This survey did not point out what every one with a grain of sense knows; namely, that all of the defense of the free world which we are ruining ourselves to pay for does not provide any defense. We have neglected the vital defenses of our homeland to provide rich loot abroad for the Communists to take over.

On May 25, 1959, a Wall Street Journal editorial said:

An important shift has taken place in the U.S. economic position in the world. \* \* \* foreign subsidiary operation by U.S. firms \* \* \* is multiplying at an accelerating rate. U.S. brand-name goods are now manufactured all over the world. The United States is gradually pricing itself out of the world markets.

Here is what faces many an American business: It cannot make its product here and compete in world markets with the Germans, the British, or the Japanese. The

alternative is a drastic reduction in its business or the export of some of its capital resources to another country, the erection of a plant there and the development of its worldwide business from a foreign, not a U.S. base. \* \* All around us our economic position in the world disintegrates.

In a remarkable series of public statements in the latter part of April 1959, President Eisenhower said:

First, that inflation is a dreadful threat to the American economy.

Second, that he is making an all-out fight for a balanced budget because a sound dollar is the foundation of America's defense.

Third, and that all American businessmen should work tirelessly to obtain public and congressional acceptance of the President's recommended \$3.9 billion of new foreign-aid appropriations for this

Senator HUBERT HUMPHREY predicts that the Soviets will soon start pushing America out of world markets in agri-cultural goods. Humphrey's remedy is to enlarge the program which will make this possible. He wants bigger and more extravagant Federal farm programs, which build agricultural surpluses that are so high-priced they cannot be sold even on the domestic market, much less on the foreign market. HUMPHREY wants to increase our program of giving agricultural surpluses away abroad. Satisfy the world demand for agricultural goods by giving ours away, and we will eliminate those markets that the Soviets are going to take away from us.

On May 22, 1959, at a time when every literate person on earth knew that America is in grave danger because inflation, caused primarily by policies of Government, is driving American capital and American gold reserves abroad, causing a relentless shift of industrial and economic strength from America to other nations, Mr. Henry Kearns, Assistant Secretary of Commerce, made a speech in Dallas, to a gathering cele-

brating World Trade Week.

Mr. Kearns urged U.S. businessmen to invest their money abroad, and recommended legislation, pending in Congress, to give special tax treatment that will encourage American capital to fiee overseas.

Will the end result be peace or chaos? Your knowledge of the situation, fellow Members, is greater than mine since most of you have been here longer than I.

However, my guess is that we are breeding world discontent, fostering false and misleading hopes in our friendly allies and in the end the American people will end up disliked, distrusted, disillusioned, and at a tremendous disadvantage.

We will have to face up to a realistic revenue problem. Our basic tax is the income tax with the large part paid by individuals and limited corporate percentages. As we continue our foolish and dangerous course, we will have less and less personal and corporate income to tax. Will we then shift to consumer taxes completely?

Thomas S. Gates, Jr.

EXTENSION OF REMARKS

#### HON. PAUL B. DAGUE

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES
Thursday, June 4, 1959

Mr. DAGUE. Mr. Speaker, in a recent article entitled "Salt at the Helm," Time magazine had this to say, in part, concerning the newly appointed Deputy Secretary of Defense, Thomas S. Gates, Jr.:

Born April 10, 1906, in Philadelphia. Majored in English at Penn (1928). Joined Philadelphia's solid Drexel & Co. Served as a private in the National Guard. Commissioned in Navy intelligence in 1942, he sailed in major campaigns, performed gallantly (two Bronze Stars), was mustered out as a commander after 42 months, rose to captain in the Reserve and retired in 1953. Tapped by President Eisenhower as Under Secretary of the Navy in 1953, Republican Gates was promoted to Secretary in 1957. Anxious to return to his investment job, Gates early this year resigned his \$22,000 Secretaryship, effective June 1. But Ike persuaded him to stay in Washington as Deputy Secretary. Said Gates, "It plays hob with my personal plans, but I guess it is my duty." Says a longtime banker friend from Philadelphia: "Tom Gates has an unusually high sense of public duty. It's in the nature of the man."

With that as a preface I am honored to add that Tom Gates is one of my most distinguished constituents—ninth district of Pennsylvania—a resident of my home county, a good friend and neighbor. And because of a personal and neighborly awareness of his great abilities, which should prove so valuable in the high position to which he has been appointed, I am reassured by the fact that Mr. Gates is remaining in the Defense Department.

I was genuinely sorry—and in this I know I was joined by officials in the Government, Members of the House and a large segment of the public—when it was announced a few months ago that Tom Gates was planning to retire as Secretary of the Navy. Consequently, it was with deep satisfaction that I learned that, at the request of President Eisenhower and Secretary McElroy, Mr. Gates had consented to remain in Government in a higher and very responsible position, that of Deputy Secretary of Defense.

There can be no question but what the interests of our national security have been strengthened by Tom Gates' acceptance of this new assignment. He brings to it a wealth of experience in national security matters. His tenure as Under Secretary and later as Secretary of the Navy has been marked by highly competent leadership. He was, in every sense of the word, a strong Sec-While there was no question retary. who was head of the Department of the Navy under his regime, he encouraged initiative and acceptance of responsibility by civillan and military leaders at all subordinate levels of the Navy Department.

I think it entirely appropriate to point out that while serving as Secretary of the Navy he made an historic contribution to the betterment of national security by laying the organizational foundation for an even closer relationship between the Navy and the Marine Corps within the Department of the Navy. While Under Secretary of the Navy, he supervised, under the overall direction of the then Secretary of the Navy, Mr. Robert B. Anderson, the redrafting of the basic orders and directives governing organizational relationships within the Department.

This was indeed an important contribution for, as the House has long recognized, the unique character of balanced American seapower stems from the integration of Marine landing forces into the fleet. This relationship between the Navy and the Marine Corps, which was regularized and improved through the leadership of Tom Gates, has produced great and continuing contributions from the standpoint of our defense capabilities

During his tenure as Secretary of the Navy, there was also tremendous strides made in weapons and instruments of U.S. seapower. We moved into the age of the large fleet carrier. Atomic submarines became an operational reality. Prolonged and submerged submarine cruises became practical. The underwater passage to the North Pole was successfully negotiated. The Navy made operations in the Antarctic a routine. The Marine Corps brought to operational reality its vertical envelopment techniques. This concept, imbodying the use of helicopter-carrying transports of a modified aircraft carrier type, constitutes what is probably the most important and revolutionary contribution to combat methods since the end of World War II

It permits our balanced fleets to conduct amphibious operations in the thermonuclear age. Not only is this Marine Corps contribution another demonstration of the far-sighted and practicable thinking which has characterized the Marine Corps in its role of amphibious specialists, but it reflects the kind of progressive thinking which has been so deliberately encouraged within the Department of the Navy by Secretary Gates. Parenthetically, the understanding consideration given the Marine Corps by Mr. Gates would have assured him a place in my personal hall of fame were that the only thing to recommend him.

I would also like to point out that during the last few months of his tenure as Secretary he made another meaningful and lasting contribution for the betterment of the Department of the Navy. With his keen appreciation of the importance of organizational principals, he convened, a few months ago, a small but also highly selective Board to examine the functioning, operations, and concepts of the Department of the Navy. The membership of this Board is particularly noteworthy, as it demonstrates, again, Tom Gates' ability to recognize and utilize the great talent which exists within the Department of the Navy.

As senior member of the Board he appointed the Honorable William B. Franke, then Under Secretary of the Navy and now Secretary of the Navy. The two senior military members of the Board were Adm. James S. Russell, Vice

Chief of Naval Operations, and Lt. Gen. Merrill B. Twining, USMC, Commandant, Marine Corps Schools, Quantico, Va. As Members of this House are well aware, the selection of these two officers to the Board was another example of Tom Gates' frequently demonstrated ability to fill top positions with officers of preeminent qualifications. Both Admiral Russell and General Twining have long been recognized as keen students of balanced seapower based upon a close relationship between the Navy and the Marine Corps.

Under the overall guidance of Secretary Gates, the Board—known as the Franke Board—met for 3 or 4 days a week over a period of almost 4 months. It is recognized within the Department of the Navy and the Pentagon that this was really a unique board, inasmuch as the senior members, Mr. Franke, Admiral Russell, General Twining, and Mr. John H. Dillon, administrative assistant to the Secretary of the Navy, were also working members of the Board. This fact in itself made the Board an unusual development on the Washington scene.

The report of the Franke Board, which has been read by many Members of the House and the Senate, has become recognized as one of the most concise, practical, and understandable reports of its kind ever to emerge from the Pentagon. As those who have read the report recognize, the first portion of the report which sets forth the organizational functions of the Navy Department and the balanced fleet constitutes the most rational and persuasive exposition on the philosophy of the Navy Department and seapower yet to appear in print. Congress and the Nation are indebted to Secretary Gates and Secretary Franke. and their assistants on the Franke Board, for such a major contribution to the understanding of and furtherance of our national security.

Tom Gates can leave the Navy Department with the secure knowledge that all those who are aware of his contributions and leadership extend him a sincere "well done" as Secretary of the Navy and look forward to even more accomplishments by him as Deputy Secretary of Defense.

Letter From Steve Modla, of Warren, Mich.

EXTENSION OF REMARKS

# HON. JAMES G. O'HARA

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Tuesday, May 26, 1959

Mr. O'HARA of Michigan. Mr. Speaker, Steve Modla, of Warren, Mich., is a public-spirited citizen dedicated to the establishment of good Government. He is a friend of mine and it is largely because of the efforts of Mr. Modla and other unselfish volunteer political workers that I now have the privilege of serving in this House.

I recently received a letter from Mr. Modla in which he expressed his concern over National and International conditions and suggested basic principles which must be followed by those in positions of public responsibility. Members of Congress and others who read the CONGRESSIONAL RECORD should have the opportunity of reading it. I therefore include a copy of his letter in full at this point in the RECORD:

WARREN, MICH., May 30, 1959.

MY DEAR CONGRESSMAN: All of us are aware of, and are shocked and frightened by the cold war tactics employed by the Russians. The result is a continual increase in world tensions. We can avoid catastrophe only by rededicating ourselves to the basic principles that have made our Nation great and by expressing our national will to our elected representatives in Government.

As a people, we must recognize that our actions have not always been correct. We must refuse to think in selfish, personal terms. We must subordinate political advantage to considerations of the common

good.

Our first step should be to practice, at home, the principles of Christianity and democracy which we expect of others. If we cannot set our own house in order we surely cannot lead the world. In this country today there are millions, willing and able to work, who, because of our economic situation, are unable to earn a decent living for themselves and their families. Many of our citizens are denied an opportunity to obtain an education or employment commensurate with their ability because of race or color. Such conditions cannot be tolerated in a nation that professes principles of justice and equality.

If we wish our vows to be heard, our anxieties to be relieved, it is indispensable that all our acts conform to the laws of right and justice: succeeding not only in conquering our enemies, but also our own

evil passions.

The United States must become a showcase of democracy in action and it is our elected Representatives who should lead the way. This includes, of course, our Senators and Representatives in Congress. It also includes elected and appointed officials at every level of government. Corruption and self-interest in officeholders, even on the local level, is destructive of American ideals and is a cancer of the body politic which, if not removed, will infect all parts of our society.

The Nation will follow the pattern set by our statesmen. It is their responsibility to lead our people to a new era in which corruption and self-interest will no longer be features of American life. Democracy in action is our challenge to Russia and a symbol to the world. It is our only hope for survival. When we have achieved that ideal we will have shown the world a true picture of "government of the people, by the people, and for the people."

Sincerely yours.

STEVE MODLA.

Transmission Lines in Iowa

EXTENSION OF REMARKS

OF

HON. MERWIN COAD

OF TOWA

IN THE HOUSE OF REPRESENTATIVES Thursday, May 28, 1959

Mr. COAD. Mr. Speaker, on Tuesday, June 2, I spoke in support of a Bureau of Reclamation transmission line which would serve part of my district, an appropriation for which is included in the public works appropriation bill, as reported out by the Appropriations Committee. I do not wish to impose upon the House, but this line is so essential to the well-being of the rural electric cooperatives and the municipalities of western Iowa that I feel compelled to ask once again that all Members support it.

The line represents the only feasible method for western Iowa to receive the benefits of Missouri River power. A large portion of that power which would have been allocated to western Iowa went elsewhere when the original allocations were made several years ago. The proposed line will bring the Missouri River power to the locations where it is needed. Cooperatives and municipalities will save considerably more than \$2 million per year by the purchase of Missouri River power. It will be a great boon to our overall economy.

It all adds up to the fact that here is a line that is greatly needed. It will not cost any one one dime-other than the cooperatives and municipalities who receive service off of it. They will completely repay the full cost of construction, with interest, in addition to all operating and maintenance costs.

I am pleased to report that this line, while serving only western Iowa, is receiving support from the entire State. Of the 55 REA cooperatives in the State, virtually all have written to the Appropriations Committee urging the construction of the line. Many other groups have joined in its support.

I have received the following communications from the President of the Iowa Farmers Union and the Master of the Iowa State Grange voicing their support of this project:

IOWA FARMERS UNION

As the State president of the Iowa Farmers Union and on behalf of the entire membership of our organization, I wish to urge passage of the appropriation bill providing funds for Bureau of Reclamation transmission lines in Iowa.

Studies made by both the Iowa Commit-tee on Missouri River Power and the Bureau of Reclamation reveal the need and justification for these transmission lines to deliver the low cost Missouri River power into the Iowa marketing area.

Because of the growing needs for an adequate supply of electrical power on our farms and in our rural communities, and in view of the allocations of Missouri River power for the Iowa marketing area in the years to come, it is essential to have these transmission lines to bring this power into the State.

We wholeheartedly endorse the construction of these lines.

MAURICE O'REILLY, State President, Iowa Farmers Union.

#### IOWA STATE GRANGE

Realizing the importance of the rural electric cooperatives to farmers of Iowa and the increasing need for adequate electric power supply for our Iowa farms and rural communities, the executive committee of the Iowa State Grange unanimously resolves to go on record in support of the request of the Iowa Committee on Missouri River Power for construction of Bureau of Reclamation power transmission lines to deliver low cost hydro power to load centers

of the preference customers in the Iowa Missouri River power marketing area

In view of the favorable results of studies made by the Iowa committee and the Bureau of Reclamation, the executive committee urges that these lines be constructed. LOREN MURPHY,

Master, Iowa State Grange.

## Television Industry Donations to Public Service Causes

EXTENSION OF REMARKS OF

#### HON. JOHN V. LINDSAY

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES Tuesday, May 26, 1959

Mr. LINDSAY. Mr. Speaker, the March 9, 1959, issue of Television Age contains a letter from the publisher which I have taken the liberty of including in the Appendix of the RECORD. I believe this letter will be of interest to my colleagues and I should like to call it to their attention.

The letter follows:

LETTER FROM THE PUBLISHER TO SERVE A NATION

\$271 million. This is the amount of money that the television industry donated to public-service causes during 1958.

This amount of money represents 20 percent of the total revenue of the industry. Behind this figure is the dramatic story of a medium that is dedicated-

To aiding the stricken of the disasters of floods and tornadoes and droughts and hurricanes and to raising money for relief.

To alerting the Nation to the realities of

push-button warfare. To strengthening the moral fiber of our country by encouraging attendance at the church of one's faith.

To alleviating the plight of the less fortunate not only here but all over the world, and to giving hope to the hopeless because a generous nation was told of their plight.

To mobilizing the forces against the scourges of muscular dystrophy, infantile paralysis, cancer, and diseases of the heart.
To alding the Red Cross, Boy Scouts, the

local P.T.A.

To taking up the crusade for safer highways, more playgrounds, better schools. To projecting the town meeting into every

corner of the land to provide a discussion platform for the burning issues of the hour.

#### FOR A BETTER LIFE

For in a larger sense television is a mirror of America. In this reflection television is ever present, devoting time, money, ingenuity and energy to achieving a better way of life.

There are those who will say that the medium is required to do this as a trustee of a public facility.

This is an erroneous premise because television assumes a far greater responsibility of public service than could ever be required of it by either the legislators or the regula-

No one has to tell the medium to donate \$271 million in the public cause. It does this voluntarily, willingly, effec-tively. It assumes the responsibilities of good citizenship and good neighborliness on a positive basis.

To those who would criticize these efforts, let them stand up and be counted. Let them do as much or more before carping from the sidelines or hunting headlines.

IMPACT CONTINUES TO GROW

Television, like America, will continue to go forward. As it goes forward it will increase, as every year it has increased, its impact on the American public because it widens the horizons of its public service.

Cordially,

S. J. PAUL.

## How Your Congressman Becomes a Spendthrift

EXTENSION OF REMARKS

#### HON. PAUL G. ROGERS

OF FLORIDA

IN THE HOUSE OF REPRESENTATIVES Thursday, June 4, 1959

Mr. ROGERS of Florida. Mr. Speaker, in the June issue of the magazine Nations Business there appears an article entitled, "How Your Congressman Becomes a Spendthrift," which bears the byline of our colleague and my close personal friend, "Charlie" Bennett.

This article presents a penetrating analysis of our spending program at a time when Government expenditures are rapidly approaching an all-time high.

That the good people of Florida's Second Congressional District have seen fit to return "CHARLIE" BENNETT to Congress repeatedly and in most instances unopposed, seems eloquent testimony to the esteem with which he is regarded.

I commend the reading of this comprehensive presentation to every Member of the Congress and am pleased to present it for inclusion in the RECORD: HOW YOUR CONGRESSMAN BECOMES A SPEND-

THRIFT—HERE'S A STORY OF PROSPENDING PRESSURES AND WAYS TO EASE THEM TO SAVE TAX DOLLARS

(By Representative CHARLES E. BENNETT)

Members of Congress are in a constant struggle to keep from becoming spend-

The Congressman who strives for Federal' economy today is frustrated by a combination of loose fiscal practices and the ironic prospending attitudes of much of the pub-

I've watched this phenomenon over the 10 years I have served in the U.S. House of Representatives. It has now reached alarm-

ingly expensive proportions.

Though the cards seem stacked against saving and for Government spending, this could be corrected. Congress and our citizens could adopt a three-part program which, I believe, would give new vitality to the quest for thrift and save billions of the taxpayers' dollars. The program would strike at both the attitudes and the machinery that favor excessive Federal spending.

Unless we plan some action now, evermounting costs of Government could create further inflationary deficits, dilute our purchasing power, stunt our economic growth, and threaten our national strength and

security.

Our troubles seem to be rooted, first of all. in public feelings about spending. Most people are for economy generally, but not specifically.

I remember well the tone of the mail that poured into my office a few summers ago when desire for Government economy was being fervently expressed. The letterwriters

urged me in no uncertain terms to "cut the fat out of that outrageously high budget," and "keep that Federal spending to a bare minimum." At about the same time the House was considering a multimillion-dollar measure I felt was unnecessary in spite of its popular appeal. Following my convictions, I voted against the bill.

In the weeks that followed you would

have thought that I was the most penny-pinching man alive. Scores of letters criticized my vote and not a single one recognized my action as a vote for economy.

This is not unusual in Congress. I have talked with many fellow lawmakers who tell of constituents who ask in the same breath for tax cuts and larger appropriations for

their special projects.

Since each Member of Congress must not only vote his own convictions but also be mindful of his constituents, he must weigh carefully any proposal that could benefit them. Even if a measure only appears to benefit his constituents, a Member is under great pressure to support the idea. If the legislator falls to vote with his constituents, he can be replaced with someone who does take their views.

This leads to a system of survival of the spendingest. So the primary source of econ-

omy must be the public.

However, in the eyes of a large segment of the public, progress has become synonymous with more and larger Federal programs and benefits. Each new program is excitingly and attractively presented. In the dazzle, the ultimate cost to people in taxes is obscured.

It is now taken for granted that the Federal Government should be involved in such personal or local matters as health, education, and welfare. These words are powerful symbols. The programs under these general labels could become more costly than our national defense. In the broadest sense, "welfare" could even mean two Cadillacs in every garage—at taxpayer expense.

Another problem is that once a program is begun, it is nourished until it is thriving. To end a going Federal program is almost unthinkable, even though it may have become obsolete or undesirable.

I can recall only two Federal programs that have been abolished since I was first elected to Congress: Uncle Sam no longer stables stallions for breeding cavalry horses, and is now out of the rum-distilling business in the Virgin Islands.

Lobbies now exist for every conceivable spending cause. The appeal to Congress for dollar support is seldom based on self-interest, though. The selling pitch is usually couched in terms of the benefits of a program to national security, human welfare,

or economic growth.

Sometimes a Member of Congress commits himself to a noble idea or project without realizing its potential cost Once committed, it's difficult to wiggle off the hook. When I first came to Congress, I enthusiastically introduced a measure to premit tax deductions for certain types of employe compensation in-centive plans. I was stunned to learn from the Treasury Department that the bill would cost an estimated \$1 billion in tax revenue the first year and ultimately could cut U.S. revenues an estimated \$8 billion a year. I dropped the idea as quickly as I could.

Unfortunately, the public memory is dim on heroes of economy battles, but people never forget a vote against their favorite As one of my colleagues lamented at lunch the other day:

"Nobody ever gets a statue built for econnizing. You don't even make a footnote omizing. in the history books."

The other major obstruction to economy in government today is the loose and clumsy system we use to pay for what we buy.

We are now spending about \$80 billion without the best means for resolving competing needs, judging overall cost or knowing how much money we will have with which to pay our bills.

One problem is that we act on Federal

spending in piecemeal fashion.

When an appropriation bill or other legislation comes up for action, my colleagues and I don't know whether voting for the measure will eventually unbalance the budget or not. We don't know how much will be spent for other programs still to be voted on or how the economic impact of other spending will affect revenues.

Another problem is that money matters are influenced by more than a dozen committees in each chamber of Congress, so central control is lacking. The major committees assigned to fiscal subjects are the House Ways and Means, House Appropriations, Senate Finance, Senate Appropriations, Joint Economic Committee, and Joint Committee on Internal Revenue Taxation. But other committees get in the act in a variety of ways.

Federal spending normally must be approved by the Senate and House Appropriations Committees. Legislative committees authorize programs, then the Appropriations Committees each year grant the Federal agen-

cies the money to run them.

However, a sort of budgetary sleight of hand has come into practice by which the Treasury can be dipped into without the usual controls.

One of the most popular of these fiscal tricks is called "authority to spend from public debt receipts." With this device, Congress lets a Federal agency borrow directly from the U.S. Treasury rather than making it rely on congressional appropriations. It has become a popular method to finance the many Federal lending programs and dodge annual Appropriations Committee review. Already Congress has authorized agencies to spend about \$150 billion by this method. Housing programs, farm price sup-ports and Export-Import Bank lending, for instance, are financed this way.

Other doors to the Treasury go by the names of "contract authority," under which obligations can be incurred before appropriawhich fitions are made; "revolving funds," nance certain intragovernmental buying activities and "no-year" appropriations, under which many long-term defense projects

Add to this the fact that Uncle Sam already has billions of dollars promised each year to a number of basic programs or obligations, such as public assistance payments to the States, veterans' pensions and interest on the national debt. Control and choice over where and how public money will be spent, therefore, has been drastically limited.

In this era of towering defense costs as well as other burdensome Federal commitments, I don't think we can suddenly do away with big budgets. But I believe we can save billions of tax dollars as well as help create a Tresh public attitude toward Federal spending. We can do it by adopting a three-part program aimed at rewarding economizers, tying taxes to spending and tightening or creating new controls over the purse strings.

1. Members of Congress and other Federal officials who fight for economy could be recognized through some system of thriftratings and awards. This could best be done by a private, national nonpartisan organization, which could devote singular emphasis to the fiscal aspects of any Federal proposal.

This organization should be a responsible and respected group. It should have the resources and facilities to estimate the cost and appraise the effect of new spending ideas or programs as soon as they are proposed. It should make known its findings quickly and lucidly to Government and the public.

Particularly, it should help Congressmen with cost data even as bills are drafted.

An organization such as this has operated on the State and local level in Florida for 20 years. It is the Florida Tax Information Association, Inc. Probably other States have similar nonprofit, nonpartisan groups to promote efficient spending of public dollars.

On the national level, through awards to effective and economy-minded public servants, and objective fiscal analysis, a similar organization could command widespread attention and stimulate a new respect for sound Government paid for with sound dollars.

lars.

2. Pay-as-you-go and user charge principles, I believe, could be more widely adopted, both to pay for Government services and to impress immediately on the public the cost of a program or activity.

The Federal highway construction program is materially paid for through the tax on gasoline. Social security is financed by a tax on prospective beneficiaries. I believe many of the supporters of the expensive Federal aid for school construction proposals would think twice if a broad-based tax to pay for the program were tied directly to the legislation.

A number of existing charges and fees could be raised so that the citizen who is served pays for the service and knows what it is costing him. The cost of the postage stamp, for example, was finally raised from 3 cents to 4 cents last year—the first increase in 25 years. The Postal Service is still short of paying its way by more than

\$500 million a year.

Since no formal overall consideration is given to the budget by Congress, a joint congressional budget committee, it seems to me, could be set up for this purpose. It could also appraise public needs. It could determine whether an activity is a proper one for the Federal Government, or whether it should be done on a State or local level. It could coordinate and advise on the work of the tax-writing House Ways and Means and Senate Finance Committees and the Senate and House Appropriations Committees. And it could survey ways for putting more Federal activities on a direct pay-as-you-go basis.

3. Procedures could be tightened or new ones created for better control of Federal spending. Congress should accept a resolution sponsored by Representative Howasn W. ate and House Appropriation Committees. Chairman, aimed at stopping backdoor trips to the Treasury. Representative Smirn's idea is to require that all spending be routed through the Appropriations Committee. The legislative committees would still have the power to authorize programs, but any spending scheme would get the traditional annual check of the Appropriations Committee.

Legislative committees tend to favor their particular field of interest. The Agriculture Committee, for instance, wants to do all it can for the farmer; Merchant Marine and Fisheries Committee wants to serve maritime interests. The Appropriation Committees can appraise the worth of individual programs and balance, one against another when all spending ideas go through this important unit. A like proposal to make sure all spending is channeled through the Appropriations Committees is also pending in the Senate.

A greater control over spending could be achieved if money bills were handled differently. Congress now acts on 12 to 15 separate regular appropriations bills plus other supplemental appropriations. Sometimes we

increase, sometimes we cut; but we never know whether more has been appropriated than there are revenues to pay the cost until the last bills are voted on.

House Appropriations Committee Chairman Clarence Cannon of Missouri, Senate Finance Committee Chairman Harry F. Byrn of Virginia and other congressional veterans have often proposed that all the regular appropriations bills be handled in one bill. An omnibus appropriations bill could give Congress new perspective, balance, and control over how public money is being spent.

Another related idea could have the same effect. Final action could be postponed each year on spending bills until all of them have been considered. The bills could be kept in a sort of deepfreeze until the end of a congressional session. Then individual bills could be revised up or down to keep total spending from spilling over the revenue coming in.

Congress, at the least, should have available a formal running account of its spending. In addition to the President's annual budget document and midyear revision, Congress should have up-to-the-minute information summarizing appropriations, expenditures, receipts, and the effect of pending bills on overall totals.

Finally, I'm sure untold amounts of money could be saved if the President had the power to veto separate items within appropriation bilis rather than being limited either to signing or vetoing money bills as a whole. Since the item veto first appeared on the American scene in the Confederate constitution, 40 States have adopted the idea. With the item veto, the President could effectively cut the fat out of appropriations and assist materially in what all loyal Americans really want—an effective but economical government.

I am confident that the program I have outlined could help restore the respect for and safeguards over your tax money which are so sorely needed today.

The People Are Looking to the House

EXTENSION OF REMARKS

## HON. W. J. BRYAN DORN

OF SOUTH CAROLINA

IN THE HOUSE OF REPRESENTATIVES

Thursday, June 4, 1959

Mr. DORN of South Carolina. Mr. Speaker, I commend to the attention of every Member of this Congress the following editorial from the Anderson Independent, Anderson, S.C.:

Here's a Bold Threat to Nation's Safety That Neids Smacking Down

The brazen arrogance, the bold effrontery, the unmitigated gall, and the callous disregard for human and legal rights of the people displayed by James Hoffa in threatening a nationwide strike of transportation are so overwhemlingly shocking that they would be almost amusing if they were not also a revelation of our own failures.

How the American people can sit idly by and allow a man of this type to threaten the security, the freedom, and the well-being of this country is astounding in itself.

Read his words over again, the words that he audaciously blasted away at a meeting of the Longshoremen's Union. In Brownsville, Tex., the other day Hoffa, who has climbed to undoubted power with the help of crooks, thugs, and radicals, and who has been steadily boosted by laws or lack of

laws that would restrain in some degree his lust for absolute mastery, is drunk with his own success.

Hoffa is riding toward a fall and it may come soon. This country was not settled and fought for just to give one man a monopoly over its welfare. The blood spilled to obtain its freedom, the blood shed by the North and South to determine whether it should continue a Union or two separate powers, is too deeply embedded in its soil, its sacrifices are too many to allow a self-seeker barbed in the clothes of a savior of the working people to rule.

If someone were to get up and proclaim that he had a master switch that could set off explosions in every principal American city at his command, he would be hauled down and observed by psychiatrists. But Hoffa is doing just that in a way.

Set off a national strike that would crip-

Set off a national strike that would cripple all industry, cut off food from our people everywhere, throttle all the mechanism of democracy that has been built up over the centuries? Impossible, you say. But that is what this brazen little man, drunk with swelling power, is threatening us with. He threatens every home, every business, every industry in America, and we sit and take it like dull-witted cattle whipped into a coral. Why?

Have we lost our courage, our pride, our determination, our resolution—the same qualities that have pulled the Nation

through two recent World Wars?

We don't see any mass meetings of protest, we don't hear of any marches on Washington to demand that Congress stop this would-be Napoleon, this man who threatens with the wild look and gestures of a laterday Hitler. We seem to be taking it sitting down.

And Congress debates, argues, throws up a screen of amendments, appoints new committees, and likewise does little to legislate in behalf of the welfare of all the people. Congress is so concerned about the privileges and powers of a self-chosen few that it overlooks the good of all the people.

A congressional committee solemnly listens to John L. Lewis ponderously proclaim that no legislation be passed that would even mention unionism or its evils. It considers next year's votes rather than bold legislation that would cut down this rapidly-growing monopoly that thrives on graft, strife, threats, boycotts, and terrorism.

After all these months, there is no law

After all these months, there is no law passed to protect the rights of all the people against the oppression of the few.

What are you waiting on, Congress?

The threat has been boldly emblazoned on every front page in America. One little man thinks he is bigger than all our elected representatives.

Now is the time for Congress to slap down this threat of revolution, to preserve the rights of the American people to work peaceably at jobs of their own choosing and to carry on their business unhindered by gangster-type rule.

Get busy, Congress. We are waiting on you to make the first vital move.

Aid to Schools

EXTENSION OF REMARKS

## HON. LEE METCALF

OF MONTANA

IN THE HOUSE OF REPRESENTATIVES
Thursday, June 4, 1959

Mr. METCALF. Mr. Speaker, the transcript of the President's news con-

ference yesterday included the following exchange:

Am to Schools

Question (George C. Wilson, Congressional Quarterly). Mr. President, since your 1959 Federal aid to schools proposals have not received much attention on Capitol Hill, would you support your 1957 school-aid proposals as an alternative to the Democratic—

The PRESIDENT. You are expecting my memory to be a little bit more perfect than it is at this minute. For 6 years I have been saying—7 years I guess now, putting in something on the education bill. I will have to look—the details of your question, let Mr. Hagerty answer.

Mr. Speaker, in order that Mr. Hagerty may refresh President Eisenhower's memory, I am sending him a copy of page A1565 of the Congressional Record of February 26, 1959, when I traced the President's wavering, and sometimes contradictory, course on aid to schools through his state of the Union messages.

#### Leaders Wanted

EXTENSION OF REMARKS

## HON. HALE BOGGS

OF LOUISIANA

IN THE HOUSE OF REPRESENTATIVES

Thursday, June 4, 1959

Mr. BOGGS. Mr. Speaker, under leave to extend my remarks in the Record, I include the following:

LEADERS WANTED

(Address of Hon. Henry Kearns, Assistant Secretary of Commerce for International Affairs, at the National Sales Executives, Inc., convention, Roosevelt Hotel, New Orleans, Thursday, May 28, 1959)

The United States has no greater national asset than its high caliber, well-trained, efficient army of sales executives. Today, when it is becoming increasingly imperative that we develop greater recognition, worldwide, for our competitive enterprise system, and that we develop new markets both here and abroad to provide larger outlets for our constantly expanding production facilities, we as a nation are fortunate indeed that we have this valuable asset working in our behalf.

It gives me the greatest of pleasures to have the opportunity of talking with the elite of this army, the annual convention of the National Sales Executives, Inc. I believe that the salesmen of this country have within their grasp the key to the future security and prosperity of all America. Our need to increase the volume of our Nation's exports comes at a time when our security is threatened by the Sine-Soviet economic offensive. At the same time, we are faced by increasing competition from the industrial nations of the free world. The answer to these challenges rests heavily on the ability of our sales executives to adapt the sales techniques known well in our domestic markets in the development of a vigorous campaign for selling American products and ideas abroad.

It is a useful coincidence that we are given the opportunity to draw together to-day the important sales leaders of this country in one of America's greatest port cities at a time when there is this desperate need for action in our world trade affairs.

The National Sales Executives, Inc., is not unaware of the importance of world trade.

Your recent activities under the heading of "Operations Enterprise"—your program of training foreigners, through personal visits and on-the-spot seminars, the sales techniques known well in our domestic markets—have given you an insight into the opportunities and problems that face the economic world today. I am happy to have this opportunity of discussing this important subject with you.

Taking the theme as posed by one of your great leaders, "Red" Motley, "Nothing happens until somebody sells something." I would like to examine some of the headlines that are affecting our thinking today. They would include: "We Are Pricing Ourselves Out of the Market"; "There Is a World Flight From the Dollar and We Are Rapidly Losing Our Gold"; "This Business or That Is Suffering From Import Competition"; "United States Is Bucking Fierce Market Competition"; "Low Priced Labor Abroad Threatens American Industry."

This is not the first time in the history of the United States that we have faced economic challenges. In the competitive field, this country has always faced the productive capacity of Europe. However, at this time our trade outlook is faced by challenges on several fronts. Europe has renewed its economic capability, Japan, that must trade to live, has built an industrial machine that is modern and productive, and the Communists have served notice upon us that they intend to "bury us" in the peaceful field of trade. Taken together, these represent a formidable threat to us.

Of course, the timid and the shortsighted can look upon this array of trade problems and determine that we must retire into a Fortress America; that we must at all costs preserve the American market for American industry; that there is something inimical between our high standard of living and commercial contact with foreigners. Those of us, however, who have been accustomed to frontline duty in the field of competition realize that this policy bears with it a prohibitive price tag. This price will include the following:

1. We can lose the potential markets of more than 1½ billion people in the free and uncommitted areas of the world.

2. We can lose access to the foreign supplies of raw materials so desperately needed in our present and future industrial plant.

3. We may make it unprofitable and perhaps unwise for our present world allies to continue association with us once we have retired from world trade, and thus force the free world into the waiting arms of the Soviets.

4. We may drastically limit the future industrial and agricultural production of this country in such manner that needed expansion would become impossible, thereby assuring our loss of world leadership.

5. We will reduce the selectivity of products for the 175 million American consumers, and, in so doing, add to the fires of inflation. We must therefore accept as true the

We must therefore accept as true the axiom that "protectionism has priced itself out of the market."

Those of you who have participated in world-trade affairs know that upward of 4 million people gain their livelihood from this important aspect of American business; that our sales of American products abroad in the last 6 years have been more than \$104 billion and, even in 1958, were valued at \$16.3 billion; that these sales of non-military goods were greater in value than the total sales of all automobile parts and accessories, of all farm and field crops, or of livestock production, and were as great as the total sales of all the retail stores in the country for any one month. We know that this volume of business, accounting for 4 percent of our total gross national product, is essential to the economic health and the future of many thousands of American

firms who depend upon this extra business for successful operation.

Never in our trade history has there been a greater need for leaders to spark a revival of confidence in our Nation's ability to compete, to express faith in our competitive system as the most productive that the world has ever seen, and to initiate positive action in emphasizing the advantages of our opportunities rather than decrying our handleaps. The key role that the national sales executives hold in our economy leaves no doubt that you can provide the leadership so necessary at this time. Let us take a brief inventory of some of the factors you might consider:

1. Price: Actually, how much of the world's goods is really sold on price alone? Perhaps the commodities that are exchanged on world commodity markets, perhaps some heavy equipment that is sold on direct competitive bid, but the great bulk of the products that move in world trade move through some type of retail distributive mechanism. Certainly our experience has indicated that in addition to the price tag that is hung on the merchandise there are factors of service, delivery. terms, guarantee, standardization, quality, reliability, established tradition which means substantiated reliability, design and styling, and, most important of all, salesmanship. You know better than I that price is only one consideration in the success of almost any sale. Otherwise, General Motors would not be selling Cadillacs and Ford would not be selling Continentals. In fact, if price were the only consideration, how utterly drab our existence would be today.

2. Design: The markets of the world do

2. Design: The markets of the world do not always coincide with those within the United States. Customers' needs and preferences more often than not differ from country to country. It is necessary that we encourage our producers of consumer goods to understand the needs of potential foreign customers and to design production to meet these needs. It will be little satisfaction to lose our world markets and later learn of greater understanding on the part

of our competitors.

3. Terms: There is no challenge to the fact that this country has the greatest financial resources of any country in the world. It seems inconceivable, therefore, that we should be outdone in our ability to provide favorable terms to our potential buyers. It is unrealistic to believe that our competitors will sell their goods upon terms that are non-collectible. They intend to be paid just as we do. Some modification of our credit facilities to meet new situations may be necessary.

4. Delivery; No other country in the world has the comprehensive facilities to move goods from the producer to the consumer that would in any way equal ours. We have the most highways, the most trucks, the greatest railroad mileage, the most freight cars, the most ships, the most cargo-carrying aircraft, and the greatest number of the finest ports in the world. We must recognize the advantages that these tremendous facilities bring:

5. Salesmanship: We take pride in our competitive system. We know that our industrial development has been achieved to a great extent because of our ability to stimulate domestic demand for our industrial output. No people in the world have been as thoroughly trained in salesmanship as have Americans. It seems inconceivable that at this time some otherwise responsible people within this country seem to want to tell the world that we no longer believe in a competitive society.

To illustrate the need for understanding of the opportunities that exist in our world trade posture. I would like to discuss in detail one of the very many facets that can be turned to our overall trade advantage. You may be surprised to know that this important tool, which I consider one of the greatest, is the GATT, the General Agreements on Tariffs and Trade. This much maligned and little understood aspect of our world trade deserves your thoughtful con-

sideration. Let me explain:

Every one of you has probably been fol-lowing the Foreign Ministers' Conference in Geneva, Switzerland. But how many of you know that an important world trade conference is also meeting right now in the same city? The countries participating in the General Agreements on Tariffs and Trade are holding their 14th general business meeting. They're discussing a wide range of foreign trade questions, including how to get rid of import quotas and licensing restrictions which some countries maintain; what to do about the wide price fluctuation in commodities like coffee or copper which some countries depend on for most of their export earnings; and what arrangements to make for new tariff negotiations.

As I was going over the 25 or 30 items on the agenda for this May meeting some weeks ago I was struck by the contrast between the way in which trade problems have been dealt with since the war and the way in which countries had to cope with them following the First World War.

In many ways the basic economic problems in the two periods were rather similar: The need to repair and rebuild war-damaged plant and equipment; the distortion of production and trade patterns resulting from wartime controls and new political alinements; the battle with inflation in a number of countries and pressure to merge smaller nations into larger, more productive economic units, to mention a few.

But we had no trade agreements program at all when the First World War came to a close, and what commercial treaties we had Were pretty broad and general in trade mat-Trade relations throughout the world in those days were based pretty much on innumerable separate two-country agreements of various types. In Europe individual pacts Were constantly being formed, changed, and terminated. In times of relative economic stability these pacts tended to liberalize and increase the flow of trade. But in times of economic instability, when firm policies were most needed, the international obligations Were made\_loose and pliable and agreements ran for only short periods. The idea was to give yourself plenty of room to use trade restrictions if others did or if they became necessary. In fact, in the early twenties and particularly in the early thirties, Government administrators were often handed blanket authority to raise or lower tariffs, apply quotas or otherwise regulate a country's trade as they wished.

There was no universally accepted set of rules for trade among nations. When two countries got into an argument they usually had to battle it out themselves, and too frequently the method of protecting trade interests was reprisal and counterreprisal. Trade barriers were usually pushed up in the process, far higher than conditions warranted. For example, in 1931 when a number of national currencies were being depreciated, France began to levy surtaxes against imports from countries with depreciated currencies. The Spanish Government then promptly authorized its administrators to impose surcharges on goods imported from countries which levied increased import charges on Spanish goods due to the depreciated Spanish currency, and so it went. Almost every type of trade restrictive or trade disruptive device was in use.

The depression which swept the world in the early thirties put a temporary end to any broad multilateral cooperation among nations and a period of intense trade warfare was initiated. Every country tried to insulate itself from the rest of the world and solve its own problems without regard to

the effects of its actions on others. The process of reprisal and counterreprisal was in high gear.

To get wide agreement on limiting of trade controls in a period of crisis is, of course, extremely difficult. But had there been such an agreement in operation-had countries agreed on a set of principles to guide their trade relations and formed the habit of working out their problems together in regular meetings, the impact of the depression on world trade might well have been softened to the benefit of all. For when one country cuts its imports, it is actually cutting the exports of its trading partners. And with reduced exports these countries must cut back their imports. Reprisals and counterreprisals gradually choke world markets and the result is a terrible loss to all.

At the depths of the great depression in the early 1930's, this country recognized that positive action must be taken to stimulate world trade. As a result the Trade Agreements Act was passed, known generally as the Reciprocal Trade Agreements Act. The purpose of this mechanism was to use the enticement of greater access to the U.S. market as an influence upon other countries to negotiate for a gradual reduction to trade impediments. Between 1934 and 1947 separate two-country (bilateral) agreements were signed with 29 countries. Even with this progress, it was recognized that trade problems dealt within separate agreements by individual countries continued to have serious limitations. It was evident that further real progress depended upon the establishment of a broadly based multilateral understanding.

Contrast this, if you will, with the present postpar period. Even before the war in Europe was over, plans were underway to ease postwar adjustments and to reestablish a truly multilateral trading system. The International Bank for Reconstruction and Development was established to facilitate international investment. The International Monetary Fund was set up to stabilize exchange rates and smooth out temporary payments problems. And in the trade field an historic international agreement was concluded soon after the end of the war-the General Agreement on Tariffs and Trade.

Originally signed by the United States and 21 other countries in 1947, the agreement is now adhered to by 37 countries which together account for over 80 percent of total world trade. Virtually all the world's major trading nations are signatories.

I suppose the most well known function of the GATT is its sponsorship of tariff negotiations. There have been 5 such conferences-one in Geneva in 1947, another in Annecy, France in 1949, a third at Torquay, England, in 1950-51, a fourth again at Geneva in 1955 during which session Japan was brought into the Western trading community, and a fifth at Geneva in 1956. All in all, some 60,000 tariff concessions have been exchanged affecting well over half the trade of the signatory countries with each

Participation in these conferences is, of course, voluntary. Each country decides for itself whether or not it will take part and what concessions it will make. At each conference participating countries negotiate for reductions, or binding against increase, or individual duties which they levy against each other's goods. The result is a set of lists, one for each country, of duty rates reductions, or binding against increase, of which that country agrees not to exceed in levying charges on imports from other parties to the agreement. This procedure has the effect of reducing tariff levels generally and of lending stability to trade relations. For although there are provisions for altering individual bound rates the international commitments have the effect of generally limiting such charges to cases in which action

is really necessary. The lists of tariff con-cessions represent one of the two major elements of the GATT.

The other major part is a set of general rules by which the Contracting Parties agree to be guided in their trade relations with each other. These rules are designed to prevent discrimination and minimize nontariff barriers.

These are very important considerations. For reductions in foreign tariffs are of little value to us so long as import quotas, licensing requirements or other types of restrictions can be applied to the products concerned. The situation is even more operous when a country discriminates against our trade by applying stricter controls on our goods than on those from other countries, or when some country refuses to take our products but imports the same goods from another source.

Of course, when the GATT was first drawn up everyone realized that for some time after the war it would be necessary for many countries to limit their purchases from abroad in order to protect their limited supplies of foreign exchange. Moreover, since the dollar was in almost universal short supply it was unavoidable that dollar imports should be restricted most severely. Therefore, an exception was made to permit the temporary use of import restrictions for this purpose. But countries taking advantage of this provision were required to remove their controls as rapidly as possible and to have their controls examined periodically by the other countries participating in the Agreement.

Today, with the very substantial improve-ment in world financial condition, the need for discriminatory restrictions against dollar imports has been dissipated in many areas. It is clear that the machinery of the GATT can be used effectively in induc-Ing our trading partners around the world to remove restrictions which discriminate against American exports, and your Government is pressing forward vigorously to open the doors for many hundreds of millions of dollars worth of American sales. This becomes a tangible benefit from our participation in the GATT.

At their annual business meetings, the GATT countries have conducted examinations of individual countries' control systems. As financial conditions improved the restricting countries were urged to modify their controls or remove them altogether. In recent years there has been a broad movement toward trade liberalization and the United States is now in a position to realize the full benefit of tariff concessions which it has received in the various negotiating conferences..

As an indication of the extent of this progress, it is worth noting that of the 14 European countries which are parties to the GATT, 4 have formally freed from licensing requirements over 90 percent of their private imports from the United States and Canada, based on 1953 import patterns, 10 have freed at least two-thirds of such imports and only 2 countries have not attained liberalization percentages of at least 50 percent. Here are the percentages for individual countries: Austria, 45 percent; Belgium, Luxembourg, 86 percent; Denmark, 70 percent; France, 56 percent; Germany, 95 percent; Sweden, 68 percent; Switzerland, 99 percent; and the United Kingdom, 75 percent. Turkey is the only country in the group which has not been able to liberalize at least some of its imports from its dollar

To see how the GATT assists us in this process we might look for just a moment at the case of the Federal Republic of Germany. When Germany came into the GATT during the Torquay Conference in 1950-51, she found it necessary to continue to restrict dollar imports for balance of payments purposes. In the following years these restrictions were gradually reduced, but we felt the progress was not fast enough in view of Germany's increasingly favorable payments position. Then in the summer of 1957 the International Monetary Fund made the determination that Germany could no longer justify restrictions on financial grounds.

The German Government recognized the finding of the IMF as well as its obligation under the GATT and proposed a specific liberalization program. Many countries considered the proposed German program inadequate and urged faster action. Discussions were continued between sessions. On January 11, 1958, Germany removed controls on more than 1,300 commodity classifications in its import statistical schedule, and in November, during the following GATT business meeting, did the same for another 50 industrial items. On January 3 of this year 66 agricultural and 33 industrial items were removed from the control list. We're now trying at the current GATT session to work out an equitable arrangement for the remaining restrictions.

The solution which is finally developed may well permit some items to remain under control. For there cannot be any absolute ban which allows no exceptions. The United States has also had to use import quotas for national security purposes and to effectuate certain agriculture programs. But the process of consultation, of many countries working together to maintain the integrity of an agreement which all recognize to be important to their trading interests, tends to reduce these exceptions to the bare minimum as the German case well demonstrates.

This process of regular consultations and working together for solutions to problems applies, of course, to a whole range of commercial questions. Trade disputes which are difficult for the two parties concerned to work out by themselves often become more manageable when an impartial panel of experts can be appointed to study the question and recommended solutions. Many disputes among GATT countries are handled

in just this way.

For example, Greece granted Germany a tariff concession on phonograph records in 1951. In 1956 the Greek Government raised the duty on long playing records, maintaining that the tariff concession did not cover this product since long-playing records were virtually unknown back in 1951. A panel of experts studied the matter and their report supported the contention of Germany and the U.S. that the Greek action was a violation of the Agreement. Further discussions were held at the GATT meeting in the fall of 1957, and the Greek Government agreed to reduce the rate of duty on

long playing records.

Problems which have been resolved through the complaint procedures of the GATT range from Swedish antidumping duties on nylon stockings and Belgian discriminatory restrictions on imports of U.S. coal to Italian regulations favoring domestic production of ship's plates which resulted in a complete stoppage of deliveries of Austrian-produced products.

In these and many other ways, the General Agreement helps to protect United States trade interests and to promote an ever increasing flow of beneficial world trade. Our participation has become today the principal way in which we achieve the purposes of our Trade Agreements Act and one of the best ways of demonstrating and promoting the principles of free enterprise throughout the world.

We must not forget in this connection that new countries are emerging from old colonial empires—that in many parts of the world economic development is changing the character of former underdeveloped nations which are assuming greater importance in world affairs. I think it is of vital impor-

tance that we have this broad agreement in the field of international trade to help these countries shape their policies in the free enterprise tradition.

Now what lies ahead for us in this field? Last year, as you know, the Congress once again extended the trade agreements legislation. The 1958 act was quite liberal, providing a 4-year period for the negotiation of new agreements—the longest in the history of the program—and giving the President authority to reduce duties by 20 percent. All of the safeguards to domestic producers were, of course, retained and some in fact were significantly strengthened.

Last fall, at the 13th business meeting of the countries particlpating in the GATT the United States proposed that a new round of tariff negotiations be held commencing in the latter part of 1960. One of our principal aims in these negotiations will be to obtain lower rates in the new uniform external tariff which the 6 countries of the European Common Market will gradually be placing in effect. As these countries eliminate tariffs and other controls on trade among themselves, it will be to our great advantage to obtain the lowest possible rates in the common external tariff to avoid serious competitive disadvantage in some of our export products.

The General Agreements on Tariff and Trade may be likened to the commodity and stock exchanges that are well known in our economic life. We recognize that it is possible to secure equity capital for business through person-to-person sale of stock, however, this is cumbersome, slow, and does not need meet modern requirements. By the same token, it is possible to negotiate favorable trade agreements on a country-bycountry, product-by-product basis, but this too becomes slow and cumbersome. GATT makes it possible to perform these negotiations upon a broad, free world basis covering thousands of subjects and actually serving to open the doors of trade quickly and effectively. When it is recognized that more than 60,000 items have been involved in the negotiations to date, it is obvious that this is a great tool for good.

Distribution of products and services within the United States is complex and upon a world-wide basis it is even more so. This outline of the General Agreements on Tariff and Trade serves to exemplify the complexity of this subject. It is obvious that this mechanism can be very effective if wisely used. This country, today, needs more than anything else, a group of leaders who are not looking for excuses to justify their failure, but who are looking for a challenge that will result in success.

We are convinced that our free, competitive society offers more of the good things of life to more people than any other yet devised. Under the leadership of your great organization a renewal of faith can prove that our system is truly superior. We will sell more of our product, we will be able to buy more from our trading partners, we will increase the product selectivity for all consumers, and we will make it desirable and profitable for the trading nations of the world to continue working with us toward peace and tranquillity in the world.

#### Abba Eban Goes Home

EXTENSION OF REMARKS

# HON. RAY J. MADDEN

OF INDIANA

IN THE HOUSE OF REPRESENTATIVES
Thursday, June 4, 1959

Mr. MADDEN. Mr. Speaker, the following editorial by H. B. Snyder of

Gary (Ind.) Post-Tribune is an appropriate tribute to Ambassador Abba Eban of Israel.

Ambassador Eban has well served his country and the free world in representing the only beachhead of freedom remaining in this particular area of the globe:

#### ABBA EBAN GOES HOME

Ambassador Abba Eban has headed back to Israel, concluding more than a decade of service as representative of his nation in Washington and at the United Nations in New York.

Eban has brought credit to his profession as a diplomat, both as an ambassador in Washington and as permanent representative of Israel at U.N. headquarters. Some measure of his ability is reflected by the fact that he is being replaced by two men.

He has been a persuasive and eloquent spokesman for his country. Many of the farewell tributes to him have cited the brilliance of his speaking. A sample, on the occasion of Israel's 10th anniversary, carries Eban's vision of Israel's future:

"The 20th (year) will find Israel abloom, with Jordan waters carried southward to the dry places. The pulse of commerce will beat strongly between Elath and the eastern continents, while the links grow tighter between Israel and her own Mediterranean world. Nuclear and solar energy will bring freedom from the servitudes of imported oil, and give Israel a horizon as broad as its scientific disciplines can reach. \* \*

"Peace, the final gift, is in the hands of others, although its pursuit is still among the first laws of Israel's policy."

Eban is returning home to run for the Knesset (Parliament). Assuming his election, he should be a strong force there for international responsibility on the part of Israel and for working out the peaceful and prosperous situation he envisages for his homeland a decade in the future.

#### Mr. Strauss' Integrity

EXTENSION OF REMARKS

## HON. FRANK T. BOW

OF OHIO

IN THE HOUSE OF REPRESENTATIVES
Thursday, June 4, 1959

Mr. BOW. Mr. Speaker, I believe it is of importance to the Members and to the American people generally to have the views of an outstanding, widely respected leader of the Washington community, Rabbi Norman Gerstenfeld, concerning the character and integrity of Secretary of Commerce Lewis Strauss. In reply to an editorial in the Washington Post, Rabbi Gerstenfeld has written a letter to that newspaper which I ask leave to include with my remarks:

#### MR. STRAUSS' INTEGRITY

For weeks now I have been observing the debate over the confirmation of Lewis Strauss with a sense of deep frustration.

By temperament and philosophy I am strongly disinclined to involve myself, however, indirectly in any political controversy; but by conviction and sense of duty, I feel I must offer my personal witness to the integrity of Lewis Strauss in the face of the unceasing attacks on him. Your editorial recommending that Mr. Strauss withdraw can serve only to encourage these unfair attacks.

I am constrained to write you now only because I feel I must in good conscience and simple justice present the evidence based on years of association and friendship with Lewis Strauss. I do not want to be neutral while a man's most precious asset, his good name, is being callously sacrificed.

He has not asked my help and I have no idea of whether he will welcome this letter. But I think you ought to know that in a score of ways over many years Lewis Strauss has demonstrated to me and to many, many others a high sense of civic and social responsibility.

You have only to look at the record to see the variety of his civic and spiritual contributions and commitments. Believe me he has served these causes well and honorably.

It is simply inconceivable that the Senate should permit a record of attainment and character established over many years to be torn down.

Lewis Strauss will live in history as a spiendid example of integrity and ability. If the Senate gives true weight to his qualifications-and indeed to the precedents it has established and followed for 100 years it will confirm him.

RABBI NORMAN GERSTENFELD.

#### Peison in Your Water-No. 101

EXTENSION OF REMARKS OF

## HON. JOHN D. DINGELL

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Thursday, June 4, 1959

Mr. DINGELL. Mr. Speaker, pursuant to permission granted I am inserting into the Appendix of the Congressional RECORD an article appearing in the Denver (Colo.) Rocky Mountain News of November 22, 1958, entitled "Residents Fan Controversy Over Fitness of Water Supply":

RESIDENTS FAN CONTROVERSY OVER FITNESS OF WATER SUPPLY

(By Bill Kostka, Jr.)

Baker Sanitation District residents fanned the controversy, over whether water in the area is fit to use, with angry statements Fri-

Mrs. W. A. Robinson of 7089 Masey Street, said, "a chicken can walk across Clear Creek Without getting wet. What can you expect to find in water from there but sewage?"

Mrs. Robinson was a spokesman for a citizens group that asked the Denver Water Board for service in the area northwest of Denver. Water board officials said additional service could not be supplied now.

#### STANDARD MET

Officials of the State and tricounty health departments stated Friday the water met 'minimum standards of safety."

Joseph E. Vigfl of tricounty said, "We found 15 unsafe samples out of 30 we tested in October, but we haven't got a single un-

safe report in November."

Vigil added, "I think any sanitation district has more of a responsibility than just Providing safe water. The water must be potable—good to drink."

He said the water could be safe and still have a bad odor and poor taste.

Mrs. Robinson said, "We have flavors that vary from day to day. We never know quite what the water will taste like."

#### ILLNESS CITED

She said the water has a "fishy, nasty smell. It is sometimes so chlorinated you can't even get a glass close to your nose."

She added, "My children get intestinal cramps and diarrhea when they drink this water.

George Prince of the State health department said he didn't "feel there is any great peril out there. We are concerned about the situation because they do have tough water

Prince said the quality of the water drawn from Clear Creek drops during the summer

When two wells under construction are completed, they should be able to provide enough water for winter months, he added.

"They could have been a little more cautious," Prince said, "but they have the facilities to turn out good water."

Larry J. Anzalone, Adams County Civic League president, said the wells should be completed in a week.

Mrs. Robinson said her doctor told her not to let "my children drink this water. We carry water for drinking from Denver,

"When you carry water." Prince said, "you can create a sanitary problem that is more dangerous than the water was to begin with."

Vigil offered some hope of eventual relief.
"The two deep wells will help the situation quite a bit. Once the lines are flushed out, the water will be better," he said.

## Ouincy Junior College-South Shore's Educational Challenge-Part I

EXTENSION OF REMARKS

#### HON. JAMES A. BURKE

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Thursday, June 4, 1959

Mr. BURKE of Massachusetts. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article written by Glenn A. Mc-Lain, professor of social studies, Quincy Junior College, Quincy, Mass.

Professor McLain has written an excellent article which explains in detail many of the problems confronting the youth of our Nation. The reports thus far on the Quincy Junior College have been most gratifying:

QUINCY JUNIOR COLLEGE-SOUTH SHORE'S EDUCATIONAL CHALLENGE

(By Glenn A. McLain)

On December 18, 1958, Quincy Junior College, a commuters educational institution, received State approval and authorization to offer a full 2-year program. To many in Quincy and the South Shore this represents a signal victory and the end of a 5-year struggle to establish a recognized junior college. To others who know the real nature of the problems still facing this college without frills, the important challenges lie in the immediate future. The past, present, and future of this unique educational development should be the concern of every civic minded citizen in Quincy and the South

Since the advent of sputnik in 1957 and with great public attention focused upon America's educational needs by the chal-lenge of Russian education, our 49 States and the Federal Government have been struggling with these serious nationwide problems. Quincy and the South Shore are now facing the most important call to public activity ever to develop in this area for many years. Nineteen hundred and fifty-nine is the year of decision for those public spirited citizens and educators who have struggled

with few resources but much imagination to create an educational institution which will serve the South Shore community, the expanding needs of local business for specially trained students, and for college-bent youngsters who have been forced to postpone their educational plans because of overcrowded conditions in nearby institutions.

It is the duty of every citizen in this area, every parent who wants a good but less expensive college education for his children. and for every businessman and adult who firmly believes in local improvements in higher education to meet this need-head onfor the expanding program of the Quincy Junior College. In order to evaluate this fast-moving activity in Quincy it is necessary to trace the 3-year history of the college from 1955 to the present time.

After the close of World War II many Quincy citizens, including the school committee, began to think seriously about the growing need for a community or junior college. These civic leaders were well aware of the fabulous growth of public junior colleges in the United States during this period. They also knew that changing economic and social patterns in the South Shore foretold new solutions for post high school educational developments in the near future. Their thoughts and plans were highlighted in 1953 and 1954 when Dr. Frank Wiley, of Harvard, released a study made at the request of Dr. Paul Gossard, superintendent of the Quincy schools, showing urgent needs for a 2-year

college in Quincy.

The Wiley report became the Magna Carta of the Quincy Junior College movement. It emphasized that such a program could be inexpensively supported by student tuition fees, the South Shore community, and possible funds from city of Quincy sources. A privately sponsored citizens study committee immediately swung into action to scientifi-cally survey the needs of Quincy and the South Shore: Evidence collected by this group and later presented to the school committee showed that postwar changes in manpower needs, educational facilities not readily available for students in Massachusetts and the prohibitive cost of higher education made the eventual establishment of a Quincy Junior College a vital necessity.

In the fall of 1956 it was obvious that skyrocketing college enrollments in the area were beginning to force these problems into public view. All the facts showing over-crowded colleges in and around Boston, the suitability of a low-cost Quincy community college where ample classroom space was available with no capital outlay were once more brought before the school committee by the citizens study committee civic leaders in the South Shore. This time led by Chairman Fritz Streiferd, the committee was backed up by the taxpayers association, the PTA council, church groups, and citizens from all walks of life.

The go-ahead signal was given by city officials for an experimental program to offer two college level courses at Quincy High School during the evening. On that date in September 1956 the fledgling Quincy Junior College, conceived in crisis and dedicated to serve the needs of the South Shore, was born in a spirit of hope and promise for the future.

Some strong reservations were held by a few civic leaders about the program for two practical reasons. Rising tax rates for homeowners and the very newness of the junior college idea in New England prompted a number of letters to the editor of the Quincy Patriot Ledger. The Ledger, in the tradition of both good civic spirit and the best traditions in journalism commented, sometimes adversely, in its editorial columns. All of these exchanges in public opinion were in the New England tradition of the town meeting spirit, and they helped those for and against the plans to clarify their objectives.

Critics of the program doubted whether any real educational needs demanding a junior college existed in this area, whether enough well-trained college instructors could be found and whether an expanding program would be expensive for the taxpayers. This kind of democratic give-and-take which reached the community level in Quincy from 1953-57 helped to stimulate public thinking on the subject. As the true facts have become known showing steady increase in enrollments to cut program costs, the hiring of excellently prepared and experienced in-structors and the exceptionally low cost of the entire operation of only \$3,500 to the city of Quincy from 1953 through 1958, there is now only token opposition to the Quincy Junior College. Where there is opposition today it is only found among those citizens who have not had the opportunity to study the role of the college in the local, State, and national picture.

QUINCY'S JUNIOR COLLEGE GROWS RAPIDLY

The experimental program started in 1956-57 offered two college level courses. While only a few students registered for the beginning program, the practical nature of the offerings and the urgency of higher educational needs on the South Shore soon made the effort worthwhile. Educational and civic laders all over New England alerted the general public during this period on the growing needs for public community colleges.

In Quincy the citizens study committee already creatively active in this field expanded its operations to form a corporation spotlighting South Shore's educational needs. The reports, special studies, and pioneering efforts of this group pointed up that New England was last in the Nation in providing higher educational facilities for its young people and adults. Spurred by this progressive type of public stimulus the Quincy School Committee approved a full freshman year of college courses for 1957-58. Previous predictions from South Shore educational and community leaders for the rapid yet conservative growth of this new institution were more than justified by the academic record of the college.

Sixty-seven students registered for one or more of the five courses offered in 1957-58. Classes were made up mostly of newly graduated high school students and well qualified adults. Excellent professors from Harvard, M.I.T., Eastern Nazarene, Tufts, Boston University, and other nearby colleges provided a high level of instruction with professional guidance for the students wishing to transfer to other colleges. The professional success of the program was proven in December 1957 when the Quincy School Committee officially changed the name of the program from college level courses to Quincy College. The combination of forward thinking on the part of the school committee and the educational fervor shown by the citizens study committee had won the first big victory for the junior college. challenges ahead were just beginning to show themselves, and their local implications were crucial for all citizens.

# PROBLEMS FOR QUINCY JUNIOR COLLEGE IN 1957-58

In January, 1957, Dr. Charles Akers took over the administration of the program as a part-time director succeeding Prof. Timothy Smith. Educational problems of every sort pressed for immediate solution in Quincy, the State, and throughout the Nation.

On a national level Sputnik I had galvanized the U.S. Congress to study the American educational dilemma. At Senate hearings held through 1957-58 America's schools were shown to have failed in many respects to have kept up with the eruption of new knowledges and techniques to run a modern society. Of special importance to Quincy Junior College were the facts developed by

Congressional Committees concerning America's waste of it's most precious asset—the minds of it's youth. Because of smugness miserliness, and the diversion of energies to bigger tail fins on cars instead of taking care of our educational needs we lagged behind the Russians in the basic struggle for survival.

Here in Massachusetts prominent public figures led by former Harvard President James Conant and the Furcolo Commission for the Audit of State Needs sounded the educational alarms for a completely new post-high school educational program. High on the list of new programs for Massachusetts was a comprehensive plan for nine new regional junior colleges. In the closing days of the 1958 legislative session the Furculo program was passed by an overwhelming matority.

Thanks to the legislative efforts of Representative Carter Lee and other South Shore officials the Quincy Junior College gained legal State approval for tuition subsidies up to 50 percent of the deficits incurred in any college year. This kind of imaginative educational support by South Shore political leaders gives great promise for larger State aid in the future.

The new director was successful in creating high standards for the curriculum development of Quincy Junior College. proval was gained from the State Board of Education for a 1-year program. Cooperation and support came from outstanding educators, private citizens and the school committee in the long range plans of the school. The Board of Directors of College Courses Inc. (the former study committee) led by Attorney Melvin Thorner and Cyril L. Mc-Carthy was designated by the school com-mittee as a development council to aid in furthering the aims of Quincy higher edu-cation. A volunteer Academic Policy Committee composed of 10 outstanding educators guided the academic destinies of the college. The carefully planned development of the educational policies of the college in 1957 pointed the way to a future program of sound fiscal policy in the true Quincy philosophy. The Yankee tradition of sound educational and financial investment in the youth of this area gave every promise for a permanent future for Quincy Junior College.

There were still a few people in Quincy during this first year of a regular program at Quincy Junior College who had incorrect or no information about the operation. No funds were available for the printing of educational publicity to tell of the progress, plans and expected future of the junior college. The greatest problem remaining at the close of the school year was the need for public understanding concerning Quincy Junior College. What was really needed was a "quick course" for the general public and for some skeptical city fathers who still visioned the City of Presidents as one where a public junior college was not fashionable. Gradually, since that time many of the watchers of the public purse have begun to view the Quincy Junior College in the total State and national picture. In looking at this total view it is necessary to trace the junior college movement in the United States from 1902 to the present time.

# QUINCY JUNIOR COLLEGE IN THE NATIONAL AND STATE PICTURE

The record of the public junior college has been mostly unknown in New England until recent years. Educators and civic leaders in this area, because of historical reasons, have often felt that a junior college was a sort of a finishing school for girls or perhaps a postgraduate attempt to provide courses for high school misfits.

The rapidly changing nature of the American community in our space age society has dramatically changed these "Athens of America" New England ideas throughout

Massachusetts. The public junior college has emerged from a historical background to which the private junior college has made major contributions. Although the private and public junior college have a number of features in common they are very different in sources of financial support, agencies of control, in clientele, purposes and curriculum. These factors have to be carefully considered by the taxpayers if the public junior college movement in Quincy and the South Shore is to gain the confidence of public opinion.

Quincy Junior College represents a strong educational promise to the youngsters and adults who urgently need its services. It is a vital reality that can only be appreciated by looking at the national, State and local situation in total perspective. This problem must be viewed with the unprejudiced eye of the alert public minded citizen who knows New England once led the Nation in educational pioneering, but who also knows of our State's educational lag at the present time.

The first public junior college in America was founded in Joliet, Ill., in 1902. The basic reasons for the establishment of this type of institution have remained much the same since then. Junior colleges have always had several advantages. The most important are that costs are always low and their services always go to a large percentage of people who otherwise would have lost their educational opportunities.

Studies show that twice as many high school graduates go to college in areas where junior colleges are located than go to college from areas where they are not available. When it is considered that over 50 percent of the collegeable high school graduates in the South Shore and in the Nation do not go to college, the role of Quincy Junior College becomes of major importance.

In the nation there are now over 654 junior colleges enrolling over 1 million partand full-time students—nearly one-third of all institutions of higher education. There are 12 two-year colleges enrolling over 9,000 students each. Eighty-nine percent of these colleges are publicly controlled, showing the nationwide acceptance of the value and necessity of junior college programs. Easy accessibility of colleges geared to local areas, inexpensive tuitions and flexible curricula have resulted in explosive expansion since 1940.

Only in New England where tradition centered citizens, always thinking of the ancient past when the then easily available private schools had room for all eligibles has remained out of this important national educational development.

Strong steps in the direction of a new type of realistic thinking about New England's need for junior colleges were taken in 1957 at the New England Regional Conference for President Eisenhower's Committee Beyond the High School. In a ringing criticism of past failures in this respect, the Committee called for more junior colleges to provide feeder courses for the universities and for terminal degrees for those students who needed special training for the increasing demands of competitive industry. group of outstanding Massachusetts citizens at this meeting emphasized the role of publicly supported junior colleges like Quincy by showing that State educational problems were so large that they were beyond the scope of private institutions.

# THE 2-YEAR COLLEGE IN NEW ENGLAND AND MASSACHUSETTS

About 8,500 full-time and 6,000 part-time stadents are enrolled in 28 of New England's 2-year colleges. These institutions include junior colleges and technical institutes. All but three of these, Newton, Holyoke, and Quincy are private or church affiliated, of-tering general liberal arts or highly specialized terminal occupational courses. All of

the three public junior colleges in New England are located in Massachusetts.

Newton Junior College is New England's only daytime public junior college. Newton offers a liberal arts program with sub-groups in pre-engineering, pre-teacher training and seven other fields. It is a low cost com-munity accepted institution keyed to the special needs of a modern bedroom city.

Holyoke Junior College is a publicly controlled suburban coed college offering ter-minal occupational programs, liberal arts and other courses. Holyoke gives a real opportunity for low cost education with yearly costs of about \$400. The Holyoke community has fully accepted this multipurpose program as an asset to the entire area.

The newly created Furculo two year regional community college bill offers exciting possibilities in Quincy, Newton, and Holyoke. No legislator on either side of the aisle knows exactly how the Governor's \$43 million proposal will influence the Quincy development. In the view of State Educational Commissioner, Owen B. Kiernan, "Cities operating their own college program may one day wish to turn control of their institutions over to the State, lightening the burden on their own taxpayers."

Now that the State department of education has officially approved Quincy Junior College it is possible that State authority will be given to lower tuition to the level of In this case, the State Teachers Colleges. instead of tuition costs of \$450 yearly, students would take a full year's program for about \$150. Such a development could immediately triple the enrollment at Quincy

Junior College.

Whatever benefits might eventually come to Quincy Junior College from the new State junior college plan, higher education will continue to advance under the existing program in Quincy. The expanding needs of Quincy Junior College in 1959-61 will be best served by a combination of both local and State support. Local citizens must always keep in mind that there are no real set patterns in developing control of public junior colleges. A combination of local, State and even national control would not be without precedent.

# Our Foreign Trade Dilemma

EXTENSION OF REMARKS OF

# HON. JAMES C. DAVIS

OF GEORGIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, June 3, 1959

Mr. DAVIS of Georgia. Mr. Speaker, the foreign trade position of the United States is becoming a subject of increasing concern to all who are vitally affected by our foreign trade policy.

The usual conclusion, now so often expressed, is that we are pricing ourselves out of foreign markets and at the same time making our own market more attractive to imports. The result has been not only a decline in our exports in the magnitude of 20 percent in the past 15 months but a concurrent increase in imports, Beyond that we have lost over \$21/2 billion in gold since the beginning of 1958 while more and more of our industries are undertaking production overseas as the only means of holding their foreign markets.

Mr. Speaker, it seems to me that not enough attention has been given to the

rising productiveness of other countries as an explanation of their stronger competitive position. A vast amount of modern equipment, machinery, and apparatus has been shipped abroad by this country in the past 10 or 11 years. In considerable part this was done under our foreign aid program, with the remainder going out in the form of commercial exports. The total amount has been in the neighborhood of \$30 billion.

Let me point out that \$30 billion worth of machinery is a vast quantity of machinery, enough to equip thousands of factories, mills, and mines.

Of course, not all foreign industry has been modernized but obviously much of it is now either mechanized or well on the way. Some foreign plants, according to reports of American industrialists, are now equipped with more modern machinery than many of our own plants.

Considering the low wages generally prevailing abroad it should stir little wonder in us when we see the competitive results of these developments. It seems perfectly clear that the increased productivity in foreign countries, not offset by proportionate wage increases, has greatly improved the competitive advantage already enjoyed by many coun-

I believe, Mr. Speaker, that this development poses an extremely serious problem not only for particular industries in this country but for the economy of the United States.

If we can only continue to export at high levels if we continue to subsidize our producers or only by extending our subsidies into new areas, we are actually on the run. This is the very spot where we find ourselves today, and we should reexamine our position.

The remedy that we now have under the escape clause is almost worthless. It offers very little assistance because of its negative administration. tinue to expose our industries to relentless competition from abroad and then do nothing or almost nothing to offset the highly damaging effects of the exposure. In the face of this situation we are in Geneva right now planning another tariff-cutting conference.

We have a prime example of this exposure in the textile industry, in the smaller iron and steel companies and many others. Their own costs have risen sharply as a result of national policies and their competitive capacity has deteriorated in the face of foreign producers that do not bear the same cost-raising burdens as our industry.

On this subject a recent address by O. R. Strackbein sheds a light that has been sadly lacking. Mr. Strackbein has supplied us with a statistical analysis of the great expansion and inflation that have occurred during the past two decades in this country and their competitive effect. I urge all Members to read carefully what he has said. Under leave to extend my remarks in the RECORD, I include this address recently delivered in Chicago before the Antifriction Bearing Manufacturers Association:

OUR FOREIGN TRADE SLIP IS SHOWING

(Address of O. R. Strackbein, chairman, the Nationwide Committee on Import-Export Policy, before the Antifriction Bearing Manufacturers Association, Chicago, Ill., May 28, 1959)

In 1958 our commercial exports declined some 16 percent from the level of 1957. They have receded another 6 percent during the first quarter of this year compared with 1958. Imports, on the other hand, have increased, some 12 percent during this same first quarter over the year-ago level. In fact, during March of this year imports reached the highest monthly level in history, at \$1.3 billion for the month. I have read also that in March of this year the shipments from the United Kingdom to this country exceeded her imports from us for the first time since 1865.

In 1958 the United States ran a deficit of \$3.4 billion in her total foreign account. This included all transactions, such as tourist expenditures abroad and foreign investments, no less than merchandise imports and ex-

Are these trends merely surface symptoms, nothing more than passing ups and downs, such as might be expected at any time, or

do they have a deeper meaning? Should we be surprised at these foreign trade developments? What are their impli-

cations?

The first thing that should be said is that what we are witnessing today is not something that has come up overnight like a thunderstorm that will be gone tomorrow. We are confronted with something that has been building over the past 25 years. It consists of the fruits of two opposing lines of national policy.

The one is the outcome of our domestic

economic policy and the other is the fruit of our foreign trade policy. These policies have been contradictory but, because of many powerful interferences, such as war and subsequent defense measures, their fundamental clash has until recent years been well concealed. Therefore, the public has been oblivious of the effects rather than ready for them.

There is a third element that exerts a profound influence. This is our general foreign policy, deeply absorbed in the conflict with communism. It injects international power politics into the economic field and has succeeded in obscuring what is and what is not good foreign economic policy. It presumes to override all other considerations and to subordinate them to the supposed needs of diplomacy as interpreted by the State Department

Let us see if we can line up the ranks of the two opposing forces of economic policy, the domestic and the foreign, and then try to see what the effect has been on the inter national competitive standing of the United States. What are the implications for our domestic economy and for our foreign trade position?

On the domestic side we must go back 25 years to the inception of the domestic economic policies that have generally prevailed since 1933. It will be seen that the legislative measures that were adopted had among other objectives the increase of income in the hands of consumers. This policy then was concerned particularly with employment, labor wages, farm prices, and economic cushions against downslides. The increase of employment at higher wages was looked to as a means of increasing purchasing power while at the same time reducing the burden. Farm price supports were likewise justified in the light of enhanced purchasing

These general policies proliferated in many directions. Obligatory collective bargaining was conceived as a lever for raising wages. Minimum wages and outlawry of child labor were to eliminate the sweatshop and to remove wages as a source of competitive advantage to employers. The shorter workweek was to help spread employment. In 1946 the Full Employment Act was passed, formalizing policy in this field.

Agricultural legislation also went beyond price support into crop curtaliment, soil conservation, fertilizer subsidies, building of dams, subsidization of surplus crop exports,

etc.

The part of the program that concerned itself more with prevention of a slideback into depression took the form of unemployment compensation, bank deposit insurance, public works programs, etc., including deficit financing.

I am not concerned here with the merits of these economic programs. Whether they would have succeeded in achieving the level of employment that came with war production, is also beside the point. The that World War II bolstered the policies by creating high demand while restraining normal peacetime consumption. The post-war years to 1948 saw superimposed upon our domestic demand the call for vast shipments abroad to the war-devastated coun-This fact kept the wheels of our reconverting industry whirling. Then came the Marshall plan and in 1950, after the first postwar recession, the Korean outbreak; and thereafter the vastly expanded defense program. Each of these events broadened demand and thus supported widespread domestic industrial expansion.

The upshot was that the goals of high wages, high employment, high farm prices, swollen exports and therefore of high consumer purchasing power were achieved if not, indeed, thrust upon us. Average hourly earnings of production workers in manufacturing industries increased from 63 cents per hour in 1939 to \$1.08 in 1946, the first postwar year. By 1949 the rate was \$1.40 per hour. This was the pre-Korean rate. The \$2 mark was reached in September 1956. At the end of 1958 it had risen further to \$2.19.

The gross national product also showed a phenomenal upthrust. The figure was \$100.6 billion in 1940. In 1946 it had more than doubled to \$209 billion. Nineteen hundred and forty-nine found it at \$257 billion and the end of 1957 saw it at \$434 billion. It then fell back but has since passed that point and moved to the alltime high

of \$467 billion in April 1959.

Corporate profits after taxes rose from \$5.9 billion in 1939 to \$22.1 billion in 1950, then back to \$21 billion in 1956 and slightly further back, to \$20.2 billion in 1957. No figures for 1958 are at hand; but there was some decline. The parallel between the wage rise from 1939 to 1958 and the rise in corporate profits after taxes is phenomenal. Wages, to repeat, rose from 63 cents per hour in 1939 to \$2.19 in 1958; profits from \$5.9 billion to a figure of about \$21 billion, giving each a 3½-fold increase.

Employment-rose from 45.7 million in 1939 to 66.5 million in June 1957 and stands right at 65 million today. The payroll index of employment in the manufacturing industries has increased (1947-49 equals 100) from 34 in 1940 to 162.7 in 1957. Of this nearly five-fold increase, the expansion of the labor force by some 45 percent accounts for a considerable part.

Agricultural, forestry, and fishery income increased from \$6.2 billion in 1940 to \$16.8 billion in 1957. The highest point was in 1950 at \$17.2 billion. This increase was smaller than in the wage and profit field. A decline in farm population offset this to some extent in point of per capita returns.

These figures give us all the evidence needed to demonstrate that our economy has indeed boomed.

Along with this expansion our public debt also ballooned from \$40.4 billion in 1939 to

about \$285 billion at present. The annual interest payments on this debt has risen during the same period from \$0.94 billion to \$7.2 billion.

Our Federal expenditure in 1939 was \$8.7 billion. In 1958 it was \$72.8 billion. The present budget is some \$77 billion.

Wholesale prices (all commodities), where 1947-49 equals 100, stood at 50.1 in 1939 and rose to 103 by 1948, representing a doubling, and then on to 119 in 1958.

Purchasing power of the dollar, as measured by consumer prices, where 1947-49 equals 100, has fallen from an index of 166.9 in 1940 to 83.2 in 1957. This was a drop of 50 cents on the dollar.

These latter figures on wholesale and consumer prices indicate to what extent the other great mushroomings cited above were merely bloated expansions without substance and how much of them was solid. Our current Federal budget, if deflated to the 1939 price level, would fall in the neighborhood of \$38 or \$39 billion instead of the actual \$77 billion. The lower figure would still represent a massive expenditure.

The significance of these statistics in the field of international trade competition lies in the effect produced on our cost of production. If other countries did not suffer a similar increase in cost burdens they have gained a competitive advantage beyond that previously enjoyed, assuming that productivity here and abroad remained the same.

Many of our legislative measures did increase production costs of our producers and manufacturers. Among these are farm price supports, social security, and obligatory collective bargaining. Other factors that contributed heavily were profits, the war, and the postwar defense program. The taxes that followed in the wake of war and as a result of defense expansion also come out of production in the end and therefore represent increased costs.

To the extent that we helped other countries rebuild their industries and agriculture (and this we did extensively) we lifted from them overhead burdens that would otherwise also have raised their costs.

Now, while we were increasing the costs of our production through these various legislative measures and as a result of military events, on the domestic scene, we very busily engaged in activities that produced opposite effects in our foreign economic policy. This is to say, on the domestic front we embraced State control and extensive interference with the free market, through law and regulation, aimed at higher prices, higher wages, and higher income in general, while on the seaward side we became obsessed with the idea that the best medicine was free trade or a laissez faire policy. We started walking apart.

We greatly reduced our tariff even though it should have been clear that our international competitive position must deteriorate as a result of our domestic economic policies, unless other countries adopted policies similar to ours. In agricultural commodities this became very clear when our high prices drew imports of potatoes, cheese and other products into this country with the efficiency of a magnet. This was also true of industrial products but the fact was obscured because of the strong consumer demand in general which absorbed imports. and because the Government was under no obligation to buy domestic glassware, bicycles, watches or other items that were menaced by imports. The idea gained ground that farm products that were menaced by imports were in a class by themselves simply because the Government bought them; but actually some industrial prodbecause the Government bought ucts were equally exposed.

Three principal steps that we took, beginning with tariff reductions in 1934, were sure to weaken our competitive position. They were (1) we reduced the average protective effect of our tariff by very close to 80

percent; (2) since the institution of the Marshall plan we have shipped abroad approximately \$30 billion in machinery; (3) we have escorted upward of 8,000 foreign productivity teams through our plants with the express purpose of teaching them our techniques, production methods, assembly line routines, labor-saving devices, and so forth.

The effect of this combination has been greatly to improve the competitive position of our foreign competitors. Just as we are no longer in the foreign tin the missile and satellite field, we are fast losing our technological and productivity lead in industry.

To be sure, wages have also risen in other countries. Prices and profits, too, have moved upward. Social security likewise has

been expanded.

Yet, even though some other countries have in the past 5 or 6 years moved up with us, three factors have almost as surely widened the competitive gap. In the first place our upward trend in wages and profits and prices after the war began several years before the rise really got underway in the other countries. In the second place, obligatory collective bargaining here, together with other differences, made our labor organizations more effective in escalating wages. Thirdly, other countries superimposed tens of billions of dollars worth of machinery on lower technological base and therefore succeeded in expanding output per man-hour of work more than has been our percentage of expansion from a much higher original When a modern machine replaces a handicraft operation, as has happened in many instances abroad since 1949, it increases output much more than when it only replaces a somewhat less modern machine, as is usually the case in this country.

What we see before our eyes today is therefore precisely what should have been expected. Our programs, both domestic and foreign, have been successful, for whatever reason, in accomplishing what we set out to do; but have brought with them some un-

welcome byproducts.

In the process our exports have begun to slip; our imports are rising and many of our industries are opening branches abroad or making manufacturing arrangements of one kind or another. Lower wages and lower production costs abroad, resulting from mechanization, provide the magnet.

The proof of the pudding is in the eating. Rather than carry out their expansions in this country and shipping goods into foreign markets many industries have concluded that they cannot hope to serve foreign markets from the home base because of higher costs but must do so from abroad where lower wages and lower unit costs put them back into a competitive position. Some of them will no doubt, as some are already doing, ship foreign-made merchandise from abroad to this country. Others, in place of manufacturing abroad will no doubt do what still others have already done, namely abandon or curtail manufacturing here and engage in importation and distribution of foreign products.

Yet others no doubt will do what some manufacturers of assembled products have already found themselves forced to do, namely, to import parts for assembly in the finished product rather than buying the

parts from domestic producers.

All this adds up to a gloomy view both for exports and for any lively domestic industrial expansion that might be contemplated, except in new fields. Obviously industry will not be able to absorb the unemployed plus the new additions to the labor force each year if expansion in this country is dampened in favor of foreign plants and other investments overseas.

Exports may indeed be sustained or even expanded but only by taking a ride on the Treasury merry-go-round. Already we are subsidizing farm products to get back into

or stay in the markets out of which our farm policy effectively priced us. Loading the Treasury with further obligations merely means higher tax rates or deferment of tax cuts and this in turn will mean continuation of that much of a cost burden on production.

What is the answer?

Obviously the investment climate in this country must be made at least as attractive as the climate of foreign investment. This can only be done by removing the highly vulnerable competitive condition vis-a-vis foreign goods from which many and a growing number of our industries are suffering. If it is not done this country's economic position in terms of foreign competition will become untenable. All sorts of juggling and embarrassing retreats will become necessary. Much better to take the necessary steps before it is too late.

# Congress and President Must Face Up to Successful Communist Economic Aid Program

EXTENSION OF REMARKS

# HON. HENRY S. REUSS

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES
Tuesday, June 2, 1959

Mr. REUSS. Mr. Speaker, East European industry is pouring consumer goods, industrial equipment, and technical know-how into the vital Middle East to help the Kremlin win the economic colonic cold war. This Red economic offensive is much too successful to ignore.

Unless we face up to the successes of the Communist economic aid program, and unless we are prepared to take the economic offensive ourselves, we stand to jeopardize our status in the Middle East.

Mr. S. Lloyd Nemeyer, president of the Milwaukee Gas Light Co., is one of the many of my constituents who have stressed the importance of congressional and executive understanding of Communist efforts in this critical part of the world. He has called to my attention the following article, from the May 1959 issue of News Front:

RED SATELLITES DRIVE TO OUST WEST FROM MARKETS OF STRATEGIC MIDDLE EAST

Throughout the Middle East, the inscription "Made in Poland"—or Hungary, Czechoslovakia or even Bulgaria—is becoming at least as familiar as "Made in U.S.A."

The Baghdad policeman on a motorcycle, the Syrian grocer telephoning in a brandnew telephone booth, the passenger in a modern railway coach traveling from Cairo to Port Said, the Egyptian peasant gaping at his first farm tractor, might not even be able to find the Communist countries on a map—but he is constantly reminded that their industry is helping raise his standard of living.

The Soviet satellites' move into Mideastern markets, strategically supporting the Soviet Union's own economic offensive, has so far attracted dangerously little attention in the West.

East Europe's nationalized industry is in direct competition throughout the area with long-entrenched Western firms—and its leaders know it.

At a recent Hungarian foreign trade conference, the theme of competition with the West—and especially with the United States—was frankly and repeatedly stressed.

Gyula Karadi, Hungary's Deputy Minister of Foreign Trade, halled the 1958 U.S. recession as having had an "extremely advantageous effect on our trade offensive."

And the representative of the state-owned Beloianis Telephone Co. was greeted with roars of applause when he announced that it had broken Bell Telephone's "10-year monopoly of the Syrian market" with a \$1.2 million order for telephone switchboards.

The satellites began to penetrate the Middle East when they sought new markets to compensate for dropping raw materials prices and diminishing free world trade.

Today, however, cold war economics and psychology—winning customers away from the West and boosting the prestige of the Communist world among the uncommitted nations—seem to have taken precedence over the satellites' own real economic interests. Consumer goods and investment capital desperately needed at home are being poured into the Middle East.

Poland, in the midst of a grave economic crisis of her own, is building a sugar factory worth \$3.2 million for Iran, Bulgaria, one of the poorest and least industrialized of the satellites, has built several complete factories for Syria. And Hungary, which has one of the worst highway systems in Europe, has raised a 2,700-foot bridge—the longest in Africa—at Heluan, near Cairo, for politically temperamental Egypt.

Czechoslovakia, the world's fifth largest exporter of machine tools, has trebled its trade with Egypt over the past 5 years and increased its trade with Syria 11 times. Bulgaria's trade with both of these United Arab Republic members has jumped 11 times, and Poland's with Iran is up 25 percent, since

The satellites are offering everything from spectacular construction jobs to luxury consumer goods.

They have set up a special organization to coordinate their participation in construction of Egypt's partially Soviet-financed Aswan Dam.

The Czechs are building an oil refinery which will process 1 million tons of oil a year and are laying 42 miles of pipeline in Syria. Entire factories they have shipped and installed in Syria and Egypt include a sugar refinery, a cement plant with an annual capacity of 150,000 tons, a shoe factory, a ceramics factory, a rolling mill, and a bicycle factory. The Volce of the Arabs radio in Cairo now issues its denunciations of "imperialism" from two powerful transmitters built and equipped by Czech technicians.

Hungary is exporting machinery, motor vehicles, electric equipment, diesel engines, pumps, tractors and rails to the Middle East. Over \$20 million worth of Hungarian locomotives and railway cars are in use in Egypt alone. Hungarian engineers in Egypt are building a powerplant at El Tabin and three electronics factories. In five Middle Eastern countries, Hungarian matches are on sale and newly emancipated girls are wearing made-in-Hungary sweaters and lipstick.

Spartak cars from Czechoslovakia, Warsawas from Poland and Ikaros buses from Hungary are familiar sights on the streets of Beirut and Bagdad.

In exchange, the satellites are buying increasing quantities of Middle Eastern cotton, wool, phosphate, manganese ore, copper, rice and fruit.

The small nations of east Europe have a definite psychological advantage in the Mid East over the major Western Powers—and even over the U.S.R. itself. They have never played a political role in Africa or Asia, and are able to play effectively upon anticolonial feelings.

They make much of "aid without strings" for home consumption, too.

A Czech newspaper, discussing mideastern trade in a recent editorial, reminded its readers that the "other side of the export issue is equally important; we help these countries free themselves from colonial economic exploitation." And a Hungarian foreign trade official sounded the same themse in an interview: "Our exports to Africa and Asia are significant contributions to the cause of socialism."

But the success of the satellites' export program probably lies less in their skill in molding public opinion than in their ability

to ignore it.

Their leaders face no painful debates on foreign ald; they can ignore essential domestice needs because no one asks them for an economic accounting.

Thus, they can offer the underdeveloped nations of the Middle East—and those of the rest of Asia and Africa—everything from razor blades to power stations on a barter or credit basis, with deferred payment at low interest. They can underbid Western competitors, offer quick delivery and send along squads of technicians to service equipment and train local personnel.

And their customers, naturally, come back for more. As one Syrian businessman says, "It is none of our business if they want to

sell at a loss."

#### Sister M. Honora Honored

EXTENSION OF REMARKS

# HON. LOUIS C. RABAUT

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES
Thursday, June 4, 1959

Mr. RABAUT. It is a source of great personal satisfaction and an honor for me to ask for insertion into the Congressional Record of an excellently compiled and brief biography of a distinguished American educator. This American educator is Sister M. Honora IHM, who is the president of the Marygrove College for girls in my home city of Detroit.

For reasons that are personal to me I have intimate knowledge of her extraordinary achievements in the field of education and character building. I am especially pleased that her career, which has won her many honors in the past, has just been additionally recognized by her designation as the Soroptmist Woman of the Year by the Soroptmist Club of Detroit.

I would like to add on my own that few women in the history of modern education in the United States have had so profound an influence in the field of education as Sister Honora. Her personal qualities, the example of her character, her keen sense of humor, and her fine educational background have had a marked influence among a considerable student body, among faculty and among college administrators, in a life marked by industry, diligence, and progress.

The article by Vera Nolan of the Detroit Times follows:

#### SISTER HONORA HONORED

Sister M. Honora, president of Marygrove College, with outward composure but blue-gray eyes atwinkle under her stiffly starched coif, was pleased at being named Soroptimist Woman of the Year.

The award was given at the traditional dinner last evening of the Women's Service Club at the Women's City Club.

"But I don't consider the honor personal,"

she said. "It's for Marygrove."
Garbed in the voluminous habit of the religious. Servants of the Immaculate Heart of Mary, Sister Honora admitted that she was born to be a teacher.

She added one or two more remarks, then quickly admonished, "but don't print that." Her prediction of a teaching career has been borne out with a history of instruction which began back in Ann Arbor in 1916, when she taught at St. Thomas High.

She attended Marygrove College in the early twenties by way of the IHM Mother House in Monroe, got her masters at the University of Notre Dame, a Ph. D. at Fordham

University in 1928.

Then in succession she was professor of English at Marygrove, dean of the college until 1937, when she was named president. Sister Honora frankly admits that she has

liked everything she has been given to do in her lifetime.

"In the convent you do what you're told," she chuckled. "I've always liked that, too." From 1948-51 Sister was a lecturer at Catholic University workshops in higher education.

In 1952 she received the honorary degree of doctor of science in education from

Wayne State University.

Such recognition and her listings in Who's Who in America, the American Catholic Who's Who, Who's Who of American Women, Who's Who in American Education and the Directory of American Scholars disclose her aptness as a distinguished scholar in the field of guidance and college curriculum development and her ability as an administrator.

Her leadership in the field of higher education for women has produced an ideal of rounded academic training, community service, social responsibility, and family life grounded in a fine spiritual tradition which has become a way of life for thousands of

her alumnae.

She said: "We look more sheltered than we are. Almost 75 percent of all our hundreds of students earn all or part of their tuition. This we encourage.

"There is an essential necessity for women in the world to do the things that women should do.

"Pope Pius XII once said: 'Women should be where decisions are being made and be ready for them when they are made.' We try to prepare our young women for such an eventuality."

Sister Honora is convinced that higher education for women will continue progres-

"But there is great concern across the country about women's education."

She is not entirely sympathetic with co-educational institutions. "They were founded for men specifically.

"If sacrifices need to be made it will be the women on these campuses who will make them.

"For, on coed campuses there is a tremendous amount of unconscious prejudice in the general attitude toward feminine achievement.

"Eve was made on the same quality level as Adam," she pointed out. "But something happened."

On the subject of women's colleges, "they have a definite place in society and will always have it."

On the subject of the suggested 2-year college course for women, "an unfortunate situation with which I disagree.'

Can the educational processes rendered by the cloister mold well rounded citizens? "The philosophy of eduaction is set by the character of the college. Let them look at our graduates-their success can prove it."

The Big Squeeze on Little Steel

EXTENSION OF REMARKS OF

# HON. J. EDGAR CHENOWETH

OF COLORADO

IN THE HOUSE OF REPRESENTATIVES Thursday, June 4, 1959

Mr. CHENOWETH. Mr. Speaker, I wish to include in my remarks an address delivered by Mr. Alvin F. Franz, president of the Colorado Fuel & Iron Corp., before the American Iron and Steel Institute at New York on May 28.

I am happy to represent the district where the main plant of the Colorado Fuel & Iron Corp. is located. I refer to the Minnequa plant in Pueblo, Colo. I consider Mr. Franz one of our best informed men on steel, and I am sure his observations will be of interest to the Members of the House. His speech follows:

THE BIG SQUEEZE ON LITTLE STEEL

(By Alvin F. Franz, president, the Colorado Fuel & Iron Corp.)

#### INTRODUCTION

During the post century, the American steel industry has faced and solved many problems. However, I doubt that any of them were more critical than those we have before us today. They affect not only the steel industry, but also the entire economy, and present a threat to our American standard of living.

#### INFLATION

The basic issue underlying these problems is the inflationary trend that has persisted since the close of World War II, despite three recessions. Inflation has brought with it increasing costs, a rapid growth in foreign competition, inadequate depreciation allowances and, in some instances, the overseas migration of American business. These developments are challenging all American steel companies, both large and small. This morning I would like to discuss with you their impact on the smaller companies.

#### RISING COSTS

In spite of the present high operating rate, and the good financial performance of the steel industry during the first quarter of this year, we are all aware that steel production costs are constantly increasing. This is not a new problem, it has plagued both large and small companies for the past 15 years. However, during that time, no acute crisis was provoked since rising costs were, to a great extent, recouped through higher prices. But, in the past 2 years, it has become progressively difficult to raise prices in order to compensate for higher costs. For, during this period, we have witnessed the crystallization of a political and economic situation where continued price increases can no longer be counted on to recover rising

Therefore, because of political pressure, it will be much harder for the industry to raise prices high enough to cover any increase in cost that may develop this year. If such a pattern continues, and costs go up again next year, and the year after, getting price relief may well become an impossibil-This is not the statement of an alarmist, but a fact of political life in the United

It therefore seems to me, gentlemen, that one of the most pressing problems facing us today is how to keep the companies in the steel industry economically sound in a free enterprise system. With rising costs and little prospect of adequate price relief, the industry, and particularly the smaller steel companies, are faced with serious difficulties.

ATTACK ON COSTS

The true solution to these issues can be found only in a frontal attack on costs. Costs must be kept in line and, if possible, reduced-for, with price limitations, any increase in costs will further squeeze profit margins. This is evident from even a cursory study of steel industry finances and emphasizes the absurdity of the statement that the industry can absorb wage and other cost increases because of so-called exorbitant profits. Let us examine this statement and look as these so-called exorbitant profits, particularly the exorbitant profits of the smaller steel companies.

Consider the eight steel companies, including the Colorado Fuel and Iron Corp., whose annual ingot capacity falls in the medium range of about 11/2 to 3 million tons; net earnings for those companies averaged 4.6 percent of sales in 1957, and only 2.3 percent of sales in 1958. The average earnings of these eight companies for the 5-year period, 1954 through 1958, were only 4.4 per-

cent of sales.

Thus, it can be readily seen-certainly in relation to the smaller steel companies—that the catch phrase "wages can be absorbed because of exorbitant profits," is a myth. This proposal offers no solution to the problem of rising costs and stable prices. In fact, the management and the stockholders of any steel company must view with concern any suggestion resulting in lower profit margins that would threaten the security of the enterprise.

The attack on costs can be made in two ways: First, by fully modernizing plant and equipment to take advantage of the latest developments in technology, and, second, by keeping operating costs at a reasonable level.

#### DEPRECIATION

The modernization of plant and equipment requires large investments which should come, in great part, from depreciation re-These reserves are presently inadequate, due to postwar inflation, and a change in the tax laws to remedy this inadequacy is long overdue. The European and Japanese industries were modernized with the generous assistance of our Government. The American steel industry should now be helped by amending the tax laws so that a realistic depreciation allowance can be recovered to provide for most of the cost of replacing wornout and obsolete equipment. We certainly should be willing to do for ourselves what we have done for others.

A realistic tax policy should be adopted permitting us to recover the purchasing power of the original investment. This can then be reinvested in modern equipment and thus help reduce the cost of production. Such a reform in the tax laws does not constitute a subsidy. It merely returns to the investor what is his. I would like to stress most emphatically that the problem of in-adequate depreciation is not restricted to the steel industry alone. It affects all American industry.

In recent surveys the McGraw-Hill Co. made the shocking observation that a large proportion of the industrial plant and equipment in the United States is obsolete. Over \$95 billion will have to be spent-and spent soon-to bring our industrial facilities up to the best modern standards. Yet plans for 1959 call for little more than \$30 billion of actual expenditures.

Plant modernization is of paramount importance to the smaller steel companies who must rid themselves of obsolete facilities in order to maintain a competitive position. To modernize, their earnings must be maintained at a level sufficient to supplement inadequate depreciation charges, and, for the present, if costs go up, price relief is imperative to maintain these earnings. In fact, the smaller companies will be in greater need of price relief than the larger ones, for many of them have not had sufficient capital to modernize their plants fully. This is an

Item congressional committees do not seem to realize. In their attempt to bring pressure on the industry to keep prices down, they direct their attack against those companies who have had the capital to invest in new facilities and who have reaped the rewards of modernization through lower costs. They seem to forget that the smaller steel companies have not modernized to the same degree and so have higher costs which require price increases to cover these costs. Therefore, by keeping the price down when costs go up the protectors of the small businessman have, in reality, been squeezing his profits to an alarming degree.

#### AMERICAN FOREIGN PLANTS

Another result of the increase in the cost of production is the construction of plants by American companies in foreign countries. Thes companies, representing a wide variety of manufactured products, have felt it necessary to establish plants abroad to help retain markets and remain competitive. They have apparently concluded that a combination of American productive efficiency and foreign wages provide a solution to at least some of their problems. American-owned overseas manufacturing facilities now total billions of dollars.

An added reason given for the current interest in setting up foreign plants is that our Government is being urged to give a better tax rate to domestic corporations who would do most of their business abroad.

Many will present the point of view that any additional advantages given to foreign competition will only accentuate the problem of protecting American jobs, and that any tax reform should first be applied in this country.

#### FOREIGN COMPETITION

Foreign competition has become a problem of growing importance during the past 2 years. In many respects, its remarkable growth can be attributed to rising costs in the United States. This problem should be evaluated with a proper sense of balance, neither exaggerating its impact on the steel industry nor minimizing it. The plain-facts are—many foreign firms are well managed, aggressive and now have modern facilities. In a number of cases, their productive efficiency is equal to our own, and represents a serious competitive threat to our steel markets, both at home and abroad.

In 1957, the United States exported 5.2 million tons of steel mill products, and imported 1.1 million tons. But this ratio of almost 5 to 1—in favor of steel mill exports—dropped to less than 2 to 1 in 1958, when exports fell to 2.7 million tons, and imports reached a high of 1.7 million tons, This is significant enough, but more startling is the fact that in July and December, 1958, and again in January and February, 1959, imported tonnage of steel mill products was actually greater than steel tonnage exported.

Because of these developments, we appear to have lost much of our foreign market, and a portion of our domestic market is in Jeopardy. For example, the United States exported 721,000 tons of semifinished steel in 1957. This dropped to 124,000 tons in 1958—a decrease of 83 percent. Exports of structural shapes decreased from 453,000 tons in 1957 to 292,000 tons in 1958, while exports of plates declined from 604,000 tons to 249,000 over the same period—a drop of 59 percent. Exports of tinplate, an item in which the United States has long had a pre-eminent position, fell from 538,000 tons to 244,000 tons—a decrease of 54 percent.

Let us now have a look at the import side of the picture. In the domestic market we are at a competitive price disadvantage in such products as rods, barbed wire, nails, reinforcing bars, and other items. In 1958, for example, reinforcing ber imports totaled 473,000 tons, or about 200 percent higher

than 1957, and were equal to about 23 percent of domestic mill shipments in 1958.

Imports, until recently, were principally confined to common steel products, but, within the past year or so, a number of specialty wire products have arrived on the American market in alarming quantities. In 1958, imports of a number of steel products ranged from 30 percent to over 200 percent higher than in 1957.

higher than in 1957.

These are facts. In answer to these facts, it has been said that exports and imports represent a relatively small percentage of total shipments in the industry. Yet some companies, and, for the most part they are small companies, have been severely affected. It seems to me, however, there is a factor involved here far more significant than tonnages and percentages. It is simply this—the American steel industry in certain areas is no longer competitive with the rest of the world.

The reason behind this is no mystery. The European and Japanese steel industries were, in great part, destroyed during World War II and have been rebuilt with modern equipment, much of which was financed by the United States. Thus, many of their plants are as good as our modern installa-tions and far better than much of our older equipment. We no longer have the superiority in facilities that for years permitted us to pay higher wages, and still produce cheaper and better steel. Moreover, foreign producers have wage rates ranging from 66 percent to 86 percent lower than those paid in the United States, and, because of modern equipment, their productivity is increasing rapidly at our expense. While, in 1957, the American steel industry paid its workers \$3.22 per hour, including fringe benefits, the Japanese steel industry paid 46 cents per hour. This low labor cost, coupled with the increased efficiency of new equipment, clearly explains the reasons why a ton of Japanese steel products can be manufactured, shipped across the Pacific Ocean, stored and trans-shipped to American steel producing and market centers at a delivered price from \$20 to \$40 per ton less than the price of the American

In industry after industry throughout the country, more products are arriving from overseas. They are not confined only to raw steel. The mounting list includes such steel-consuming products as automobiles, sewing machines, typewriters, heavy machinery, electrical apparatus and many others. Whatever you make, your turn may be next.

#### AMERICAN JOBS

Gentlemen, I would like to reiterate:
Many foreign steel products are now being manufactured overseas by modern equipment. In fact, much of it has been provided by leading American machinery builders. Expanding foreign production and improved product quality has undoubtedly been influenced by the technical know-how freely given to foreign productivity teams, who have visited steel plants in this country.

Many are now asking—have we reached the turning point—are the economies of foreign countries being strengthened at the expense of our own? This is an interesting question and must be given consideration to appraise the impact this development will have on our standard of living.

Our standard of living is at present much higher than any other in the world. It is our intention to keep it this way. In the development of this standard the steel industry has made a substantial contribution and we are very proud of it.

Our national economy is built on pillars of steel. Through a large investment of capital the steel industry has created well over a half million jobs which now pay American workers an average of \$3.60 an hour, including fringe benefits. For each of the 500,000

workers directly employed in steel mills, nine others hold jobs in plants making steel products. The total accounts for more than one-third of all factory employment in the United States. If we are to preserve and strengthen these jobs for the American people, it is imperative for us to face foreign competition with improved equipment and low operating costs. We cannot afford to price ourselves out of foreign and domestic markets if American jobs are to remain secure. Unfortunately, at the present time we seem to be doing just that.

Foreign-made goods are purchased because they carry a lower price tag—certainly not because they are superior in quality. Our American workmen can produce goods equal to the best in the world—if not better. Therefore, if we are to retain the markets we now enjoy and recapture those we have lost—we must find a solution to the problems now facing the American steel industry. This calls for a united effort on behalf of all forces involved in production. Our responsibility is to help curb inflation and thus protect American jobs.

#### SUMMARY

Remember this, curbing inflation and keeping American production competitive is not a problem for steel management alone. It is also labor's problem and the public's problem. If our costs keep rising we will be faced with unemployment, a loss of business, and such a drastic decline in profits that the economic health and stability of our industry will be threatened.

This is a year of decision. If we can keep costs in line now, and for the next 2 or 3 years, and if we are able to get the proper depreciation funds to modernize our plants, we can better meet competition and solve the problems now facing the American steel industry, as we have in the past.

# LAWS RELATIVE TO THE PRINTING OF DOCUMENTS

Either House may order the printing of a document not already provided for by law, but only when the same shall be accompanied by an estimate from the Public Printer as to the probable cost thereof. Any executive department, bureau, board, or independent office of the Government submitting reports or documents in response to inquiries from Congress shall submit therewith an estimate of the probable cost of printing the usual number. Nothing in this section relating to estimates shall apply-to reports or documents not exceeding 50 pages (U. S. Code, title 44, sec. 140, p. 1938).

documents not exceeding 50 pages (U. S. Code, title 44, sec. 140, p. 1938).

Resolutions for printing extra copies, when presented to either House, shall be referred immediately to the Committee on House Administration of the House of Representatives or the Committee on Rules and Administration of the Senate, who, in making their report, shall give the probable cost of the proposed printing upon the estimate of the Public Printer, and no extra copies shall be printed before such committee has reported (U. S. Code, title 44, sec. 133, p. 1937).

#### CONGRESSIONAL DIRECTORY

The Public Printer, under the direction of the Joint Committee on Printing, may print for sale, at a price sufficient to reimburse the expenses of such printing, the current Congressional Directory. No sale shall be made on credit (U. S. Code, title 44, sec. 150, p. 1939).

#### CHANGE OF RESIDENCE

Senators, Representatives, and Delegates who have changed their residences will please give information thereof to the Government Printing Office, that their addresses may be correctly given in the Record.

# Appendix

Mr. Strauss' Integrity

SPEECH

OF

# HON. JACOB K. JAVITS

OF NEW YORK

IN THE SENATE OF THE UNITED STATES
Thursday, June 4, 1959

Mr. JAVITS. Mr. President, I ask unanimous consent to have printed in the Record at this point as a part of my remarks a letter to the editor of the Washington Post, published in the June 4, 1959, issue of that newspaper, on the editorial page, under the heading "Mr. Strauss' Integrity." The letter is signed by Rabbi Norman Gerstenfeld, minister of the Washington Hebrew Congregation.

There being no objection, the letter was ordered to be printed in the RECORD, as follows:

#### MR. STRAUSS' INTEGRITY

For weeks now I have been observing the debate over the confirmation of Lewis Strauss with a sense of deep frustration.

By temperament and philosophy I am strongly disinclined to involve myself, however, indirectly in any political controversy; but by conviction and sense of duty, I feel I must offer my personal witness to the integrity of Lewis Strauss in the face of the unceasing attacks on him. Your editorial recommending that Mr. Strauss withdraw can serve only to encourage these unfair attacks.

I am constrained to write you now only because I feel I must in good conscience and simple justice present the evidence based on years of association and friendship with Lewis Strauss. I do not want to be neutral while a man's most precious asset, his good name, is being callously sacrificed.

He has not asked my help and I have no idea of whither he will welcome this letter, But I think you ought to know that in a score of ways over many years Lewis Strauss has demonstrated to me and to many, many others a high sense of civic and social re-

You have only to look at the record to see the variety of his civic and spiritual contributions and commitments. Believe me he has served these causes well and honorably.

It is simply inconceivable that the Senate should permit a record of attainment and character established over many years to be torn down.

Lewis Strauss will live in history as a splendid example of integrity and ability. If the Senate gives true weight to his qualifications—and indeed to the precedents it has established and followed for a hundred years—it will confirm him.

Rabbi Norman Gerstenfeld,

Minister, Washington Hebrew Congregation.

Mr. JAVITS. Mr. President, I offer this letter for the RECORD because there is already in the RECORD a sermon from

another spiritual leader, rather going in

the other direction, against Mr. Strauss.

Normally we would not place such material in the Record, but it seems to me that in the light of the fact that one such statement has already been placed in the Record, it is in order to offer an affirmative statement, stating in the most direct terms the greatest confidence in his integrity, and that it is only fair to include it in the Record.

Supersecrecy in Science Is Self-Defeating Policy; Congress, President Clash on Key Housing Bill Issues

EXTENSION OF REMARKS

# HON. LYNDON B. JOHNSON

OF TEXAS

IN THE SENATE OF THE UNITED STATES Friday, June 5, 1959

Mr. JOHNSON of Texas. Mr. President, on May 14, the Corpus Christi, (Tex.) Caller published a thoughtful and intelligent editorial entitled "Supersecrecy in Science Is Self-Defeating Policy." This editorial is especially noteworthy, in that it points out the dangers of too much and too little secrecy in the scientific field.

On May 23, there appeared in the same newspaper an editorial entitled "Congress, President Clash On Key Housing Bill Issues." This editorial stresses the country's need for housing legislation, and the responsibility of the President to keep in mind the importance of housing as a factor in economic recovery. I ask unanimous consent that these two editorials from the Corpus Christi Caller be printed in the Appendix of the Record.

There being no objection, the editorials were ordered to be printed in the REC-ORD, as follows:

[From the Corpus Christi (Tex.) Caller, May 14, 1959]

SUPERSECRECY IN SCIENCE IS SELF-DEFEATING POLICY

Much has been made in some quarters of Soviet Russian theft of U.S. scientific secrets or developmental techniques. There are some who would have us believe that the United States is the only reservoir of basic scientific information in the world today.

The absurdity of this contention should be apparent. There is no such thing as a national monopoly of scientific talent. Since we have devoted more effort to translating Russian scientific publications, for instance, our own scientists have benefited greatly. A treatise on mathematical probability, for instance, written by a contemporary Russian mathematician, Kolmagaroff, is widely used in the defense research field in the United States. Again, we would not have been so surprised in October 1957 by the launching of the first Soviet sputnik had we read earlier

Russian articles on the subject of rocket development.

It is certainly true that Russians have profited greatly by reading United States and other scientific publications. We, too, have profited from reading Russian and other foreign publications in the field. But this is surely not an argument for not publishing new theories or techniques nor for classifying them as secret. The basic reason for publication is to inform one's own scientists and to avoid duplication in research. Just as important, publication of new theories often stimulates independent inquiry, intellectual thought providing a ferment for new lines of scientific approach.

One of the striking characteristics of sci-

One of the striking characteristics of scientists of every nationality is the near universality of their theory is rejected outright. Each is tested and only abandoned if its invalidity is established. Every scientist draws from the common reservoir of scientific knowledge. He proceeds along established lines from hypothesis to proof. It is the universality of approach that makes it possible for a Britisher and an Italian to arrive at the same conclusion while working independently.

One of the tragedies befalling the American scientific community is the assumption by many nonscientists that new discoveries can be kept secret. This has led to an excess of security consciousness. It has resulted in ignorance among our own scientists who may be pursuing a theory that has already been proved true or false by other scientists whose findings have been kept secret.

Perhaps there are national defense secrets in the scientific field that should be kept as long as possible. But the only persons qualified to determine the security classification should be scientists themselves—not bureaucrats obsessed with security. Furthermore, security classifications should be under constant, continuing review so that downgrading can give the widest possible dissemination of information.

Very few scientists, whether they be Russian, German, or American, would defend secrecy for secrecy's sake if they could speak their mind. They know that scientific advancement can be accelerated only if there is the freest exchange of information between all scientists. Only in the rare case of a unique discovery in the field of national defense is secrecy justified. Even then, scientists know that their fellows somewhere else in the world, thinking along parallel lines, will eventually discover the same thing.

[From the Corpus Christi (Tex.) Caller, May 23, 1959]

CONGRESS, PRESIDENT CLASH ON KEY HOUSING BILL ISSUES

Three important political issues came to a head with House passage of the omnibus Federal housing bill: (1) A balanced budget; (2) public housing; and (3) urban renewal. The House, like the Senate, resolved those issues against the administration; but the House, unlike the Senate, did not do so by a majority sufficient to indicate that an Eisenhower veto could be overridden.

If President Eisenhower vetoes the measure, the Democratic Congress will, of course, try to override the veto. Falling that, it would be hard-pressed to whip together passage of a modified bill to continue the FHA's self-liquidating home mortgage in-

surance authority, which has bipartisan support and is vital to the economy. A Presidential veto thus would be a closely calcu-

lated political risk.

In regard to the first issue, a balanced budget, the House-passed bili's \$2.1 billion program is closer to the President's \$1.6 billion recommendation than the Senate's \$2.69 billion figure. In view of the remarkable economic recovery now in progress and the related possibility of trimming other spending, it cannot be stated flatly that the House bill would "unbalance the budget" or that it is a "budget busting bill," as the House GOP leadership charged.

On the other two issues, continuance of public housing and an effective rate of Federal urban renewal aid, the congressional Democratic majority appears clearly in line with the popular mandate expressed in last November's national elections. The administration's opposition has vocal support, but it is obviously a sharply limited minority

support.

In the battle against creeping slums and health-hazard housing, American cities are patently incapable of solving the problems unassisted, and they have received precious little aid in their efforts from the various State governments. Given this situation, there is no discernible practical alternative to Federal aid. If private enterprise alone "can do the job," as often claimed, the fact remains that it has yet to demonstrate any such capability in any sizable city in the United States.

President Eisenhower may veto the final bill, which is likely to spilt the difference between the Senate and House figures. But if he does, it will probably cost the Republicans whatever political gains the current economic recovery now seems to promise.

# Income Tax

EXTENSION OF REMARKS

# HON. PHILIP A. HART

OF MICHIGAN

IN THE SENATE OF THE UNITED STATES Friday, June 5, 1959

Mr. HART. Mr. President, 3 weeks ago I sent to each Member of the Congress a series of articles from the Detroit Times entitled "The Real Truth About Michigan." Many responses from Members confirm my feeling that the Detroit Times, in presenting these articles to the public, was performing in the highest tradition the role of effective public servant, which some have suggested the press does not always fulfill.

I ask unanimous consent to have printed in the Appendix of the Record an editorial from the Times of Tuesday, June 2, and which bears further upon the subject of Michigan.

There being no objection, the editorial was ordered to be printed in the Record, as follows:

INCOME TAX

After months of bickering and name-calling, Michigan's major political parties have finally made it clear where they stand on taxes.

The Republicans want a sales or use tax. The Democrats want a tax on personal income, corporation profits, and financial institutions.

No reasonable person can quarrel with these proposals, or arbitrarily discard them because he may believe in one party philosophy as against the other.

These are merely proposals, to be treated as such until they have been carefully scrutinized under the spotlight of public opinion.

Taxes? We loathe them in any form, but we recognize them for what they are—practical instruments for the well being of the citizens and preservation of the State.

When we accept taxes, we do so grudgingly, on the premise they are equitable and will do the job for which they were intended.

The test of equity in the Republican plan falls short of its mark. It will hit lower income groups harder than those in the upper brackets.

It is a regressive tax, so recognized by unbiased experts. It has only one popular appeal. It is a "painless" tax.

Does it do the job for Michigan?

Republican senators say "yes" but Democrats, joined by many house Republicans, say "no." Therein, we believe, lies the weakness of the GOP position,

The tax at best will raise only \$108 millions in new revenue and it is the judgment of house members in both parties that Michigan needs at least \$120 millions.

The GOP plan will not wipe out the State's \$105 million deficit. Sooner or later the lawmakers must face this problem. The deficit will not go away by itself.

Thus, a use tax is stopgap legislation. It only postpones the inevitable day when the legislature must honestly come to grips with Michigan's financial problems whether the chief executive is friend or foe.

Let us hasten to say we are not wedded to the Democrats' income tax plan. It is another withholding tax, another chip in the paycheck and another excuse for padding State payrolls.

But is it equitable?

We think so. The personal income tax would be spread among all people who pay a Federal income tax. It would tend to equalize the tax burden on those who derive the most from our economy.

Most important, we think, it does not

Most important, we think, it does not exempt special interest groups as does the

use or sales tax.

Does it meet the need?

We believe it does. The tax package would raise enough money to pay the bill for State government and at the same time start retiring the deficit.

It would give the State badly needed buildings, restore morale at the education level and blot out such spectacles as payless paydays in government.

For business, we believe the Democrats' proposal is long overdue.

It would repeal the monstrous business activities tax that extorts money from Michigan business and corporations, without regard for ability to pay.

It would repeal the intangibles tax that bites into the savings and dividends of widows, orphans, and retired fathers and mothers.

It would tax profits, not loses.

Republican propagandists have denounced the corporate profits plan. They call the BAT repeal a "phony lure" designed to lull taxpayers into acceptance of the Democrats' package.

They have gone back to their old bag of tricks and pulled out the tax climate argument that gave Michigan a black eye around the Nation.

But nowhere in the GOP document do we find anything that remotely resembles tax relief for Michigan business.

Nowhere do we find the Republicans willing to take a positive stand on reforms that will remove tax burdens from struggling businesses and corporations.

They warn about the future, but blithely overlook the present.

They say with mock humility that Republican senators would be guilty of betraying the people if they yielded now to the "stubborn insistence of the administration for an income tax."

We say betrayal and guilt would fall harder on Republicans than Democrats if the people are led to believe that the GOP program, in its present form, is the sensible and truthful cureall to Michigan's fiscal woes.

# Preach the Story of Freedom

EXTENSION OF REMARKS

# HON. HENRY DWORSHAK

OF IDAHO

IN THE SENATE OF THE UNITED STATES Friday, June 5, 1959

Mr. DWORSHAK. Mr. President, I ask unanimous consent to have printed in the Appendix of the Recore an inspiring address by Imperial Sir George E. Stringfellow of East Orange, N.J., Imperial Potentate, A.A.O.N.M.S., before the Masons and Shriners, Aloha Temple, Scottish Rite Cathedral, Honolulu, T.H., on May 8, 1959, entitled "Preach the Story of Freedom."

There being no objection, the address was ordered to be printed in the RECORD, as follows:

It is my good fortune to be the first Imperial Potentate of the Shrine of North America to visit the magnificent 50th State of the United States. Your star in our flag is one that many of us have longed for many years. It will, I am sure, shine with brilliance in the years that lie ahead, as the people of Hawaii shone with brilliance in the years that followed the infamous attack on Pearl Harbor 18 years ago. We are proud that at last you are to have equality of statehood and we all know that Hawaii will live up to its responsibilities in the firmament of our Union.

I bring you the greetings and the good wishes of 165 temples of the Ancient Arabic Order of Nobies of the Mystic Shrine and their 830,000 nobles. From Canada, from Mexico, from the Canal Zone, and from the mainland, they all wish you well.

There has been a strong Masonic tie between th United States and Hawaii since the New England missionaries came to what were then called the Sandwich Islands. And there has been a strong bond of friendship among the nobility since King David Kalakaua became a member of Islam Temple in San Francisco. His death was announced, along with that of William J. Florence, one of the founders of our fraternity, by Imperial Potentate Sam Briggs at the meeting of the Imperial Council in Omaha, Nebr., on June 10, 1892. The ties of Masonic love and Shrine friendship became even greater when Imperial Potentate Lou Winsor constituted Aloha Temple in March of 1901. Aloha had been granted its dispensation at the imperial council session in Washington in 1900. The imperial sir was a fun-loving traveler and expressed the thought that he would like to lead the pilgrimage himself. And so, on February 25, 1901, the imperial train steamed out of the station at Grand Rapids, Mich. All across the United States more nobles and their ladies joined the train until, when it arrived in San Francisco, there were more than 200 persons aboard.

Since that wonderful day, almost every imperial potentate has led a pilgrimage to this beautiful oasis, and with each passing year the Nobles of Aloha have established themselves as great hosts in the true meaning of the Shrine. I am proud, indeed, that I have been given the opportunity of visting in your tents in the capacity of imperial potentate.

As my year as leader of our great fraternity draws to a close, I look back on many memorable experiences, but none has given Carrie and me more pleasure than this pilgrimage to Hawaii. It is hardly possible for an imperial potentate to visit all of the 166 Shrine temples of North America in a single year, even in this jet age of air travel. However, I have visited all sections of North America; I have attended meetings of Shrine associations: I have talked with the officers and the nobility of almost a hundred temples; I have talked with grand masters and heads of other Masonic bodies in the various jurisdictions: and everywhere I have gone there has come to me the plea that I speak forth in the name of the Shrine for a more militant Masonry that somehow must preserve, or help to preserve, those freedoms for which Masons in another century sacrificed so dearly.

I cannot and do not presume to speak for Masonry or Masons, for the Shrine, or for the Shriners with respect to political affiliations. I have no desire to do so. But I do know that the dearest tenet of Masonic thought is freedom, for only if there is true freedom can there be true brotherly love, which is the pervading force of our fraternity.

I suppose there is no true definition of the word "freedom" as I use it here. Certainly freedom is not license. It is not exemption. Rather, it is, or should be, the absence of force by an organized society, public or private, against the individual. Our Nation was founded, has grown great, and can grow greater in direct proportion to the freedom of the individual to think and do as he pleases so long as no other individual is harmed in the process.

A few weeks ago I heard U.S. Senator EVERETT DIRKSEN, of Illinois, observe that it was from his Masonic lodge that he acquired the fundamental principles that the hope of the universe reposes in the individual, with his integrity, his peace of mind, and

his dignity.
Our forefathers gave us our present way of life, for which they gave their blood, their fortunes, and their lives, that they and we, their posterity, might live in liberty. And to a large extent this way of life is what it is because it was conceived by men who, for the most part, had taken their solemn obligations of Masonry. It is a fact that most of the men who signed the Declaration of Independence were master Masons. It is a fact that most of the men who signed the Constitution of the United States were Freemasons. If we are worthy of our heritage, we must stand up and be counted. We must either accept the invasion of the creeping cancer of socialism into our moral, social, and economic conscience or we must be prepared to repel it as we would any physical invaders who may seek to dominate the world. Make no mistake about it, we can be invaded and conquered mentally, perhaps, more easily than we can be invaded and conquered physically.

For example, a prominent American educator has just published the results of a careful study of 11 widely used high school textbooks in American history. The study reveals shocking facts of distorted teachings which are of concern not only to parents of school-age children but to every American. Unless interested parents, teachers and other citizens get busy and halt teachings which tend to undermine American institutions in the minds of our children, and replace them with teachings which create a wholesome respect for basic American principles, mankind's greatest blessing-individual freedom-cannot possibly survive. If we lose freedom in America, the world will be beset

with another dark age.

There has never been a guarantee that our marvelous American governmental and economic system would be handed, intact and thriving, from one\_generation to another automatically. The great truths are not automatically adopted and the great virtues are not automatically instilled into each new generation. History proves over and over again that fundamental principles do not live on from one generation to the next unless they are clearly understood, cherished, and constantly vitalized.

Teachers and school administrators in every section of the Nation have stated that cannot readily find textbooks which would create in the hearts and minds of their high school pupils a vigorous pride in their Nation's history, a respect for and loyalty to its ideals, principles, and institutions. Some of the present textbooks used in our public schools present George Washington as a rich aristocrat who had no use for people; the framers of the United States Constitution as a group of selfish, wealthy men who wanted to keep the common people forever lowly and powerless; discount patriotism as stuffy and old hat, and imply that business and industry under our private enterprise system are enemies of the people. This, of course, is playing right into the hands of the Communists. It's playing into their hands because they have a hand in writing our textbooks, or inspiring the writers who do write them.

Communism has infiltrated our religious organizations. Proof of that is found in the fact that a prominent national church group is currently urging that the U.S. Government recognize Red China and that the U.S. Government do what it can to elect Red China to the United Nations and to repudiate Chang Kai-shek, our ally. Why any religious organization would embrace communism is beyond my comprehension unless that religious organization is dominated by communism, for communism decrees that religion is an opiate of the people and must be exterminated everywhere before communism is safe anywhere. Yet, here is a religious organization doing what it can to give communism a respectable place in world affairs.

It would indeed be a travesty if we should forsake the principles of our masonic founding fathers to accept a philosophy so alien to that for which they bled and died. If and when this shall come to pass, freemasonry and the Shrine will be the first to be abolished, just as it is always the first to be abolished by any dictator or group of dictators. Errant judges and legislators may change the law to suit their whims, but so long as the soul of freemasonry and the Shrine shall live, we must and shall continue to preach the story of freedom.

This is the message I bring to you in this new 50th State, as you prepare to accept the responsibilities which are a part of the privi-lege of sisterhood in the Union of States. You may say it is a personal message, and in a way it is. But it is more than that. It is, I believe, the composite thinking of most of the Shriners and freemasons with whom I come in contact.

You know the Shrine is a great organization, and well it should be for the men who are Shriners have three times passed the tests of their masonic brethren. It has been said that the Shrine is the playground of masonry, and perhaps in a way it is, for Shriners are forever seeking and creating happiness for themselves and those around them. James McGee, who was the 26th Shriner created, said that the Shrine was formed as a sort of "relax" from the more arduous and difficult practice of freemasonry. And no doubt, through the years, there are some who have been frivolous in their search for, shall we say, freedom of spirit. But there runs a spiritual quality through the Shrine that manifests itself in brotherly love, charity and a profound belief in the fatherhood of God.

It is said that in our hospitals for crippled children, the Shrine found its soul. Cer-

tainly our hospitals, with which you are all conversant because you have one here in Honolulu, is a great philanthropy. They led the way in the Western World in seeing that something was done for little children who were threatened with a life of misery. But the Shrine is more than the hospitals. It is the ultimate expression on this earth of the fatherhood of God and the brotherhood of man.

#### Unemployment Picture in Wisconsin

EXTENSION OF REMARKS

# HON. ALEXANDER WILEY

OF WISCONSIN

IN THE SENATE OF THE UNITED STATES Friday, June 5, 1959

Mr. WILEY. Mr. President, we recognize that, although the unemployment picture across the Nation is brightening somewhat, there is still need for constructive action to create work for those who unfortunately still remain jobless.

In Wisconsin, for example, we still have somewhat over 40,000 unemployed. Although this represents 15,000 less during May than in the previous monthand 39,000 less than a year ago-the situation still needs improvement. According to our Wisconsin State Employment Service, the employment gains during May were general throughout industry. Increased production schedules. new contracts, plus usual seasonal factors, increased employment in the manufacturing of transportation equipment. nonelectrical machinery, and food; as well as in construction, transportation services, and other fields.

To help alleviate the critical economic problems faced by our unemployed, our State legislature has enacted a new law to extend the maximum coverage for compensation from 26½ weeks to 34 weeks as well as to provide for adjustment in top weekly benefits. In making these improvements in our unemployment compensation program, Wisconsin is continuing its fine record of work in this field-since, in 1932, it acted as a pioneer by being the first State to enact an unemployment compensation law.

We recognize, of course, that even these improvements will not meet the needs of all our jobless. However, it marks improvement in the situation.

We recall, of course, that the President has again and again recommended constructive action by the States to extend periods for which jobless would be eligible for unemployment compensation; as well as-where possible-to increase the amount of benefits to lessen the economic hardships for the unemployed workers and their families.

I request unanimous consent to have printed in the Appendix of the RECORD a brief summary of the main changes in Wisconsin's unemployment compensation program to help meet the needs of our jobless, received from Paul A. Raushenbush, director of the Unemployment Compensation Department of the Industrial Commission of Wisconsin.

There being no objection, the summary was ordered to be printed in the RECORD, as follows:

A number of States have made notable improvements in their State unemployment compensation programs this year. We're happy to join that group.

Here's a rough summary of Wisconsin's main unemployment compensation changes, which were recommended by our joint labor-management advisory committee, passed unanimously by both houses, and signed by Governor Nelson on June 2.

(1) Weekly benefit celling: Starting with new benefit determinations issued after December 31, 1959, the law's top weekly benefit rate will be adjusted, at 6-month intervals, to about 52½ percent of Wisconsin's gross statewide average weekly wage for covered with the year ended 6 months earlier).

work (in the year ended 6 months earlier).
Wisconsin thus joins Kansas, Utah, Wyoming, Colorado, and Vermont.

(2) Starting with new benefit determina-

tions issued after June 7, 1959:

(a) Qualifying work: The 14 workweeks now required to qualify will be increased to 18 workweeks.

(b) Maximum duration: Wisconsin's new top duration will be 34 benefit weeks, based on 45 workweeks (instead of 26½, based on 38).

# The Texas Zeitung-Chronicle

· EXTENSION OF REMARKS

# HON. LYNDON B. JOHNSON

OF TEXAS

IN THE SENATE OF THE UNITED STATES Friday, June 5, 1959

Mr. JOHNSON of Texas. Mr. President, the New Braunfels (Tex.) Zeitung-Chronicle has been published since 1852, first as a German-language newspaper, and later in English. My good friend, Mr. Frederic Oheim, has been managing editor of this fine newspaper since 1941; and under his editorship the original Zeitung has prospered and expanded, and has merged with two English language papers.

The people of New Braunfels, San Marcos, and Fredericksburg have played a great role in Texas history, Mr. President. The Zeitung-Chronicle has told their story for more than 100 years. It is a story of a whole people's pride, deter-

mination, and industry.

Mr. President, I ask unanimous consent that an article on the history of this newspaper, appearing in a recent issue of the Zeitung-Chronicle, be printed in the Appendix of the Record.

There being no objection, the article was ordered to be printed in the RECORD,

as follows:

COLORFUL ZEITUNG-CHRONICLE HISTORY BE-GAN IN 1845 AS PEOPLES PROJECT

The long and colorful history of the Zeitung-Chronicle, one of the oldest businesses in New Braunfels, goes back to November 12, 1852. The paper in those early days was known as the Zeitung and was printed entirely German.

The citizens of New Braunfels recognized the need for a newspaper soon after the town was founded in 1845. But it wasn't until 1851 that a group of townspeople began negotiating with George Dietz, a former assistant editor of the New York Staats-Zeitung who was in Fredericksburg at the time, to run the paper. Dietz refused the editorship

and the local group hired a San Antonio man, a Mr. Lackmann, for the position, However, Lackmann died before equipment could be purchased.

A mass meeting of the citizens was held in 1852 and Ferdinand Lindheimer was chosen editor out of a list of three candidates. Money for equipment was raised by public subscription. Each subscriber received a certificate of partnership.

By July 1853, Lindheimer had bought up all the partners' shares except one, that of a G. M. Ross. Soon thereafter Lindheimer obtained Ross' lone share and became sole owner.

Karl Jonas Ludwig Almquist, famous Swedish author, was Lindheimer's assistant during the first years of the Zeitung. Almquist had been forced to flee Sweden as a result of his political escapades. He lived in New Braunfels under the name of Gustavi.

Lindheimer, who had achieved a considerable reputation as a botanist in Texas, had no practical knowledge of printing. Since there were no German printers in the colony, help had to be trained on the spot. First printer of the Zeitung was probably David Feick, a relative of Lindheimer's. Lindheimer's sons also helped print the paper.

The Zeitung was able to publish during the Civil War without missing an issue, even though paper was unobtainable and help was lost by the needs of the Army. Some of the issues had to be printed on butcherpaper, wallpaper, and even on tissue paper.

The Zeitung was unpopular with the German people in Texas during the war years because the people were strongly antislavery and pro-Union. Lindheimer published a paper that was loyal to the Confederacy.

August 16, 1872, marked the date of the last issue of the Zeitung edited by Lindheimer. Anselm Elband was the next owner and publisher, and edited the paper with great ability until his death.

Eiband was known for his brilliant mind and his vivid and colorful language. He could express himself in words that were understandable by everyone. Eiband rarely wrote his editorials and articles before setting them, by hand, into type. He would compose directly into type, making up the stories as he went.

Ernest Koebig succeeded Eiband. He also served as county judge, founded the Seguiner Wachter and the Seguiner Zeitung, installed a steam engine to run the press, and in general took an interest in everything that was happening in the community.

Julius Halm and A. G. Startz succeeded Elband, with Ludolph Lafrentz as editor. In the last decade of the 19th century Capt. Julius Giesecke, McEver Church, and Eugen Kailer were members of the Zeitung Publishing Co. Giesecke was business manager, Church, a Scot, was the foreman, and Kailer was editor.

Church sold his interest in the Zeitung to Giesecke, and in 1899 G. F. Ohelm bought Kailer out and assumed the editorship of the Zeitung. Ben F. Nebergall, shop foreman, after Church's retirement, entered the partnership soon thereafter.

Frederic Oheim grew up in the shop and office of the Zeitung and became editor in 1941 at the illness of his father, G. F. Oheim, Alfred Jung became associated with the paper in May 1948 as assistant editor and continued as such until his death in the mid-1950's.

G. F. Oheim died in 1947 and B. F. Nebergall in 1948. Frederic Oheim then became the sole owner of the Zeitung Publishing Co. Mrs. Lottie Miller, daughter of B. F. Nebergall, assisted in the publication of the paper and the operation of the commercial job printing.

Frederic Oheim and his staff put out the Comal County Chronicle once a week, in addition to the German-language Zeitung. The Zeitung and the Chronicle were merged into one weekly paper in 1952, and was known as the Zeitung-Chronicle. The paper had an English section, which was Roger Nuhn's responsibility. The Zeitung-Chronicle became more and more of an English-speaking paper, until the time the Zeitung-Chronicle merged with the Herald Publishing Co. in November 1957. The Herald, which had been published twice weekly, began to appear only once a week. The Zeitung-Chronicle appeared on Friday, completely omitting the German section.

Mrs. Charles Scruggs is today the publisher of the Herald Publishing Co. and Claude Scruggs, her son, is the business manager. Managing editor is Frederic Cheim, and Roger Nuhn is news editor, Marjorie Cook, women's page editor, has been with the original Herald for 8 years. Mrs. Lottle Miller is the society editor. Charles Sebesta is the advertising manager and office manager is Christine Keel.

The backshop is headed by Max Murphey, who has long been with the Herald. Eddie Nuckols and Leonard Fikac are two printers who were originally with the Herald. Sonny Kanz, Roland K., Gisbert Schaefer, and Al Brandt, Jr., were with the original Zeitung-Chronicle.

#### The Public Defender's Bill

EXTENSION OF REMARKS

# HON. ALEXANDER WILEY

OF WISCONSIN

IN THE SENATE OF THE UNITED STATES
Friday, June 5, 1959

Mr. WILEY. Mr. President, recently the Senate took constructive, expeditious action by passing the Senate bill 895, known as the public defender's bill.

As my colleagues will recall, this measure, if enacted, would provide that persons accused of a crime, but not able to afford counsel, would have an attorney appointed by the court. The lawyer's fees, too, would be determined and paid by the court within statutory limitations.

We recognize, of course, that under the Constitution every citizen deserves equal rights and protection. Justice should not—must not—depend upon whether an individual accused of a crime is rich or poor.

Currently, the bill is pending before the Judiciary Committee of the House of Representatives. I hope that the House committee will take expeditious action on the bill—which I was pleased to sponsor.

Today I received from Bernard J. Hankin, secretary of the Milwaukee Bar Association, a letter stating the endorsement by the executive committee of the public defender's bill. Likewise, I was pleased to receive a telegram from George A. Haberman, president of the Wisconsin State AFL-CIO, representing a membership in excess of 280,000, favoring the principle of the public defender's bill.

I request unanimous consent to have the letter and the telegram printed in the Appendix of the RECORD.

There being no objection, the letter and telegram were ordered to be printed in the Record, as follows:

MILWAUKEE BAR ASSOCIATION, Milwaukee, Wis., June 3, 1959.

Hon. Alexander Wiley, Senate Office Building, Washington, D.C.

DEAR SENATOR WILEY: The executive committee of the Milwaukee Bar Association has voted to endorse a public defender bill which would provide for payment to an attorney appointed by a Federal court to defend an indigent person.

We believe that such legislation is long

overdue.

Respectfully yours. BERNARD J. HANKIN, Secretary.

Senator ALEXANDER WILEY, Senate Office Building, Washington, D.C .:

The executive board of the Wisconsin State AFL-CIO, representing labor unions in the State of Wisconsin having a total membership in excess of 280,000, unanimously favor the principle contained in bills S. 895. H.R. 4185, and H.R. 4609. We urge favorable action on them.

WISCONSIN STATE AFL-CIO. GEORGE A. HABERMAN,

President. GEORGE W. HALL,

Secretary-Treasurer.

# "Why Can't United States Try Lynchers?"

EXTENSION OF REMARKS

# HON. WILLIAM PROXMIRE

OF WISCONSIN

IN THE SENATE OF THE UNITED STATES Friday, June 5, 1959

Mr. PROXMIRE. Mr. President, the Milwaukee Journal has called for action by the Attorney General and by the Congress in the Mack Charles Parker lynching case, in an unusually hard-hitting and forthright editorial. I whole-heartedly support the sentiments expressed in this editorial, and I commend a reading of it to my colleagues.

I ask unanimous consent that the editorial be printed in the Appendix of

the RECORD.

There being no objection, the editorial was ordered printed in the Appendix of the RECORD as follows:

[From the Milwaukee Journal, June 3, 1959] WHY CAN'T UNITED STATES TRY LYNCHERS?

Justice is slow in Mississippi, as shown by the fact that the State won't move against suspects in the lynching of Mack Charles Parker until November. And there is reason to wonder whether justice is possible at all.

The judge who was to have tried Parker on a charge of rape and who will call the grand jury to hear evidence against his alleged lynchers said the other day: "When I heard he [Parker] was taken. I thought this-if that woman had been a member of my family, they wouldn't have to look very far to discover who took him."

The prosecutor is seeking reelection. reelected, he will present the State's case when the lynchers are tried. He says: people here ask me if I would prosecute this case enthusiastically, I tell them, "Hell, no."

The Attorney General of the United States says that there is no Federal law violation in the Parker case. He can get some legal argument on that. The St. Louis Postargument on that. The St. Louis Post-Dispatch recalls an article in the Washington University Law Quarterly in 1943 titled

"The Federal Civil Right 'Not To Be Lynched.'" It was written by the Chief of the Justice Department's Civil Rights Sec-tion, Victor W. Rotnem. Rotnem recalled section 19 of the U.S. Criminal Code, which reads:

"If two or more persons conspire to injure, oppress, threaten, or intimidate any citizen in the free exercise or enjoyment of any right or privilege secured to him by the Constitution or laws of the United States, or because of his having exercised the same, or if two or more persons go in disguise upon the highway, or on the premises of another, with intent to prevent or hinder his free exercise or enjoyment of any right or privilege so secured, they shall be fined not more than \$5,000 and imprisoned not more than 10 years, and shall moreover be thereafter ineligible to any office or place of honor, profit, or trust created by the Constitution or laws of the United States."

Parker was deprived of his right to justice under the law, to his right to a free trial. Some lawyers contend that the above code extract is applicable to lynching cases. Mississippi does not act properly in the Parker case, perhaps the United States can.

It's worth trying.

Meanwhile, how about adoption of a clearcut, Federal antilynching law?

# The Mutual Security Program

EXTENSION OF REMARKS OF

# HON. JOHN F. KENNEDY

OF MASSACHUSETTS

IN THE SENATE OF THE UNITED STATES Friday, June 5, 1959

Mr. KENNEDY. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial from the Christian Science Monitor and a column by Mr. William S. White commenting on this year's mutual security debate.

There being no objection, the editorial and the column were ordered to be printed in the RECORD, as follows:

#### MR. FULBRIGHT'S LOAN LETTER

Senator Fulbright is currently in the strange position of having to plead with the President to support a bill which would accomplish much that Mr. Eisenhower set out to do in 1957 when he created the foreign aid development loan fund. The head of the Senate Foreign Relations Committee has written to the White House urgently seeking the President's backing.

We hope that the President's answer to this letter will be full and firm support for his friendly opponent, Mr. FULBRIGHT.

In 1957 Mr. Eisenhower spoke eloquently of the need for a loan fund from which developing nations could borrow to facilitate basic construction. In 1958, his administration continued to push this concept, saying that the fund should be managed on a long-term basis-for "at least 5 years, possibly even more" with capital of a billion dollars a year.

This bold and sensible policy was followed in a period when the Congress was whacking away at the program. Now, when a rescue committee from across the Senate aisle has stepped in to push essentially the same plan, Mr. Fulbright's \$1.5-a-year, 5-year guarantee of funds for foreign loans, the executive branch is found backing its own baby with apparent timidity.

Such timidity seems unwarranted. FULBRIGHT's tendered assistance passes the

administration's new inflation test. (None of the billions made available has to be spent if not needed.) It also passes the new handwriting on the wall, test which Senator Mansfield has offered as the temper of the electorate; namely that foreign aid should be in the form of loans rather than gifts. And finally it offers Mr. Eisenhower, as president of the world's largest savings and loan company, the authority to compete as he wants with the long-term, low-interest loans offered by Mr. Khrushchev's bank.

That, surely, is reason enough for the President to back Mr. FULBRIGHT's backing of the

President.

[From the Washington Evening Star, June 1, 19591

THE STRUGGLE OVER FOREIGN AID-LONG-TERM AND YEAR-TO-YEAR PLANS DIVIDE CAPITOL AND ADMINISTRATION

# (By William S. White)

Amazing is the word for the situation of cross-currents in which the Eisenhower administration's \$3.9 billion foreign aid program has been placed-partly by the administration itself.

Two internal struggles are going on, one in Congress and one downtown, as to the whole direction foreign aid ought to take

hereafter.

In Congress, many of those most expert in foreign affairs, in both parties, are trying to put economic assistance on a long-term revolving fund basis. They want to do this by greatly increasing—in some cases by doubling—the money that will go into the repayable loan fund.

Incidentally they also want to reduce military aid somewhat. Particularly, they would like to cut it down in little countries where jet planes are really not so needed, or so useful, as irrigation systems and better

roads.

Their real and basic purpose, in a word, is to set up a nonhandout kind of economic aid with a 5-year authorization. would mean that other countries could plan on construction schemes in the only way many can be sensibly planned upon-over a period of years.

As it stands, assistance is on a year-to-year schedule. It is possible to begin a big dam in a small republic, but it is not necessarily possible to finish it. The country concerned cannot be absolutely certain that the aid permitting such a start in one year will be

forthcoming for the next year.

But this basic purpose has run into com-plications beyond ready belief. The ad-ministration is described as being opposed to enlarging the repayable loan fund beyond the \$700 million asked for it by the Budget Bureau. And this is the state of affairs, even though the President himself 2 years ago was asking just such an enlargementand for 5 years.

But though the administration is taking this line, the facts underneath are these: A very important part of the administra-tion, the State Department, is quietly for, and not against, such an enlargement. Thus it comes down to this: The administration here really means the Budget Bureau and the Treasury Department. The function of these agencies is to try to keep the books balanced-and never mind what they may say in Pakistan or Peru.

Where the White House itself actually stands cannot be known until the President speaks up with unmistakable plain-He is being asked to do that by the chief Senate Democratic foreign spokesman, Senator Fulbright of Arkansas. Certain Senate Republicans are urging Senator Fulskicht on, although understandably they do not care to take an open lead with

Even this, however, is not the end of a tale of complications compounded. For even assuming that FULBRIGHT and company at last bring the true administration, the President himself, onto their side, there will be yet more trouble.

This trouble is in-built in Congress itself. For a 5-year authorization program would bypass the powerful Appropriations Committees of Congress. Heretofore, these have had the final word on money every year. It might be possible to coax the Senate Appropriations Committee to go along. It would be profoundly difficult, however, to persuade the House committee to do so.

If foreign aid is to be reformed in a businesslike way, the President will have to join his bipartisan foreign policy backers in Congress to overcome the Treasury-Budget alliance downtown and the Appropriations Committee alliance on Capitol Hill.

Lacking some such reform, foreign aid itself will surely die within a few years in the face of growing national and congressional boredom and dissatisfaction with the old model.

## Operation Brainpower

EXTENSION OF REMARKS

# HON, LYNDON B. JOHNSON

OF TEXAS

IN THE SENATE OF THE UNITED STATES

Friday, June 5, 1959

Mr. JOHNSON of Texas. Mr. President, the Ex-Students' Association of the University of Texas—known as the Texas Exes—has undertaken an extremely promising program in behalf of the university. It is called Operation Brainpower. Its goal is to recruit for the university some of the best young minds being graduated from Texas high schools.

Mr. Ed Schutze, president of the Dallas Texas Exes Club, originated the plan that grew into Operation Brainpower. He brought a group of university officials to Dallas, to explain the benefits the university could offer top students. Since then, the State organization, with Ed Schutze as chairman, has undertaken a recruitment program to finance appearances by university teachers and administrators before student groups throughout the State.

I ask unanimous consent that an article entitled "Operation Brainpower," from the Alcalde, the university alumni magazine, be printed in the Appendix of the Record. The article details the progress of this commendable program.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

#### OPERATION BRAINPOWER

With all the zeal and ambition of salesmen, and indeed they might be called such, the three officials mounted the stage in the Beaumont High School auditorium to expound upon their product.

The customers on this warm March 24 evening had a hard eye open for factors which would help them to choose a future academic home. They represented the top 25 percent of the high school students in the Beaumont area, and they wanted to hear what these men had to say about scholarship and its achievement at the University of Texas.

Through a unique plan made possible by

the Ex-Students' Association, the three university officials were there for just that

"When you come to the university you are moving in fast company," began Registrar Byron Shipp. The university is looking for good students, he said, pointing out that 121 members of the present university freshman class are former high school valedictorians. Registrar Shipp went on to explain admission requirements.

Arthur Cory, assistant dean of the college of arts and sciences, explained next university advisory and curriculum systems, telling the group that prospective students should not be alarmed by the idea of getting lost at a big university—"we have too much help for you."

Carl Bredt associate dean of student life, described briefly the multitude of non-academic services offered by the university and the various organizations on the perioheries of the campus.

The showing of the color and sound motion picture, "Gone To Texas," produced especially for this program, completed the orientation.

Accompanied by parents, the talented juniors and seniors with the aid of Beaumont Exes, then split into special-interest groups to fire specific questions at the three men from the university.

Thus went the 23d session of operation brainpower—a program whereby members of the Ex-Students' Association make it possible for officials to spread before local honor students the wares of the university.

Interesting students in coming to the university is not a new project for alumni. For years, Texas Exes have toiled faithfully in helping the coaching staff recruit top athletic talent for Longhorn teams. At the same time, university alumni watched in frustration while the country's leading private schools "raided" the State's high schools in search of superior brains. The university, hamstrung by a Texas law which prohibits the use of tax funds to recruit students for any State school, was helpless to do anything about it.

The Ex-Students' Association, as an independent organization supported by alumni dues, faced no such restrictions. In May 1957, months before sputnik aroused popular interest in education, one alumnus decided the time had come for the alumni to start recruiting brains as well as brawn.

He was Ed Schutze, B.S. in chemical engineering, 1948, president of the Dallas, Tex., Exes Club. With his club as sponsor, he invited a team of university officials to come to Dallas and explain the benefits offered by the university to the area's best high school students.

The meeting proved so successful (not only did prospective students show a great deal of interest, but more than half of the 150 who attended eventually came to the university) that Jack Maguire, executive director of the Ex-Students' Association, with Schutze, set into motion a statewide program of similar meetings. Schutze subsequently was named chairman of the State Operation Brainpower committee.

During 1958, \$1,00 was set aside from the associations' budget for financing the travel and housing expenses of officials making Operation Brainpower trips. Interest of Exes, students, and local school officials proved to be so great that initial and subsequent allotments have proven inadequate.

Members of the University, Students' Association formed a supporting committee under the chairmanship of Secretary Majorie Menefee. With Miss Menefee's spirited, "We only wish we could hurry progress up," the undergraduates, among other projects started publication of a handbook for prospective students. They also set up work-

shops for Instruction of fellow students who accompanied administrative officials on brainbower trips

What have been the results of Operation Brainpower during its 2 years of existence? Well, for one, the number of high school valedictorians entering the university rose from 88 in 1957 to 121 in 1958, an alltime high. Likewise, Registrar Shipp reported that 80 percent of last September's entering freshmen were in the top half of their graduating class, another record. While the sharp increase in enrollment of top students may not have been entirely a result of Operation Brainpower, there are few who would deny that it was a powerful motivating force in the increase of academic excellence.

To accommodate this brighter set the university:

Set up a junior fellows program for the top 25 freshmen. However, there were so many candidates that selection was postponed until January of this year to allow more time for interviews and the acid test of first-semester grades.

Doubled the usual number in accepting 250 entering freshmen for plan II, the liberal arts program for students selected from the top quarter of their high school classes.

Gave 555 semester hours' credit to freshmen passing new advanced placement examinations in German, college algebra, trigonometry, chemistry and English.

So many local Texas Exes Clubs, the groups that sponsor and coordinate the meetings, have requested Operation Brainpower teams for visits to their communities that many have had to be turned down—the lack of funds being the main deterrent.

In April the Operation Brainpower program was reevaluated and adjusted to handle a demand which appears will increase with the growing awareness of higher education on the part of Texas Exes and the public in general.

Beginning next fall, Operation Brainpower sessions will be centered in from 8 to 12 of the larger population centers in Texas. Meetings will be scheduled far in advance in cities like Dallas, Houston, San Antonio, Beaumont, Corpus Christi, Tyler, Amarillo, San Angelo, and others. High school students from the surrounding areas will be invited to come in to these centers.

In each case, the local Texas Exes Club will host the meeting, get out invitations to the area high schools, plan the program and arrange for refreshments.

To each of the meetings will go an Operation Brainpower team from Austin, its expenses paid by the Ex-Students' Association. Teams will include at least one representative of the university administration, a representative of the office of the dean of student services, an academic dean and two or three students.

"We are particularly hopeful that university students can attend each Operation Brainpower session in 1959-60," Chairman Schutze said, "This year, campus leaders have proved very effective in these visits to high schools. They can talk the language of the students better than anyone else."

Said the Dalias Morning News about Operation Brainpower: "It will be a good thing for the University of Texas. It is likely to turn out to be a good thing for higher education everywhere. It will, if the movement catches fire, that is, if higher educational institutions generally follow the lead of the big State institution. In a few years it could turn out to be the most revolutionary development in modern education.

"I will be an odd sort of revolution. It will consist of rediscovering the real purpose of higher education—both publicly and privately supported \* \*. The new movement toward emphasis on brainpower can bring a sweeping reform that will give us a much sounder educational system."

# Reading, Writing, and Television

EXTENSION OF REMARKS

# HON. ALBERT GORE

OF TENNESSEE

IN THE SENATE OF THE UNITED STATES Friday, June 5, 1959

Mr. GORE. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an article entitled "Reading, Writing, and Tele-vision," written by David C. Stewart, and published in Harper's magazine for June 1959.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

READING, WRITING, AND TELEVISION (By David C. Stewart)

A young woman telephones her thanks for help in getting a job as a waitress; an errand boy calls with the glad news that he has been promoted to grocery clerk, and a carpenter to say that he has been able to take on a contracting job.

Testimonials like these are pouring innot to an employment service or vocational guidance expert—but to an educational TV station, WKNO in Memphis. Two years ago WKNO embarked on the pioneering task of Using the video screen to teach illiterates to read and write. Since then, an estimated 2,000 adults have attained what is known as "functional literacy"—roughly equivalent to the fourth grade of school, which is enough to meet the ordinary demands of life. To achieve this level, each pupil spent some 350 hours in study, divided between half-hour TV lessons given three times a week and homework supervised by volunteers at centers set up in schools and libraries as part of the program.

The idea of combating illiteracy by TV was originated by Keith Nighbert, WKNO's young Program director. His inspiration came from Dr. Frank C. Laubach, whose methods over the past 25 years have been used to teach reading to more than 100 million people, speaking 237 different languages and dialects in 94 different countries. Through a system known as each one teach one, Dr. Laubach has taught reading and writ-ing to the people of countries where the illiteracy rate is 70 percent, and no more than 10 percent of the population is sufficiently well educated to qualify as teachers, in the conventional sense.

Although illiteracy is generally considered a problem of the underdeveloped nations, there are, in fact, an estimated 10 million Americans who cannot read and write well enough to understand safety signs in a factory, follow a recipe in a cook book, or serve in the Armed Forces. It was Mr. Nighbert's notion that TV might be an ideal means of reaching them and that the only Way to prove his point was to go after the estimated 57,000 illiterates in the Memphis

This proved no small task. People who can't read are seldom anxious to admit it. Accordingly WKNO made its appeal obliquely. "Do you know someone who cannot read and Write?" asked announcers on commercial radio and TV stations in the area who co-Operated in the recruitment drive. Newspapers published descriptions of the proposed course under the heading, "Read This To Someone Who Can't Read." The word was Epread further during a literacy week, spon-Sored by the Memphis Advertising Club. pliance companies and churches donated TV sets for the centers (one set was donated by a local boy, Elvis Presley). The Memphis section of the Council of Jewish Women contributed \$1,500 to help launch the project and also provided volunteer workers. haps most important of all, the program had the enthusiastic support and advice of Dr. Laubach and his expert staff. His methods proved surprisingly adaptable to the TV screen, the great difference being, of course, that a single teacher could instruct several thousand pupils simultaneously.

#### WORDS AND PICTURES

A former Memphis elementary school teacher, Mrs. Pauline Hord, became director of the TV literacy project. At their own expense, she and another local teacher, Miss Ruth Knowlton, undertook to train themselves in TV pedagogy and the special learning problems of illiterate adults. percepts were supplied by Dr. Laubach whose disciples are told: "Cut 'no' out of your vocabulary. Never ask a student a question he cannot answer. Never talk much. Never tell him what he already knows. Talk in a low tone of voice. Do not move about nervously nor wave your hand or finger.'

Laubach pupils start out by learning the alphabet through a series of reading readiness charts. The consonants are taught first since all but c, g, and s have only one sound. The vowels, says Dr. Laubach, are "maddening chaos'-we have 8 sounds for a and

15 ways to pronounce o., The chart above shows how the first consonant, b, is taught. As the TV camera moves in for a close shot, the teacher points to the picture in the first frame and says, "This is a bird with a round body. He is reaching for a worm. Say 'bird.' The teacher pauses for the students' responses and traces the letter b. Then he points to the second frame and says "This looks like a bird with a round body. Say 'bird'." Then he points to the third frame, covering the b. and says, "This is the word 'bird.' Say 'bird'." Pointing to the first letter he then says, "Bird begins with the sound buh.' Say 'buh'." The students are asked to repeat this sound three times. Then the teacher points to the fourth frame and says, "Every letter has a sound and also a name. name of this letter is 'b.' Say 'b'." this has been repeated, there is a short explanation of capitals and then the teacher moves on to the next letter.

#### IMPATIENT LEARNERS

When the alphabet is mastered, the pupils are ready for the Laubach reading text, Streamlined English, which uses visual associations to teach a vocabulary of 1,100 "most useful" words. Pictures lead to words, then to spelling, and finally to a story. The first one starts out: "This is a hill. It is a hill. It is Mr. Hill's hill." One of the final stories goes this way: "After the world war a woman went to Washington to watch the soldiers come home. But something went wrong with her automobile and she had a wreck.

WKNO followed the first course with a more advanced one called, "A Door Opens." These stories dealt with family problems and with such fundamentals as food, health, clothing, shelter, work, recreation, citizenship, and moral and spiritual needs, and added 320 more words to the students' reading vocabulary. By popular demand, arithmetic was also included in the second course.

The televison screen, by its nature, enforces concentration. Its limitation is the fact that it cannot allow for individual dif-TV lessons are necessarily scaled down to the majority pace which may be too WKNO fast for some and boring for others. found that those who could not keep up simply dropped by the wayside. The majority were impatient learners, anxious to see immediate results but also unwilling to be rushed or pressured. Learning slowed down seriously if there was a gap of more than 48 hours between lessons.

As news of the course spread, people came from the countryside to stay with Memphis relatives for the thrice-weekly lessons. One constant viewer was the wife of an illiterate man who worked during the lesson periods; she watched each evening and taught her husband when he came off the night shift.

Heartened by the results of WKNO's ex-periments, TV stations in a dozen other cities are currently embarking on literacy training programs. To aid them, WKNO has training programs. To aid them, WKNO has now packaged 98 half-hour lessons on film

which it is offering for sale.

Of even greater importance may be the impetus which the successful WKNO experiment may give to international efforts to extend the frontiers of literacy. From 43 to 45 percent of the world's people over 15 years old are illiterate. The essence of Dr. Laubach's method is that it can be used by teachers with very little education themselves; they must, however, be trained in his techniques, and his textbooks are indispensable tools for them. To date progress has been slowed by a shortage of teacher-trainers and of materials. To fill these gaps, a new center and foundation honoring Dr. Laubach is being planned. It will occupy a 25-acre site near Memphis. The center will The center will include TV facilities and a large auditorium and will train students and prepare educational materials for use throughout the world. This is a program which may one day rank as a major American contribution in helping millions of men and women achieve their aspirations for dignity and opportunity in modern society.

# Poison in Your Water-No. 100

EXTENSION OF REMARKS OF

# HON. JOHN D. DINGELL

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES Thursday, June 4, 1959

Mr. DINGELL. Mr. Speaker, pursuant to permission granted I am inserting into the Appendix of the Con-GRESSIONAL RECORD an article appearing in the Green Bay (Wis.) Press-Gazette, of January 14, 1958, entitled "Pollution Problems Elsewhere":

# POLLUTION PROBLEMS ELSEWHERE

It is frequently useful for perspective to be reminded that public problems that seem peculiarly local because of their immediacy are actually common to the rest of the world and are being fought with difficulty elsewhere also.

Thus our attention was caught recently by a report from the Water Pollution Board the New York State Department of Health, which might with perfect propriety have been issued by our own State Committee on Water Pollution, at Madison.

There, as here, anxious critics have sometimes seemed unreasonably to demand that we miraculously undo in a few years prob-lems that were decades, and even centuries, in the making.

"In many instances," reminded the New York authorities, "the problems of water pollution in New York State date back to the years when settlements were being established and streams were being freely used as dumping places for waste products of community life.

"Many of the acute problems we now face had their origin well before the turn of the century. While the 8 years since the law was enacted represent a substantial period of time, the period is very short when compared to the great number of years during which the progressive and serious degradation of natural waterways took place.'

Unsaid, but clearly implied there, is the idea that we cannot reasonably expect to resort our streams and our lakes to the state of naturalness and chemical purity they may have had when the first sturdy Dutch colonists peopled New York, or when the first bold Frenchmen occupied the Fox Valley centuries ago.

All that is not to say that we ought not to proceed as effectively as our circum-stances require, and according to the objec-

tive meaning of the law.

But we cannot depart from the 20th century, or erase the fact that pollution started 3 centuries or more ago, that our Wisconsin rivers accommodate the industries that are the economic bloodstreams of the State and that urban communities are not compatible with leaping trout and glistening bass. Parenthetically, we usually remember in this context that when the first Frenchmen met the Indian natives in this part of the world, the latter passed on a decidedly uncompli-mentary description of the odoriferous qualities of Green Bay. The Fox River then, as now, was a tributary.

# Antarctica Is Important to the United States and the World

EXTENSION OF REMARKS

# HON. RALPH W. YARBOROUGH

OF TEXAS

IN THE SENATE OF THE UNITED STATES Friday, June 5, 1959

Mr. YARBOROUGH. Mr. President, the importance of Antarctica to the United States and to the entire world, as well as the need to secure a long-range political settlement in that area, has been stressed recently by a number of our scholars. Prof. Robert D. Hayton, specialist in international law and foreign policy at Hunter College in New York, has for some time been studying the interests of the United States and of other countries in Antarctica, and is generally recognized as one of the top experts on legal and political questions of the polar regions. He believes a bold formula must be compounded to lead the interested nations toward some form of joint administration in which all participate and all make some sacrifice in order to ensure the peaceful utilization of this major frontier. He feels strongly that it is time for this country to establish a firm policy, including enunciation and active prosecution of U.S. claims if necessary, and that we must create without delay a permanent, integrated national program for Antarctic activities of the type contemplated in S. 764, the Richard E. Byrd Antarctic Commission. of which I am a cosponsor, which provides for continuity and support of study. research and development of programs for peaceful uses in science, commerce and other activities related to Antarctica. and to direct and administer the U.S. Antarctic program in the national interest. I am hopeful that action can soon be taken on this. I hope that we may soon begin hearings on this resolu-

Mr. President, I ask unanimous consent to have printed in the Appendix of the Record an adaptation of Dr. Havton's latest article. "Polar Problems and International Law—Developments in the Antarctic," published in the American Journal of International Law, volume 52, No. 4, which discusses the impact of recent specific and strategic developments on legal thinking in the United States and abroad.

There being no objection, the article was ordered to be printed in the RECORD. as follows:

POLAR PROBLEMS AND INTERNATIONAL LAW-DEVELOPMENTS IN THE ANTARCTIC

On March 11, 1957, at the age of 68, Rear Adm. Richard E. Byrd died. His name was for many virtually synonymous with polar exploration. An era died with him. In 1955 Admiral Byrd had been named top policy officer within the Defense Establishment on Antarctic matters. Rear Adm. George Dufek succeeded him as officer in charge, U.S. Antarctic projects, inheriting the Byrd staff and mantle and the job.

In the early post-World War II period Byrd himself helped terminate the era he personified, that is, the primacy of the private and semiprivate professional explorer who penetrated a virgin and unearthly vastness of sea, ice, mountains, and snow desert with a patriotic but also a deeply personal, almost proprietary interest. Today expeditions are offical projects with multiple objectives. The operations mounted by the United States in recent years are of unprecedented scale and scope. In addition to scientific observations and basic explorations, tests of special equipment and supplies are made; valuable training is afforded officers, crews, and troop units. Since the first flights to Antarctic airfields from terrain outside the region-in this case Christchurch, New Zealand—were completed in 1956 by Navy planes and later by Air Force Globemasters, the "season" has been extended up to 3 months by making bases available long before ships can approach through the ice.

The basic stimulus for the stepped-up activity in Antarctica since 1955 was the preparations for and the conduct of the International Geophysical Year. Technically, a cooperative, nongovernmental effort on the part of the various national members of the International Council of Scientific Unions, the IGY received much publicity and con-siderable official support. Nothing approaching the number and breadth of projects scheduled for completion by the end of 1958 had ever been attempted previously. Twelve nations cooperated in the Antarctic and sub-Antarctic observations and tests for the IGY. Partly because the projects were scientistdesigned and partly because there exists a gentleman's agreement that all activities during the 18-month IGY were to be re-garded as nonpolitical (that is, without merit in making territorial or other claims), the international cooperation has been outstanding among all participants, including the

In April 1958, the Department of State announced it was conducting diplomatic conversations with the interested nations concerning an extension of the scientific cooperation beyond the International Geo-physical Year. The International Council of Scientific Unions, after an exploratory meeting in Stockholm in September 1957, created a special committee on Antarctic research (SCAR) which met in The Hague in February 1959, to discuss specifically post-IGY work. It was first announced in January 1959, that the United States would for certain continue its scientific operations in the Antarctic past the IGY's December 31 termination date.

Four of the seven U.S. stations were selected for continued observations. Operation Deep Freeze as Deep Freeze IV, under the command of Admiral Dufek, the Defense Department, and the Navy, continued the support of the post-IGY program. Coordination was continued with a number of Federal departments and agencies having interests in the region or in the results of the operations the National Science Foundation took on the task of mounting the scientific research programs. The Soviet Union, operating several stations, remained in Antarctica. Australia and the United States jointly announced agreement to cooperate in the maintenance of the Wilkes Station. The Weddell Sea Base and Ellsworth Station have been assigned on the same basis to the Argentines.

On February 11, 1959, British Prime Minister Harold Macmillan announced, during a visit to Australia, a shift in his government's traditional position of individual sector claims, and called for internationalization and demilitarization of the Antarctic. tional claims were to be ruled out and scientific research promoted. This plan brought a flurry of mixed reactions, especially in Latin America.

Latin Americans have not forgotten that President Franklin D. Roosevelt, in facing the Axis challenge, decided to extend the Monroe Doctrine to that portion of the Antarctic under South America and rethe quested the Department of State to consider the advisability of a joint claim there "in behalf of and in trust for, the American Republic as a whole." Secretary of State Cordell Hull announced flatly in 1940 that continental defense considerations made it imperative that the American Republic sustain dominant title to that quadrant.

During the winter and early spring of 1958 the U.S. Government was gathering itself for a concerted move into the field of Antarctic policy. The approaching close of the IGY as well as the presence of the Russians in the area made it obvious to a number of the interested states that further delay would be reckless indeed. Internal coordinations and external conversations culminated in the initiative, by the President on May 3, 1958, whereby the United States was dedicated to the principle that Antarctica shall be used only for peaceful purposes. Accordingly, the United States invited 11 other countries, including the Soviet Union, to confer to seek an effective joint means of achieving this objective.

A diplomatic note was delivered by the respective U.S. Ambassadors to the foreign ministers of Argentina, Australia, Belgium, Chile, France, Japan, New Zealand, Norway, the Union of Soviet Socialist Republics, and the United Kingdom which suggested friendly cooperative and harmonious agreement, through a treaty arrangement to insure that Antarctica be used for peaceful purposes

One month later the State Department announced that all 11 nations had accepted the President's invitation. Several of the notes of acceptance, including that of the Soviet Union, made general reservations regarding territorial claims and other rights, but these seemed to complete harmony with the "status quo" concept of the American proposal. Consultations began almost immediately in Washington on the matters of time and place for the conference and of specific draft treaty language to achieve the goals of the meeting. Simultaneously, every country began a systematic study of and search into its own position, titles, and historical activity in Antarctic lands and

Faced with a widely popular, concrete proposal, and the likelihood that the conference would be held in any event, Chile and Argentina agreed to participate. The possibilities have been the subject of repeated

contemplation in the Latin American press. Several other South American states have begun to take an interest. It is reported that at the request of Itamaraty (the Brazilian foreign office) local military circles, including the Superior War College, have begun to study the possibility of Brazilian participation in an Antarctic settlement and even of an Antarctic claim. Peru and Uruguay have also recently begun studies along similar lines, the latter having appointed a commission to study the rights of Uruguay in the Antarctic. A logical extension of the sector principle to all of the littoral states of southern South America appears to be the basic "approach" and hope of these countries. This scheme has been named "the theory of projections" by its proponents; simply by dropping a line down the "unobstructed" meridians southward to the Pole.

While these countries may have contrived their entrance into Antarctic affairs too late for actual participation in the impending conference of interested states, any discussion or later programs by United Nations organs or by any of the specialized organizations will provide an opportunity for the assertion of Peruvian, Uruguayan and Brazilian "rights."

The presence of competing state activity has caused the older claimants and interested states to redouble their efforts. In a new spirit of compromise it is now considered urgent to put into operation agreements which will preclude uncontrolled expansion of the Communist contingents and the introduction of military and other "cold war" considerations.

On July 15, 1959, Ambassador Arthur S. Lall, of India, requested that the question of Antarctica be placed on the agenda of the 13th General Assembly, suggesting that consideration be given the question. India proposed the same agenda item in 1956. Opposition to general discussion, particularly by Chile and Argentina, caused India finally to withdraw her proposal at that time. Similar and even broader resistance to a General Assembly debate (now that a 12-nation conference of interested states may be called), plus the number of other pressing world problems, has caused India to decide once again not to press the issue for the time being.

The general exploration and exploitation of Antarctica has been hampered as much by the lack of an ice-free airbase as by anything else. The only suitable location found thus far, Marble Point on the edge of McMurdo Sound, has now been surveyed and an initial 1,700-by-50-foot gravel runway has been put into use. Expansion of this initial strip to a length and surface adequate for major aircraft is a high priority project with American Antarctic specialists. In 1957 the United States specified in its renewal of the commercial aviation agreement with Australia that service be authorized along three routes, including one over the Antarctic. An agreement is being negotiated with Brazil which would allow implementation of the Antarctic route via Rio de Janeiro. Antarctic stopover is planned for Marble Point, Flights from South American capitals to Melbourne and Sydney, while not of high traffic potential, would be shortened by up to 6,000 miles over present routings. There is apparently considerable official eagerness to inaugurate such service by an American carrier as soon as navigational and landing facilities permit.

Landing strips on the ice are very treacherous and, when on the shelf, likely to deteriorate or break off and drift away, as have the Navy's best efforts in 1956, 1957, and 1958.

President Roosevelt's order of November 25, 1939, assigned a mission to the newly created (though short-lived) U.S. Antarctic Service and gave specific instructions to its commander, Admiral Byrd. The letter re-

iterated traditional policy that the "United States has never recognized any claim of sovereignty in the Antarctic regions asserted by any foreign state," and cautioned members of the U.S. Antarctic Service not to "take any action or make any statements tending to compromise this position," however:

Members of the Service may take any appropriate steps such as dropping written claims from airplanes, depositing such writing in cairns, et cetera, which might assist in supporting a sovereignty claim by the U.S. Government. Careful record shall be kept of the circumstances surrounding each such act. No public announcement of such act shall, however, be made without specific authority in each case from the Secretary of State.

The directive for the Navy's 1946 Operation High Jump listed the extension and consolidation of "U.S. sovereignty over the largest practicable area of the Antarctic continent" as one of its objectives. Operation Windmill in 1947 was similarly instructed, as was the first Operation Deep Freeze in 1955. The universal understanding to make the IGY nonpolitical led to the formal removal of claims objectives from the orders of subsequent phases of Operation Deep Freeze, the support force for the United States IGY stations.

#### PROSPECTS AND ISSUES

Attention to polar problems shows every sign of increasing rather than decreasing. There is a need for a bold, long-range polar policy—both from the politico-military and the scientific points of view.

Scholars abroad are maintaining their interest in polar problems. At home, even secondary students are being informed of the significance of the area.

An institutional framework for the treatment of the problems of either the Arctic or the Antarctic would be, under any circumstances, a major landmark in the history of international relations. A successful formula would yield priceless precedent in the international law and organization for possible broader application at some future date. Several commentators have expressed the hope for experience in the polar regions which could serve as a model for man's eventual regulation of the even more remote satellite, moon, and outer space.

Should navigational aids, weather observations, and scientific studies be carried out on a merely cooperative basis, leaving performance to the individual nations concerned, or should such tasks be undertaken by some mutually supported international bureau created especially for the purpose? Should the United Nations be given jurisdiction over all such special territories and a permanent force created which would not only patrol all regions assigned, but administer special scientific, relief, and development programs?

Decisions of the greatest importance to the human race are being thrust upon the leaders of the nations. They must cast about for a partial community in which to try out slightly more advanced forms of international administration and policing which may in time come to be recognized as a trustworthy step in the right direction.

Twelve nations are preparing to discuss settlement of the Antarctic question in a proposed forthcoming conference. Arctic inspection against surprise attack is part of the basis for a special disarmament meeting proposed for October 1958. Pressure increases for a permanent United Nations police force. It is to be hoped that in every country the statesmen responsible will bear in mind the potential for world peace of adequate solutions to the questions of the polar regions.

ROBERT D. HAYTON.

# Inflation

EXTENSION OF REMARKS

# HON. THOMAS B. CURTIS

OF MISSOURI

IN THE HOUSE OF REPRESENTATIVES
Friday, June 5, 1959

Mr. CURTIS of Missouri. Mr. Speaker, I wish to call to the attention of my colleagues an editorial which appeared in the St. Louis Globe-Democrat on Wednesday, June 3, 1959, entitled "If We Don't Curb Inflation":

#### IF WE DON'T CURB INFLATION

The American factory worker last year earned an average of \$83.15 a week. On paper, he was making \$2.17 more each week than he earned in 1957. But that wage gain was really a sham and a delusion.

The cost of living rose so much in that one year alone that his weekly \$83.15 wage was worth 6 cents less than the \$80.98 a week he had earned a year earlier. Inflation had made him property richer.

tion had made him poorer—not richer.

Washington is largely to blame for the inflation that has gone on almost without interruption ever since the end of World War II. Both the White House and Congress have approved the spending of huge sums, whether the Government had the money or not.

When the money wasn't there, the Treasury turned on the printing presses and ran off some more greenbacks and charged it off to the national debt.

Uncle Sam now owes some \$275 billion on which he pays some \$8 billion a year in interest alone.

President Eisenhower has announced his resolve to make next year's budget balance and run up no more national debt—come hell or high water. For some reason, his stand has won him few bouquets in Congress—or out of it.

At a recent press conference, he was bombarded with questions about his budget-balancing plans.

Some of the queries were sharp enough to get under the hide of a man far less thin-skinned than David Dwight Eisenhower. One of the most pointed questions was whether he is right in making a fetish out of balancing the budget. The President replied:

"I don't know why suddenly a balanced budget is getting to be a bad word. I think it is rather a good thing to be a bit frugal and say that we can live within our means \* \* \*

"If we cannot live within our means as prosperity is growing and developing, when are we going to do it? And if we are going to always live under deficit spending, what is going to happen to our currency?"

The answer to the last question is to look at what has already happened to the American dollar. Today's dollar is worth less than 1939's half a buck.

So far Congress has given the President no help at budget balancing. Either the Senate or the House has approved huge housing bills, expensive schemes for Federal aid to education, multi-million-dollar programs to bail our areas hard-hit by the vanished recession, and spend-thrift subsidies for veterans.

If all of these bills pass both Houses in about their present form, Budget Director Maurice Stans estimates next year the Federal Government will go in the red about \$3\$ billion. This, of course, in what promises to be one of the biggest boom years ever.

As the President said:

"If we cannot live within our means as prosperity is growing and developing, when are we going to do it? "And if we are going to always live under deficit spending, what is going to happen to

our currency?"

The answer to that last question is this: If Washington keeps printing greenbacks, whenever it is short of cash, then one day the American people may find out how cruel it is to live not under creeping inflation, but under the galloping variety.

It may find out what it is like to have dol-

It may find out what it is like to have dollar bills worth less than the paper they are printed on, and food, clothing and shelter so dear that money can hardly buy them.

Resolution of Wisconsin Association for Adult Education, Urging Continuation of Programs for Vocational Education

EXTENSION OF REMARKS

# HON. ALEXANDER WILEY

OF WISCONSIN

IN THE SENATE OF THE UNITED STATES
Friday, June 5, 1959

Mr. WILEY. Mr. President, today I was pleased to receive from Clare D. Rejahl, executive secretary of the Wisconsin Association for Adult Education, a resolution adopted at the association's recent convention in Green Bay, Wis.

In essence, the resolution voices strong support for continuation of our programs

for vocational education.

We recall that in the past the Federal Government has made a contribution to vocational education. However, it is important to stress that the States and local communities bear a major portion of the cost burden, matching Federal funds at about a 5-to-1 ratio.

As we know, the 1959 budget fortunately provides for continuation of this program. From time to time, there have, however, been recommendations for withdrawal of Federal support.

Over the years, this fine vocational education system has provided folks in a wide variety of fields, including industry, agriculture, labor, nursing, homemaking, and others, with opportunities to develop skills and training, the better to perform in their vocations.

In order to give my colleagues the benefit of the deep feeling of our fine Wisconsin association on the need for continuation of Federal support, I ask unanimous consent to have the resolution printed in the Appendix of the Record.

There being no objection, the resolution was ordered to be printed in the

RECORD, as follows:

Whereas the program of vocational education in Wisconsin has had as a primary objective the development of the skills of the working youth and adults of our State; and

Whereas the program of vocational education in Wisconsin has been developed with the assistance of Federal aids allotted to the State under the provisions of the Smith-Hughes and George-Barden Acts; and

Whereas the elimination of Federal aids for vocational education under the Smith-Hughes and George-Barden Acts would result in discontinuance of some established vocational education training programs which are essential to the basic economy of our

Nation and would hinder the development of needed new programs; and

Whereas the elimination of Federal aids for vocational education would weaken the industrial, business, and agriculture training structure of our country, the strength of which is so essential to successful competition with the Communist world; and

Whereas President Eisenhower in his 1959 budget message to the U.S. Congress has recommended the elimination of Federal aids for vocational education under the Smith-Hughes and George-Barden Acts beginning on July 1, 1960, and has stated that legislation will be introduced into the 1959 session of Congress to accomplish this objective: Therefore, be it

Resolved, That the Wisconsin Association for Vocational and Adult Education Conference, assembled in Green Bay, Wis., on Friday and Saturday, May 1 and 2, 1959, take action vigorously opposing the recommendations of President Eisenhower for the elimination of Federal aids for vocational education beginning on July 1, 1960; and be it further

Resolved, That a copy of this resolution be sent to the Honorable Dwight Eisenhower, President of the United States, Washington, D.C.; to all Wisconsin congressional representatives; and to the Honorable Gaylord A. Nelson, Governor of Wisconsin.

# Protection of the Scenic Shorelines of the United States

EXTENSION OF REMARKS

# HON. RICHARD L. NEUBERGER

OF OREGON

IN THE SENATE OF THE UNITED STATES
Friday, June 5, 1959

Mr. NEUBERGER. Mr. President, on May 20 I was pleased to introduce in the Senate S. 2010, which is the bill sent to Congress by the administration to provide for the creation of three national shoreline parks, to be selected administratively by the U.S. National Park Service.

The bill would authorize \$15 million for the purchase of these three locations. Because I believe so strongly that our scenic seashores must be protected—whether on the Atlantic, the Pacific, or the Great Lakes—it is my hope that this legislation becomes law. I am gratified with the opportunity to work together with the administration in so worthy a cause—as I cooperated with them in saving the timber and wildlife resources of the great Klamath Indian Reservation of southeastern Oregon, last year.

An excellent editorial on this theme was published on the editorial page of the Oregon Daily Journal, of Portland, for June 1, 1959. The title of the editorial is "New Tack on Seashore Proposal." I ask unanimous consent that the editorial be printed in the Appendix of the Record, for the information of the large number of Senators who are interested in helping to safeguard permanently our magnificent seacoasts and shorelines.

There being no objection the editorial was ordered to be printed in the RECORD, as follows:

NEW TACK ON SEASHORE PROPOSAL

Senator RICHARD L. NEUBERCER'S decision to introduce a Department of the Interior bill on the acquisition of unspecified national seashore areas means he is willing to side-track temporarily his own bill to establish a seashore recreation area in the Oregon Dunes between Florence and Reedsport.

The new bill, sought by Acting Secretary of Interior Elmer Bennett, calls for the appropriation of \$15 million to purchase three sites from a number of possibilities on the Atlantic, Pacific, guif, and lakeshore coasts.

Senator Neurerger is confident, once this bill is passed, that the Oregon Dunes area will have a good chance of being one of the three, partly because of the modest acquisition cost compared with that of some of the leading contenders. The Oregon Dunes cost is estimated at \$3,200,000, compared with \$16 million for the Cape Cod (Mass.) Dunes, \$9 million for the Indiana Dunes, and \$10 million for the Point Reyes (Calif.) Dunes.

The Oregon Dunes proposal is controversial, but Neubergers thinks it is less so than some of the others and that this will enhance its chances. Most of the opposition, he says, is limited to the Florence area. He has found favorable opinion elsewhere on the Oregon coast and in other parts of the State. He is almost certain now that the Senate public lands subcommittee will hold hearings in Oregon this fall, at Florence or Reedsport and Portland, on the Oregon Dunes bill. The measure of public support found at these hearings can be a determining factor in the success or fallure of the proposal.

Meanwhile, it should be noted this is not the first time Neuberger has teamed with the Department of Interior on a matter relating to Oregon resources. Last year he embraced the Seaton bill on the disposition of Klamath Indian timber, after he decided it had a better chance in Congress than his own, and was extremely influential in steering it through. He now believes passage of the Department of Interior seashore bill is a necessary first step to success for the Oregon Dunes proposal.

Oregon outdoor and conservation groups should take advantage of the time between now and the fall hearings to determine their position. Their testimony might well decide whether Oregon is to have a national seasoner recreation area or not.

#### Wanted: Cancer Defense

EXTENSION OF REMARKS

# HON. RICHARD L. NEUBERGER

OF OREGON

IN THE SENATE OF THE UNITED STATES
Friday, June 5, 1959

Mr. NEUBERGER. Mr. President, the June 4, 1959, issue of the Machinist, published by the International Association of Machinists, contains a succinct editorial entitled "Cancer," whose significant message would be diluted by further introduction. I ask unanimous consent that the editorial be printed in the Appendix of the Record.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

CANCER

For 6 years, the Communists tried every trick in the book to get John Foster Dulles out of their hair. What the Commies couldn't do to our former Secretary of State, cancer did.

We may know how to defend ourselves against the Communists, but recent events prove again that our defenses against cancer are inadequate and ineffective. It's time to strengthen our national defense against cancer.

# Federal Water Pollution Control Act

SPEECH

#### HON. JOHN D. DINGELL

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Thursday, June 4, 1959

The House in Committee of the Whole House on the State of the Union had under

House on the State of the Union had under consideration the bill (H.R. 3610) to amend the Federal Water Pollution Control Act to increase grants for construction of sewage treatment works; to establish the Office of Water Pollution Control; and for other purposes.

Mr. DINGELL. Mr. Chairman, I wanted an opportunity to remind my colleagues here that the question before us really is whether we are going to have an effective water pollution law or not.

I want to recite to you some of the things that go into the water that you and I and our citizens downstream drink. If you have read some of the insertions I have put into the Appendix of the Congressional Record you will know what is being dumped by hundreds of thousands of tons into the waters of the United States. We find substances like dead cats, dead dogs, municipal waste, human feces, condoms, garbage, big gobules of fat, chicken feathers, entrails of animals from slaughterhouses and radioactive waste. These are some of the things that are in the water your constituents and mine are drinking. These are some of the things that this bill is aimed at taking out of the waters that your constituents and mine are drinking. The waters of the United States are so foul that it is really painful to drive along a river like the Potomac.

Let me tell you some of the other things that go into these waters; alkalis, acids, strong corrosive substances, substances so strong that they are eating up bridges and retaining walls, levees, canals and dams, poisons like phenol, a pea-sized bit of which will kill an elephant, substances which attack and enlarge the liver, other substances, which cause damages to body of a nature yet unknown.

When the House votes on this measure, these things should be borne well in mind.

At low water on the Ohio River one quart in every four has been through toilet, kitchen sink, mine dump or factory. One quart in every four of the water of the beautiful Ohio has been defiled with unspeakable filth, poison, and germs. What will the people of that great river valley, or any other river valley say to their elected representatives who oppose restoring, the water of our country to a safe, clean condition, especially when in the future

they find, as some now do that 1 out of every 2 quarts of water is defiled by flowing through sink, toilet, or industrial system.

# Early Settler of Wilkes-Barre Receives Recognition in National Magazine

EXTENSION OF REMARKS

OF

# HON. DANIEL J. FLOOD

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Friday, June 5, 1959

Mr. FLOOD. Mr. Speaker, under leave to extend my remarks in the Record, I include the following article that was featured in the Wilkes-Barre Sunday Independent, May 10, 1959:

CATLIN MAKES THE BIG TIME—LIPE MAGAZINE FEATURE GIVES HONOR TO WILKES-BARRE'S INDIAN PAINTER WHO DESPAIRED HIS WORK WAS WASTED

George Catlin, Wilkes-Barre native and highly controversial painter and author of his time (1796-1872), has scored big time recognition for his authentic paintings of early American Indians.

Life magazine currently is publishing a series of color-plate articles on "How the West Was Won." A double-page spread on Catiln's paintings of Indian tribes and ceremonies as well as a full-page reproduction on Catiln's painting of an Indian chief are featured.

painting of an Indian chief are featured. James J. Corrigan, of 297 Madison Street, elty, local historian and an authority on Catlin's works, has interesting comments on the Life magazine spread. His library contains many of Catlin's famous volumes on the Indians, including two purchased from book dealers in London—"Last Rambles Amongst the Indians of the Rocky Mountains and Andes (1868)" and "Life Among the American Indians (1875)."

In the preface to the latter work, Catlin noted the following biographical materials, of considerable importance to modern Wyoming Valley residents, in view of the fame gained by one of the area's natives in the field of art:

"The place of my nativity (July 26, 1796) was Wilkes-Barre, in the Wyoming Valley, rendered historically famous by its early and disastrous warfare with the Indians whom the civilized races had driven out of it, and celebrated in the popular poem by (Thomas) Campbell, 'Gertrude of Wyoming.'"

#### STUDIED LAW

"When at the proper age, I commenced reading the law for a profession, I attended the law school of the celebrated Judges Reeve and Gould, in Connecticut, for 2 years." (Catlin had previously attended the academy in Wilkes-Barre, set up in the town's courtroom and Jail, decently clapboarded for its new purpose.) "After reading for a couple of years longer, I passed my examination and was admitted to the bar, commencing the practice of law, which I followed for several years.

"During this time, fortunately or unfortunately, another and stronger passion was getting the advantage of me, that for painting, to which all of my love for pleading soon gave way. I very deliberately resolved to convert my library into paintpots and brushes, and to pursue painting as my future.

"In Philadelphia now, I again resolved to use my art in rescuing the looks and customs of the vanishing races of native man in America from the oblivion to which I plainly saw they were hastening before the approach and certain progress of civilization."

BEGAN TO PAINT IN 1832

"I started in 1832 with canvas and colors and penetrated the vast solitudes from whence I have brought the information to be given in the following pages.

"I devoted 8 years of my life in visiting about 50 tribes in North America and brought home a collection of more than 600 oil paintings (in all cases made from nature) of portraits, landscapes, and Indian customs, and every article of their manufacture, of weapons, costumes, wigwams, etc., which exhibited for several years in London and afterwards in the Louvre, Paris, at the invitation of his Majesty, Louis Philippe, who paid it many visits, with the Queen and most of the royal familiy."

Despite George Catlin's fame, even in his lifetime, his remarkable Indian paintings and books of the Redskins were strongly criticized before his end, principally by envious enemies of his artistic career. On occasions in his long life, approaching poverty dejected Catlin who attempted continuously while living abroad to gain a reward he considered fair for his Indian paintings. He lived to see his hopes fulfilled, his paintings placed in the Smithsonian Institution at Washington.

TRUE TO WILKES-BARRE

Catlin's lifelong devotion to his native town, Wilkes-Barre, is tragically revealed in the first line of a volume, by his excellent biographer, Lloyd Haberly, a Rhodes scholar, who in his work, "Pursuit of the Horizon—A Life of George Catlin," published in 1948, wrote:

"In his deaf, lonely age, after 30 years abroad, he still signed himself, 'George Catlin of Wilkes-Barre'."

George Catlin, "provided every possible comfort by his daughters," died at Jersey City on December 23, 1872. His remains were interred at Greenwood, Long Island.

# Vice President Nixon Writes About Dulles

EXTENSION OF REMARKS

# HON. ALVIN M. BENTLEY

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES
Friday, June 5, 1959

Mr. BENTLEY. Mr. Speaker, the most recent issue of Life magazine contains several pages of photographs covering the recent funeral ceremonies of our late great Secretary of State, John Foster Dulles, as well as pictures setting forth the highlights of his illustrious career. Accompanying this pictorial study is a brief but moving article by Vice President Nixon about the character and quality of this great man whose passing was indeed a loss to the entire free world.

It is a pleasure to call the attention of my colleagues to this article and, under leave to extend and revise my remarks, to include it with them, not only for the information of my colleagues in Congress but with the expressed hope that it will be given wide circulation throughout the entire country.

It is a fitting tribute to a very great man from another great man who was closely associated with Mr. Dulles in both his work and his thinking regarding foreign policy and the dangers of international communism; VICE PRESIDENT NIXON WRITES ABOUT DULLES (By RICHARD M. NIXON)

I have had the privilege of knowing and working with John Foster Dulles since the time I first met him in 1948. And it was my great fortune that since the fall of 1955 the association between us was particularly close.

In a city where a political leader learns that the number of his friends goes up and down with his standing in the public opinion polls, I found Mr. Dulles' loyalty to his friends was no more affected by the latest poll than was his adherence to his own policies.

He was not unaware of his unique abilities. But he was one of those rare individuals who could accept-and even demand-from his friends constant critical examination of both his policies and his leadership. He was never guilty of that most deadly sin—unreasoned

pride and conceit.

I recall at least four occasions when he was under attack when he asked for my advice. His question was not as to his policies, which he believed to be right (a view I shared), but whether he, himself, might have become too controversial to be the best spokesman for those policies.

"I never want to be a burden on the President," he often used to say to me. "As a friend, I want you to tell me whenever you believe that I have become a burden, either

politically or otherwise."

He recognized the fundamental truth that a public man must never forget—that he loses his usefulness when he as an individual, rather than his policy, becomes the issue.

This trait was most in evidence on his last arduous journey to Europe when he had to call into play all his superb diplomatic talents in order to help unify the Western position on Berlin. There was seldom a moment on this trip when he was without pain. He was unable to keep down a single meal.

I asked him how he was able to carry on. He answered, "I told my associates that they were to watch me carefully and that they were to inform me immediately whenever it appeared that my physical condition in any way impaired my ability to carry on the negotiations in which we were partici-But he was never better at the negotiating table than at this most difficult period of his life.

He afterward told me, "I never felt any pain while the negotiating was taking place. Then at the end of the day it would come

down on me like a crushing weight."

So much for the quality of the man. His policies will be judged not by his dedication or his skill at the conference table but by what happens in the years ahead, when men like Christian Herter build on the foundations Mr. Dulles erected.

But whatever happens there are certain great principles which he advocated which will forever stand as a monument to his

He believed that those who are called to positions of leadership in a democracy have the responsibility to lead, not just to follow public opinion. During the crisis over Que-moy and Matsu, the mail, the polls, and the opinionmakers seemed to be overwhelmingly against the position he advocated. He told me that we had to try to change public opinion by informing the people of facts of which they might not be aware. If, after they learned the facts, the people held the same opinion, theirs of course should be the final judgment. But in this instance, his leadership helped to convince the people and thereby averted a Communist victory that could have destroyed the free world position in Asia.

History will also record that the inflexibility and brinkmanship for which he was criticized in truth represented basic principles of the highest order.

At a time when the political and intellectual climate in the West appeared to be moving slowly but steadily toward advocacy of shortsighted, opportunistic arrangements with the Soviets, Mr. Dulles' stubborn constancy sometimes appeared like an anachronism. Yet he made an unchallengeable argument for firmness where fundamentals were involved. Speaking before the National Council of Churches of Christ last Novem-ber, Mr. Dulles said: "Communism is stubborn for the wrong; let us be steadfast for the right. A capacity to change is indis-pensable. Equally indispensable is the capacity to hold fast to that which is good. So it is that while we seek to adapt our policies to the inevitability of change, we resist aspects of change which counter the enduring principles of moral law."

When he was attacked for brinkmanship Mr. Dulles stood on an ancient and honorable principle—that by looking a great danger in the face we may avert it and lesser perils. He was simply taking the same posttion which Winston Churchill saw so well in 1939: "If you will not fight for the right when you can easily win without bloodshed; if you will not fight when your victory will be sure and not too costly; you may come to the moment when you will have to fight with all odds against you and only a precarious

chance of survival."

But it is in a third area in which Mr. Dulles leaves to the free world perhaps his most lasting and valuable legacy. Some of his critics have scoffed at his advocacy of peaceful liberation of the Communist-dominated peoples and at his often reiterated faith in

the eventual collapse of communism.

Yet, what other tenable position can selfrespecting free peoples take? The Communists have no hesitancy in proclaiming their faith in the eventual domination of the world by dictators. Can we be less determined in our dedication to the cause of freedom from tyranny for all people?

If we want a foreign policy and a national attitude that bends before every Communist breeze, if we have come to the point where liberty is not worth our lives, if we are becoming convinced that the future is in the hands of dictators rather than in those of free men, then we no longer need the Dulleses or their legacy. But while American greatness and American hope endure, John F Dulles will be remembered as one of their most effective and eloquent champions.

# Too Much Information, Not Enough

EXTENSION OF REMARKS OF

# HON. E. C. GATHINGS

OF ARKANSAS

IN THE HOUSE OF REPRESENTATIVES

Friday, June 5, 1959

Mr. GATHINGS. Mr. Speaker, the distinguished gentleman from Texas [Mr. Mahon] and the members of the Subcommittee on Defense Appropriations do a great service to our Nation and to the security of our citizens. I wish to commend them for the long hours and great study they have devoted to the task of bringing to the House this bold, yet balanced appropriation bill. We must spend this money if we are to remain strong and able to defend our way of life.

In this connection, an editorial which appears in the June issue of Air Force Magazine written by its editor, Mr. John F. Loosbrock, will be of interest in showing the appreciation by experts of the work by this subcommittee:

Too Much Information, Not Enough Facts (By John F. Loosbrock, editor)

We have just spent a couple of days leafing through an impressive 864-page volume which will never become a selection of the Book-of-the-Month Club. Nor will it ever be done as a motion picture or a television script. Its cover is the chaste khakl of the Government Printing Office, devoid of the half-clad, bosomy females which lead to commercial success on the newsstands of the Nation.

Its title is something less than titillating-"Hearings Before the Subcommittee of the Committee on Appropriations, House of Representatives, Eighty-Sixth Congress, First Session, Subcommittee on Defense Appropriations George H. Mahon, Texas, Chairman, Part 5, Procurement."

The authors' credits include a parade of seventy-three high-ranking military and civilian witnesses ranging from Adams, Brig. Gen. A. J., to Wood, Maj. Gen. R. J. All three military services and the Department of Defense are represented, and the subject matter ranges from a learned discussion of the philosophy of deterrence to the replacement of cost of gloves.

This volume covers but one part of one group of hearings before one subcommittee of one committee of one of the Houses of Congress. And its size and scope point up in dramatic fashion just how the legislative portion of our decision-making process is being engulfed in a sea of facts, figures, conflicting opinion, as well as plain old gobbledygook.

One hardly can determine where one's sympathy lies. With the armies of generals and admirals which repeatedly storm Capitol Hill armed with flip-charts and viewgraphs in support of what they firmly believe is the answer to this nation's salvation? Or with the embattled congressmen. who snipe back with the dramatically pointed finger and the trenchant phrase?

At the moment, our feelings, admittedly colored by reading miles of fine print, lean sympathetically toward the legislators. As sincere in their solicitude for the nation's welfare as is the parade of witnesses, they must search for truth in a welter of conflicting statistics, must make decisions in areas requiring high technical competence, while simultaneously keeping a wary eye on potential holes in home political fences.

Granted, many congressmen and senators have sat on these committees for years, and some of them are more expert in certain fields than the witnesses they are interorgating. But their time is limited, and the technical resources available to them are but a fraction of those at the disposal of the executive departments.

In the defense business this dilemma is becoming critical. Not only are billions of tax dollars involved, but continued existence of the nation may well be at stake.

The situation becomes even more critical as more and more responsibility for essentially operational decisions is being flung at Congress by the executive branch while financial responsibility is more and more being withheld from, or wrested away from, Capitol Hill.

Thus, we are currently faced with a situa-tion which finds the administration warning against any breakthrough on budget ceilings while simultaneously asking Congress to make the operational choices between competing weapon systems in order that the financial ceiling may be maintained.

Not long ago, in a colloquy involving the Army's Nike concept of air defense versus the Air Force's Bomarc, the Secretary of Defense was asked flatly what decision be forthcoming from the Pentagon.
"Frankly," said Mr. McElroy, "we were

hoping you'd hold our feet to the fire on this

In other words, Congress was being asked to accept responsibility for an essentially operational decision. Yet, when it does accept the responsibility and votes funds at variance with the administration's requests, the money is quietly impounded or spent on other things.

A great part of the problem lies in our far from unified approach to defense. Under the present system Congress is denied the kind of information which it needs to make the kind of sagacious decisions expected of

Each service, operating under overall Defense Department financial ceilings, is still on its own on the Hill. The Navy may ask for a certain number of Polaris missiles, for example, and call rank after rank of expert Navy witnesses to justify its request. The Air Force will make an equally impressive case for its minimum number of Minutemen. But at no point does anyone stand up and say how many fewer Polarises will be needed if the Minutemen are voted or vice versa.

It is common to refer to our unified military forces as a team, made up of disparate elements each doing its own job. But a more nearly accurate analogy these days would be the kind of a team one would have if every man wanted to pitch, no one wanted to play right field, while the manager sat

on his hands in the dugout.

If we were on Capitol Hill, we will explore the possibility of establishing our own sources of information and advice in technical defense matters, perhaps in the form of a nonprofit corporation of the RAND type. Perhaps such a group could not furnish us with all of the definitive answers, but it could serve the salutary purpose of providing reasonable and appropriate, sometimes embarrassing, questions.

If we are to decide these matters in the public arena, let us make sure that each

side is equally armed.

#### Poison in Your Water-No. 102

EXTENSION OF REMARKS OF

## HON. JOHN D. DINGELL

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES Friday, June 5, 1959

Mr. DINGELL. Mr. Speaker, pursuant to permission granted. I am inserting into the Appendix of the Congressional RECORD an article appearing in the Burlington (Iowa) Hawke-Eye Gazette of April 30, 1959, entitled "Uproar Over

Lenox Park Sewage Mess":

UPROAR OVER LENOX PARK SEWAGE MESS

There was a full congregation awaiting the city fathers when they opened their session at city hall this morning, but no parson showed to pray over them.

Most of the audience were residents of the Surrey Road-Yoder Drive-Moody Lane-Oakland Dells-Drebenstedt Street area, and they were madder than hops about the sewage from Lenox Park.

A petition signed by 130 of them was presented to the council calling on the council to eliminate this public health

hazard. It was presented by one of the delegation's spokesmen, Mrs. William E. Kratz, of 2400 Surrey Road. First signer was Mrs. Roger Feldman of 2508 Surrey

The council discussed the matter with the petitioners and with City Solicitor H. Cosgrove Walsh and Kenneth Goldsberry, Des Moines County Health Center adminis-

Spokesmen for the delegation included Mrs. Theodore Mazur of 2534 Surrey Road and Ralph Wischmeier of 2504 Surrey Road.

Crux of the trouble lies in the fact that Lenox Park is not a part of the city and, according to Mayor Ray Morrison, does not possess property of sufficient value to justify taking it into the city and building sewer lines, etc., in the area. Sewage wastes from septic tanks in the

vicinity have been emptying into the ravine across the highway, behind the area oc-cupied by the complainants, they contend.

The council expressed sympathy with the homeowners and then adjourned as a council and went into session as the city board of health to instruct Walsh and Goldsberry to notify A. J. Stumpf, contractor, that the filled immediately, and to inform residents of Lenox Park that they must cease dumping wastes into the ravine.

#### STATE ACTION

The county board of health is to be notified of the situation, and its cooperation in abating the nuisance is to be requested.

Councilman Otto Paulsen said the situation is so bad "I'm surprised the State hasn't

moved in on it."

A few of the women questioned the council's decision to give Lenox Park residents a full month to make other arrangements for the disposal of their wastes, but Mayor Morrison pointed out that "we have to be fair to these people, too."

Goldsberry said he could see no satisfactory solution to the problem as the situa-

tion now stands.

"I'm afraid some of them will have to revert to ourdoor privies," he said.

The women said they are afraid epidemics of serious disease will start from the filthfilled ravine.

#### Tribute to John Foster Dulles

EXTENSION OF REMARKS OF

# HON. ALEXANDER WILEY

OF WISCONSIN

IN THE SENATE OF THE UNITED STATES Friday, June 5, 1959

Mr. WILEY. Mr. President, today I received a letter from Cyrus S. Eaton. With his letter he enclosed a half-page article, from the London Times, in relation to the late John Foster Dulles. I think the article deserves real study by all of us, because it presents the concept which those abroad have of that distinguished gentleman.

In his letter, Cyrus Eaton writes as follows:

This half-page London Times obituary provides not merely a detailed review of the life and career of John Foster Dulles, but a valuable résumé of American participation in international affairs during his more than 6 years as Secretary of State. The Times obituary therefore deserves especially careful study by American statesmen for the disclosure it makes of the attitude of our most important ally toward our foreign policy.

Mr. President, I ask unanimous consent that the letter from Mr. Eaton and the article be printed in the Appendix of the RECORD.

There being no objection, the letter and the article were ordered to be printed in the RECORD, as follows:

THE CHESAPEARE & OHIO RAILWAY Co., Cleveland, Ohio, June 3, 1959.

Hon. ALEXANDER WILEY, Senate Office Building,

Washington, D.C.
DEAR SENATOR WILEY: This half-page London Times obituary provides not merely a detailed review of the life and career of John Foster Dulles, but a valuable résumé of American participation in international of American participation in international affairs during his more than 6 years as Secretary of State. The Times obituary therefore deserves especially careful study by American statesmen for the disclosure it makes of the attitude of our most important ally toward our foreign policy,

In my recent visits to most of our NATO ally countries, I found their leading statesmen and editors holding the views expressed

by the London Times. Sincerely yours,

CYRUS EATON.

[From the London Times, May 25, 1959] Mr. JOHN FOSTER DULLES-A POWERFUL DIRECTOR OF U.S. FOREIGN POLICY

Mr. John Foster Dulles was President Eisenhower's Secretary of State for more than 6 years and the first Republican to direct American foreign policy after the United States became the leader of the free world,

A distinguished churchman, he was a stanch anti-Communist, deeply convinced that freedom would eventually triumph inside the great Communist empires, and determined that the West must stand firm until Russia and China abandoned the use of force to spread their doctrines—he was convinced that was their intention—throughout the world. History may conclude that he was very often right in strategy, but wrong in tactics. These caused much controversy and ill feeling, and often set back causes in which he deeply believed. Some of his troubles were due to the difficulty of coordinating the policies of allies, while steering clear of offense to Congress, which was always capable of wrecking his best laid plans, especially in his first years of office. Others sprang from his willing-ness, on occasion, to bend foreign policy to the uses and internal necessities of a political party which had been long in opposition and was still divided on the part America should play in the world. Throughout, however, Dulles enjoyed the complete confidence of Mr. Eisenhower, who proclaimed him the greatest Secretary of State he had ever known.

He was the most enduring, the most professional and the hardest working member of the Cabinet appointed by a President who liked to delegate authority. Mr. Eisenhower once revealed that he had considered the creation of a new post-that of First Secretary to the Government-for Dulles. though this was never proposed publicly, it closely described the position which Dulles came to occupy in the administration.

Even his enemies and critics had to pay reluctant tribute to Mr. Dulles' wide experience, his ability and skill as a negotia-tor, his energy, and his dedication to his task. Yet in foreign countries he never commanded the affection and confidence won by Democratic predecessors whose technical skills fell so far short of his own. He spoke often, and felt deeply, about the need of applying moral principles to foreign affairs, but he was a hard-headed realist and was often accused of opportunism and lack of moral courage.

#### STIRRING PHRASES

As a Republican Secretary of State, Dulles labored under the political necessity of differentiating his foreign policies from those initiated under Mr. Truman. Yet, judged by his actions rather than by his campaign oratory, a great part of his achievement was to secure the acceptance of responsibilities and policies introduced by his predecessors and endangered by partisan quarrels in the United States. In his fondness for stirring phrases, on the one hand, and his care, on the other, not to involve the United States in war many commentators found a reflection of the conflicting desires of America itself, which, when Dulles took charge of the State Department, was sick of the Korean conflict but frustrated by the apparent stalemate in the cold war.

No Secretary of State had a more thorough preparation than John Foster Dulles, whom the State Department represented the height of ambition. Foreign policy was in his blood. One grandfather had been Secretary of State under Harrison, an uncle had served Woodrow Wilson in the same capacity.

Dulles was born on February 25, 1888, the son of a Presbyterian minister, and remained all his life an articulate advocate of the application of Christian principles to everyday life and to the affairs of nations. His first with foreign affairs came at Hague Peace Conference in 1907; the failure of the Versailles Treaty, in which he took a minor part, to secure the peace by providing for the inevitability of change and for the self-enforcement of its provisions, made a great impression upon him. On his return to America he practised law, specializing in important foreign cases for the firm of Sullivan and Cromwell, of which he became the senior partner; at one time he was thought to be the most highly paid corporation lawer in the world.

#### REPUBLICAN SPOKESMAN

Dulles' reentry into foreign affairs came by way of the churches. In 1941 he was appointed chairman of the Commission on a Just and Durable Peace of the Federal Council of Churches, a Protestant body. In the 1944 campaign he became adviser on foreign affairs to Governor Dewey, then running against Franklin Roosevelt for the Presidency, and approached the administration with proposals for keeping the foreign policy of the United States on a bipartisan basis His recognition that it would be dangerous to let foreign countries imagine that there would be a great change of policy if Mr. Dewey won, and his efforts to combat the isolationists in his party, led to his appointment as one of the group of consultants to the American delegation to the San Francisco Conference which created the United Nations, and to an acknowledged position as the Republican spokesman on foreign affairs. Few international conferences took place without the presence of Dulles, who accompanied Mr. Byrnes, Mr. Marshall, and Mr. Acheson abroad. In 1950 he was appointed by Mr. Truman to negotiate the peace treaty with Japan.

Dulles' only personal experience of politics came when he was appointed in 1949 to fill out the senatorial term of Mr. Wagner, of New York. In the subsequent election for the seat he was beaten despite a resort to partisan invective which Mr. Truman found offensive in a man who had enjoyed the confidence of the administration and despite a public reconciliation with his Roman Catholic son which critics felt to be

inspired by political motives.

After this rebuff, Dulles continued to serve the Government until the campaign of 1952, in which he became adviser on foreign policy to General Eisenhower. The foreign affairs statement in the Republican platform, the work of Dulles, reflected a desire to heal the split between the supporters of Senator Taft and those of Mr. Eisenhower; it also showed that foreign affairs were to be aggressively exploited in the campaign. Impatience with the policy of containment, a demand that America seize the initiative and unleash Chiang, the doctrine of liberation for the Soviet satellites, seemed to America's nervous alfies to amount to a foreign policy likely to bring on a third world war.

#### RETHINKING OF POLICY

In fact, although Dulles took office with the promise to rethink American policy, bark proved worse than his bite Appeasement of Congress, and particularly of such rightwing Republicans as Senators McCarthy and Knowland, went on longer than it should, but, as Dulles saw it, this was part of the task of rebuilding confidence in the State Department and providing a firm foundation in Congress for his foreign policy. Civil servants were warned that they must display positive loyalty and Mr. McLeod, a henchman of the McCarthyites, was appointed security officer to the Department. Diplomats whose real crime was that they had affronted the China lobby were dispensed with. However, the unleashing of General Chiang Kai-shek, to which the China lobby attached such importance, proved more a matter of words than reality. Formosa was deneutralized by withdrawing the fleet placed between the island and the mainland by Mr. Truman, but the attack on the main-land which might have set off a world war never materialized.

A similar transformation overtook the doctrine of liberation, which appealed so deeply to Americans anxious for a more active policy and to those with relatives in the oppressed countries. To those who had not read the fine print of Dulles' lawyer's brief, the risk of a war of liberation seemed real. In fact, his policy had always stopped short of war, and although he never wavered in his belief that the strains and stresses inside the Soviet empire must in time inevitably work toward greater freedom and in the interest of the West, no official steps were ever taken to encourage discontent.

Long before he became Secretary of State, Dulles, in his famous reply to the "Fortress America" speech of Mr. Herbert Hoover, had insisted that solitary defense could never be impregnable and that "a nation which sheds its allies elects a dangerous course." Dulles' attitude to America's allies and to the neutrals in the cold war caused constant criticism. His first big step in office was to announce that unless the European Defense Community were ratified, the United States would have to begin an agonizing reappraisal of its foreign policies, which had been centered on Europe.

#### BRUTAL FRANKNESS

This brutal frankness, so different from the tone of Mr. Marshall or Mr. Acheson, sprang partly from the knowledge that the restoration of German sovereignty could not be longer delayed, but also from a long-held conviction that without political and economic unity Europe could never wield the power to which its spiritual and material resources entitled it. In this Dulles proved himself a good friend of Europe; unquestionably he spoke for an impatient Congress and the American people.

Far more controversial was the doctrine of deterrence through the threat of "massive retaliation" at times and places of America's own choosing. This method of escaping from the static containment of the cold war, which gave the aggressor every advantage, and over-extended the resources of the free world, had its roots also

in Dulles' conviction that often in the past miscalculations of American intentions had led to war. He had to look no farther than Korea for an example. Yet America's allies were racked with anxiety lest a trigger be pulled in the Pacific which would plunge the whole world in war.

Much of the criticism of Dulles was caused by his Far Eastern policy. To many Europeans it seemed unrealistic and extremely dangerous, based as it appeared to be upon a refusal to accept the Communist victory on the Chinese mainland and a hope that Marshal Chiang Kai-shek might some day seize power again in a friendly China. Dulles argued, however, that the United States did not refuse to recognize the existence of Communist China-in fact it conducted long negotiations with emissaries from Peking.

In his view, diplomatic recognition would bestow quite unnecessarily very considerable advantages upon a hostile the United States abandoned Marshal Chiang, the oversea Chinese would have no alternative but to follow the policies of Peking, and this might help to undermine friendly governments in the Pacific. Moreover, any retreat before Communist threats might convince America's small allies in the area, and elsewhere in the world that they could not count on American support and that they had better come to terms with the Communists.
In 1955, after the Chinese Communists

had shown aggressive intentions towards Formosa, Congress passed almost unani-mously the so-called Formosa Resolution, giving the President authority, in advance, to use force to defend Formosa if this

became necessary. Mr. Eisenhower always insisted that he would never go to war without congressional sanction, and in the Far East, where an emergency might arise, he was given a blank check. The resolution left it to the

President and his advisers to determine whether an attack on the small off-shore islands formed part of a larger attack on Formosa. This authority, which was to play a large part in the crisis of 1958, occasioned qualms, even in 1955, on the part of some far-sighted Senators.

#### TROOPS MAROONED

In the summer of 1958 the bombardment of Quemoy and Matsu and the dispatch of American Naval Forces to help supply the islands made many Americans and many of America's allies fear that a world was might break out over these inconsiderable islands, but Dulles insisted that far wider principles were at stake. What was unquestionably true was that the Nationalists had marooned a large number of their best troops on the islands.

At a famous press conference Dulles appeared to be prepared to make considerable concessions; he said that the United States had considered the reinforcement of Quemov unwise and admitted that Marshall Chiang was unlikely ever to return to the mainland unless a revolt broke out there first. If Communist China would renounce the use of force against Formosa, a negotiated settlement might be possible. fact, on a personal visit to Formosa, Dulles wrung from the reluctant Nationalists a commitment not to use force against the mainland, and the bombardment-both of the islands and of Dulles-subsided.

The risk of war also seemed acute in 1954 when the French fell back in Indochina. Dulles returned from Europe convinced that he had secured British agreement to intervention under certain conditions. Sir Anthony Eden, however, insisted that the understanding had been to consider intervention only after a genuine effort to negotiate had failed. When Dulles returned to Europe

there were bitter words between him and the Foreign Secretary over the failure to rescue Dien Bien Phu. This failure to talk the same language was to culminate, 2 years later, in disaster over the Suez crisis.

Where Indochina was concerned, however, the President's veto of such hotheads as Vice President Nixon and Admiral Radford avoided a split with Britain and prevented an initiative which would have divided Americans as well as America's allies, It seems now that the fears expressed at that time were not exaggerated. Inspired revelations in 1956 pictured Mr. Dulles as glorying in his journeys to the brink of war and boasting that he had brought pressure upon Peking three times in this manner.

An outstanding feature of Mr. Dulles's diplomacy, and the source of many jokes at his expense, was his determination to keep all the threads in his own hands. He was convinced of the value of personal contacts, and no Secretary of State was more indefatigable in pursuing them. In part this was simply the reverse side of his impatience with administration. But it had other serious drawbacks. The importance of Ambassadors on the spot was devalued if Mr. Dulles might fly in at any moment. Failures of communication between America and its allies seemed to increase and reached their peak in the Suez crisis. Dulles also proved unwilling to delegate authority for policy at home; he was said to carry the State Department in his vest pocket. absence, the State Department hardly knew what America's foreign policy was. Policy Planning Staff, which had flourished under Mr. Acheson, fell almost into disuse.

The Suez crisis displayed Dulles' qualities at their best and at their worst. He had long appreciated the strategic importance of Middle Eastern oil to Europe and the free world; unlike Democratic Secretaries of State, he was free of political obligations to Jewish groups and hoped to play an impartial role between Arab and Jew in the Middle East. Moreover, he had long believed that it was an error on Mr. Truman's part to neglect the peoples of Asia and Africa and their national ambitions, a course which favored the success of Communist penetration.

#### ASWAN DAM

The reasons behind the brusque withdrawal of the American offer to help finance Egypt's Aswan Dam, which precipitated the Suez crisis, will long be disputed. A recent book, written after many interviews with Dulles, contends that this was a move calculated to show up the emptiness of Soviet offers of economic aid. Some observers believe, on the contrary, that the humiliation of President Nasser, who had offended many Republican Members of Congress by accepting arms from the Communists and recognizing Communist China, was a characteristic piece of appeasement of Congress by the Secretary of State.

Dulles' hasty flight to London to prevent the use of force after the Egyptian seizure of the Suez Canal and his enthusiasm for the idea of a users' association testified to his energy and resource in the cause of peace. But the British Government, which had been on the point of taking the dispute to the Security Council of the United Nations, put off this step only upon assurances that the association would be a strong one, powerfully supported by the United States; it was understandably embittered as weeks went by and Dulles in his press conferences found more and more reasons why the users' association could not be truly effective.

When finally Dulles stated that America must be careful not to associate itself too closely with colonial policies, the British Government, not unnaturally, concluded that Dulles' word could not be relied upon. Sir Anthony Eden was exasperated beyond endurance,

The truth may be that Dulles, like the great lawyer he was, had drafted his proposals with care so that they could bear many interpretations. But the damage to relations with Britain and France had been done. At home the critics of the Secretary of State regarded his assurance that peace had been saved as a transparent piece of campaigning for President Eisenhower, but the man at the poils was thankful not to be at war and asked no questions.

#### ATTACK ON EGYPT

The attack on Egypt, just as Americans were preparing to reelect Mr. Eisenhower, swept any doubts away. Americans, as a whole, felt that the demand for an unconditional withdrawal was just and one that could not have been avoided. Dulles himself felt that any sign of favoritism toward old friends would have tarred the United States with the colonial brush and destroyed Arab fatth in American impartiality.

The Suez crisis was still at its height when Dulles suddenly underwent an operation for what proved to be cancer. Many concluded that he would now be forced to retire. But with that vitality and tenacity which characterized him, he continued to direct policy from his hospital bed and by the beginning of 1957 he had evolved the Eisenhower doctrine for the Middle East. To carry this new departure through a Congress controlled by Democrats deeply resentful of what they considered to have been his political role in the campaign would have been an ordeal for a younger and stronger man.

Under the Eisenhower doctrine the United States pledged itself to respond to a request for military support from any Middle Eastern country which was attacked by another that was under the control of international communism. Dulles' aim, as it was in the Far East, was to preserve the status quo and to prevent countries with friendly or neutral governments from falling to the Communists. But the only Arab country prepared to throw in its fortunes with the West was Lebanon. Moreover, the formula provided no defense against indirect aggression or against aggression by a power not controlled by international communism, such as Egypt—two of the greatest threats to stability in the area.

Finally, many critics felt that what was needed was massive economic aid, not the threat of military intervention. In this respect, however, they did less than justice to the administration, which in 1955 had propounded a farsighted scheme combining economic aid with settlement of the refugee problem and the boundary issue.

#### ACTION IN LEBANON

The dispatch of American troops to Lebanon and of British ones to Jordan in 1958 was a response to the coup d'etat in Iraq as well as to the troubled State of Lebanon and was undertaken reluctantly, as a last resort, in the knowledge that the step would be regarded as one more affront to the Pan-Arab movement. But it showed that the United States was prepared to stand by its friends and to oppose external attempts to undermine existing governments. The withdrawal of the troops from Lebanon after the election of a successor to President Chamoun proved that the United States had no aggressive intent.

Russian eagerness for a summit meeting in 1958 found Dulles at first completely unresponsive. He believed that if the West stood firm long enough Russia would abandon its expansionist policy, but this required unity and tenacity on the part of the free world. The summit meeting in 1955 had endangered this firmness of purpose and Dulles, bitterly disappointed, insisted that it was impossible to negotiate with the Russians because they treated promises like pie crust made to be broken.

The relief of the State Department was

great when Mr. Khrushchev refused an invitation to attend a summit meeting of the United Nations Security Council. Some progress in reducing tension was made during the year, however, at the meetings between Russia and the West on means of banning tests of atomic weapons and outlawing surprise attacks.

#### AMERICANS AND BERLIN

The fear that concessions might undermine the will of the West underlay the inflexibility which many of Dulles' critics felt was prolonging tension unnecessarily and risking a catastrophic war. The other chief criticism of his policy was that while during the crisis the Secretary of State's behavior was cool and courageous and usually succeeded in attaining his objectives, little was done between crises to solve the underlying problems and prevent them from erupting at a later time.

Over Berlin, where the Russians attempted to force a decision late in 1958, Americans were more united than they had been over either Lebanon or Quemoy. But when Dulles conceded that free elections were not necessarily the only means of reuniting Germany, hopes revived that this might not be one of his characteristic and meaningless legal truisms, but a response to the changing political climate in America. Among the many Democrats elected to Congress in November 1958, were a number prepared to take some risks in the search for solutions and to consider a measure of disengagement as part of a German settlement.

Only Dulles himself could hope to induce Dr. Adenauer and General de Gaulle to accept a measure of flexibility in allied policy and he undertook the vital journey to Bonn and Paris in February although he was already suffering great pain from what proved, on his return, to be inoperable cancer. How indispensable he had become could be judged by the alarm and concern felt even by his critics. He had been the strong man of the alliance, with all the threads in his fingers.

After a hernia operation in mid-February he was given radiation treatment and went to Florida to convalesce, but the discovery that the malignancy had attacked the lower neck made it clear that his resignation could not long be postponed. Finally on April 15 President Eisenhower sorrowfully announced that Dulles had decided that he must lay down his charge.

down his charge.

-He is survived by his wife, the former Miss Janet Avery, whom he married in 1912, and by two sons and a daughter.

# Retirement of Vice Adm. John M. Will, United States Navy

EXTENSION OF REMARKS

# HON. L. MENDEL RIVERS

OF SOUTH CAROLINA

IN THE HOUSE OF REPRESENTATIVES

Friday, June 5, 1959

Mr. RIVERS of South Carolina. Mr. Speaker, under leave to extend my remarks in the Appendix of the RECORD, I should like to call to the attention of my colleagues in the Congress the retirement on June 30 with rank of full admiral of Vice Adm. John M. Will, United States Navy, most recently commander, Military Sea. Transportation Service.

Admiral Will's relief has already been announced to be Vice Adm. Roy A. Gano, an able and gracious gentleman well-known in naval and commercial shipping circles, and a most wise choice to

take over the worldwide complexities of Military Sea Transportation Service. He has already served a tour as deputy commander of Military Sea Transportation Service before moving on to command amphibious group 2 in the Mediterranean.

"Dutch" Will, as he is admiringly known to his friends in the Navy and in maritime circles, is an admiral's admiral. His career was colorful in the combat days of World War II, and most recently vastly productive in an operational way during the years which followed—brush-fire outbreaks of hostilities and the troubled crises which mark our times

Above all things, "Dutch" Will is a man who believes in getting around and seeing things for himself. His pace is relentless and the scope of his journeys throughout the world have left younger and lesser men bobbing in his wake. He expects and demand the highest degree of performance in his staff, and of himself he demands even more—and produces it.

An axiom at his headquarters in Washington, borne out by distraught commanders in the field on the occasion of unannounced field trips, is "If the old man asks you a question, you'd better blankety blank well have the answer or know where you can get the information he wants."

Yet the retiring commander of Military Sea Transportation Service is no martinet. He runs a mighty taut ship and he gets the results he wants, but when a member of his staff—top civilian or stenographer; officer or enlisted man—gets a promotion or is recognized for his accomplishments, personal congratulations come from Admiral Will—if he is not in Tokyo, Thule, or Timbuctoo—almost as soon as he gets it from his boss.

"Dutch" Will is synonymous with Military Sea Transportation Service. Think of one and you automatically think of the other.

Keenly appreciative of the importance of smooth public relations, his judgment and decisions concerning MSTS have done astonishing things to bring about good will and admiration for the service which for years was thought of by maritime labor and management alike as a Federal agency competing against private industry.

MSTS still has its critics, and many are mighty outspoken, but few have anything but respect for the man at the helm, "Dutch" Will,

A year ago he was awarded the Robert L. Hague Trophy of the American Legion on behalf of the entire maritime industry, recognizing him as the single individual who had done more for the American merchant marine in that year than anyone else.

This year's fiscal report of MSTS shows a significant statistic, and one which even its harshest critics find difficult to refute. Out of MSTS' entire operating funds—\$425 million—78 percent went to private industry: ship repair facilities, shipyards, steamship companies, new construction, and what have you.

The thinking of top people at MSTS is constructive and progressive. "Dutch" Will insists upon it. MSTS, he feels, is an agency whose functions should include tests and experiments which will benefit private industry as well as MSTS' own ship operations.

MSTS has led the way in ship design; cargo handling methods; safety and training practices ashore and afloat; exploration and development of remote operating areas which include the discovery of a deepwater northwest passage in the Canadian Arctic; the further development of ice freeing devices which kept extreme northerly harbors open for shipping long after the termination of the normal navigation season and a full-ahead participation in this country's oceanographic research program.

MSTS, under "Dutch" Will, conceived the ice-strengthened cargo ships and tankers which have proved themselves year after year in polar operations. In the field of rollon, rolloff transportation, MSTS' prototype vehicle carrier U.S.N.S. Comet and her recently acquired running mate U.S.N.S. Taurus are under the scrutiny of industry and their effect is already being felt in new ship designs.

When the Maritime Administration converted two Liberty ships to gas-turbine and free-piston propulsion, MSTS put them to use.

The accomplishments of MSTS are varied and impressive. Statistics of passenger lifts, evacuation of refugees from troubled lands, the transportation of military cargoes, and the supply of petroleum products throughout the world by this vastly complex, yet highly efficient, organization are available for all to see.

It has been geared with emergencies in mind—Korea and Lebanon, to name but two. In such a successful manner is MSTS run that its ships were loaded and operating with units of the fleet within hours of the announcement of the existence of the emergency.

Its record for saving lives at sea is unequaled by any organization, with the obvious exception of the U.S. Coast Guard, which is in the lifesaving business and performs its task with great distinction, devotion, and magnificent seamanship.

The high standards and the very high degree of excellence of MSTS throughout its worldwide activities are, of course, not the result of any one man's inspiration, but of many thousands of dedicated people whom he encouraged.

Admiral Will has served two separate tours—as commander, Atlantic area, and most recently as overall commander. MSTS was there when he reported aboard each time. But each time he was assigned to MSTS the wheels turned even faster than before.

The Navy is losing a talented and courageous officer. Whatever segment of private industry has the foresight to grab him will be fortunate indeed.

The four-star flag "Dutch" Will will receive at the retirement ceremonies at the Naval Gun Factory on June 30 is the Navy's own way of showing the boy from Perth Amboy, N.J., that it, too, rec-

ognized his inherent ability and leadership 40 years ago this month. Midshipman "Dutch" Will bent on his ensign's shoulderboards for the first time, and steadied on the course which has brought him, after a long and eventful voyage, to the destination he knew lay over the horizon of his youth.

Yet the voyage is only half over. A second career is at hand. The experience of many commands, the mellowness and judgment that comes with this experience and the insatiable drive to tackle baffling problems are qualifications which most surely will be sought out by the very industry which at first held "Dutch" Will in suspicion, and within a few short years regarded him with great respect.

The four-star flag they will give him at his retirement may never fly at the truck, but the man who earned it will be at the conn in a controversy involving the "men who go down to the sea in ships and have business in the great waters."

As a member of the House Committees on Merchant Marine and Fisheries and Armed Services, I am certain that I speak for my colleagues on these committees when I say that in our dealings with the top officers of the Navy few men stand out as does "Dutch" Will for dedication and devotion to duty—qualities he seeks in others and demands from himself.

As a private citizen, may I speak for myself when I say that my admiration and respect for the man I am proud to call my friend is very great indeed.

# Labor Reform Legislation

EXTENSION OF REMARKS

#### HON. THOMAS B. CURTIS

OF MISSOURI

IN THE HOUSE OF REPRESENTATIVES
Friday, June 5, 1959

Mr. CURTIS of Missouri. Mr. Speaker. I appeared before the Joint Subcommittee on Labor Reform Legislation of the Committee on Education and Labor on yesterday and because many of my colleagues have expressed an interest in my testimony I am having it included in the

REMARKS OF HON. THOMAS B. CURTIS, OF MISSOURI, BEFORE, THE JOINT SUBCOMMITTEE ON LABOR REFORM LEGISLATION OF THE COMMITTEE ON EDUCATION AND LABOR, JUNE 4, 1959

Mr. Chairman, I appreciate the opportunity given to me to testify before this Joint Subcommittee on Labor Reform Legislation.

First, let me read into the record an editorial appearing in the St. Louis Post-Dispatch on May 19, 1959, entitled "A Stronger Labor Bill." This editorial expresses my views on this subject in a more forceful way than I can. Furthermore, I believe it expresses pretty generally the viewpoint of the citizens of the St. Louis community, including the views of the rank-and-file union members, their families, and, I might add, many local labor leaders.

I do not believe that I need to call the attention of this subcommittee to the general philosophy of the St. Louis Post-Dispatch. It is regarded as one of the leading

liberal newspapers of the country. I say this with full knowledge of the lack of definiteness today of the adjective "liberal," but also with the knowledge that in congressional circles the term is descriptive of a particular political philosophy. I suggest to the liberal members of this subcommittee, who are by numbers in such strong control of it, when a newspaper like the Post-Dispatch writes editorials like the one I am about to read, it is time for them to take heed. The people of this country expect real labor-reform legislation, and if they don't get it they are going to hold this Congress and the leaders who control it in both Houses by almost a 2-to-1 majority responsible.

#### "A STRONGER LABOR BILL

"A House labor subcommittee has begun hearings on the Senate labor bill, and already is under intense pressure from the unions to water it down. Far from being watered down, the Senate version of this muchneeded legislation ought to be strengthened.

The public interest does not demand a union-busting bill, but it does demand a measure which effectively guarantees union democracy, makes union leaders more di-rectly answerable to the rank and file, and corrects the abuses so impressively brought out by the McClellan investigation.

"Secretary Mitchell's proposed curb on certain secondary boycotts certainly should be written into the bill. The Senate left it out in favor of a limited hot cargo clause.

Present law forbids a secondary boycottthat is, the application of union pressure a firm which is not the primary party to a dispute—in certain circumstances. First, an objective of the union must be to compel one person to cease doing business with another and second, the means employed to achieve this objective must be a strike or some other concerted action of employees.

"As the Teamsters have found, however, It is easy to slap a secondary boycott on hot cargo or anything else simply by avoiding concerted action of employees. The pressure can be applied directly to an employer, or it can be applied through an individual employee. Secretary Mitchell's proposal would close these loopholes without going so far as to outlaw all secondary boycotts, some of which might be considered legitimate—for example, those against an employer who is performing farmed-out struck work.

"Similarly Secretary Mitchell's complete proposal for dealing with blackmail picketing ought to go into the bill, instead of the weaker version which the Senate adopt-Mr. Mitchell does not urge that all picketing for the purpose of union organization be barred. But he would bar such picketing where the employees clearly did not want to be represented by that union. Top-down organizing, in which the union aims its power at the employer instead of persunding his employees, is a demonstrated evil which the Mitchell proposal would effectively deal with.

"The Senate bill is defective on this point in several respects. Its language is loose, and subject to interpretations that would weaken its effectiveness. While the bill bars blackmail picketing where a plant representation election has been held during the preceding 9 months, it does not bar such picketing during the remaining 3 months before a new election, under present law, can be held. If the purpose is to bar blackmail picketing at plants where another union has won an election, why not bar it during the whole year between elections?

"The House committee also needs to take a close look at the enforcement powers behind the bill of rights which the Senate prescribed for union members. The Senate relied chiefly on authorizing a member to file civil suit in the courts. But how many union members could afford to hire a lawyer and pay for protracted litigation against a well-financed union? The enforcement power could be strengthened, either by making unions and their leaders liable for costs of successful suits against them, or by authorizing a union member to seek redress from the NLRB. When an employer violates union member's rights, the case goes to the NLRB before it goes to the courts. haps the same procedure could be followed if the member's rights were violated by a union.

"There are no doubt other respects in which the Senate bill could be improved without converting it into a union-busting The secondary boycott, picketing, and bill-of-rights enforcement clauses seem

to us the most important.
"We hope the House will tackle them courageously despite political pressure from the unions.

Now my purpose in asking to testify was primarily to discuss one aspect of labor reform legislation, a narrow aspect perhaps but a vital aspect. I want to discuss the en-forcement power behind the bill of rights as the St. Louis Post-Dispatch terms it.

#### A RIGHT WITHOUT A REMEDY IS NO RIGHT

Under the Taft-Hartley Act and under many State statutes a union member has the to an accounting from his union leaders of his union dues. Experience has shown this to be no right at all because the remedy is insufficient. As the Post-Dispatch edi-torial states: "how many union members could afford to hire a lawyer and pay for protracted litigation against a well-financed union?" What is more important, granted the premise that a union is racketeer ridden, how many union members dare go even to a prosecuting official, let alone a private lawyer to enforce their rights to an accounting of dues? This is no hypothetical case. This is the actual situation in Missouri where the right to an accounting of union dues has criminal sanctions set up by some State statute to enforce this right. No union member dare go to court to enforce his rights though these rights have been violated for years by many unions.

The sanction in the Taft-Hartley Act de-

priving a union that fails to grant an accounting of a member's dues of the right to use the facilities of the National Labor Relations Board has likewise proved to be inadequate. The racketeer ridden union officials couldn't care less about losing the use of the facilities of the National Labor Relations Board.-Indeed, democracy in labor unions today is a bundle of rights without a remedy.

The same problem exists in trying to enforce any other provision of the union members' proposed bill of rights including the most essential and basic right of them all that of a secret ballot in periodic elections of union officials and of other important union actions.

I question very much if the criminal penalties imposed in some of the proposed labor reform bills, rigid as some of them are, will be of any greater practical use in enforcing democracy in union affairs than are the present remedies. They all hinge on an in-dividual union member complaining to local authorities or to a far away tribunal in Washington, D.C. In both instances the complaining union member never knows for certain whether his name will be passed on to the racketeer against whom he is complaining. It is a brave man who complains in

However, there is an adequate remedy available and this remedy conforms to the theory of present law. Four of the bills before this subcommittee, H.R. 3540, introduced by Mr. Kearns, pages 44-45, which contains to a large degree the administration recommendations; H.R. 4473, introduced by

Mr. BARDEN, pages 41-42; S. 1137, introduced by Senator McClellan, pages 41 and 42; and S. 748, introduced by 15 Senators, page 45, include this enforcement provision. provisions I refer to provide that a union which violates the bill of rights of its members loses the tax exempt status it presently enjoys under section 501(2) and (c)(5) of the Internal Revenue Code of 1954 amended.

This is the subject which I wish to develop before this subcommittee. This subject matter, of course, is within the jurisdiction of the Ways and Means Committee, of which I am privileged to be a member. With my background I though it appropriate for me to come before this great subcommittee to testify and answer whatever questions this subcommittee might have on this provision.

First, let me state quite clearly that I do not believe in using the Internal Revenue laws as a method of enforcing other laws. On the other hand, when the proper enforcement of the Internal Revenue laws happens to coincide with the enforcement of other Federal laws, I think it is highly appropriate to call this matter to the attention of the Congress and the committees of the Congress who are concerned with the enforcement aspects of other Federal laws.

This is the case before us now. proper enforcement of the section of our Internal Revenue Code which provides for "exemption from tax on corporations, certain trusts, etc." does so on the theory that these exempt organizations are within the public interest. I quote:

"Section 501(c) List of the exempt organizations." Sixteen categories are listed. Let me read the title heads rapidly to give the committee an idea of the type of organizations Congress has felt should be tax ex-

1. Government corporations.

2. Corporations which are purely holding companies for other organizations which are tax exempt.

- 3. Corporations, and any community chest, fund or foundation organized exclusively for religious, charitable, education,
- 4. Civic leagues or organizations not organized for profit.
- 5. I quote in its entirety: "Labor, agricultural, or horticultural organizations.
- 6. Again I quote in full for contrast: "Business leagues, chambers of commerce, real estate boards, or boards of trade, not organized for profit and no part of the net earnings of which inures to the benefit of any private shareholder or individual."
  7. Clubs not for profit or private benefit.
- 8. Fraternal beneficiary societies.
  9. Voluntary employees' beneficiary asso-
- 10. Other type of voluntary beneficiary associations.
  - 11. Teachers retirement fund associations. 12. Benevolent life insurance associations.
  - 13. Cemetery associations (not for profit).
  - 14. Credit unions (of certain types).
- 15. Mutual life insurance companies with assets under \$75,000.
- 16. Certain kinds of agricultural co-ops. It is apparent that the reason these organizations have been made tax exempt is because in the opinion of the Congress they are nonprofit and generally serve a desirable public purpose. Strangely enough this section written into the law in 1916 has remained largely unchanged. Yet there are only limited criteria which guide the Bureau of Internal Revenue in deciding what organizations wil qualfy under the various headings. And mark this. Limited as is the criteria set out in the statute to guide the Bureau in administering this statute there are absoutely no criteria whatsoever in respect to category (5) "Labor, agriculture, or horticultural organizations." Business

leagues have some criteria set out, "not organized for profit and no part of the net earnings of which inures to the benefit of any private shareholder or individual." Other categories have rather lengthy, although in my judgment inadequate, criteria set out.

From a standpoint of proper public policy the Congress certainly should set forth some standards which these tax exempt organizations should meet. I certainly believe one criteria which all of these organizations should meet is one which provides for the democratic control of the affairs of the organizations by its members and should include a requirement for an accounting to the members of the moneys coming into the organization hands.

Certainly if this subcommittee in its wisdom feit that it was desirous to establish additional standards which it felt any labor organization should meet if it were to qualify as being in the public interest I feel that the tax laws should reflect that judgment.

Now I want to point out the practical effect of establishing by law, certain standards which tax exempt organizations should meet, as it would relate to labor organizations, or indeed any other organization where management, as it were, might run away with the organization against the will of the membership. The enforcement of our tax laws does not require the individual complaint to do other than to call the question of a tax evasion to the attention of the Bureau of Internal Revenue. This can be done, as it is frequently done in other tax violations by an anonymous post card or telephone call to the local office of the Bureau of Internal Revenue. The Bureau takes the matter from there to find out whether or not the allegation is well founded or not.

Consider the case of a racketeer ridden labor union. Any individual member of such a union could contact the local Bureau of Internal Revenue, anonymously if he wished, saying local, or national, Union X has not given its members an accounting of dues or has not given its members the right to a secret ballot in elections, or has not held periodic elections, or whatever. The Bureau of Internal Revenue of its own initiative will carry on, check with the Union officials to verify or to disprove the allegation. If the allegation is verified in its opinion the Union forthwith loses its tax exempt status, subject of course to an appeal to the tax courts by the Union if it feels the charges are untrue.

Now I want to state that I do not agree with the manner in which the violation of internal revenue standards is set up in the four bills I referred to which utilize it as an enforcement provision. I believe the enforcement should be in the nature of a contempt citation rather than in the nature of penalty. In other words, instead of depriving a Union of tax exempt status which would result in the collection of revenues for past violations, it should deprive the Union of tax exempt status until such time as it purged itself of its violation, with a reasonable time allowed in which to purge itself. This conforms to the basic public purpose in granting tax exempt status in the first place and does not penalize the union members who have been the victims of the violations.

I think the power of the deprivation of tax exemption is sufficiently strong so that no union leader, however bull-necked he might be, about imposing his control over a union against the will of the union members, would long stand against it. This is particularly true when we consider that once the tax is

to be imposed the Bureau of Internal Revenue will have to go over the union books to determine what the amount of the tax should be. What union racketeer even though he be willing to pay a penalty can afford to have his books looked into?

Though this amendment to the Internal Revenue Code may be made appropriately in a labor reform bill, and I hope this subcommittee will include it, nonetheless, I believe comprehensive legislation setting up proper and uniform standards for all tax exempt organizations, business, farm and labor, is needed. It would be helpful to the Ways and Means Committee in writing this comprehensive language if, in respect to labor unions, this subcommittee would set forth in this bill what criteria it would wish to see applied.

Finally, I would urge this subcommittee not to use the sanction of loss of tax exempt status to enforce any measures in the labor reform bill other than those which we might call a bill of rights ensuring control of union affairs in the hands of its members. I do not believe this public policy feature of tax exemption should go beyond this point. There may be those who would argue that any union found to violate other laws such laws against blackmail, organizational picketing, or improper secondary boycotting, should not be tax exempt. However, I think that would be using our revenue laws to enforce matters which are outside the revenue field and therefore undesirable.

I might say in conclusion, however, that I believe once we insure democracy in the unions much of the abuse of power that we have seen by certain labor leaders will disappear. I have noted that those unions which are responsive to their membership seldom are those which have been the subject of the recent unfavorable publicity. Furthermore, I believe that those union leaders who are responsive to their membership are those who have done the most for their membership; not the czars who ride roughshod over their own membership, other union men, other workers, and the public.

#### Cruiser "Wilkes-Barre" Will Not Die

EXTENSION OF REMARKS

# HON. DANIEL J. FLOOD

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Friday, June 5, 1959

Mr. FLOOD. Mr. Speaker, under leave to extend my remarks in the Record, I include the following article that was featured in the Wilkes-Barre Sunday Independent of May 10, 1959:

CRUISER "WILKES-BARRE" WILL NOT DIE— SCRAP ORDER DOES NOT APPLY TO FAMED SHIP—HAD SPLENDID SERVICE RECORD IN WORLD WAR II

With the Nation poised for the start of Armed Forces Week today, Wilkes-Barre will welcome the news from the Philadelphia Naval Base that the scrap order has gone out for all cruisers berthed in the Navy yard basin with the exception of the U.S.S. Wilkes-Barre (CL 103), a 10,000-ton cruiser, veteran of more than four major battles during World War II.

\* Presently the U.S.S. Wilkes-Barre is tied up beside many of her sister ships in the mothball fleet at the Philadelphia Naval-Base. This wealth of steel has been a familiar sight to yard visitors and area Navy folk for the last 12 years.

The U.S.S. Wilkes-Barre failed to get back

The U.S.S. Wilkes-Barre failed to get back into action during Korea, although some of the cruisers berthed near the ship were reconditioned and put back into service.

The U.S.S. Wilkes-Barre has moved occasionally, however, but only from one berth to another, to let her "kid sisters" get out of their beds and cruise the high seas in her place.

Her crew of one, who watches the U.S.S. Wilkes-Barre in her mothball regalia, will continue as the cruiser remains on view. moored securely along the pler at the Philadelphia Navy Yard.

#### TRAVELED OVER 150,000 MILES

The cruiser Wilkes-Barre clocked over 150,000 nautical miles before joining the mothball fleet at the conclusion of World War II.

The ship is best remembered by many for her valiant efforts to help extinguish the burning carrier U.S.S. Franklin in her Pacific duty near the end of World War II hostilities.

The Wilkes-Barre was christened on Christmas Eve in 1943 by Mrs. Grace Shoemaker Miner at Camden, N.J. Her new crew worked on her for the next several weeks as she completed fitting out and readying for use. Finally on July 1, 1944, she was placed in commission at the Philadelphia Navy Yard. The Wilkes-Barre trained her crew en route to the Pacific via the Panama Canal and reported to the Commander in Chief, Pacific Fleet, on October 27, 1944, then on to Pearl Harbor for more exercises to train for battle conditions. She joined the history making Task Forces 38 and 58, the powerful striking arms of the 3d and 5th Fleets.

#### IN MANY BATTLES

War actually began for the Wilkes-Barre in earnest during Christmas week 1944 off the Philippine Islands. She participated in such battles as the Luzon, Iwo Jima, Oklnawa Gunto Operations. These included attacks on Formosa, China coast, Nansei Shoto, and the assault and occupation of Iwo Jima. While operating under the 3d Fleet she participated in operations against Japan properticipated the Stars and Strips over Yokosuka Naval Base.

January 30, 1946, found the Wilkes-Barre arriving in San Pedro, Calif., her mission accomplished. This was the first time her crew saw "home" since departing the States in 1944. Departing the west coast she arrived to her commissioning place, Philadelphia, where she remained and made several refresher training cruises until February 1947. It was then that she departed on a good-will tour to England and Norway. Here she displayed to the free world the magnitude of power with which she was equipped. Were she able to talk at that time, she more than likely would have said, "Here I am, folks, all power and friendly, too." After After her good-will cruise, she cruised smoothly across the vast Atlantic and left behind & memory for all who saw her.

Leaving the Atlantic and entering the somewhat calm but dangerous waters of the Delaware River she parted company with the rest of the American Fleet, made a slight starboard (right) turn to enter this river, and cruised into her resting place to await a call to perform again. Wilkes-Barre was a little tired at this point in her career. Awaiting her arrival were many of her "sisters" such as the cruisers Savannah, Augusta, Columbia, Cleveland, Denver, San Francisco, all soon to be scrapped. After a few months amongst eager shipyard workers, inspectors, and many watch standers, the Wilkes-Barre finally took her place in the "silent" fleet.

#### Poison In Your Water-No. 103

EXTENSION OF REMARKS

#### HON. JOHN D. DINGELL

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Friday, June 5, 1959

Mr. DINGELL. Mr. Speaker, pursuant to permission granted I am inserting into the Appendix of the Congressional Record an article appearing in the Charleston (S.C.) News and Courier of April 25, 1959, entitled "Pollution Here Called 'Pretty Bad'":

SEWAGE TREATMENT RECOMMENDED—POLLU-TION HERE CALLED "PRETTY BAD"

(By Coyte White)

Sewage treatment is the only solution to what a State health official described as a brink of crisis pollution situated in Charleston Harbor and its adjacent rivers. He advised against swimming in the harbor and its rivers.

That was the gist of a summary of the water pollution situation made here yesterday by W. T. Linton, director of the State water pollution control authority. Linton addressed a local citizens committee formed recently to investigate solutions to the problem.

Terming conditions here "pretty bad." Linton said that a 9-week study in 1955: "Showel the situation to be not what you would wish it to be."

"Something must be done to remedy this problem, as a matter of preserving health in the area," said Linton. With normal development here, the problem will double in 8 to 10 years, he explained.

to 10 years, he explained.
"We (the authority) would have to require something be done then under the law,"

warned Linton.

The only solution he could advise, Linton said, "Would be some type of sewage treatment." He said the situation was not let extreme, and no immediate danger to health of citizens had been detected.

However, Linton said tests in the Ashley, Cooper, Wando and Stone Rivers as well as the harbor, indicated swimming would not

be advisable on a general basis.

The committee took the first step in solving the problem in setting a monthly meeting—the first Thursday in each month. The first formal meeting will be held May 7, at 8 o'clock, in the office of county council.

The committee, headed by businessman Edward Kronsberg, was appointed by County Council Chairman J. Mitchell Graham.

Kronsberg, Graham, County Manager Albert Hair, and other officials met yesterday with Linton and officials of the water pollution control authority to review the problem and plan steps needed to be taken.

Linton, illustrating his points with a map, said parts of the harbor, the Cooper, Ashley, Stone and Wando Rivers were polluted. The degree of pollution varies.

Pollution here does not stem from industrial waste, but from human sewage, Linton said. He said that in the Charleston area there were 11 outfalls being dumped into the Ashley and Cooper Rivers.

To a question by Dr. George G. Durst, a member of the committee, Linton replied that an activated sludge plant such as employed at the Charleston Air Force Base was a good method of treating sewage.

Linton also was highly critical of the use of septic tanks. He called them "An abomination of the Lord to begin with," adding: "In this area as urbanized as it is, with its rainfall, bacteria is bound to wash out.

"If trunk sewerlines were put in throughout the entire area, it would be the greatest thing that ever happened to Charleston. I mean no reflection on Charleston by this; it's the same in my area (Columbia)." Linton also suggested that Charleston

Linton also suggested that Charleston might be able to obtain Federal funds to aid in solving the pollution situation under

Public Law 660.

C. G. Leonard, chief of the sanitation division of the county health department, also spoke briefly on the use of septic tanks. He called their use "A potentially dangerous situation.

"Practically every ditch in Charleston County has been polluted at one time or the other," said Leonard, "and in the winter-time I've seen children eating ice they pick up from ditches."

He added, "I'd like to see something done, and I'll certainly do everything I can."

John Bettis, chief engineer of the Charleston Waterworks, noted:

"The southern end of Berkeley County is part of the problem. They have several thousand homes up there, and an outfall dumps on the ground at Goose Creek."

Representatives of the adjacent communities will be invited to participate in solving the pollution problem.

Resolution Urging Enactment of the Fair Labor Standards Amendments of 1959

EXTENSION OF REMARKS

# HON, WILLIAM J. GREEN, JR.

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES Friday, June 5, 1959

Mr. GREEN of Pennsylvania. Mr. Speaker, under leave to extend my remarks, I wish to include a resolution adopted by the following local unions in Philadelphia urging the Congress to pass S. 1046 and H.R. 4488, the Fair Labor Standards Amendments of 1959: International Molders and Foundry Workers' Local Union, No. 1, AFI—CIO; International Association of Bridge, Structural, and Ornamental Iron Workers' Local Union, No. 401, AFI—CIO; Retail Food Clerks and Managers' Local Union, No. 1357, AFI—CIO; and the Building and Construction Trades Council, AFI—CIO;

RESOLUTION CALLING UPON THE 86TH CON-GRESS TO ENACT S. 1046 AND H.R. 4488

Whereas all Americans must be assured of a basic minimum standard of living if we are to maintain a healthy economy at home and a position of moral leadership in the world; and

Whereas the present Federal minimum wage of \$1 an hour is inadequate to provide a bare subsistence in the United States today; and

Whereas more than 20 million Americans lack the guarantee of even this inadequate figure and are without nay legal limitation on their hours of work; and

Whereas these shocking facts constitute a grave threat to our national economy, a challenge to our moral standards as a people, and a peril to our reputation as democracy's showcase throughout the world; and

Whereas the existence of underpaid and overworked wage earners is a particular danger to the well-being of the citizens of Philadelphia; and

Whereas there is now before Congress a bill introduced by Senator John F. Kennedy and Representative James Roosevelt and cosponsored by many of their colleagues in both Houses, S. 1046 and H.R. 4488. This bill would greatly ameliorate this problem by raising the Federal minimum wage to \$1.25 and including nearly 8 million additional workers under the protection of the Fair Labor Standards Act: Therefore be it Resolved by Local No. 1, International

Resolved by Local No. 1, International Molders and Foundry Workers' Union of North America, AFL-CIO, That we call upon the Congress of the United States to give prompt and favorable consideration to this bill without delay so this serious threat to the economic and moral strength of our Nation will be swiftly met and that the conditions above described can be corrected.

The long-needed improvements in the Fair Labor Standards Act can no longer be delayed without the most serious economic and social consequences. I urge the Members to give their vigorous support to the early enactment of these amendments.

Kansas Committee Pushing Support of Barden Bill

EXTENSION OF REMARKS

# HON. WINT SMITH

OF KANSAS

IN THE HOUSE OF REPRESENTATIVES
Friday, June 5, 1959

Mr. SMITH of Kansas. Mr. Speaker, as you know, the citizens of Kansas voted by a majority of last November in favor of a right-to-work amendment to our State constitution.

I am proud to say that this law saferegarding the workingman's right to join or not to join a union, is proving extremely effective. We intend to see that it is scrupulously enforced, thus furnishing sound, permanent protection to Kansas working people whenever their right to work is threatened because their personal beliefs interfere with the union bosses' lust for political power.

We in Kansas have watched, with the rest of the Nation, the appalling story of corruption, terrorism, and violence which has become the stock in trade for the modern American labor movement. We shudder with other law-abiding citizens at the atrocities perpetrated in the name of organized labor. We sympathize with the plight of the workingman who in many States is a helpless pawn, in the hands of his power-hungry and often corrupt leaders.

We believe we have the proper protection against these abuses of power, for it follows that if a man has the freedom to join a union, and the freedom to refuse to join, he then has the means by which to free himself from the tyranny of those leaders with whom he disagrees, or from those who do not carry his trust. It seems to us in Kansas that right-to-work laws are the ideal union reform; their enactment and enforcement will return control of the Nation's labor movement to those from

whence it sprang, the working people.

At the same time, we realize that workers in most of the States do not have the protection of laws which guarantee their personal freedom, as they do in Kansas and 18 other States. They have, as a matter of fact, no protection at all, even though every index of opinion-both among the general public and union people themselves-shows an overwhelming demand for legislation to protect the working people from their own leaders.

Acting upon this concern for the welfare of all workers, a number of citizens in Kansas have banded together to form the Kansas Citzens Committee for Real Labor Reform. The committee feels that-short of voluntary unionism itself-the best protection for the worker is contained in the labor reform measures offered to this House by Representative Barden of North Carolina.

Accordingly, the committee is and has been urging support of all Kansas legislators for Mr. BARDEN'S measures, establishing a Bill of Rights regulating unions' internal procedures and a companion measure regulating unions' organizing tactics, even as business and other elements of our society are regulated.

This committee, headed by Philip J. Doyle of Beloit, farmer and State Senator, includes prominent Kansans in the areas of agriculture, law, small business, labor, and all persons who are interested in passage of the most effective reform legislation. They have been urging their fellow citizens to express their wishes to their Congressmen as to the nature of the union reform legislation which they desire to have enacted.

The activities of this committee are resulting in the receipt of hundreds of communications from our constituents regarding union reform. I have yet to receive my first communication from a citizen who is not in favor of strong and effective regulation of both internal and external union activities.

Because this subject of union reform will have such a serious bearing on the future course of our Nation, I ask permission to extend my remarks to include the following results of activity by the Kansas Citizens Committee for Real Labor Reform:

KANSAS COMMITTEE PUSHING SUPPORT OF BARDEN BILL

BELOIT, KANS.—Formation of a Kansas Citizens Committee for Real Labor Reform was announced Wednesday by State Senator Philip J. Doyle, Republican, of Beloit.

Doyle termed formation of the committee "a grassroots movement for a sweeping labor reform bill of rights to be enacted in this session of Congress."

He said all areas of Kansas will be covered in a drive to win active support for labor bills now in Congress sponsored by Representative GRAHAM A. BARDEN, Democrat, of North Carolina, and Senator John McCLEL-LAN, Democrat, of Arkansas, in place of "the weak and ineffective Kennedy bill which is backed by union leaders and their propaganda agencies."

The Nation has been shocked by the racketeering, gangsterism, embezzlement of union funds and property, and denial of basic rights of union members, which have been revealed in the McClellan and other hearings," Doyle said.

Doyle said there are millions of working men and women whose only hope for effective labor legislation lies in the hands of Congress.

Doyle said leading the Kansas movement is a volunteer executive committee made up of himself as chairman; Jay W. Scovel, Independence, president of the Kansas Bar Association; State Representative John D. Bower, Republican, of McLouth, a minister and farmer; Ray Frisbie, of McDonald, president of the Kansas Livestock Association; C. A. McNeal, Jr., of Towanda, a workman in an industrial plant; and Ellis K. Cave, of Dodge City, operator of a terminal grain elevator.

# Appropriations Review Essential in Federal Spending

EXTENSION OF REMARKS OF

# HON. WILLIAM L. SPRINGER

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Friday, June 5, 1959

Mr. SPRINGER. Mr. Speaker, many of us in the House have been contending for the last several years that many Federal programs were getting out of hand because the Appropriations Committees in the House and Senate were being bypassed by authorization committees drawing on the Federal Treasury. There is great merit in having the Appropriations Committee scrutinize budget requests by the various agencies periodi-The Appropriations Committees specialize in this particular problem and make recommendations to the Congress. This prevents authorization committees from making unusual and extraordinary grants to their own pet projects.

Abuses and waste in many instances are well known to the House. Bills now pending to give the Appropriations Committees jurisdiction over any bill which calls for money is a step in the right direction and should have the approval of every thoughtful Member who is interested in keeping our appropriations within some reasonable balance.

Mr. Speaker, I append herewith an editorial from the Decatur (Ill.) Herald of June 2 titled, "Congressional Review Essential in Federal Spending." This editorial supports the viewpoint which I have just set out and is sample thinking broadly of most people throughout the country on this problem:

CONGRESSIONAL REVIEW ESSENTIAL IN FEDERAL SPENDING

The House Appropriations Committee, jealous of its power to apportion money to the various Federal agencies, has once again launched a campaign to cut back or eliminate "backdoor spending" which bypasses the regular appropriations procedures

The committee objects to Federal loan and grant programs financed not by direct appropriations but authorizations to enter contracts or to borrow money from the U.S.

Chairman CLARENCE CANNON, Democrat, Missouri, says the dimensions of this type of spending has reached "alarming proportions." He estimates that the Senate originated a number of such schemes, with a potential cost of \$9 billion without reference to the House of Representatives which alone

has the constitutional power to initiate money bills.

A major problem is that legislative programs are authorized by a substantive committee having jurisdiction in that field, while the Appropriations Committee deals with all programs that require a direct congressional appropriation and is not bound to appropriate the amount that the substantive committee authorizes.

For example, the House and Senate Public Works Committees may initiate legislation authorizing \$100 million for Federal assistance to communities building water pollution control facilities. However, the Appropriations Committees may approve the spending of only \$50 million. Such actions Appropriations Committee sometimes cause the substantive committee to try a legislative end run.

A bill introduced by Representative How-ARD W. SMITH, Democrat of Virginia, would give the House Appropriations Committee jurisdiction over any bill that would permit the withdrawal of money from the Treasury without further action of Congress. Hearings have been held on this bill, but there is no sign of further action.

Backdoor spending is particularly likely to occur in such fields as housing, and, if Congress removes the present pay-as-you-go

restrictions, in highway building.

The Appropriations Committee's way of scrutinizing budget requests by the various agencies often works clumsily. But it is the best way yet devised to make Government departments justify their appropriation requests. Many abuses and instances of waste have been uncovered, although in the process it has seemed that many worthy proposals were also gored.

In some cases, an example being the Development Loan Fund, there is no reason why the funds cannot be allocated on the basis of 2, 3 or more years?

But all major proposed Federal outlays ought to undergo periodic congressional review, and the Appropriations Committees are the best equipped to perform such tasks.

Commencement Address by Senator Thomas J. Dodd at St. Joseph's College, West Hartford, Conn.

> EXTENSION OF REMARKS OF

# HON. JOHN S. MONAGAN

OF CONNECTICUT

IN THE HOUSE OF REPRESENTATIVES Friday, June 5, 1959

Mr. MONAGAN. Mr. Speaker, Senator Thomas J. Donn has made many great speeches in his brilliant and distinguished career. His final summation to the jury at the Molzahn spy case was a classic of its kind, and foreshadowed his magnificent address at the conclusion of the Nuremberg war crimes trials.

During his two terms in this body, his speeches on civil liberties, on the moral basis for foreign aid, and on negotiations with the Communists won national ac-

Those of us from Connecticut have watched Tom Dopp's career in the Senate with a great and growing pride. His maiden speech in the Senate on the Berlin crisis stirred the admiration and won the commendation of people throughout this country and the free

Earlier this week Senator Dopp made what I consider to be one of his greatest speeches at a commencement address at St. Joseph College in West Hartford, Conn. I found in this speech some of the underlying sources of the idealism and passion of justice that have so marked the career of this great man. Under leave to extend my remarks, I include in the Appendix of the RECORD the commencement address delivered on June 3, 1959, at St. Joseph College, West Hartford, Conn.:

COMMENCEMENT ADDRESS BY SENATOR THOMAS J. DODD, DEMOCRAT, OF CONNECTICUT, AT ST. JOSEPH COLLEGE, WEST HARTFORD, CONN.

When I accepted your generous invitation to deliver the commencement address it was my intention to try to distill from the experiences of a lifetime a few thoughts which I hoped would be appropriate and useful for the members of this graduating class.

I have not found it easy to do this. It is not easy to sift from the many changing currents of an active life a few simple words of advice to a new generation facing a new world. And when I was through, the advice seemed somewhat oldfashioned and out of touch with these sophisticated times. But it is, nonetheless, sound and true, and if it is out of step there is all the more reason why these things should be said.

This is your commencement day. class is anything like my own graduating class at Providence College, 29 years ago, you are probably thinking of this day as one that marks the end of a period of your life and your thoughts are dwelling nostalgically on the happy memories associated with St. Joseph College.

But commencement does not mean the end. It means what the word implies, the beginning. You are all just at the beginning of the search for knowledge.

And you are at the commencement of a tremendous set of responsibilities.

You have been the beneficiaries of years of devoted attention and selfless dedication by this wonderful group of sisters and by the other members of the faculty.

As the father of one of the graduating class, I am sure I speak for all the parents here today when I thank the sisters of St. Joseph and the lay faculty members from the depths of my heart for all that they have done.

This is a sentimental occasion for me. For it symbolizes that my daughter, Carolyn, who has been such a joy and comfort to Grace and me through the years, is about to step into a world of her own.

I am deeply grateful that she is better prepared for that world because of the sisters and teachers of St. Joseph's.

In you and in your future are wrapped up the hopes and dreams of your parents, of your teachers, of all who have sacrificed to see this day. And, in a larger sense, in your hands and in the hands of a thousand graduating classes across this great land, lies the future of our country and of the causes we uphold in the world.

If you have been faithful to your trust thus far, if you have taken full advantage of the opportunities you have had here, you now have the basic tools to make some imprint, some influence for good on your community, on your chosen profession and perhaps on the world itself.

But you will soon find, if you do not al-

ready know, that they are only the minimum

You have an education. You have learned enough to know something of the extent of knowledge, and the extent of ignorance, something of the legacy of the past and the challenge of the future.

But this gift of knowledge, this opportunity for personal fulfillment carries with it tremendous obligations. I shall try to discuss today just a few of these obligations.

The first that comes to my mind is the obligation of continued self-improvement.

Each of us is unique. Each has different capacities and different aptitudes. Each has certain talents, and each has the obligation to develop those talents as much as the circumstances of life permit, and to use them for good purposes.

We live in a country that, from its founding has been built upon the proposition that man should have the greatest possible opportunity for personal development and personal fulfillment. The state exists for man, not man for the state. This is our creed. This was at the bottom of our struggle with nazism and fascism and it is at the root of our struggle with communism.

The opportunity freely given to you has been purchased and is kept alive at great You can refuse to exercise this freedom by ceasing to develop your mind and your skills from this day forward. Or you can justify your privileges and the human sacrifices they represent by embarking today on a lifetime pursuit of intellectual

I urge you to continue your studies, whether formal or informal.

Continue on with what you have so well begun. If you plan to go on to graduate studies, so much the better. If you do not, develop the habit of private study.

There are many examples of wasted resources in this country but none is more appalling than the waste of those who abandon all intellectual inquiry as soon as they leave school.

We hear a lot these days about do-ityourself programs. I hope you will all work out a do-it-yourself home educational program. Don't store your books away on some forgotten shelf to become dusty reminders of what might have been a fruitful and productive intellectual life.

This day will not have much real meaning in the long scheme of life unless it marks a beginning, and not an end, of broadening the horizons of the mind.

There is a second obligation which will weigh even more heavily upon you as you participate more and more in life.

You all know the difference between right and wrong. You all have learned the basic principles of morality in your homes and in your church. And here at St. Joseph's you have learned the higher refinements of these principles. You have a religious and ethical training that places a far heavier responsibility for right action upon you than that borne by others.

Alfred E. Smith, the self-educated boy from the sidewalks of New York who rose to become New York's greatest Governor, said this in the first speech he ever made to a women's group:

"I know what is right. If I ever do anvthing that is wrong, it will not be because I do not know it to be so, and you can mark it down as being willful and deliberate and hold me to account for it."

These words, spoken during an era of shameful social injustice and political corruption foreshadowed a career of remarkable achievement in advancing the public good.

And these words can be applied to everyone in this fine graduating class. You all know the difference between right and wrong, and you will surely be held to account for your actions.

We live at a time when crucial moral issues are at the heart of grave national and international problems. But there is always an attempt to deny the existence of the moral element in these questions, and these attempts often succeed in obscuring from many the path that we should follow as a Nation.

Powerful and influential leaders either cannot see the moral element in these questions or they deny its existence. For example:

The chairman of the Senate Foreign Relations Committee, Senator FULBRIGHT, during debate with me on the Senate floor over the Berlin crisis, deplored my statement that between communism the struggle freedom is essentially a fight between good and evil. He insisted that these concepts are relative and cannot be made the basis for diplomatic action.

Former Ambassador George Kennan denies that we have any moral obligation to assist underdeveloped peoples. He says it is just a practical matter and that our foreign aid should be based solely upon self-in-

Professor Galbraith of Harvard, the eminent economist and author, says that there is no moral element involved in our responsibility to conserve our dwindling natural resources for the use of future generations, and he adds gratuitously that the injection of moral issues into practical problems is generally a source of endless trouble and confusion.

One of our leading jurists recently re-peated the oft-heard, foot-dragging statement that we must proceed toward desegregation because the Supreme Court has made this the law of the land. But only rarely does one hear the truer statement that the Supreme Court has just made legally bindwhat was always morally binding and that we should take up this cause not reluctantly or legalistically, but rather with

zeal and dedication.

Each of the men I have mentioned has great ability and has made important contributions to his field. How tragic, therefore, that they should overlook the central factor of our existence, and should thus mislead the people they seek to help.

The materialistic, secular attitude I speak of is sapping the moral strength of our country, and you have a very great obligation to carry into our community and national life the religious and ethical convictions that you cary away from St. Joseph

Every crucial question afflicting the Nation and the world is, at bottom, a question of right and wrong.

It is wrong to permit any Communist expansion that it is in our power to prevent. It is wrong to acquiesce even tacitly in permanent Communist control of its satellite empire.

It is wrong to refuse to the underprivileged peoples of the world the assistance they need and which we can well afford to offer.

It is wrong to wink an eye at corruption in organized labor, at immoral business practices, or at wrong-doing in Government.

It is wrong to practice racial discrimination whether it be in schools, in housing, in employment, or in any other activity. And we need not look to the South to find discrimination. It exists right here in Con-

But a highly developed mind and a highly refined conscience will avail little unless there is also the great and redeeming quality of courage.

A multiplicity of fears seem to afflict this country and a fear complex threatens to bethe buoyant optimism and indomitable confidence that characterized the national attitude of a century ago.

These fears and uncertainties are stunting the national growth and damaging our national posture.

We frequently hear of surveys of the aspirations of college graduates, young men and women who we would expect to be anxious for new challenges and new conquests. All too often the results reveal that they are interested primarily in security in confromity, in a safe berth and an easy journey. Fear is at the bottom of this.

The advertising industry, expert as it is in judging our motivations, devotes much of its energy to exploiting the petty fears of

everyday life.

In the home there is the fear that to moderately but adequately discipline the child would result in some terrible phychosis or personality problem.

The fear of national bankruptcy hinders the building of an adequate national defense.

Fear of radioactive fallout has convinced many that we should abandon our efforts at further nuclear development regardless of what the Russians do.

Fear is at the root of a hundred subtle influences which tempt us to surrender and

appeasement in foreign affairs.

Of all the admirable qualities that are in short supply, courage is the one most needed by this generation.

Fear is the inevitable end result for those who try to face the uncertainties and in-comprehensibilities of life without faith in God and belief in eternal life.

This Nation was founded, developed and preserved by men and women who faced the unknown with a courage born of a great faith. If our people ever lose those qualities the foundations of our national strength will crumble.

Surely there is no cause for the devout young women of this graduating class to approach life fearfully. For those who know the transitory nature of man's earthly existence, for those who truly believe in our eternal destiny, there should be no room for fear of the misfortunes of this life.

The qualities which I have mentioned thus far lead inescapably to another.

You will carry throughout your life an obligation to show a very special kind of loyalty to your country. In this sophisticated age it seems somewhat "corny" to speak of patriotism at an occasion of this

In some quarters patriotism is scorned today. It has gone out of fashion. And there is even a fuzzy notion current that patriotism stands in the way of the development of an international order of peace and justice.

Those who talk of patriotism today run the risk of being thought naive or boorish by people who do not understand what patriotism really means,

When I speak of it I do not mean chauvinistic breast beating or flag waving, or the hollow veneration of mere symbols.

If this were all there was to it, then patriotism would indeed be an empty thing. Our loyalty is not to the symobls, but to the ideals and traditions of our country and to the great causes it represnts.

Love of country is one of the deepest and most abiding of human instincts. Strange indeed is the man or woman who does not feel a special love for his homeland. As often as not, it is the most humble, the most abused, and the most misgoverned who will, in an hour of crisis, display the flercest

and most selfless loyalty to their country. So it can be said that the instinct of patriotism is almost universal. John Foster Dulles called it, "One of the great and indispensable virtues" and the heroic example of his life and death provides perhaps the best answer to the scoffers of our time.

Americans have a special reason for a special kind of loyalty that goes far beyond the love of things that are familiar. I do not say this merly because our country has been able to give us more advantages and privileges than other lands.

I say it because our country, its institutions, its traditions, its strength today compose the sustaining force which preserves government based on human dignity and human decency.

Whatever may be the faults and weaknesses of our people as individuals, and they are many; whatever may be the mistakes and weaknesses of our Government, and they have been many, the United States of America as a nation has historically acted with honor, with courage, with charity, with justice, and with idealism.

Perhaps we are too close to the scene to appreciate the significance of the role of our country and of our generation. The new apostolic delegate from the Vatican to the United States, Archbishop Vagnozzi, had this to say 2 weeks ago in Washington:

"Washington has become the fountainhead of freedom. We may well say that the road of freedom, of democracy, of self-determination of peoples, and the respect for human personality leads today to and from Washington and it is to a large degree in the United States that the hopes for the survival of human freedoms rest."

No nation has ever carried such an awesome burden as this. I sometimes think that our entire history has prepared us for and guided us toward this crucial role that we

now play.

Surely a sense of national mission and destiny has moved our country from its earliest days. The opening paragraph of the "Federalist" papers, pleading for the adoption of our Constitution, said:

"It seems to have been reserved to the people of this country, by their conduct and example, to decide whether societies of men are capable of establishing good government. Failure on their part would be the general misfortune of mankind."

What Longfellow said 100 years ago applies more to our generation than his:

"Sail on O ship of State,

Sail on O union strong and great, Humanity with all its fears With all the hopes of future years Is hanging, breathless, on thy fate."

All of the forces that have shaped our history, all of the good fortune, all of the noble aspirations, all the blessings of material strength, have combined to give us the means and the obligation to preserve the temple of Christian civilization from the barbarism of first nazism and now commu-

Why do I say all this? I say it because our country and its ancient ideals are more in need of the loyalty, the devotion, the understanding, and the unselfish help of its young men and women than ever before. has a nation been so in need of a generation that recognizes its destiny, represents its ideals, and embraces its traditions.

Two thousands years ago Simon of Cyrene stood at a crossroads in Jerusalem and watched our Divine Saviour pass, carrying His cross to Calvary.

Simon had no real knowledge or special interest in what was going on. He was there by what seemed to him an accident. But because he was there, and because of his apparent strength, he was pulled from the crowd and given our Lord's cross to

He shouldered his burden unwillingly and with a resentment that we can all understand. But as he trod in the footsteps of our Lord, as he began to recognize the significance of his action, the burden became lighter and the labor sweeter. He was fulfilling his destiny.

In this century the United States has stood at a great crossroads of history, at a time when morality and decency were being persecuted and crucified all over the world. We had just arrived on the world scene as an important power at the turn of this century. We were curious onlookers at the terrible tragedy that was beginning to un-fold in Europe. Our people had no desire to become deeply involved in the problems of other nations.

But events drew us irresistibly to the vortex of the world crisis. Because of our strength, because of the logic of events, we took up the cross of preserving decency in the world, without realizing the full significance of our act, without realizing that it was the fulfillment of our national mission.

If the destiny of a nation is to be fulfilled, each generation must renew its understanding of it.

Many of our countrymen today resent our role in the world because they do not understand it. There are mounting signs that our people are growing weary of the burden and wish to lay it down.

But our task is far from completed. Our country needs new strength, new zeal, new idealism. I believe that when the full realization dawns upon our people of the nobility of our role, of the meaning of our labors then our burden-like that of Simon-will seem to grow light, the labor sweet.

Those who understand now the true nature of things, the duty and the privilege that has fallen to us, have a sacred obligation to lend their strength to the just cause and to help keep America ever young in its ideals, its courage, and its fervor for the right.

That is the full meaning of patriotism in our time.

My visit with the young women of St. Joseph College has strengthened my confidence in the future. I envy you the journed ahead. Good luck and Godspeed to each of you.

# Expansion of Food-for-the-Needy Programs

EXTENSION OF REMARKS

# HON. PHILIP A. HART

OF MICHIGAN

IN THE SENATE OF THE UNITED STATES Friday, June 5, 1959

Mr. HART. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a statement I presented to the Committee on Agriculture and Forestry, on June 4, dealing with the problem of expanding our domestic food-for-the-needy programs, together with a memorandum, prepared by the Michigan State Supervisor of the Commodities Distribution Section indicating the operations of this program in Michigan during the last several years.

There being no objection, the statement and memorandum were ordered to be printed in the RECORD, as follows: EXPANSION OF FOOD-FOR-THE-NEEDY PROGRAM

Mr. Chairman, it is encouraging to be having hearings on the various bills on expanding the use of our Nation's agricultural abundance for the well-being of the many Americans who are unable to have adequate and sufficient food. I am hopeful that following the close of these hearings every effort can be made by those of us who are members of the Agriculture Committee to report to the Senate a sound and greatly expanded program for taking our surplus farm production and putting it on the tables of Americans who just are not able to buy the minimum food that they and their families need and must have. Congress must not adjourn this session until a new surplus food distribution program is law.

There is a growing realization that the difficulties accruing from our mounting farm surpluses are not going to be resolved simply by assuring all Americans an adequate diet. Even if we achieved a reasonably adequate dlet for all our citizens, I do not believe this would be more than a partial step toward meeting the challenge of our surplus produc-

So it is not with the hope that the bills before the subcommittee would miraculously eliminate our huge stockpiles that I support an expanded food distribution program for the needy. Rather, I believe that we in the Congress cannot morally justify a continuance of governmental programs which stimulate agricultural production and build surpluses while there are hungry children, older people, unemployed workers, and others who have wholly inadequate diets week after week and year after year.

We must put farm surpluses to use because it is wrong for people to be hungry in the midst of abundance. We must expand food distribution programs to bring more adequate diets to the needy and the dis-tressed if we are to obtain the necessary public support for the future recasting of a strong and sound agricultural economy in the United States.

The State of Michigan has been a bene-ficiary of the present limited food distribution program. During March 1959, 514,850 persons received federally donated surplus food in Michigan. Unlike many States, Michigan has been able to have almost all sections of the State participate in this Federal pro-gram. Seventy-four of our 83 counties are now participating. The city of Detroit has pioneered in administering a very sizable program.

There is need for the Congress to recognize this program for what it is—basically a welfare program designed to help people. This is one of the reasons I was pleased to join With Senator KENNEDY and many others of my colleagues in sponsoring S. 1884. I thought that the basic administration of the Welfare aspects of the program were not compatible with the duties and responsibilities vested in the Department of Agriculture, but could be much more effectively admin-. istered in the Department of HEW. I would hope that such a transfer would alleviate some of the public confusion that results When nonfarm programs are being budgeted and charged to the Department of Agriculture.

Perhaps the \$150 million authorized in the Kennedy bill will not be adequate to do all that is needed, so I would hope that your subcommittee would attempt to obtain the very best assessment of the true needs of our people and, if more funds are necessary, an increased authorization made in the bill.

There have been many letters coming to my office inquiring as to why more foods, such as edible oils, shortening, peanut butter, and other commodities presently held by the CCC, could not be processed and used to supplement the rather drab and limited food items now being distributed. I have been unable to find satisfactory answers as to What is preventing the Department of Agriculture, under present law, from expanding the range and variety of foods available. So I hope that your subcommittee will find where the roadblocks to these expanded programs may lie.

Last year, I understand, it was necessary for the Congress to enact special legislation to move edible oils in an oversea program for distribution by relief agencies. But today no edible oils are available for the domestic food-distribution programs, and this is a time when butter may be removed from the domestic program.

A transfer to the Department of HEW, as provided under the Kennedy bill, of the responsibilities for screening and supervising the standards of eligibility of persons coming under the program would result in alleviating some of the hardships and unfairnesses that now occur when arbitrary liquidassets standards are applied. I would hope your subcommittee would develop testimony

on this limiting part of the present program.

The Kennedy bill and the similar bills are not, of course, the only approaches to this basic problem of providing adequate diets to our families of very low income. I would only mention that there is pending before the Committee on Labor and Public Welfare a bill which I am cosponsoring with Senator Symington to establish a food stamp program. A food stamp program is not incompatible with these present proposals before the Agriculture Committee, and in fact I hope that, in the near future, hearings may be held on the various food stamp proposals so that this session of the Congress will have full data on every approach.

Mr. Chairman, later you will be hearing from experts from the State of Michiganmen who have been intimately associated with the workings of the existing program. They will represent retail food interests, the public agencies responsible for the program, and groups whose memberships have benefited. Much better than I, they will furnish firsthand data on the need for improving and expanding the existing food distribution programs of our Government. But, more important, you will hear of the really wonderful experiences there are in seeing families feeding their children milk and foods that they could not eat if we had not opened our storage warehouses. My plea today is that we open these warehouses wider, and that we of this Congress do it with a full understanding of how very fortunate our Nation is that have these storehouses of abundance to which we can turn to feed our hungry and

#### DAV Services in Ohio

EXTENSION OF REMARKS

# HON. CLARENCE J. BROWN

OF OHIO

IN THE HOUSE OF REPRESENTATIVES Friday, June 5, 1959

Mr. BROWN of Ohio. Mr. Speaker, an exceptional record of vital rehabilitation services freely extended to thousands of Ohio citizens has recently come to my attention. These splendid humanitarian services are not sufficiently appreciated by those who have benefited thereby, directly, and indirectly.

Among the several congressionally chartered veterans' organizations, which have State departments and local chapters in Ohio, is the Disabled American Veterans. The DAV is the only such organization composed exclusively of those Americans who have been either wounded, gassed, injured, or disabled by reason of active service in the Armed Forces of the United States, or of some country allied with it during time of war.

#### DAV SETUP

Formed in 1920, under the leadership of Judge Robert S. Marx, DAV legislative activities have very substantially benefited every compensated disabled veteran. Its present national commander is another judge, David B. Williams, of Concord, Mass. Its national adjutant is John E. Feighner, of Cincinnati, Ohio. The national legislative director is Elmer M. Freudenberger; the national director of claims, Cicero F. Hogan; and the national director of employment relations, John W. Burris, located at the DAV national service headquarters, 1701 18th Street NW. Washington, D.C. I am especially proud of the fact that Ohio, my home State, has led all States in membership in the DAV for the past 22 years, having about 25,000 members in its 126 chapters.

Inasmuch as less than 10 percent of our country's war veterans are receiving monthly disability compensation payments for service-connected disabilities—some 2 million—the DAV can never aspire to become the largest of the several veterans' organizations. Nevertheless, since shortly after its formation in 1920, the DAV national headquarters located in Cincinnati, Ohio, has maintained the largest staff of any veterans' organization of full-time trained na-

tional service officers, 138 of them, who are located in the 63 regional and 3 district offices of the U.S. Veterans' Administration, and its central office in Washington, D.C.

They there have ready access to the official claim records of those claimants who have given the DAV their powers of attorney. All of them being war-handicapped veterans themselves, these service officers are sympathetic and alert as to the problems of other less well-informed claimants.

#### SERVICE FACILITIES IN OHIO

The DAV national service officers in Cincinnati are Mr. Bernard Southard, Mr. Charles A. Burger, Mr. John Kirch, Mr. Thomas G. Ryan, and Mr. Ralph F. Schwamberger, located at the VA regional office, 209 East Sixth Street. Mr. Garrett J. Bowman, Mr. Pasquale B. Gervace, Mr. Albert Nigoff; and Mr. Verne Nygaard are located at the VA regional office, 234–235 Williamson Building, Cleveland.

The national headquarters of the DAV is at 5555 Ridge Avenue, Cincinnati, where the national service officer, John Delaney, is on duty. National officers for this year from Ohio are Mr. Joe Smith, 225 West Harrison, Alliance, and Mr. Joe Stefan, 864 Berghoff Street, Akron, who are the national executive committeeman and alternate, respectively, from the seventh district.

The DAV department commander of Ohio is Mr. Sam Rothenberg, 4511 Shirley Drive, South Euclid, and the department adjutant-treasurer is my long-time personal friend, Mr. A. L. Daniels, 105–07 Wyandotte Building, Columbus.

The VA hospitals coming under the jurisdiction of these offices are: A 2,116-bed NP hospital at Chillicothe, a 463-bed GM hospital at Cincinnati, a 1,013-bed GM hospital at Dayton, a 2,138-bed DOM hospital at Dayton, a 324-bed TB hospital at Brecksville, and a 852-bed GM hospital at Cleveland.

The DAV representatives with the VA Voluntary Services are Mr. George Sriner, of 1040 South Roosevelt Avenue, Columbus, at the Chillicothe NP Hospital; Mr. Joseph M. Zapatony, Post Office Box 55, North Dayton Station, Dayton, at the DOM Hospital at Dayton; Mr. George Meyers, 5868 Layor Drive, Parma Heights, at the GM Hospital at Cleveland; Mr. Robert Silva, 559 Virgil, Cincinnati, at the GM Hospital at Cincinnati; and Mr. Robert R. Boyle, 3729 West 33d Street, Cleveland, at the TB Hospital at Brecksville.

During the last fiscal year, the VA paid out \$82,890,666 for its veterans program in Ohio, including disability compensation to its 116,642 service-disabled veterans. These Federal expenditures in Ohio furnish substantial purchasing power in all communities.

The DAV of Ohio renders a most outstanding service to the wars' disabled and their dependents—as proven by the following facts and figures—for the last 10 fiscal years:

Claimants contacted (esti-	
mated)	411,054
Claims folders reviewed	352, 545
Appearances before rating	
boards	176, 533
Compensation increases ob-	
tained	13, 959
Service connections obtained_	6, 022
Nonservice pensions	9,012
Death benefits obtained	2,002
Total monetary benefits ob-	
tained	60 750 001 74

The above figures do not include the accomplishments of other national service officers on duty in the central office of the Veterans' Administration, handling appeals and reviews, or in its three district offices, handling death and insurance cases. Over the last 10 years, they reported 83,611 claims handled in such district offices, resulting in monetary benefits of \$20,850,335,32, and in the central office they handled 58,282 reviews and appeals, resulting in monetary benefits of \$5,337,389,05. Proportionate additional benefits were thereby obtained for Ohio veterans, their dependents, and their survivors.

#### SERVICES BEYOND STATISTICS

These figures fail properly to paint the picture of the extent and value of the individualized advice, counsel, and assistance extended to all of the claimants who have contacted DAV national service officers in person, by telephone, and by letter.

Pertinent advice was furnished to all disabled veterans, their dependents, and others, in response to their varied claims for service connection, disability compensation, medical treatment, hospitalization, prosthetic appliances, vocational training, insurance, death compensation or pension, VA guaranty loans for homes, farms and businesses, and so forth. Helpful advice was also given as to counseling and placement into suitable useful employment—to utilize their remaining abilities—civil service examinations, appointments, retentions, retirement benefits, and multifarious other problems.

Every claim presents different problems. Too few Americans fully realize that governmental benefits are not automatically awarded to disabled veteransnot given on a silver platter. Frequently, because of lack of official records, death or disappearance of former buddies and associates, lapse of memory with the passage of time, lack of information and experience, proof of the legal service-connection of a disability becomes extremely difficult-too many times impossible. A Claims and Rating Board can obviously not grant favorable action merely based on the opinions, impressions or conclusions of persons who submit notarized affidavits. Specific, detailed, pertinent facts are essential.

The VA, which acts as judge and jury, cannot properly prosecute claims against itself. As the defendant, in effect, the U.S. Veterans' Administration must award the benefits provided under the laws administered by it, only under cer-

tain conditions.

A DAV national service officer can and does advise a claimant precisely why his claim may previously have been denied and then specifies what additional evidence is essential. The claimant must necessarily bear the burden of obtaining such fact-giving affidavit evidence. The experienced national service officer will, of course, advise him as to its possible improvement, before presenting same to the adjudication agency, in the light of all of the circumstances and facts, and of the pertinent laws, precedents, regulations and schedule of disability ratings. No DAV national service officer, I feel certain, ever uses his skill, except in behalf of worthy claimants, with justifiable claims.

The VA has denied more claims than it has allowed—because most claims are not properly prepared. It is very significant, as pointed out by the DAV acting national director of claims, Chester A. Cash, that a much higher percentage of those claims, which have been prepared and presented with the aid of a DAV national service officer, are eventually favorably acted upon, than is the case as to those claimants who have not given their powers of attorney to any such special advocate.

#### LOSSES BY REVIEWS

Another fact not generally known is that, under the overall review of claims inaugurated by the VA some 4 years ago, the disability compensation payments of about 37,200 veterans have been discontinued, and reduced as to about 27,300 others, at an aggregate loss to them of more than \$28 million per yar. About 5 percent of such discontinuances and reductions have probably occurred as to disabled veterans in Ohio with a consequent loss of about \$1,568,000 per year.

Most of these unfortunate claimants were not represented by the DAV or by any other veterans' organization. Judging by the past, such unfavorable adjudications will occur as to an additional equal number or more during the next 3 years, before such review is completed. I urge every disabled veteran in Ohio to give his power of attorney to the national service officer of the DAV, or of some other veterans' organization, or of the American Red Cross, just as a protective measure.

The average claimant who receives helpful advice probably does not realize the background of training and experience of a competent expert national service officer.

#### COSTS OF DAY SERVICES

Measured by the DAV's overall costs of about \$12,197,600 during a 10-year period, one would find that it has expended about \$3.50 for each claim folder reviewed, or about \$3.80 for each rating board appearance, or, again, about \$22.70 for each favorable award ob-

tained, or about \$123 for each service connection obtained, or about \$54 for each compensation increase obtained, and has obtained about \$14.10 of direct monetary benefits for claimants for each dollar expended by the DAV for its national service officer setup. Moreover, such benefits will generally continue for many years.

METHODS OF PROVIDING SERVICES

Evidently, most claimants are not aware of the fact that the DAV receives no Government subsidy whatsoever. The DAV is enabled to maintain its nationwide staff of expert national service officers primarily because of income from membership dues collected by its local chapters and from the net income on its Idento-Tag-miniature automobile \_ license tags-project, owned by the DAV and operated by its employees, most of whom are disabled veterans, their wives, or their widows, or other handicapped Americans—a rehabilitation project in thus furnishing them with useful employment. Incidentally, without checking as to whether they had previously sent in donations, more than 1 million owners of sets of lost keys have received them back from the DAV's Idento-Tag department, 40,712 of whom, during the last 8 years, were Ohio residents.

Every eligible veteran, by becoming a DAV member, and by explaining these factors to a fellow citizen, can help the DAV to procure such much-needed public support as will enable it to maintain its invaluable nationwide service setup on a more adequate basis. So much more could be accomplished for distressed disabled veterans if the DAV could be enabled, financially, to maintain an expert service officer in every one of the 173 VA hospitals.

#### MEMORIAL HONOR ROLL

During the last 10 years, the DAV has also relied on appropriations aggregating \$3,300,000, exclusively for salaries to its national service officers, from the DAV Service Foundation, its separately incorporated trustee, incorporated in Ohio in 1931, incidentally, when I was Ohio's secretary of state. Its reserves having thus been nearly exhausted, the DAV Service Foundation is therefore very much in need of the generous support of all serviced claimants, DAV members and other social-minded Americans-by direct donations, by designations in insurance policies, by bequests in wills, by assignments of stocks and bonds and by establishing special types of trust funds.

A special type of memorial trust fund originated about 3 years ago with concerned disabled veteran members of the DAV chapter in Butte, Mont., which established the first Perpetual Rehabilitation Fund of \$1,000 with the DAV Service Foundation. Recently it added another \$100 thereto. Since then, every DAV unit in that State has established such a special memorial trust fund, ranging from \$100 to \$1,100, equivalent to about \$5 per DAV member. Benefactors from 29 States have, up to this time, become enrolled to the memorial honor roll.

Inasmuch as only the interest earnings from special donations will be available for appropriation to the DAV for its use in maintaining its national service officer program in the State of residence of each such benefactor, this is an excellent objective also for Ohio. Each such special benefactor is enrolled on a permanent memorial honor roll which, updated, is then included in the annual report of the DAV and of its incorporated trustee, the DAV Service Foundation, to the U.S. Congress.

Each claimant who has received any such free rehabilitation service can help to make it possible for the DAV to continue this excellent rehabilitation service for other distressed disabled veterans and their dependents in Ohio by sending donations to the DAV Service Foundation, 631 Pennsylvania Avenue NW., Washington, D.C. Every "serviced" claimant who is eligible can and should also become a DAV member, preferably a life member, for which the total fee is \$100—\$50 to those born before January 1, 1902, or World War I veterans—payable in installments within 2 full fiscal-year periods.

Every American can help to make our Government more representative by being a supporting member of at least one organization which reflects his interests and viewpoints-labor unions, trade associations, and various religious, fraternal and civic associations. All of America's veterans ought to be members of one or more of the patriotic, servicegiving veteran organizations—the United Spanish War Veterans, the American Legion, the Veterans of Foreign Wars, the Amvets, the Military Order of the Purple Heart, and the Disabled American Veterans—all of America's disabled defenders, who are receiving disability compensation, have greatly benefited by their own official voice—the DAV. If eligible, I would certainly be proud to be a life member of the service-giving Disabled American Veterans.

## Toward Military Disaster

EXTENSION OF REMARKS

# HON. WILLIAM E. MINSHALL

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Monday, May 18, 1959

Mr. MINSHALL. Mr. Speaker, this year we have once again seen the results of interservice rivalries, which are a detriment to our Nation's defense program, culminate in bitter arguments both between the military services and between various supporters and proponents of the services.

Mr. Speaker, this is a needless thing. The people should not be subjected to it; indeed, they would not be if our military establishment were functioning correctly.

An editorial appeared Tuesday, June 2, in the Omaha World-Herald which points up the weaknesses in our present Joint Chiefs of Staff setup. I think this editorial which contains some pertinent comments by my colleague on the Appropriations Subcommittee on the Department of Defense, Hon. Phil. Weaver, of Nebraska, is well worth reading by every Member of the House and the American people generally. I am, therefore, inserting this editorial in the Record. The editorial follows:

#### TOWARD MILITARY DISASTER

For months the Army and Air Force have been battling over antiaircraft missiles. The Army's Nike-Hercules is a tested de-

The Army's Nike-Hercules is a tested device of short range; the Air Force Bomarc is a more sophisticated weapon of longer range. Which should be built?

Secretary of Defense McElroy told a Senate subcommittee that "it would not bother me if you held our feet to the fire and forced us." Later the Secretary changed his mind and wrote the subcommittee that both were needed.

And what is the Congress to do in such circumstances? Isn't there a body of military experts authorized to make military decisions based on the military facts?

There is indeed such a body—the Joint Chiefs of Staff. And what did the Joint Chiefs say about the Bomare-Nike controversy? Nothing. Nothing whatever.

Frustrated and angry, another congressional group, the House Appropriations Committee, has lashed out at the Pentagon and particularly at the Joint Chiefs, declaring the latter body "is not providing the kind of leadership and advice which this country requires."

Nebraska's Congressman Phil Weaver, a member of the committee's Military Appropriations Subcommittee, carried the criticism farther. Here was a basically military decision, said Mr. Weaver, and the Joint Chiefs left it to a group of Congressmen.

The Bomarc-Nike controversy was wrestled around indecisively by the Joint Chiefs, but according to Mr. Weaver, the case of a \$260 million Navy request for a supercarrier was

not even discussed.

Not only does Mr. Weaver agree with his committee that something is wrong with present military planning but he says that continued lack of guidance by the Joint Chiefs could be disastrous.

An alternative to the Joint Chiefs system would be an overall general staff and a single service. This is favored by a number of eminent military men, including Gen. Curtis LeMay. It would be a drastic step, and its promise of increased efficiency and lowered costs should be weighed against the perlis of possible military dictatorship.

But if the Joint Chiefs system cannot be made to work, if the overall military decisions on planning, weapons and the like are to be left to the Congress, then the country may in desperation turn to hard-boiled military unification.

#### John Foster Dulles

EXTENSION OF REMARKS

## HON. FRANK W. BOYKIN

OF ALABAMA

IN THE HOUSE OF REPRESENTATIVES
Friday, June 5, 1959

Mr. BOYKIN. Mr. Speaker, under unanimous consent to extend my remarks in the RECORD, I include therein a letter and a poem by my beloved, lifetime friend Col. E. Vernon Knight, of Mobile, Ala., formerly of Indiana. He has written this poem about a great man, John Foster Dulles, and I am enclosing this poem. I wish I could compose one, not only about John Foster Dulles, but also about Col. E. Vernon Knight, who has done so much for our beloved Southland and our way of life. He came south many years ago, when his beautiful daughter, Mary Jane, and his many sons were just little children. He had a wonderful wife, Katherine. Her father endowed the great DePauw University in Indiana, and everybody knows of the great good it did, but nobody has ever done more than Col. E. Vernon Knight and his wonderful family. Katherine has gone to heaven, but we still have Colonel Knight, although he is over 80 years old and has been stricken, which was caused by his service in the Spanish-American War.

I could speak all day about my beloved friend, Col. E. Vernon Knight, but I will just put this poem in that he has written about John Foster Dulles, a great man who has done so much for all mankind—just the same as this man, E. Vernon Knight, has done.

Anyway, God bless them both, and I wanted a lot of folks to know about this, and I know the Congressional Record will go to every library in this Nation, as well as to every beat, and they will know about John Foster Dulles and Col. E. Vernon Knight:

MOBILE, ALA., May 27, 1959.

DEAR FRANK: As today I watched on my
TV all the John Foster Dulles burial ceremonies, the following thoughts came to my
mind:

#### TO JOHN FOSTER DULLES

"When names are called up yonder, John Foster.

We know your name will be upon that roster.

We know the pages of your record will be filled

With Christian thought and deeds which you have willed.

Giving of yourself, you never once did cease, You gave your life that all the world might

live in peace.
And in your passing, you have left be-

hind An unpaid debt that's owed by all man-

kind. To you, John Foster, may we ne'er for-

get
The services you gave to place us in your debt.

When heaven's angels open wide the portal We know that you, John Foster, then will be immortal."

Hastily yours,

COLONEL KNIGHT.

# A Tribute to Our Army Missile Team

EXTENSION OF REMARKS

# HON. JOHN R. FOLEY

OF MARYLAND

IN THE HOUSE OF REPRESENTATIVES

Friday, June 5, 1959

Mr. FOLEY. Mr. Speaker, recently it was my privilege to visit the U.S. Army Ordnance Missile Command, Redstone Arsenal, Huntsville, Ala., as a member of the Army Reserve Unit, Congressional Command. The briefings and inspection tours conducted by Maj. Gen. John B. Medaris, commanding general; Brig. Gen. J. A. Barclay, commander of the Army Ballistic Missile Agency; and Dr. Wernher von Braun were most revealing and reassuring. The outstanding, easily detected landmarks of the arsenal are not the tall Jupiter missiles in launching position but the high morale, the brimming confidence, the great dedication of all members of the command. Since my visit, the Army ballistic missile team scored another outstanding triumph. The story behind the team and the triumph is a matter of interest to all. It is included here as a check point on our progress into space:

A TRIBUTE TO OUR ARMY MISSILE TEAM

In the early morning half-light on May 29, the Army moved us one step closer to our national objective of placing a man in space.

Much has been made of the fact that two monkeys, Able and Baker, have returned safely from their flight into space. They did a fine job, strapped in their capsules, to tell us how primates react to the great unknown conditions of space travel, including the tremendous accelerations and decelerations of the beginning and end of their trip and the weightlessness which intervened as they soared through space.

But lost in the excitement of having passed this important milestone was the realization that this success was achieved by men, not monkeys. The development team responsible for this achievement has already received public notice on the occasion of earlier successes. It is reassuring to know that this group is continuing to advance our national capability, in scientific areas as well as military fields.

The Army Ballistic Missile Agency development team, headed by Dr. Wernher von Braun, was first to transport primates on a space flight, but that is only one of a long list of firsts earned by this ground.

list of firsts earned by this group.

As early as 1930, some of the key members of this ABMA team were laying the foundation for our recent successes, developing rocket motors and guidance systems which culminated in the German V-2 weapon, the world's first large ballistic missile.

At Redstone Arsenal, the Army team designed and built the first large U.S. ballistic missile, named for the arsenal where it was developed. This Redstone missile program started the U.S. Army Ordnance Corps and its missile team on a career marked with major successes and impressive firsts. The heart of the Redstone was the first successful all-inertial missile guidance system, and the launching of the first Redstone missile in August 1953 marked the beginning of our present ballistic missile and space programs.

In late 1955, when the Nation was faced with the urgent need for development of long-range deterrents, the Army team was selected to develop an intermediate range ballistic missile. Drawing on its wealth of experience and moving with the calculated haste of experienced men, it successfully launched the United States first IRBM only 16 months later. In developing and testing the nose cone for this Jupiter missile, ABMA launched in September 1956 the first multistage long-range missile, which traveled over 3,200 miles down the Atlantic missile range. In August 1957 this test missile, called Jupi-ter C (for "composite"), proved the success of the Army's development as ABMA scored another first by firing an ablation type heat protected nose cone 600 miles into space, and recovering it intact after its reentry through the earth's atmosphere. This was the first Object ever launched into space and recovered, and now rests in a place of honor in the Smithsonian Institution.

When the first Soviet satellite was launched, on October 4, 1957, our national consternation ran high that we should have been bested in the competition for being first in space. A second Soviet satellite on November 4 made the situation even more embarrassing, and finally, on November 8, the missile team at the Army Ballistic Missile Agency was authorized to prepare two satellite vehicles as back-up for the so-far-unsuccessful United States attempts to orbit a satellite. The same Jupiter C that held the world's long-distance flight record was designated for the task, and on November 20 the date for launching was established.

History records the success of the Army team that orbited the free world's first satellite, Explorer I, on January 31, 1958, only 84 days after it was authorized. The door to

space had opened a crack.

The ABMA team established a record again on March 3, 1959, when it launched our first successful deep space probe. A Jupiter missile equipped with the upper stages from the satellite launching Jupiter C, hurled a 15¼-pound instrumented payload past the Moon, out of the reach of Earth's gravity into an orbit around the Sun, the first made-in-U.S.A. object ever to prove the secrets of interplanetary space. Radio signals from Pioneer IV relayed measurements from instruments aboard this gold-plated cone over 400,000 miles back to earth, establishing a new point-to-point radio communication distance record. Space travel came a bit nearer.

Now the same Army team has been the first to send primates into space and to recover them, unharmed after their historymaking voyage. The vehicle used was their Jupiter missile. Into its nose cone went the two monkeys, Able and Baker. With a roar and a flash of flame from its rocket motor, the missile with its passengers soared up from the Florida coast early Thursday morning a week ago. Straight and true it sped to its target, a spot in the Atlantic Ocean Where a Navy task force awaited its arrival. So accurate was the missile and so well organized the recovery operation that the nose cone and its passengers were safe aboard the recovery ship only 76 minutes after the hose cone splashed into the water. Com-plete records of the animals' actions and reactions were received and are being studied to learn how we can be sure, when We put a man into a similar rocket, that he will survive his first voyage into space.

Reliability is the watchword with Army missilemen. The reliability of their equipment has been conclusively demonstrated; the reliability of their work is a matter of record. A task assigned is a task well done, and a schedule established with them is a commitment which will be met. The United States owes much to this ABMA team; to Maj. Gen. J. B. Medaris, who directs the Army's missile programs; and the men of the Ordnance Corps who first established the Army's missile team in 1945. May their outstanding successes continue to thrill the free world, to deter aggressors, and to lead us on into space.

#### Honors for Miss Mary Rait

EXTENSION OF REMARKS

# HON. WAYNE N. ASPINALL

OF COLORADO

IN THE HOUSE OF REPRESENTATIVES

Monday, June 1, 1959

Mr. ASPINALL. Mr. Speaker, there has been a great deal of discussion in

recent years concerning the need for construction of new classrooms to meet the ever increasing enrollments in schools throughout the Nation. There is no doubt about the necessity of more classroom space, but in concentrating on the building of schools we are prone to forget that above all else it is good teachers, rather than buildings, that make good schools.

Mr. Speaker, I am certain that throughout the land there are untold numbers of dedicated teachers, teachers who are an inspiration to their students, teachers who would make the most ramshackle and inadequate of buildings a good school. I wish that it were possible for individual recognition to be given to every such teacher. One of these is Miss Mary Rait, of Grand Junction, Colo. Miss Rait was recently honored by being named Colorado's Teacher of the Year. I have known Miss Rait personally for many, many years and can say without hesitation that she is exceptional, as a teacher and as a person. Mr. Speaker, I include in the RECORD an editorial from the Grand Junction, Colo., Daily Sentinel congratulating Miss Rait on her selection as Colorado's Teacher of the Year. The editorial follows:

#### HONORS FOR MISS RAIT

Grand Junction, indeed all of western Colorado, is proud of Miss Mary Rait. The recognition she has received as Colorado's Teacher of the Year is one which she richly deserves. It is, even with all of the honor that it connotes, only a small part of the debt which is owed her.

Miss Rait's career in Grand Junction schools began many years ago when she taught in Grand Junction High School. Men and women who attended her classes then are sending their sons and daughters

to her at Mesa College today.

When Mesa College was new—and was Grand Junction Junior College—Miss Rait was one of the early volunteers who started it on its way. She has continued her fine work with young people down through the years. One of the halls on the college campus was named in her honor.

Miss Rait is not only the "teacher of the year" for 1959. She has been, first of all, a teacher and a fine one for many years. Hundreds of young people have found her classrooms an inspiration to study, to work, to further their education. She has always been the approachable, the interested teacher.

Her community life has been as varied and as unselfish. Whatever she has been asked to do in the community, and many things which were never asked of her, have been done. Her career as a teacher should remain a beacon light for those who are in her profession.

Sweden: Freedom and the Good Life

EXTENSION OF REMARKS

# HON. ABRAHAM J. MULTER

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES
Friday, June 5, 1959

Mr. MULTER. Mr. Speaker, tomorrow, June 6, is celebrated in Sweden as Constitution and Flag Day.

Sweden throughout her history has stood for the ideals most cherished by Americans. Hers is a tradition of freedom, of courage, of respect for religion with tolerance, of education, progress, of high regard for the individual, and, in modern history, of peaceful conversion.

The Swedish tradition of freedom dates from earliest history. Mention is made by Tacitus of the separate, Suiones people, from whom Sweden derived its name. The Viking ships are believed to date from the Roman era. The tales of the Viking era—from about 700 to 1000 A.D.—stir our imagination and command our respect. Courage and a capacity for organization was their legacy wherever these sea kings made a permanent landing. Characteristic, above all, was, and has ever been, a love of freedom and respect for individual liberty.

As early as the Middle Ages, Christianity triumphed in the center of the old heathen realm, the land of the Valkyrie. It has flourished significantly in Sweden ever since. Soon after Luther, the Lutheran church became the church of Sweden. More than 90 percent of the Swedes are baptized and married by the clergy of that church to this day. Because of the tolerance acquired during the centuries since its foundation, however, this figure actually covers many nonconformists and those indifferent to all but certain customs of the church.

The people of Sweden have long been taught to think for themselves. The Swedish press boasts of having the oldest legally protected guarantees of press freedom in the world. A newspaper established in 1645 still appears regularly. Greater knowledge, more extensive schooling are the basis of the vigorous and alert democracy that exists in Sweden.

Sweden has been a leader in social reform. Her progress in social security has served as a model for many features of the American system. Observers from England have compared Sweden's measures favorably with those of their own country, New Zealand, and Australia. For nearly two centuries, Sweden's communities have cared for their aged, infirm, and otherwise needy peo-ple. Workmen's compensation, unemployment insurance, and compulsory health insurance are part of the national scheme of social welfare, which has been for over 70 years in the process of revision and improvement. The general aim is to protect the life and health of each citizen

The Swedes are good neighbors abroad as well as at home. Renowned neutrality, maintaining peace for nearly 150 years, has not prevented Sweden from joining in the Council of Europe, the Organization for European Economic Cooperation, the United Nations, as well as many other international organizations-with all that participation implies. In joining the U.N. Sweden did specifically declare her intention to maintain her traditional freedom from military alliances, while protecting with a strong defense her independence and democratic institutions. The world's respect for her stand is clearly evident in the choice of Dag Hammerskjöld as its leader in the United Nations.

Sweden's high standard of living is reflected in a comparatively high level of stability in national politics. Communists have played a very small role there. The two-party system, which prevailed in the era of formulation of the Swedish parliamentary democracy, inspired a stanza which strikes a responsive note in our own day. In the 18th century, the Swedish poet Jacob Wallenstein wrote of party politics by popular name:

Let Hats and Caps fight on, let discord's thunder rumble;

An oak which now and then is shaken by a blast,

Below the ground holds firm and fast.

When Rome its squabbles ceased she had begun to tumble, And England gains her peak amid disputes

and strife.

Free states from party feuds draw life.

The free states of the world and we in America, join in a salute to Sweden's freedom and good life.

# Spain and NATO

EXTENSION OF REMARKS

# HON. CHARLES O. PORTER

OF OREGON

IN THE HOUSE OF REPRESENTATIVES Wednesday, May 20, 1959

Mr. PORTER. Mr. Speaker, under leave to extend my remarks in the Rzcord, I include the following excerpts published in Iberica for April 15, 1957:

SPAIN AND NATO

AMERICAN POSITIONS

"Be it resolved by the Senate (the House of Representatives concurring), That it is the sense of the Congress of the United States that the Department of State use its good offices toward the end of achieving the earliest possible participation by Spain in the North Atlantic Treaty" (from Concurrent Resolution 14 passed by the House of Representatives on March 20).

"It is believed that the United States can best contribute to the achievement of Spanish membership in NATO by continuing to encourage the improvement of relations between Spain and the other nations of western Europe" (from a letter signed by Robert C. Hill, Assistant Secretary of State, to Senator Theodore Green, chairman, Committee on Foreign Relations of the Senate).

SPANISH POSITIONS

"To admit the Spanish dictator (to NATO) is not to admit Spain. Franco is not Spain. He is its antithesis, as the movements of protests occurring within Spain these days demonstrate. The democracies of Europe and America would dishonor themselves were they to accept Franco as opposed to Spain" (from joint declaration of executive committees of the Spanish Socialist Labor Party and the General Labor Unions of Spain, Toulouse, France, Mar. 20, 1957).

"We most energetically protest the resolution passed by the House of Representatives.

\* \* Were the agreement pending for General Franco's membership in NATO to prevail, then the first to be injured thereby would be the United States for having attacked the most sacred interests of the rights of man and of the citizen, and world democracy, and thereby having to assume the historic responsibility of having suppressed the Spanish nation. Such a decision could only serve the cause of totalitarian communism by

greatly impairing the democratic free world" (from statement issued by the National Committee in the Exterior of the National Confederation of Labor of Spain).

"If Spain is considered as indispensable to the North Atlantic Treaty Organization, there are but two courses open: to demand that the regime qualify by adopting free institutions; or to strike out from the charter the preamble and article 2. An admission of the present absolute Sultanate would imply that the members of NATO publicly recognize that they attach no importance to their own solemn engagements. This would thoroughly destroy the moral authority of the organization" (from statement issued by the Spanish Council of the European Movement, signed by Salvador de Madariaga, chairman).

(Note.—Unfortunately the Spaniards within Spain are not free to express their opinions on the subject of Spain's admission to NATO at this time. However the three organizations whose statements have been quoted above may be said to reflect opinion within Spain because of their great prestige and widespread connections in the interior. Needless to say these three organizations are all strongly anti-Communist.)

SPANISH ORGANIZATIONS OPPOSE ADMISSION OF FRANCO SPAIN TO NATO

JOINT STATEMENT BY SPANISH SOCIALIST PARTY AND GENERAL LABOR UNION OF SPAIN (U.G.T.)

Now, after having been responsible for the disastrous situation from which Spain is suffering, the dictator Franco is attempting to obtain new and extensive credits in the United States to save himself from catastrophe, just as he is also trying to obtain an invitation for an official visit with President Elsenhower.

The great North American democracy would be committing a grave political blunder and would become discredited before the Spanish people if, knowing as the Americans know the true feelings of the Spaniards, they were to lend themselves once again to running to the aid of a corrupt regime and a tyrannical dictator.

The ambitions of the dictator are not limited to that but, having discovered a belated attraction for Europe, he now has the audacity to want to be admitted to NATO and the different European organizations and communities and the Council of Europe \* \* \* all to defend democracy.

The General Labor Union of Spain and the Spanish Socialist Labor Party agree that the moment has come for them to state publicly and with all solemnity to the democracies belonging to these organizations that if they admit the Spanish dictator into their midst they would not thereby be serving the cause of Spanish democracy nor the ends which these organizations proclaim.

Let no one make any mistakes. To admit the Spanish dictator is not to admit Spain. Franco is not Spain. He is its antithesis, as the movements of protest occurring within Spain demonstrate. The democracies of Europe and America would be doing themselves dishonor were they to accept Franco as opposed to Spain. They would be converting themselves into accomplices in causing the misfortunes of the Spanish people.

The Spanish Socialist Labor Party and the General Labor Union of Spain ask labor groups, all democratic organizations and very especially the International Confederation of Free Trade Unions that, fulfilling their duties, they make every effort possible to prevent the ambitions of the Spanish dictator from prospering in Europe and America. STATEMENT BY THE NATIONAL CONFEDERATION

OF LABOR (CNT)

The National Confederation of Labor (CNT) raises its most energetic protest against the resolution passed by the House of Representatives favoring Spain's admission to NATO.

We wish to remind everyone, because they seem to have forgotten, of the Fascist character of the Franco regime which has been imposed by the use of force and violence on a people who struggle to revalidate democracy and to attain freedom.

Should the resolution favoring the admission of General Franco in NATO prevail, then the first to be injured thereby would be the United States of America, in having opposed the most sacred interests of the rights of man and of the citizen, and world democracy, in assuming the historic responsibility of having submerged the Spanish nation. Were it to be adopted, such a decision would only serve the cause of totalitarian communism by greatly impairing the free and democratic world.

LETTER TO NATO FROM SPANISH COUNCIL OF THE EUROPEAN MOVEMENT, BALVADOR DE MADARIAGA, CHARRMAN

We, Spanish citizens deprived of the exercise of our citizenship by a military dictatorship, draw the attention of the North Atlantic Treaty Organization to the fact that the admission of Franco Spain into the Organization would utterly destroy its moral authority. The preamble of its charter says that the parties "are determined to safeguard the freedom, common heritage, and civilization of their peoples, founded on the principles of democracy, individual freedom, and the rule of law"; and article 2 adds that they will contribute toward the further development of peaceful and friendly international relations by strengthening their free institutions (and) by bringing about a better understanding of the principles upon which these institutions are founded.

We Spanish citizens point out that the present Spanish regime has never hidden the fact, indeed boasts of the fact, that its institutions are not those of liberal democracy; and that, whatever the wording of its so-called laws, there is in fact no law or institution in Spain today but the will of the dictator, so that no Spaniard feels that either his life, property, or honor is safe if he happens to dissent from official-dom.

In the circumstances, we point out that if Spain is considered as indispensable to the North Atlantic Treaty Organization, there are but two courses open: to demand that the regime qualify by adopting free institutions; or to strike out from the charter the preamble and article 2. An admission of the present absolute sultanate would imply that the members of NATO publicly recognize that they attach no importance to their own solemn engagements. This would thoroughly destroy the moral authority of the Organization.

# New England Council's Views on Federal Airport Aid Bill

EXTENSION OF REMARKS

# HON. THOMAS J. LANE

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES
Tuesday, June 2, 1959.

Mr. LANE. Mr. Speaker, under leave to extend my remarks in the Record, I wish to include the views of the New England Council for Economic Development on the Federal airport aid bill which I have received from Gardner A. Caverly, executive vice president of the council:

THE NEW ENGLAND COUNCIL FOR ECONOMIC DEVELOPMENT, Boston, Mass., June 3, 1959. MEMORANDUM

To members of conference committee on Federal airport aid bills, S. 1 and H.R. 1011.

From Gardner A. Caverly, executive vice president.

The views of the New England Council on the Federal airport aid bill are set forth in the following letter addressed to Senator Corron, the New England member of the conference committee:

"JUNE 3, 1959.

"The Honorable Norris Cotton, "U.S. Senate, Washington, D.C.

"Dear Senator: In the hope that it may be of assistance in helping you to reach a decision, we wish to present the position of the New England Council on the airport aid bills now being considered by the conference committee.

"The council has long been active in urging the establishment of airport facilities and navigational aids in the New England area adequate for the needs of scheduled air commerce and general aviation. While we do have some of the country's outstanding airports, it is of vital necessity, both to the region and the country as a whole, that expansion and improvement be a continuing program. For this reason, it is extremely important to have an adequate Federal airport aid act passed during this session of Congress.

"We are encouraged by the fact that both the Senate and the House have passed measures to continue the program. With the principal issue appearing to be that of the amount of money to be authorized, it would be our hope that the amount called for in H.R. 1011 will prevail. It is our belief that an adequate program can be carried out under this amount and that to strive for more would likely endanger the entire program in view of the administration's expressions on the subject.

"There is one phase of the program now in S. 1 only which we would like to see incorporated in the final measure. This is the provision for aid for seal coating, a very important and necessary element to the proper preservation of an adequate system of airports.

"If we can be of further service to the committee, we shall be most happy to oblige. Meanwhile, we hope there will be an early decision along the lines we have indicated so that progress in the development of airport facilities will not be seriously affected.

"Sincerely,
"Gardner A. Caverly,
"Executive Vice President."

One Hundred and Ninth Field Artillery Battalion, Based at Kingston, Pa., Helped To Write Proud History of 28th Division—America's Oldest

EXTENSION OF REMARKS

# HON. DANIEL J. FLOOD

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES Friday, June 5, 1959

Mr. FLOOD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article that was featured in the Wilkes-Barre Sunday Independent, May 10, 1959:

EIGHTY-YEAR UNBROKEN HISTORY—109TH HELPED TO WRITE PROUD HISTORY OF 28TH DIVISION—AMERICA'S OLDEST

The 28th—of which the 109th Field Artillery Battalion is a part—is the oldest division in the U.S. Armed Forces, according to a verified history released by the Office of the Chief of Military History, Department of the Army.

The 28th Infantry Division, Pennsylvania National Guard, also is reported by the Army historians to be the largest Reserve component organization in the Second U.S. Army area.

(The 109th Field Artillery Battalion, with headquarters at the Kingston Armory, is commanded by Lt. Col. Frank Townend. It has five batteries and a medical detach-

The continuous history of the 28th dates back to 1879 when Maj. Gen. (later Governor) John F. Hartranft conceived the idea of having the Pennsylvania National Guard organized as a single division in conformance with Regular Army tables of organization. Since March 1879, the division, known first as the 7th Division, and redesignated the 28th Infantry Division in 1917, has an unbroken history.

#### DATES BACK TO 1747

In reality, the history of the 28th dates as far back as 1747 when Benjamin Franklin formed his Battalion of Associators, a militia organization recruited in Philadelphia "for the protection of the Commonwealth." The 103d Engineer Battalion, of Philadelphia, is a direct descendant of this organization. Other organizations of the division date back to the 18th and early 19th centuries and the 28th Reconnaissance Co. of Philadelphia boasts a continuous history since it was first organized as the First Troop, Philadelphia City Cavairy, in 1774. Units of the 28th have served in every major war from the French and Indian War and the Revolutionary War to the Korean emergency. This service is attested by the 35 battle streamers and the 15 silver bands worn on the color and guidons of units of the division. The division colors carry six battle streamers from its World War I service and five from World War II.

Today the 120 units of the division, commanded by Maj. Gen. Henry K. Fluck, is quartered in 59 armories or rented buildings located in 57 cities of the Commonwealth. Hundreds more of the communities of Pennsylvania are represented in the division's ranks as each unit recruits its members from the surrounding area.

#### DIVISION SELF-SUFFICIENT

Training in the division is carried on with the current Army equipment of all types and when the division moves to the field for training it is self-sufficient in its ability to conduct its own training, carry on ts own administration, perform its own maintenance, operate its own messes, and provide its own basic medical care. Armory and field training is supplemented by special MOS schools and staff schools conducted within the division attendance at Army Service Schools, and enrollment in Army exension courses. During the last year 57 officers and warrant officers and 49 enlisted men left their civilian jobs to attend service schools and at present over 900 officers and enlisted men are devoting additional time to their extension course studies.

Regulations require that every member of the division participate in 48 armory drills and 15 days of field training annually. With large, well equipped units, however, much more time and effort is required. This is given by many officers and enlisted men who work countless additional hours preparing for training, adding to their own military

knowledge, and assisting in the administrative and logistical work that must be done,

#### HELP IN EMERGENCIES

Every year, units of the division are called upon to render services during local emergencies. During the last few years division units have assisted in fighting forest fires, locating children lost in heavily forested areas, patrolling dikes in flood-threatened towns, delivering supplies to areas isolated by flood or bilizzard, and building bridges and assisting citizens in areas destroyed by floods. These are all a part of a guardsman's job. He leaves his family and his job to perform them just as he has left his home to defend his country during every emergency it has faced.

The east wall of the commanding general's office in Harrisburg holds 24 pictures of division commanders who have led the 8th in succession since 1879. Among them are many National Guardsmen who have distinguished themselves in civilian as well as military affairs and many Regular Army officers who have gone on to higher commands. The National Guardsmen include Maj. Gen. Ed-ward Martin, formerly Governor of Pennsylvania and U.S. Senator from Pennsylvania; Maj. Gen. William E. Price, past president of National Guard Association; Maj. Gen. Danield B. Strickler, former Lieutenant Governor of Pennsylvania who led the division during its first 28 months of active service in the Korean emergency, and Maj. Gen. Edward J. Stackpole, publisher and historian.

Among the outstanding Regular Army officers who have commanded the 28th during portions of its active duty tours are General of the Army Omar Bradley, Gen. C. V. R. Schuyler, and Lt. Gen. Donald P. Booth. The two distinguished officers who led the 28th during most of its combat service are the late Maj. Gen. \*Charles H. Muir, later 4th Corps commander in World War I, and Maj. Gen. Norman D. Cota, who led the division from July 1944 until its inactivation after V-J Day in October 1945.

#### THE "BLOODY BUCKET"

Pennsylvania is a varied State, rich in history and beauty, and mighty in industry, agriculture, education, and culture. The men of the 28th come from all parts of her varied populace. They wear the division emblem—a plain red keystone—symbolic of their parent State's key position in the founding of the United States. This simple, but distinctive, emblem is recognized on sight throughout the Army and by the many "alumni" from all over the Nation who have helped in times of war and other national emergencies. To General Pershing it symbolized the "Iron Division" in World War I and the Germans of World War II dubbed it the "Bloody Bucket."

In the armories where the red keystone is worn you may see a Revolutionary War musket, a Civil War battle flag, a Philippine bolo knife, one of the Kaiser's finest spiked helmets, or a souvenir from the Hurtgen Forest. During bull sessions after drill or during breaks in the field, conversation may drift back to World War II or the Korean emergency, but the main effort is always placed on the business at hand.

# The Bentley Bill, H.R. 2729

EXTENSION OF REMARKS

# HON. ALVIN M. BENTLEY

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES Friday, June 5, 1959

Mr. BENTLEY. Mr. Speaker, under leave to extend and revise my remarks in the Appendix of the RECORD, I am including the following letter from Mr. George J. Burger, vice president of the National Federation of Independent Business, in a further effort to bring to the attention of the House the importance and need for my bill, H.R. 2729:

BURLINGAME, CALIF., June 4, 1959.

Hon ALVIN M. BENTLEY, House Office Building, Washington, D.C.

MY DEAR CONGRESSMAN BENTLEY: A report reaches me from our vice president, Mr. Ed Wimmer, that recently he conferred with a store manager of one of the tire manufacturer's retail stores. The store manager said, as he reports, that due to buying tires from the factory and selling for the factory, with a store full of other items showing good profits, he could sell tires cheaper than the wholesaler. (Where he used the word "wholesaler" he meant "retailer".)
Further he said, "Isn't that good for the

consumer? Wouldn't you like to make that

savings?

He further stated, "Why should the Congress protect the independent, shouldn't it be the consumer who is protected?" He continued, "After all, suppose the Benţley bill does go through, and we have to pay the same as the independents. There is no retail price control and the money still goes to the company, no matter how they charge

It has been the universal complaint of independents in that industry that the manufacturer doesn't care whether the store runs at a profit or loss, no matter how much injury accrues to independent retailers and no matter how much money his own store loses, the manufacturer still gets the manufacturing profit.

If this is the universal procedure of those manufacturers operating retail stores, as outlined in the above quotes, then we will say for the record that the Bentley bill, H.R. 2729, is long overdue and that if Congress is determined to protect the business life of efficient independent business, then this legislation should be passed immedi-

It is my belief, as a matter of informa-tion to your colleagues, that this letter should find its place in the Appendix of the RECORD.

Sincerely,

GEORGE J. BURGER, Vice President.

# The 110th Anniversary of the Danish Constitution of 1849

EXTENSION OF REMARKS

#### HON. ABRAHAM J. MULTER

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES Friday, June 5, 1959

Mr. MULTER. Mr. Speaker, June 5 is the anniversary of the Danish Constitution of 1849. One hundred and ten years ago the evolution of democracy in Denmark began with the adoption of this great and forward-looking instrument of government.

Representative government emerged in Denmark during an era of economic distress at home and republican protest throughout much of Europe. The Nepoleonic Wars had left Denmark in a period of poverty and economic stagnation, during which the banking system

failed, foreign trade precipitately declined, grain prices fell, and the Government's program of land reform came to a standstill. At the same time, strong opposition to the old European order of monarchical despotism emanated from the bourgeoisie and the growing working class.

Naturally, these conditions called forth criticism of Frederick VI's government. Furthermore, the principle of absolutism, itself, was attacked. Under the influence of the July revolution in France, King Frederick in 1834 established four provincial assemblies. While the function of these bodies was consultative rather than law-making, their origin marked the beginning of parliamentary practice and encouraged public discussion of political questions. A Liberal Party was formed with a program of substituting for the absolute authority of the monarch a new constitutional government which would be more representative of the people.

In 1848 the February revolution in France gave impetus to the liberal movement in Denmark and in many other centers of political protest in Europe. The ephemeral victory of liberalism in France encouraged the Danes to petition the new King, Frederick VII, for reforms. The King agreed to renounce absolute power and permitted the formation of a government responsible to representatives of the people. A national assembly convened and drafted the Constitution of June 5, 1849, which granted specific powers to a bicameral legislature.

Although the Constitution of 1849 was abrogated by a reactionary constitution in 1866, the principle of popular government embodied by the document of 1849 continued to inspire the advocates of true democracy. The Constitution of 1866 gave an overwhelming influence to the aristocracy in the upper chamber of Parliament, although the lower house continued to be popularly elected. In 1872 the group favoring an extension of land reform secured a majority in the lower house and insisted on a true parliamentary system by which the King would be obligated to select a cabinet from members of the majority party in the lower house. For about 30 years the struggle between the interests of property and reform in the upper and lower chambers, respectively, was bitter. The forces of reform steadily increased in strength until in 1901 King Christian IX requested that a government be constituted from members of the majority party in the lower house.

Then in 1915 a new constitution came into effect which abolished the privileged system enjoyed by the wealthy class in electing the upper chamber. By this new constitution, the conservatives accepted responsible cabinet government and political democracy. Important social legislation, including land reform and benefits to labor, soon followed.

The peaceful revolution by constitutional reform, which began with the adoption of the Constitution of June 5. 1849, was now accomplished. The principles of popular representation in the legislature and cabinet government by ministers responsible to the majority party were now so firmly established that the upper chamber of Parliament, once a powerful citadel of privileged and vested interests, was formally abolished by a constitutional amendment in 1953. The ability of the Danish people to resolve deep class conflicts by peaceful procedures has been unmistakably demonstrated by the past century of their political history.

For its exemplary accomplishments in the development of democratic institutions, the United States salutes the great nation of Denmark on the 110th anniversary of the adoption of the Danish

Constitution of 1849.

#### Poultry and Egg Prices

EXTENSION OF REMARKS

# HON. CHARLES B. HOEVEN

OF IOWA

IN THE HOUSE OF REPRESENTATIVES Friday, June 5, 1959

Mr. HOEVEN. Mr. Speaker, in a lengthy statement issued to the press last week, the distinguished chairman of the House Committee on Agriculture charged that the Secretary of Agriculture has refused to aid the distressed poultry industry. This statement was issued on the heels of a letter sent by the Department of Agriculture in response to a committee resolution requesting a review of existing authority for programs to assist the poultry industry and asking for a report on the actions to alleviate the situation.

The plain fact is that the Secretary of Agriculture and those under him in the Department are deeply concerned over the plight of the poultry industry and are giving very substantial direct assistance to help overcome present difficulties. The record is very clear on that. In fact, the direct help that the Department has been giving to the poultry industry has extended over a considerable period, especially in connection with

Since October of 1958 the Department has purchased more than 15.4 million pounds of dried eggs in conjunction with efforts to help move more eggs into consumption and thus relieve some of the pressure of increased production on regular markets. In the past month of May alone the Department bought more than 2.7 million pounds of dried eggs. the equivalent of more than 270,000 cases of shell eggs, at a cost in excess of \$3 million.

In total, the purchases of dried eggs made since last October were the equivalent of 1.5 million cases of shell eggs. This quantity would supply 1.6 million people with all the eggs they would normally eat in a full year. It represents more than 2.500 carloads of 600 cases of eggs per car. The cost of these egg purchases has amounted to about \$18 million. In addition to this program, the Department announced last Monday that it will make weekly purchases of frozen whole eggs to supplement other programs of assistance to poultry farmers.

Purchases of dried eggs are continuing at a stepped-up rate. They are being made every week and the product is being distributed to needy persons and charitable institutions. Schools participating in the national school lunch program have received some 12 million pounds of the dried eggs. They have been using this product since last fall and there is a considerable quantity available for use when schools reopen this fall. In summary, the Department is buying all of the dried eggs it can reasonably dispose of through the school lunch program, through distribution to needy persons, and through eligible institutions.

The Department's approach to the egg problem is a sound one, and it is based on past experience. Years ago the Department purchased huge quantities of dried eggs under a price support program and, because of the amounts involved, was forced to store the bulk of them. Not only was the cost of this program staggering but considerable quantities of the eggs so deteriorated in storage that they were unfit for consumption and had to be disposed of. That could happen again if purchases exceeded available outlets and extensive storage were necessary. The Department wants no part of such an operation and neither do those people in the egg industry who remember this costly operation.

The Department has been asked to purchase shell eggs for distribution to schools and institutions. This, too, the Department has had experience with. Shell eggs purchased by the Department in the fall and winter of 1956-57 were distributed to schools and eligible institutions. 'All too frequently the eggs donated by the Department were used in lieu of normal purchases from local sources and local production. The people who were hurt in this operation. and there were many, were quick to point out the inequities of the program. This school year is generally over. The only Outlets for shell eggs, therefore, would be through institutions and to needy persons. These groups are already being supplied with dried whole egg solids. To buy shell eggs and put them in storage would be asking for trouble. The Department did this in 1952 with very discouraging results. Eggs are highly perishable and deteriorate in quality and taste rather quickly.

Any egg purchase program aimed at boosting producer prices to the extent being advocated by some would have two immediate undesirable effects. It would encourage producers to hang on to poor layers and it would encourage the purchase of chicks for flock replacement purposes. The end to the egg industry's current problem is tied to these two actions. The culling of hens from flocks has been running almost double the rate of a year ago and on May 1 there were 13 percent fewer eggs in incubators for flock replacement chicks than a year earlier. These corrective actions are already being felt, as evidenced by the increase in producer egg prices during recent days.

The egg price problem will not be solved by buying large quantities of eggs and putting them in storage to hang over the market. The problem can be solved, and quickly, by increasing egg consumption in the modest amount of just a little over one more egg per person per month. A program to do just that is underway. On May 18 the Secretary of Agriculture called together a representative group of the major food distributors of the Nation to develop a stepped-up promotion and merchandising campaign to increase egg consumption immediately. The response of the industry was excellent. In fact many of the organizations represented already had well-developed plans for such a program. The resources of the Department are geared to lend all possible asistance to this effort. Intensive merchandising drives of this nature have been highly effective in the past in the case of beef and pork. The present effort will be equally successful.

The suggestion that the Department purchase broilers could only have been made in panic and without thought. Broiler production is a continuing process. Chicks are placed on farms for production throughout the year. The production period from egg to marketable broiler is only about 12 weeks. Because of this situation, any purchase operation by the Department would also tend to perpetuate the surplus problem by encouraging further increased production. Recent data indicate that an adjustment is underway. During the past month the number of eggs placed in hatchery incubators for broiler production has been below a year earlier. This means that by July, when the resulting broilers will be marketed, producer prices will very likely be higher than during July of 1958. If this trend continues, producer prices will be at more reasonable levels during the balance of the year. If this trend is halted, as it surely would be if the Department were to step into the market, today's problem would continue indefinitely.

The Department of Agriculture is not going to embark on any purchase programs for eggs or chickens which will hurt these industries in the long run. Extensive purchases without a home would do just that. The Department's current egg buying program for available outlets and the stepped-up merchandising effort will solve the immediate problem if left alone. Any actions in excess of this can only have one result, a continuation of the current situation and a worsening of the problem in the long run.

In conclusion, the Department has been assisting egg producers. Further, I am certain that the Secretary of Agriculture and his assistants have the whole egg and poultry situation under constant review and will not hesitate to take any further action which may be appropriate.

The poultry industry, the Department of Agriculture, and every Member of Congress who is concerned with the present plight of the poultry farmer will follow with keen interest the efforts of the Dairy and Poultry Subcommittee to formulate constructive legislation concerning poultry and egg producers. As of this date nothing has been done ex-

cept criticize the Secretary of Agriculture.

The Department's constructive actions in dealing with the present poultry situation and the various considerations that have entered into the steps taken are reviewed in the letter sent to the House Committee on Agriculture on May 25, 1959. The letter is as follows:

> DEPARTMENT OF AGRICULTURE. Washington, D.C., May 25, 1959.

HOD. HAROLD D. COOLEY. Chairman, Committee on Agriculture,

House of Representatives.

DEAR CONGRESSMAN COOLEY: This is in response to the committee's resolution dated May 13, 1959, requesting the Department to review all existing authority for programs which "will lead toward improvement in the present critical situation within the domestic poultry industry" and to report on the ac-tions which the Department proposes to undertake to alleviate the situation.

We have made a careful review of every aspect of the problem and of the alternative methods of helping in the present situation. In our review we considered the authorities available and the effect the use of such authorities would have on both the short-and longtime benefits to the industry. We are currently using several of these authorities to the maximum practical extent.

#### CURRENT ACTIONS

Egg purchase: Dried whole egg solids are being purchased under section 32 authority for distribution to needy persons and chari-table institutions. Between October 1958 and the latter part of April 1959 a total of approximately 12 million pounds of dried whole egg solids was purchased under section 6 authorities for distribution to schools participating in the national school lunch program.

On April 16, 1959, this aspect of the program was completed and a section 32 program of a similar nature was initiated. During the month this program has been in operation, a total of 1.4 million pounds of dried whole egg solids has been purchased. Total egg solid purchases, therefore, have amounted to about 13.5 million pounds which is equivalent to approximately 1.4 million cases of shell eggs. The cost of these two programs has exceeded \$15 million. Purchases continue to the maximum extent possible consistent with outlets available for the product

Merchandising stepup: On May 18 the Secretary called together, in Washington, representatives of the major producer, cooperative and farm organizations, along with representatives of the major food distributing groups of the Nation, and urged that they develop coordinated and intensive merchandising programs for eggs to be effective the remaining weeks of the spring flush. response to this request was excellent and in the weeks ahead intensive merchandising campaigns will be underway. The resources of the Department, through its plentiful foods program, information services, and the Federal Extension Service, will be made available to assist in this effort.

Intensive merchandising drives of this nature, for not only eggs, but turkeys, beef, and pork, have been highly effective in moving temporary excess supplies in the past and have had the effect of improving market conditions.

Copies of the press release and subsequent letter addressed to all organizations are attached.

#### ACTIONS CONSIDERED

Fowl purchase program: Careful consideration has been given to the purchase of fowl as a means of reducing the marketable supply of eggs. It is our conclusion that such a program would be of doubtful value. On May 1, 1959, the Nation's laying flock was 3 percent above the same date last year. Total egg production was at a rate of 4 percent above the same date last year. In order to reduce the marketable supply of eggs to a level about equal to a year ago, it would be necessary to remove over 11 million laying hens from flocks. An additional 10 million layers would also need to be removed from flocks to compensate for the increased number of pullets expected to enter laying flocks during the next few months.

Even the purchase of 21 million layers would not likely remedy the situation inasmuch as many, perhaps most, of the fowl purchased would not be average layers but rather would be layers in either poor production or not in production at all. Except as the paying price for fowl was advanced to a high level it could not be expected that any substantial culling of good layers would take place from commercial flocks. Such flocks are normally culled on a year-round planned basis with replacements being made either continuously or at intervals three or four times a year. Since the rate of lay in such flocks is probably well above the average, and since such producers would be very reluctant to change their culling practices, the net effect on total egg production from the purchase of fowl would likely be very disappointing.

The removal of fowl from flocks through purchases would have the effect of first, raising the average rate of lay, and second, encouraging the purchase of replacement chicks. An increase in the average rate of lay of just one more egg per hen per month would increase total egg production by about 5 percent.

This is the season of the year of heavy purchasing of flock replacement chicks. Unless purchases are reduced substantially, relative to a year ago, the problem we have today will be perpetuated. A reduction in the hatch is underway. On May 1 there were 13 percent fewer eggs in incubators for flock replacement chicks than on May 1 last year. Heavy culling during the past 2 months also indicates that a correction of the situation is underway. During April, culling rates exceeded a year earlier by about 25 percent.

Shell egg purchase program: The Department has had considerable experience with shell egg purchase programs. When distribution was made to institutional users, the net effect of the program was disappointing and the results disrupting to the industry. Too frequently the shell eggs distributed merely displaced similar quantities purchased by such institutions from local sources. When distribution was to schools participating in the national school lunch program, displacement of purchases from local sources was considerably less but still a problem.

Schools will be out very shortly. Any purchases for this outlet would, therefore, require storage over the summer months. Storage is costly and, because of the perishable nature of shell eggs, the quality of the product deteriorates rather rapidly even under the best conditions.

Broiler purchase program: The Department has given very careful consideration to a purchase program for broilers to be distributed to schools participating in the national school lunch program. Aside from the fact that schools will be closing very shortly and before a distribution of broilers could be made to them, it has been our feeling that such a program would further aggravate the situation rather than help to correct it. Broiler production is a continuing process. Chicks are placed on farms for production throughout the year. The production period from egg to marketable broiler is only about 12 weeks. Because of this situation, any purchase operation by the Department which would tend to improve or even

stabilize producer prices would also tend to perpetuate the surplus problem by discouraging the production adjustment which must take place. Recent data indicate that an adjustment is underway. During the past month the number of eggs placed in hatchery incubators for broiler production has been below a year earlier. This very likely means that by July, when the resulting broilers will be marketed, producer prices will be some higher than during July of 1958. If this trend continues, producer prices will likely be at more reasonable levels during the balance of the year.

Section 32 export subsidy for fowl: As you are aware, the dollar problem is a substantial obstacle in many areas, even when prices are highly attractive. We have given careful consideration to possibilities for using section 32 funds in providing export assistance for poultry, both in underdeveloped areas and in advanced industrial areas not currently supplied with quality products from the United States. It would be less than candid, however, to say that, except as our products are forced on such markets to the detriment of trade of friendly nations, there is little possibility of significantly increasing exports in the short run.

Sales of fowl under Public Law 480, title I: The feasibility of export programs for fowl has been thoroughly explored. We have been actively engaged in promoting exports of poultry through title I, Public Law 480, programs. Growing dollar markets for high quality poultry have been developed in Western Europe, but these markets are small in relation to the size of the U.S. poultry output. The areas of the world which can store and distribute perishable products, such as poultry, on any substantial scale are mainly the advanced industrial areas which already have well established sources of supply. Development of additional markets for poultry in these areas is a slow process and market potential in the low income, underdeveloped areas elsewhere is very limited.

In summary, we feel that the efforts of the Department to help in the present situation have been realistic and are in the best long-time interest of the industry.

Sincerely yours,

CLARENCE L. MILLER,
Assistant Secretary.

Amateur Wrestlers Need \$5,000 for Tour

EXTENSION OF REMARKS

#### HON. ED EDMONDSON

OF OKLAHOMA

IN THE HOUSE OF REPRESENTATIVES

Friday, June 5, 1959

Mr. EDMONDSON. Mr. Speaker, I should like to call to the attention of the House, and to the attention of people throughout the United States who are interested in American prestige in the athletic field, an interesting article by Dan Parker which appeared in the New York Mirror on Wednesday, May 20, 1959:

AMATEUR WRESTLERS NEED \$5,000 FOR TOUR (By Dan Parker)

Whenever the United States sends an inferior team against Russia and suffers a humiliating defeat with a consequent loss of prestige for us in the eyes of the world, there is a lot of sound and fury. Editorials are written decrying the lack of interest, pride, or whatever it is that prevents us from puting our best foot forward in these international meets. And what happens? Every-

one forgets about it until the same thing happens again. The nadir was reached when the Russians humiliated us at basketball, our own game, during the world championship tournament in Chile last winter.

Now the same situation is about to arise in amateur wrestling unless means are taken to prevent it. The means in this case amount to \$5,000, the sum that remains to be raised if a team of eight national amateur champions, a manager, a trainer, and a coach are to return a visit the Soviet wrestlers made here last year. Of the \$11,000 needed to finance the trip, only \$6,000 has been raised by the U.S. Amateur Wrestlers' Foundation, a group authorized by the AAU to provide the funds.

Henry Wittenberg, one of the best amateur wrestlers America has ever produced, is appealing to the public to put the fund over the top so it will not be necessary to cut the size of the team and thus lessen its chances of making a good showing on the tour of Russia, Iran, Turkey, Poland, France, and Belgium. Wittenberg, who will coach the U.S. wrestlers, engaged in intercollegiate competition while in City College and later represented the United States in two Olympics, winning the 191-pound championship in 1948 and being runner-up in 1952. He was also a member of the New York Police Department after finishing his college course, but is now engaged in the photo engraving business.

"We've exhausted every avenue of approach in our efforts to raise the balance of the required funds," he says. "The State Department's cultural exchange program had no money for us. We applied to various foundations dedicated to promoting international good will through sports but all had the same story—no funds. On our own, we raised over \$6,000. But unless the public responds, we won't be able to get the minimum of \$11,000 needed to finance the trip for a full team."

When the Russians sent their wrestling team here, by invitation, last year, they paid their own fare but were reimbursed for their expenditure and also provided with return transportation when they arrived here. They paid their own expenses on tour. The same arrangement will be in effect when the Americans return the visit. Russia will pay our team's transportation over and back but the Americans will pay their own expenses on tour. The U.S. team members were selected as the national championships in Stillwater, Okla., last month. They are the champions in each division. Only one of them, Bob Marella, a student at Ithaca College, is a New York State man. A 300-pounder, he will represent us in the heavy-weight division.

The others come from various parts of the United States and all of them will have to pay their own transportation and expenses to New York City and return. Some of the expense money sought will be used for their keep while they are undergoing 10 days of training here under Coach Wittenberg and Trainer Cyril Mitchell of the Multnonah A.C. of Oregon. One of the team members, Fritz Zivian, a 160-pound student at Oregon State University from Switzerland, was so eager to go along that he became an American citizen. To beat the deadline he had to call upon Senator Neuberger, of Oregon, to speed along the process. Thanks to the Senator's wholehearted cooperation. Fritz will sail to Europe as a Yankee Doodle boy.

The important thing about this trip is that the United States wants to be represented by a good team in the Olympics next year and only through competition with the top amateurs of the countries to be visited can we hope to develop grapplers of Wittenberg's class.

Professional wrestling, it seems, could do something worth while in this campaign, now that it is rolling in wealth. In fact, I think the best move the wrestling moguls could adopt to win public favor would be to wipe out the \$5,000 deficit as their contribution to the cause of honest wrestling. If Toots Mondt swore off horse playing for a week he could do it all by himself. (I can dream, can't I?) Lovers of amateur sport who wish to participate in this worthy cause are asked to send their tax-deductible contributions to the U.S. Wrestlers' Foundation, 205 West 39th St., New York, N.Y. Checks should be made out to the Amateur Athletic Union and earmarked for the U.S. Wrestlers' Foundation. First thousand 1-buck contributions would send the drive over the top.

Mr. Speaker, since this article appeared in the New York Mirror, I have had word that a portion of the needed funds has been raised, but that there is still a shortage of more than \$2,000 that needs to be raised for this worth-while undertaking.

## Federal Water Pollution Control Act

SPEECH

OF

#### HON. MELVIN PRICE

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES
Thursday, June 4, 1959

The House in Committee of the Whole House on the State of the Union had under consideration the bill (H.R. 3610) to amend the Federal Water Pollution Control Act to increase grants for construction of sewage treatment works; to establish the Office of Water Pollution Control; and for other purposes.

Mr. PRICE. Mr. Chairman, I oppose the Cramer amendment because I favor a water pollution control program. Those who do not favor such a program. I assume will support this amendment. The minority leader has made it clear that the administration did not approve of the program at the outset and I agree on that. However, there have been some outstanding Members of the House on the Republican side and Members in the other body who did favor this program. One of the original sponsors was another great Ohioan and my good friend and former colleague, Charles Elston, and the great Senator from Ohio, Mr. Taft, was one of the original sponsors of this program in the other body.

Mr. Chairman, I rise to support H.R. 3610, and I direct my remarks to the proposed amendments.

On pages 12, 13, and 14 of the Report No. 294, House of Representatives, 86th Congress, 1st session, entitled "Water Pollution Control," submitted on April 23 by the gentleman from Minnesota [Mr. Blatnik] from the Committee on Public Works, in which is advocated an all-out attack on the social crime that is water pollution, you will find expressed the dissenting views on this legislation.

On page 14, the last sentence in the report states that "approval of the Federal-State matching amendments proposed in this statement will greatly improve H.R. 3610." It also states that an adoption of the amendments will "pro-

vide an effective incentive to a sound and substantial expansion of our water pollution control program."

Mr. Chairman, I affirm that exactly the contrary will result if the amendment is accepted.

The proposed amendment would destroy a working program, a going concern, that for the first time in the history of our country is successfully attacking the disgraceful water pollution problem of the United States. This is a problem which affects almost every stream—lively or sluggard—in our country, no less than our lakes, our inland waterways, and the farflung shores of our oceans and gulfs.

The dissenting views are outlined in six points. The first argument advanced is that State matching would result in doubling the present grant funds without an added drain on Federal funds. But to accomplish this end. the States would have to agree to it, they would have to pass enabling legislation in each State. Most State legis-latures meet every 2 years. And most of these States are in session this year. They will, therefore, not be able to consider this proposal for 2 years hence, until after the election in 1960. Again, in 1960, only 18 States will be in session. We could go on for years trying to get States to agree to the minority proposal. It would be almost as bad as trying to get a constitutional amendment. Children could be born, grow to manhood and womanhood and die, before all of the States agree to this complicated proposal

The second point of the argument is that there would be a more effective screening of project applications since the States would have a financial interest in every application. I can only point out that a recent study conducted by Mr. Milton P. Adams, executive secretary, Michigan Water Resources Commission, found universal agreement among State water pollution control agencies that State screening of projects is now very effective and that few complaints have been turned up anywhere along the line.

The third point in the so-called explanation reads as follows:

Cooperation by the States with the Federal Government would greatly strengthen the water pollution control program.

This rhetorical flourish reminds me of the first sentence of one of ex-President Calvin Coolidge's columns many years ago. For the benefit of some of the younger Members of the House, I shall recall that after Mr. Coolidge left the presidency, he engaged in writing. His newspaper columns were widely read. Some of them were noted for their profound revelation of the obvious. One of Mr. Coolidge's columns, if I recall correctly, began this way: "All church spires point to heaven."

I should like to emphasize that the States are cooperating with the Federal Government in the water pollution control program today, and they are cooperating in a very marked way. They are cooperating in a manner that merits

the plaudits and the help of the National Congress, and not its resistence and timidity and tight-fistedness.

The fourth point advanced is that the amendment would financially benefit communities throughout the United States, since they would need to raise only 50 percent instead of 70 percent of the total cost of a sewage treatment plant project. This is based upon the assumption that the Federal grant amounts to 25 percent, and that the State grant would also amount to 25 percent. It is difficult to understand this paradoxical point. Opponents of the Federal construction grant program have long and loudly been calling for increased local participation. Now they are turning around, and are calling for smaller amounts of money from communities. However, they make up the difference by taxing the State as a State. This itself, it seems to me, is a poor example of concern over States rights.

The fifth point is that Federal-State matching would result in recognition of the rights of the States, and there would follow, and I quote, "a more wholesome atmosphere" for Federal-State cooperation. I have here Document No. 86-4 entitled, "Hearings Before the Committee on Public Works, House of Representatives, 86th Congress, 1st session, on H.R. 3610." The hearings were held on March 18, 19, and April 8 of this year. The document comprises 241 pages. The merest glance at the statements made by almost 100 witnesses, or those who wrote in or telegraphed supporting testimony, would reveal that there was nearly unanimous agreement that a very close and wholesome atmosphere in Federal-State relations exists at the present time in the carrying out of the provisions of Public Law 660.

The final point of the minority proposal is that there has been State matching of Federal funds under the Federal aid highway acts and that this system has been most satisfactory and the rights of the States in highway matters have been recognized. Mr. Chairman, this particular point is another prime example of the profound revelation of the obvious.

In conclusion, there is no sound argument against the present construction grants program under Public Law 660. A recent editorial in the New York Times stated, in commenting upon the report of the House Committee on Public Works in connection with H.R. 3610:

The House committee heard the administration's appeal for the proposed transfer (of the construction grants program) to the States. Then it provided, by an overwhelming majority, to vote instead to double the program of Federal grants, from \$50 million to \$100 million a year. \* \* The committee's reasoning was plain and persuasive: the program has worked.

Citizens all over America likewise know that the present program has worked. They know that it is getting late. Time is running out. They want this program not only continued, but expanded so that the social crime of pollution of our rivers, streams, lakes, and coastal waters may be stamped out.

## School Safety Patrol Gold Lifesaver Medal Awards

EXTENSION OF REMARKS OF

## HON. JOHN R. FOLEY

OF MARYLAND

IN THE HOUSE OF REPRESENTATIVES Friday, June 5, 1959

Mr. FOLEY. Mr. Speaker, it is my honor to bring to the attention of the Members of the House the winners of the 1959 School Safety Patrol Gold Lifesaver Medal Awards. One of the heroes is a constituent of mine, 12-year-old Frederic G. Burke, Jr., one of eight children of Dr. and Mrs. Frederick G. Burke, Sr., 3307 Woodbine Street, Chevy Chase, Md.

Young Fred Burke, as a safety patrol boy, displayed extraordinary heroism to save the life of a 6-year-old child at the risk of his own life. We from the Sixth District of Maryland are proud of Fred Burke and the magnificent example of devotion to duty he showed.

In tribute to him, his fellow medal winners, and all school patrol boys and girls, there is set out below a brief history of the school safety patrol and the names and citations of the 1959 medal winners:

#### PATROL HISTORY

The school safety patrol movement has grown tremendously since its origin in the early 1920's. Today, it is a national institution—a vital force in the important work of protecting America's children from the hazards of modern traffic. Seven hundred and seventy thousand boy and girl patrol members in the United States daily help to protect millions of children enrolled in thousands of elementary schools. In cities and towns, in rural areas, and on schoolbuses, the school safety patrol serves to remind schoolchildren of hazards of street and highway crossings on their way to and from school.

Educators regard the patrol movement as an excellent school activity, as well as a method to help develop a sense of responsibility, character, and positive usefulness for community living. Commendation for patrol work is universal. It comes from par-ents, educators, police, and other outstanding public officials.

While it is obviously impossible to set any precise figures on the lifesaving results of school safety patrol work, it is certain that this movement has been partly responsible for the improvement of the traffic death rate of children 5 to 14 years of age. Since 1922, the traffic death rate for this group has continued to decrease to nearly one-half, while the death rate of other age groups has practically doubled.

LIFESAVER MEDAL AND CITATION CERTIFICATE

The American Automobile Association and affiliated automobile clubs inaugurated the AAA Gold Lifesaver Medal Award in 1949. The president of the AAA annually appoints a medal award board and authorizes the members to select patrol boys and girls whose traffic lifesaving acts have saved the life of persons in imminent vehicular traffic danger. The gold medal is awarded in cases involving extraordinary heroism, while the citation certificate recognizes actions beyond the call of

duty.

In the decade of this honor award program, beginning 1949, the brief summary following explains the considerations given by the board:

Recommendations submitted: 165. Medals awarded: 79.

Citation certificates awarded: 21.

States represented: Arizona, Arkansas, California, Colorado, District of Columbia, Florida, Georgia, Indiana, Maryland, Ohio, Michigan, Minnesota, New Jersey, New York, Pennsylvania, Rhode Island, Virginia, Wisconsin North Carolina.

Presentation of the award is made by outstanding national leaders. It has been the good fortune of recipients to have been decorated for their valor by the President of the United States, the Vice President, Cabinet officers, the Director of the FBI, and top military leaders.

BOARD OF JUDGES, 1959, SCHOOL SAFETY PA-TROL LIFESAVER MEDAL AWARD BOARD

John J. Agnew, Deputy Chief of Police, in Charge of Traffic, Metropolitan Police Department, Washington, D.C.

Helen K. Mackintosh, Chief, Elementary Schools Section, Department of Health, Edu-cation, and Weifare, Office of Education, Washington D.C. Washington, D.C.
Arthur E. Miller, Chairman, Assistant Sup-

erintendent (retired), Metropolitan Police Department, 7804 Radnor Road, Bethesda,

John H. Mitton, traffic engineer, Department of Highways and Traffic, 301 C Street NW., Washington, D.C.

Mrs. C. Rhodes Cox, president, District of Columbia Parent-Teachers Association, 3390 Stuyvesant Place NW., Washington, D.C.

PREDERIC G. BURKE, JR., AGE 12, OUR LADY OF LOURDES SCHOOL, BETHESDA, MD.

After crossing heavily-traveled Wisconsin Avenue at East-West Highway, Bethesda, Md., with 20 other children, 6-year-old George Francis Howard ran back into the street in front of a turning truck and heavy oncoming traffic to pick up some of his school papers. Realizing the danger to George, Patrol Member Frederic G. Burke. Jr., darted into the street. He shouted and held out both arms to stop the traffic. Cars skidded to a stop, barely missing the boys, as Frederic quickly brought the small boy to the safety island. Frederic's heroic act, without thought of self, was witnessed by Police Officer Marvin R. Gulick.

Frederic is the son of Dr. and Mrs. Frederic G. Burke, Sr., 3307 Woodbine Street, Chevy Chase, Md.

RONALD T. HARVEY, AGE 12, BRYAN SCHOOL, WASHINGTON, D.C.

Acting immediately, which placed him in danger of injury in front of a turning car at 13th Street and Indpendence Avenue SE., Washington, D.C., patrol member Ronald T. Harvey heroically saved 6-year-old Eleman Queen from certain injury. The small boy was in charge of his sister, who was holding his hand. He broke away from her, ducked behind Ronald and into the path of the Without regard to his own safety, Ronald jumped into the street, grabbed the child by the coat and pulled him to safety.

Ronald is the son of Mr. and Mrs. Thomas Harvey, 1107 Independence Avenue SE., Washington, D.C.

WILLIAM JAMES HOAG, AGE 15, ST. JUDE'S SCHOOL, ST. PETERSBURG, FLA.

When the schoolbus carrying 56 of his schoolmates stalled in the path of an onrushing train, bus patrol member William James Hoag jumped from the bus and ran 400 feet down the tracks waving his arms violently to signal the engineer to stop. The engineer, recognizing William's School Safety Patrol belt, realized the situation immediately and ground the train to a halt 3 feet from the school bus. But for William's quick thinking and courage, the children, who had alighted from the bus, and the cars waiting on both sides of the track, would

undoubtedly have suffered injury and damagé.

William is the son of Mr. and Mrs. Dom-inic P. Moniz, 6413 Emerson Avenue S., St. Petersburg, Fla.

ROBERT THOMAS KOWALCZYK, AGE 13, SS. PETER AND PAUL SCHOOL, GARFIELD HEIGHTS, OHIO

When 7-year-old Jill Colette Nagy ignored the directions of patrol member Robert Thomas Kowalczyk and ran into the street in front of a fast-turning vehicle, Robert jumped from the curb, disregarding personal danger, and pulled Jill back to safety. The driver said she would have hit the child but for Robert's quick thinking and heroic action, as she could not have stopped quickly enough.

Robert is the son of Mr. and Mrs. John Kowalczyk, 4610 East 93d Street, Garfield Heights, Ohio.

THOMAS GERALD O'DONNELL, AGE 13, ST. JOACHIM'S SCHOOL, BEACON, N.Y

Impulsively jumping out of his mother's parked car, which was parked across from the school, and into the street in front of an approaching car, 5-year-old David Michael Frederick was saved from serious injury by patrol member Thomas Gerald O'Donnell, who ran into the street to halt the small boy's rash progress. Grabbing him by both shoulders, Thomas swung the boy out of the path of the moving car. The driver, making an emergency stop, proceeded past the spot where the boys had been. 'Thomas' courageous act, without thought of danger to himself, was acclaimed by David's mother, a helpless witness to the incident.

Thomas is the son of Mr. and Mrs. Gerald O'Donnell, 35 East Street, Beacon, N.Y.

BRIAN N. STEPHENS, AGE 13, ST. MARY OF SOR-ROW SCHOOL, BUFFALO, N.Y.

In the path of a skidding automobile, which finally came to a stop after running through a red traffic light, patrol member Brian N. Stephens saved six classmates of St. Mary of Sorrows School from certain death or injury. Brian's heroic action, with-out thought of self, in running into the street and pushing the children back to the curb and safety was witnessed by Mrs. Earl Paul, adult crossing guard, who was on duty at the time. The driver said he surely would have struck one or more of the children if it had not been for Brian's courage and split-second timing.

Brian is the son of Mr. and Mrs. George Stephens, 580 Wilson Boulevard, Buffalo,

#### Tribute to Sam Hood

EXTENSION OF REMARKS OF

## HON. JAMES G. FULTON

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES Tuesday, May 26, 1959

Mr. FULTON. Mr. Speaker, most of us carefully observe the news stories which bear heavily on our daily lives. However, too often we forget the dedication of men who conscientiously and ably cover these events of history which we share because of them. At times we are dramatically reminded of their significant role in our society.

Such an occasion occurred in the city of Pittsburgh recently when a tragic bus accident removed from our community a colorful and competent reporter, my good friend Sam Hood, of the Pittsburgh Press. The tributes of praise and appreciation for his contribution were heartwarming to all who knew Sam Hood, and I would like to share with others the grateful thanks extended to one who performed an important responsibility and performed it outstandingly.

From the paper he served as a reporter, the Pittsburgh Press, came the following editorial tribute entitled "Sam Hood" on March 11, 1959:

Sam Hood was a man of vast energies and many talents. He tried his hand at a lot of things.

His art criticisms for the Pittsburgh Press were pieces that the man-in-the-street could understand. But they were nonetheless solidly written against a background of study of the masters.

His available-light photographs were fine enough to be hung in a one-man show at Carnegie Institute. Yet photography was only an avocation.

As an accomplished jazz pianist he presented a one-man concert a year or so ago, writing his own arrangements.

He was an authority on George Bernard Shaw, and author of a biography on Shaw's biographer, Archibald Henderson. In these varied fields of the arts, Sam

In these varied fields of the arts, Sam Hood had perhaps won more public recognition than most talented persons can hope to attain in a long lifetime. He was only 42 when he met death yesterday on a downtown street corner.

Above all, Sam Hood was a reporter—a reporter in the best traditions of his profession. He believed in the public's right to know about the public's affairs. He was a digger and a doer, a reporter whose tenacity knew no limits that his ingenuity could not conquer.

Beyond a doubt, Sam Hood would have chosen to be remembered as such.

The Pittsburgh Sun-Telegram added their words of praise on March 12, 1959, in the following editorial, entitled "Samuel Stevens Hood":

Sam Hood was a remarkable man. As a newspaper reporter, he was of the first rank, endowed with keen curlosity, zest, persistence, and real affection for work. He was a hard man to compete with in the gathering and reporting of news.

And beyond his professional ability, Sam was highly versatile in talents and accomplishment. He was a skilled portrait photographer, as those will attest who saw the exhibition of his work given not long ago at Carnegie Institute. He played the piano with expertness, and liked especially to score his own arrangements of jazz classics. He had a wide range of literary knowledge and interests, and wrote a book about George Bernard Shaw's official biographer. In recent years, he was art critic for the Pittsburgh Press, in addition to his reportorial duties.

Sam was on the way back to his office on Tuesday, to write a news story, when he was killed in that tragic accident at Forbes and Smithfield. We in this business, who knew him, worked with him, and most of all liked him, are dazed and saddened by his death.

Other newspaper comment follows: [From the Pittsburgh Sun-Telegraph, Mar. 11, 1959]

DEATH WRITES "30" TO END LIFE OF TALENTED SAM HOOD

Death ended the life of a man of many talents yesterday when it wrote "30" below the name of Samuel Stevens Hood, 42, Pittsburgh Press reporter.

Hood, of 11 East Prospect Street, Ingram, was an art critic, an expert jazz pianist and arranger, portrait photographer, and authority on George Bernard Shaw

ity on George Bernard Shaw.

Hood had just left the Penn-Sheraton, after he and other Pittsburgh reporters interviewed the president of the American Bar Association. He apparently was on his way back to the Press when fatally injured.

An autopsy showed he died of shock and hemorrhage resulting from a crushed chest and internal injuries.

Governor Lawrence told his weekly news conference today he was "very blue" about Hood's death. He said:

"Sam was a good friend of mine and a good reporter."

Hood joined the Press in 1945 after working as a reporter in Harrisburg. He covered every type of assignment except sports. He had won two Pennsylvania Newspaper Publisher Association wards for court coverage, and the Pall Mail "Big Story" award for crime coverage.

In recent years he was an art critic.

An amateur musician, he wrote many of his own piano arrangements. In 1958 he presented a program of popular and jazz music before the Pittsburgh Press Club.

He was the only amateur photographer ever to hold an exhibition at Carnegle Institute.

In 1956 his "Artists and Faces" included photographs of prominent Pittsburgh painters and sculptors. The photos were taken in natural light. He frequently photographed persons he interviewed.

Born in Morehead City, N.C., he attended high school in Raleigh, N.C., where his parents now live. His father Gurney P. Hood, is a prominent banker and State government official.

Hood graduated from the University of North Carolina in 1939. During summer vacations from high school and college he crossed the country 4 times as a hitchhiker, visiting 38 States.

He worked for several North Carolina newspapers before entering the advertising field in New York City in 1942. He returned leter to newspaper work in Harrisburg

later to newspaper work in Harrisburg.

In 1949 Hood published a book on Archibald Henderson, George Bernard Shaw's official biographer. He carried on an extensive correspondence with Shaw in gathering material for the book.

Survivors include his wife, Elizabeth Wallace (Wally) Hood; a son, Christopher Rhodes, 10; his parents, and a brother, Leland Robin.

[From the Pittsburgh Post-Gazette, Mar. 11, 1959]

REPORTER HOOD MAN OF MANY TALENTS—GBS
AUTHORITY, JAZZ PIANIST, PORTRAIT PHOTOGRAPHER

Sam Hood, who was one of the victims of yesterday's tragic bus accident, was a well-known newspaper reporter and art critic. He was also an authority on George Bernard Shaw, an expert jazz pianist and portrait photographer.

Samuel Stevens Hood, 42, of 11 East Prospect Avenue, Ingram, had just left the Penn-Sheraton Hotel where he interviewed the president of the American Bar Association. He presumably was on his way back to the Pittsburgh Press, when he was fatally injured.

He joined the Press staff in 1945 after working as a reporter in Harrisburg. He was known throughout the city for his legal reporting and in recent years as the art critic for the paper.

Mr. Hood was born in North Carolina.

In 1949, Mr. Hood published a book on Archibald Henderson, Shaw's official biographer, after doing extensive research and

engaging in correspondence with the famous Shaw.

Mr. Hood, who was married and the father of a son, Christopher, about 10 years old. maintained an active interest in the field of photography, frequently taking his own pictures of persons he interviewed. In 1956, Carnegie Institute gave a one-man showing of his photographs of local artists and prominent persons.

Another of Mr. Hood's interests was modern jazz and he recently gave a piano performance of popular tunes which he arranged in the current jazz styles at the Pittsburgh Press Club.

[From the Pittsburgh Press, Mar. 12, 1959] TRIBUTES TO SAM HOOD POUR IN—GOVERNOR, JUSTICE, OTHER OFFICIALS PRAISE NEWSMAN

Tributes to Sam Hood, Pittsburgh Press reporter killed in a tragic bus accident Tuesday, continued to roll in today.

The words of praise, mixed with feelings of shock, qame from Gov. David L. Lawrence, Justice Michael A. Musmanno, of the State supreme court; Safety Director Louis Rosenberg and Mr. Hood's Congressman, Representative James G. Fulton, of Dormont.

"He was an ideal newspaperman. He often told me that he had no other ambition than to be a good newspaperman," reported Justice Musmanno.

#### FAST BUT RIGHT

It was almost a Saturday ritual for the judge and Sam to lunch together at the Hotel Pittsburgher or to take walks together.

"He was ever alert for news, moving fast, checking sources and rechecking leads so that he would not only get the story first but get it right.

"He strove not to hurt those about whom he wrote," Justice Musmanno continued. "He could be devastating but not unkind, and never unfair.

"He managed with a word or two to temper the blow when the story called for blows and blasts."

#### A GOOD FRIEND

Governor Lawrence declared that Mr. Hood "was a good friend of mine and a good reporter. He was tenacious and he usually got the story."

Director Rosenberg described the dead reporter as a "man of many talents as a newspaperman and in art and music. Too, he had a fine sense of humor that most people lack.

"In character he was basically true and good. He called the thing as he saw it without coloration or bias."

Mr. Fulton wired that he was a good friend of Mr. Hood and offered the services of his office to the Hood family.

## Whither Egypt?

EXTENSION OF REMARKS

## HON. JAMES E. MURRAY

OF MONTANA

IN THE SENATE OF THE UNITED STATES

Friday, June 5, 1959

Mr. MURRAY. Mr. President, Egyptian propagandists have been trying to impress the world with Nasser's accomplishments. It is true that Nasser has certainly made a name for himself with his adventurous foreign policies. However, what has President Nasser accomplished in terms of uplifting the living

standards of his own people? This is a key question which deserves careful thought and study. In this connection, the No. 53—winter-spring 1959—issue of Prevent World War III, published by the Society for the Prevention of World War III, Inc., 515 Madison Avenue, New York, N.Y., carries an illuminating analysis of the Egyptian economy, under the title "Whither Egypt?". From the facts contained in this article, it would appear that the Egyptian economy is geared to a program of "guns instead of butter." This would explain to a large extent of the belligerent character of Cairo's present foreign policy.

I ask unanimous consent to have this article printed in the Appendix of the

RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

#### WHITHER EGYPT?

Moscow's recent offer to provide the equivalent of \$100 million toward the construction of a high dam at Aswan on the Nile taxed Cairo's propaganda machine to the limit. The main target of the ballyhoo was the Egyptian masses who have been told over and over again by their leaders that the Aswan Dam would transform their lives from abject poverty to plenty. The knowledge that promises wear thin after much abuse must have entered into Nasser's calculations when he appealed to the Kremlin for a sign of concrete sympathy. The New York Times correspondent Foster Hailey wrote from Cairo (Oct. 26, 1958): "This new \$100 million rabbit that Nasser has pulled out of the Red. hat should do much to restore in Egypt some of the glitter that had rubbed off the revolution. The fellaheen were proud of their leader and of his international standing. But the demands of the stomach are fully as great as those of the heart. The triumphs on the international stage had put no more bread on the table and it was obvious that Nasser has not been receiving the adulation he once did.

"But if the fellah can have his cake and bread and rice at the same time, he should

be very happy indeed."

Mr. Hailey's observations raise an important question, i.e., whether in the long run Nasser's imperialistic ambitions can be reconciled with the "bread and butter" needs of the Egyptian people. Whether the Aswan Dam is the panacea for Egypt's ills or a huge political gimmick depends on how the above question is answered.

#### EGYPT'S POVERTY

A brief evaluation of Nasser's domestic policies cannot be divorced from the basic facts about the Egyptian economy. The miserable plight of the Egyptian masses is an old but tragic story. The steady deteri-oration of their economic fortunes has been noted by writers on this subject. Thus, between the years 1920 and 1938 the total consumption of consumer goods in Egypt, including food, decreased, although the population has increased by 25 percent. In an analysis of this situation, W. Cleland reported in L'Egypte Contemporaine (May 19, 1939): "The low level of earnings means that consumption even of energy-producing goods is very low. The diet consists mainly of beans and maize, with very little milk or meat. Pellagra, rickets, and night blindness are some of the nutritional diseases frequently met with."

The grave economic distress of the Egyptian masses is intimately bound up with the land problem. In 1952, the year Nasser seized power, it was estimated that 20 percent of the entire cultivated area of Egypt

was held by 2,156 owners of holdings of 200 feddans or more each (1 feddan equals 1,038 acres). On the other end of the scale 2,018,-163 persons held one or less feddans each. The holdings of this group represented about 13 percent of Egypt's cultivated area. While most of the valuable lands are concentrated in the hands of a relatively few, it has been estimated that of more than 4 million adults working in agriculture, approximately 1½ million are landless.

The gross inequities in land tenure are further aggravated by the population problem. Egypt's population in 1952 was approximately 21,500,000. In 1957 the population had increased to 24,315,000. Projecting this rate, it is estimated that Egypt's population in 1967 will be close to 31,500,000, Meanwhile the available cultivated land area has not significantly increased. Added to these facts is the failure of Egyptian agriculture to diversify. This means that the welfare of millions are at the mercy of the ups and downs of the world cotton exchange. The backwardness of the Egyptian economy has had devastating effects on living condi-tions and health. This is the Egypt which Nasser took over in 1952.

#### NASSER'S PROMISES

Nasser capitalized on the wretched condition of the people. He spoke in glowing terms of a new day for the Egyptian masses. The top heavy, corrupt bureacracy of King Farouk would be rooted out. Economic parasitism would also be eliminated. There would be a general cleanup in the living conditions of the people. Opportunities would be open to the young people who otherwise were destined to spend the rest of their years working in the cotton and rice fields. To cap all of these promises, Nasser and his associates announced that they would distribute millions of feddans among the landiess population.

The promises roused the spirits of the people. But how has Nasser performed? Shortly after Nasser took over the reins of the government, the figure of millions of feddans that was supposed to be distributed, was whittled down to 1 million, then to three-quarters of a million. Walter Z. Laqueur, a close observer of Middle East affairs, "On the first anniversary of the 'Revolution,' Gamel Salem, the Junta member in charge of the reform project, declared that 500,000 feddans would be distributed among 150,000 families (the total cultivated area being about six million feddans, of which two-thirds were held by large owners). But according to the most recent official figures, only 247,000 feddans, or about 3 percent of the land, have actually been re-distributed up to the end of 1955."

Four years after the new promise was made the Manchester Guardian (July 2, 1956), was able to report that "two-thirds of the total land is still owned by 6 percent of the population." It also noted, "In the Cairo jubiliation after the evacuation of Suez, and during the referendum on the constitution and the surveys of what the revolutionary government has achieved, very little was said about land reform. Colonel Nasser, in his recent immensely long speech to the Cooperative Association touched on almost every problem of Egypt, but hardly mentioned this. Yet in the first days after the revolution, land reform was held out as one of the main benefits which the new government would bring."

#### ECONOMIC TREADMILL

The promise to redistribute 500,000 feddans was finally made good this year. Nevertheless, conditions have hardly been alleviated. On the contrary, the price of fertilizer has risen and is in short supply. Some of the sequestered land is definitely not suited for tiliage in small plots. A report from Cairo (New York Times, Sept. 13, 1958) notes: "Food production has been increased 12 percent over the last 6 years due largely to land reclamation. That barely keeps pace with the increase in population, however." In other words, the much advertised land distribution reform has barely made a dent in Egypt's agricultural setup. A dispatch from Cairo (New York World Telegram, Aug. 31, 1958) reported that the income of the average Egyptian farmer stays almost exactly at the Farouk level." i.e., 24 cents a day. A report by the World Wide Press Service (Aug. 21, 1958) estimates that "some three-fourths of Egypt's population lives at the brink of starvation."

These observations were confirmed by Senator Hubert H. Humphrey in an official report to the Senate Committee on Foreign Relations. Senator Humphrey made an extensive trip in 1957 to various underdeveloped areas of the world. Among his observations are the following: "The Egyptian standard of living, which has always been low, has been declining for several years. One wonders how much lower it can go without mass starvation. In Egyptian villages I did find new schools, hospitals, and small community clinics. Cooperatives are being formed; -fresh-water pumps are being installed; land distribution is taking place in accordance with the Land Reform Law of There was evidence of extensive construction in Cairo. But the overall facts remain: The standard of living is going down and land reform has only been partially carried out and at a very slow pace in the 5 years which have transpired since the law was passed."

While the agricultural crisis continues to weigh heavily on the Egyptian masses, they are plagued by a steady inflationary trend. This has been partially concealed by state subsidies. Nevertheless, it is estimated that living costs in 1958 are at least 8 percent over those in 1951. At the same time salaries and wages have been officially frozen to the 1956 levels. Meanwhile it is estimated that Egypt's productivity has declined by 3 percent per capita since Nasser took over (London Dally Expréss, Oct. 7, 1958).

#### FINANCIAL MANIPULATIONS

A more graphic illustration of Nasser's domestic reforms may be seen in the financial picture. The trend is unmistakably in the direction of a relatively steady decrease in expenditures for welfare and a rise in spending for military and security programs. The 1956-57 budget totaled 326,300,000 Egyptian pounds (E£). Seventy-eight million, four hundred thousand Egyptian pounds or roughly 28 percent was devoted to military needs. Another E£12,229,400 were allotted for security purposes. Thus, 31 percent of the budget was devoted to military programs of one kind or another. Many experts believe that these figures are underestimated. On the other hand, only E£33,-600,000 went for education, E£13,543,000 for health, and E£45.800.000 for econom. development. In a country where more than 82 percent of the population is illiterate, the funds for education are grossly inadequate. In contrast, there seems to be no penny pinching in expenditures for military hard-

Insofar as economic development is concerned there was an actual decrease from E£54,300,000 in the previous year to ££45,800,000. It is significant that funds for agricultural development practically disappeared from the 1956-57 budget dropping from ££5 million to ££900,000. The military figure is also noteworthy in that it represents a 50 percent increase over the previous budget and is more than twice the first military budget following Nasser's seizure of power.

Defense and security are close to one-third of the total 1957-58 budget. Expenditures for education are virtually unchanged, funds for economic development drastically decreased, while expenditures for health are also reduced. The 1958-59 budget of the U.A.R. continues along the same lines. A substantial portion of the total budget is devoted to the needs of the military while health and education requirements are allotted relatively paltry sums of money.

What other conclusion can be gained from these facts other than that Nasser, despite his oratory, hews to the favorite programs of dictators—guns instead of butter?

#### THE SOVIET "DEAL"

During his stay in Egypt, Senator Hum-PHREY discussed economic problems with Nasser. "Nasser did not accept opportunities I gave him to discuss at length his \$250 million arms deal with the Russians or the fact that the major assets of Egypt are being put into arms instead of into raising the standard of living of Egypt's population. Senator HUMPHREY's report on Nasser's reluctance to talk about his deals with the Soviets is understandable for, although the Egyptian masses may not know it, their economic well-being has been mortgaged far into the future by these deals. Statistics show that in 1957 the Soviet bloc took 46 percent of Egypt's total exports, in contrast to 33 percent in 1956. Perhaps more impor-tant is the fact that three-fifths of Egypt's cotton exports went to Soviet Russia in 1957. Since cotton is king in Egypt it is obvious that Nasser's program of exchanging Egyptian cotton for Soviet guns has placed the Russians in a strategic position. Nasser, of course, regards his dealings with the Soviets as a means of playing off East against West and thereby obtaining help from both The Russians have a reputation of driving a hard bargain. They were happy to supply Nasser with guns, but in so doing the Egyptians fell into the vise of Soviet policy.

From an economic standpoint Nasser's deals mean simply that the Egyptians have become more and more dependent upon Soviet trade policies which are always predetermined by political considerations. These policies have already proved to be quite embarrassing, to say the least, to Egypt's economic planners. Thus, Soviet deliveries of goods outside of military hardware have often proven to be slow and or of poor quality. In some cases prices are as much as 40 percent over those originally quoted to the Egyptians. As a matter of fact, Egyptian cotton has virtually priced itself out of the world market. According to the London Financial Times (April 29, 1958) the Soviet bloc's habit of settling adverse trade balances by the resale of raw material stocks at sacrifice prices, has already resulted "on several occasions in the 'dumping' of Soviet purchased cotton on Egypt's western market." There has also been a definite tendency for the Soviet bloc to purchase more from Egypt than to sell. This achieves two results: (1) It deprives the Egyptians of needed goods and (2) it makes even more dependent the Egyptians upon the Russians. The mortgaging of the Egyptian economy to the Russian Bear is further highlighted by the fact that Soviet "technicians" are playing a greater role in directing various economic projects.

The grip which Moscow now exerts on Egypt's external trade relations is reflected in the decreasing commercial contract between Egypt and the West. While there has been a considerable drop in imports to reduce the trade deficit, this has been largely based on an austerity program which, as mentioned above, involves the freezing of wages and salaries at their 1956 level. The austerity economy is a natural consequence of a policy which gives priority to guns and places the Egyptian economy at the mercy of a ruthless and gigantic totalitarian trading bloc.

NASSER'S WAY OUT

There is evidence that Nasser is aware of the potential dangers and is concerned, lest the people become fed up over his failure to put more bread on their tables. It appears that Nasser hopes to solve the dilemma along certain economic and political lines. The economic angle is tied up with the strategic importance and value of the oil resources in the Middle East. Egypt possesses little oil but where Nasser lacks oil resources he is sufficiently determined to grab other people's property. Like the buccaneers of old, Nasser's economic plan is simple. It is to grab the oil resources of neighboring Arab countries under the slogan of all for one and one for all. This would not only bring in substantial revenues to bolster up his regime but it would also turn the screws on the West.

Ever since his seizure of the Suez, Nasser has worked in this direction. It now appears that his policy of grab may be camouflaged under a highly publicized scheme to form an Arab bank. Ostensibly the purpose of this bank is to finance economic projects in the Middle East. It would be established jointly by all the Arab States on the understanding that each of them would contribute a certain amount of the necessary initial capital. It sounds like a legitimate proposition though, when one reads the fine print, so to speak, it becomes clear as day that the bank would be essentially an instrument of Cairo's policy. The inspiration for the plan comes from the Arab League and would operate within its framework. The Arab League is dominated by Cairo. The very headquarters of the bank would be in Cairo. Furthermore, as the London Financial Times notes (Sept. 10, 1958), "Egypt is the country most in need of funds from any development hank'

Theoretically, the bank's funds would come from the member Arab States. In reality, the bulk of the money will come from the oil rich states, particularly Saudi Arabia and Kuwait. The Shiek of Kuwait has already made his pilgrimage to Cairo. Presently agents of the Arab League are dickering with Kuwait officials. It is contemplated that Kuwait will join the Arab League. Once in the league, the shiek will be expected to show his generosity by offering a substantial sum to the bank. Kuwait now provides Britain alone with 50 percent of her crude oil imports. Moreover, Kuwait's investments in London, derived from the oil revenues, account for about 11 percent of all of the liquid funds available in the entire sterling bloc. These are the prizes that Nasser seeks under the guise of his Arab development bank.

Nasser has not wasted any time. He has already a substantial fifth column in Kuwait camouflaged as Egyptian teachers who. for the time being, do not attack the Sheik personally but merely call for the Kuwait public to stand by Nasser in his fight against "Arab agents of imperialism." Meanwhile the Sheik has been gently pressured by Nasser's agents to give 10-15 percent of his future oil royalties to the bank. to get that kind of money under his wing, Nasser is likely to treat the Sheik-and Kuwait-with gingerly care." (Business Week, Sept. 6, 1958.) It goes without saying that should the Sheik have second thoughts on coming in, he will become a prime target of the Cairo radio which will blast him as a British lackey, a tool of the West, and a traitor to the Arabs.

From evidence on hand it appears that the Nasser plan was developed before the Iraqi coup which broke up the Arab Federation. Thus, the New York Times (May 11, 1958), writes: "President Nasser may succeed in subverting the Arab Federation and getting control of all or part of its revenues; his

appeal to the imagination of the Palestinian refugees and to the growing urban middle class all through the Arab world is immense.

"He may by similar means get control of Saudi Arabia's oil revenues.

"Or the Arab 'have' nations may find means of sharing their revenues with President Nasser—some would say, more brutally, means of buying him off.

"Thus they might organize an Arab investment bank on which the Nasser regime could

draw for cheap credit. \* \* \*\*

More recently, Nasser's plan was discussed by William L. Ryan, news analyst for the Associated Press (New York Post, Oct. 1, 1958): "Under Gamal Nasser's leadership, nationalist-minded Arab leader's are aiming a body blow at foreign oil producers in the Middle East.

"The Arab leaders intend a serious challenge to U.S. policy. A hint of things to come is found in a little-noticed development in Nasser's capital.

"The Arab League is inviting all its member states to send delegations to what is being billed as the 'first Arab oil conference' scheduled for November 1 in Cairo.

"This is on Nasser's initiative. He is pushing hard for the idea of greater producer-state participation in the oil industry, all the way from extraction to marketing. He wants a cut of the oil riches. \* \* \*"

#### AID FROM THE U.S.A.?

Nasser's political line is simply an extension of economic buccaneering. Here he turns to the U.S.A. knowing full well that the State Department is gravely concerned with Soviet penetration in the Middle East. Very well, Mr. Nasser declares, if the U.S.A. is anxious to thwart further Soviet advances, then it must show its generosity and help a poor country like Egypt.

When the President of the United States proposed an economic development scheme for the Middle East, his suggestions were hailed by all people who realize that economic assistance is a vital necessity. Nasser is fully aware of this sentiment and hopes to turn it to his own narrow advantage. fortunately, there are State Department officials who believe that Nasser can be "converted" if only U.S. taxpayers will show a willingness to foot the bill. Good intentions on the part of the policymarkers is not the immediate issue. The point is that if the President's suggestions are tied up with Nasser's Arab bank, then the United States of America will, in effect, be subsidizing Nasser's buccaneering program which has as its final aim the complete ejection of American interests from the Middle East.

#### THE ASWAN DAM TRANQUILIZER

From the foregoing it is clear that Nasser's domestic "reforms" have been sacrificed on the altar of his imperialistic ambitions. The policy of piracy which is the essence of Nasser's economic program, may bring quick cash, but it cannot put new life into a bankrupt economy. It is against this fundamental fact that the efficacy of the Aswan dam project must be judged. Perhaps in theory the project has a certain plausibility. However, when one unties the fancy packaging covering the project, a number of facts emerge which place the entire proposition under a big question mark.

In the first place, authoritative studies have questioned the economic gains for the Egyptian people that allegedly would flow from the construction of the dam. The International Bank for Reconstruction and Development made a detailed technical analysis of the proposed plan. Regarding Egypt's industrial prospects, the bank predicted that even if the dam were built, the pace of industrial growth would be slower than heretofore. The dam was supposed to increase agricultural income by 50 percent over the next two decades. Even if this should ma-

terialize, the bank noted, "Egypt will no doubt face a continuing problem in keeping pace with the growth of population. In view of the probability that the population by 1975 will be about 60 percent greater than at the present, there is little or no prospect that Egypt will have done much more than maintain the present standard of living even taking into account the greater proportion of children in the population by 1975."

Besides the doubtful economic benefits over the long run, the bank's study expressed doubt as to the ability of the Cairo regime to manage the precarious economy of the country with the necessary skill and determination so as to keep the enormous investment in the dam project from breaking Egypt's back. Indeed, the bank report sharply criticized the economic policies of the Cairo regime which is characterized as a "pell-meil

approach to development."

The American engineer Morris L. Cooke, who has served in high U.S. Government posts, also commented on the soundness of the Aswan dam project in a detailed analysis ("Panacea or Politics?" published by the Public Affairs Institute, Washington, D.C.). Mr. Cooke noted that economic weaknesses inherent in the plan were complicated by political difficulties. For example, he pointed out that the Nile passed through a number of states besides Egypt and that the dam as proposed would, in effect, discriminate against these states. Furthermore, the Egyptian economy had been gravely distorted through the arms-for-cotton deals with the Soviet bloc which have drained Egypt's resources for purposes of supporting a huge military establishment. Above all, Mr. Cooke noted, Egypt's economy has been undermined "by the militarism, fiscal manipulation, and political adventuring of the Nasser regime.

Just as Hitler's promise to provide every German with a peoples' car turned into a huge fraud by virtue of the very nature of his regime, so one can safely predict that the Egyptian masses will also discover the Aswan

dam project to be a gigantic hoax.

## Milestone in Housing for the Elderly

EXTENSION OF REMARKS

## HON. THOMAS L. ASHLEY

OF OHIO

IN THE HOUSE OF REPRESENTATIVES
Friday, June 5, 1959

Mr. ASHLEY. Mr. Speaker, on May 24 a significant occasion took place in Toledo, Ohio, with the dedication of one of the first housing for elderly projects, Spieker Terrace, to be completed under a special provision of Public Law 84-1020 which authorizes the construction of federally aided low-rent housing for elderly persons. The occasion was significant because it marked the recognition of a unique problem and one which will be with us more and more in the years ahead.

The figures speak for themselves. The number of older people is increasing more rapidly than our total population, thanks to modern medicine and public health conditions. Right now there are approximately 15 million people who are aged 65 or over. By 1965 these will be 18 million and by 1975 there, will be 22 million

Spieker Terrace marks a vitally important forward step in our Nation's housing problems—one more step in the direction of carrying out the basic declaration of our national housing policy which is "the utilization as soon as feasible of a decent home and a suitable living environment for every American family.

Mr. Speaker, at our dedication ceremony in Toledo we were honored to have as our principal speaker Dr. Wilma Donahue, one of the foremost authorities on gerontology and who holds the position of chairman of the division of gerontology at the University of Michigan. Dr. Donahue has directed and carried out extensive studies in the field of gerontology and is the author of numerous publications on related subjects. Her remarks on the occasion of the recent dedication of Spieker Terrace reflect a grasp and understanding of the problems confronting our senior citizens themselves as well as the responsibility which the Nation as a whole bears them. I am hopeful that my colleagues will find a few minutes to peruse them:

DEDICATION ADDRESS OF A. GIDEON SPIEKER TERRACE

(By Wilma Donahue)

#### 1. INTRODUCTION

It is with great humility that I participate in this dedication of the A. Gideon Spieker Terrace because so many have done so much to bring the Terrace into being and I can do so little. The faith, the knowledge, the dedication of public officials, the skill and talents of professional men and the knowledge of the men on the job who read the blueprints and made form take shape for these and for many others, I can only stand as a symbol at this dedication, representing their concern and belief in the right of Toledo's older citizens to their fair share of good housing.

The A. Gideon Spieker Terrace is more than just another housing project for older people. It is a pioneer effort to give expression to a new way of living. It stems from profound changes taking place in the cultural pattern of our society as a result of the tremendous sweep of industrialization. It is this vast readjustment of the ways to utilize natural resources and to conserve the energies of man that has made possible a new view or philosophy of aging.

#### 2. A NEW PHILOSOPHY OF AGING

At the turn of the century, aging was seen largely in terms of progressive decline and withdrawal, eventuating in permanently disabling illness, deterioration, and dependency. And for good reason, because this concept had considerable basis in fact. Life expectancy was short. Old age came to relatively few, and for those who survived, con-ditions of work and living were hard. Chronic disease was common and little was known about its treatment. Injury resulted usually in permanent disability. Retirement was a reality, in the main, only for those who became too ill or disabled to work. Retirement pensions were almost nonexistent, and the old had to depend on children, kinfolk, or public funds for support and care. All this makes it understandable that the first foci of programs for older people was in the provision of financial contributions and sheltered living facilities offering lifetime care for those without families.

Fortunately, we are able to say with reference to an increasing proportion of older people, that this concept represents a stereotype which is rapidly outliving its usefulness. It is being replaced by a positive and dynamic attitude toward aging wherein age, sickness, and poverty need no longer be confused. The new view of aging is that it is

a great social achievement—Bernard Baruch says that it is the greatest achievement arising out of our scientific culture. Such a viewpoint represents a radical change and has great implications for the future.

The great majority of all who are alive today can expect to live through the highly productive years and to enjoy a period of retirement activity with a reasonable income. The added years of life are becoming healthier and more vigorous years. Improved nutrition, easier homemaking and working conditions, a better health environment, new discoveries and procedures in medicine, and rehabilitation are having a measurable impact expressed in part by an average increase in life expectancy of 20 years during the last four or five decades.

Beyond the extension of life itself, the outstanding achievement, as I see it, lies in the increasing opportunity to live independently in the older years and to devote more time to the pursuit of activities of one's own choosing. Shortening of the hours of work and increased life expectancy alone have given us 45,000 hours or 22 years of additional free time over the past century. It is significant that independence and free time come when maturity, growing out of accumulated experience and wisdom, and when the potentials for broader social usefulness can be greater than at any other period of life.

These, it seems to me, suggest the outlines of the promises we see when we look to the future—a future which implies the greater fulfillment of man. This future is already here for some older people and they appear to be enjoying it immensely. For others, the realization must indeed seem far off, because certain things are essential if we are to make the most of these new opportunities and capitalize on a new philosophy of aging.

3. THE ESSENTIALS OF THE GOOD LIFE FOR ALPER

3. THE ESSENTIALS OF THE GOOD LIFE FOR OLDER

(a) First and fundamental is the need for an adequate income.

The incomes of older people are improving. but are still far from satisfactory. As Congressman Ashley has pointed out, income data show that approximately one-fifth of the families in which the head is 65 years of age and over have less than a \$1,000 annual income while minimum budget requirements for elderly couples exceed \$2,000. sponding figures for unattached males living alone are a median income of \$1,337 against a budget need of nearly \$2,000, and for single women a median income of \$700 compared with a budget estimate of \$1,500. Recent data show that 25 percent of older couples have liquid assets of only \$14 or less. How, then, can this fourth of our older people pay for really adequate housing, or buy the extensive medical care they may need, or secure the amenities essential for good uses of leisure time?

And yet, these are the men and women who have built our country, who have given their energies and lives to rearing the families of today, and to bringing about the improvements in our society. Caught in the dilemma of a long and persistent inflationary spiral which has made their dollars earned in another era of small value and caught, also, in the first generation to experience the new longer life they, unfortunately, antidate the social inventions created relatively recently to improve the economic status of ensuing generations of old people.

Thus, for many of today's older people,

Thus, for many of today's older people, special planning is needed. Society, business, older people themselves recognize this need. The A. Gideon Spieker Terrace is one of the answers to help meet the fundamental need for financial adequacy.

(b) Health, of course, is the second vital factor of the good life, for it is indeed the keystone to a positive approach to aging.

It is fortunate that vast amounts of research in progress is designed to improve health in the later years, and to prevent the development of chronic conditions before the

onset of old age.

Acute disease is not significantly greater among the elderly than among the young, although the older individual has a longer illness and hospital stay. But in the area of chronic disease and disability, the incidence is five times greater among the 65 years of age and over than it is in the population as a whole,

Once considered hopelessly incurable, the old were left to wait it out with nothing more than a few palliative measures and custodial care being offered during their lingering deaths Today, all this has been

changed.

Coincidental with the increasing numbers of aged persons in the population, the new and dynamic medical specialty of physical medicine and rehabilitation has developed. The pioneers of this new medical skill knew no bounds to their enthusiasm for its miracles and began applying their new techniques and philosophies to the restoration of the old and disabled. The result was electrifying.

Old persons who had spent many years bedridden as a result of a stroke began to learn to walk and to care for themselves. Some began to return to normal lives in the community. New stroke cases were introduced to training before contractures, weakness, and deformity overtook them. The orthopedic cases were fitted with limbs and taught to walk. And most significantly, they were given something for which to live, something to do which made the achievement of health and independence of preemi-

nent importance.

Communities are doing their share in this all-out conquest for good health. They are not only building hospitals and nursing homes, but are also providing geriatric diagnostic centers and clinics, hospital homecare, visiting nurse services, home helps, and 80 forth. It is thus feasible to provide living quarters where older people may live independently because these needed services are becoming increasingly available to them. Medical care, moreover, is being offered where it should be—in the regularly constituted health facilities of the community, rather than in some custodial arrangement Within the old-age home or housing project. Every community should integrate its medical care facilities—general hospitals, chronic or convalescent hospitals, nursing homes, old age infirmaries-into a health care constellation. Only in this way, can the great skills of the medical profession be mobilized and utilized for the good of all persons regardless of age.

(c) Beyond economic security and health, there is the whole matter of continuing active participation in the life of the community.

For a retired person, the greatest tragedy is only too often the loneliness and frustration which derives from being cut off from the on-going life of the community. The rapid spread of "Golden Age Clubs" and "Senior Citizens Groups" throughout the country is an indication of the need of older people for the companionship of persons of their own age, and for new interests and for creative activities. Many of the retired are taking advantage of the increasing op-Portunities for work with the voluntary agencies that contribute so much to the Well-being of the community. This is important, because it is a recognition that a free society requires the day-to-day parti-cipation of informed citizens in the life of their communities. And informed citizen-ship comes about by remaining integral, wanted, and respected members of the community; it does not generally take place in the isolation of segregated old age homes or the sick wards.

(d) Finally, there is great need for housing and lifting arrangements which will meet the special requirements of those who have achieved the opportunity of being old.

One of the principal adaptations to industrialization, urbanization, mobility, and changing social values has been the decline of the extended kinship household, and the rise of the small family consisting of a man, his wife, and immature children. The modern family must, by social circumstance, divert most of its energies and money to the training and preparation of its children to take their successful places in our competitive society. Thus, the older person cannot depend upon the younger family as in the past for physical protection and social expression.

There is, as a matter of fact, considerable evidence of a desire on the part of the older generation to live apart from the generation of young adults occupied with their own activities and family responsibilities. There are, of course, some 12 millions of older couples out of a total of perhaps 4.5 millions who do live with their children, but studies of this three-generation living show that more than one-half of the number of both older and younger adult generations involved regard the arrangement as an undesirable

expediency.

Although the changing family structure has been apparent for many years, relatively little attention was given to the housing of older people. A few old-age homes and the poor farm sufficed to take care of those without families. But with the increase in the numbers living to reach old age in good health and independency, interest in providing housing for the elderly has quickened. In spite of increased interest and action in the field, however, there is perhaps no program area in a greater state of flux today. Opinions are strong and research is at a minimum. Yet the policies being adopted today will reflect our attitudes and will determine the pattern of living for millions of people for many tomorrows. If we segregate the elderly—forgetting that it is only a stone's throw of years until we, ourselves, will join these segregated ranks; if we fail to design buildings that do more than keep the rain out and the heat in: if we provide only an unchanging, monotonous living environment-we may expect to reap a harvest of emotionally dissatisfied, mentally ill, and stagnant old people.

There are today in this country hundreds of thousands of retired couples and single people who are searching desperately to find some sort of small house or spartment that is geared to their special wants. Is the fact that they cannot find suitable accommodations a reflection of "wants" beyond those of other age groups? I think not.

of other age groups? I think not.

In fact, results of studies show that the characteristics old people would choose for their homes reflect only the same human, personal needs basic to the happiness of anyone. These requirements may be described as follows:

1. Shelter, warmth, security, and quiet—but not too quiet.

2. Privacy, auditory as well as visual, a

place to be alone—dignity.

3. Independence of action, right of choice,

self-determination—authority.

4. Nearness to relatives and friends—share life but not same roof.

5. Residence among their own kind of people—age, background, finances.

6. Variety, stimulation, absence of monotony—adventure.

7. Maintenance of family and personal traditions—"shrines the heart has builded,"

8. Physical assets—safety, convenience, closeness to services and community life.

9. Costs—rents or sales prices that are financially feasible in comparison to income.

4. TAKING MEASURE OF THE A. GIDEON SPIEKER TERRACE

We have enumerated the essentials of a good life for older people. How does the A. Gideon Spieker Terrace measure against these criteria?

- (a) Adequacy of income: Spieker Terrace is a recognition of the fact that the incomes of perhaps as many as from one-fourth to one-third of older people are too small to permit their competing on the open market for the kind of housing which will preserve their health and general welfare. Meager incomes and depleted assets are greatly augmented through this public housing plan. Here, there is a minimal rent which can be met by the resident, thus allowing him to maintain the dignity of providing for himself.
- (b) Maintenance of health: Spieker Terrace is designed around the concept that the health of older people is promoted by living an active life among other older people who are likewise busy and essentially well. The very design of the terrace reflects this concept because here in the heart of the little village is the community house where happy older people come together to do things and to enjoy one another. Contrast this to an environment in which the life of the older person is centered around an infirmary and its ailing occupants. Subtly, then, Spieker Terrace reflects a belief that busy people living independently in proper housing can maintain good health, and, moreover, that if and when they become ill they will have the right and opportunity to receive care in the regularly constituted health facilities of the community.

(c) Participation in community life: The modest size of the terrace project and its siting in the residential area makes possible its easy incorporation into normal community life and safeguards against the segregation and isolation of its residents. The terrace is so easily accessible to friends and relatives, and the residents themselves can so readily reach shops, their churches, their lodges, and social groups, that there is little danger that the project will become an island

of marooned old people.

Further, the physical plan of the terrace of organizing its life about an activities center where hobbies, practical skills, learning, reading, and social get-togethers can be pursued invited the active participation of every resident and his neighbors. Through such participation touch is maintained with the world about and mental and physical aging is staved off.

(d) Adequacy of living arrangements: The ultimate test of Spieker Terrace, however, is how well it meets the personal and basic

needs of its residents. Let us see.

There can be no doubt of the adequacy of the shelter and security it provides. The attractive one floor brick motel type apartment buildings demonstrate in the architecture that we will find here warmth against the cold of the winter winds; ease of living as one's energies grow less; quiet, but of the quality muted only by a comfortable distance from the voices of playing children.

Here, too, is to be found precious privacy—
a place of one's own in which to do as one
pleases—a place where one may be joyful or
sad—where one may conceal the hurts'from
the outrageous slings of fortune, or the deep
joys of personal and family achievement.

Corollary of privacy is independence and in Spieker Terrace, every resident has independence. The right to choose his or her pursuits, to decorate and furnish living quarters to suit individual taste, to select one's friends, to order one's own household.

Companionship, so often lacking for older people, is richly abundant in Spieker Terrace. Nelghbors of one's own age, nearness to old friends and relatives; and most importantly—the kind of living space which allows the older couple to enjoy the deep and satisfying experiences of sharing life. How often this latter privilege is denied a man and his wife because there is no place for them to be together, or because quarters are so confining that no two persons could

share them without friction.

The poet, Anne Campbell, has expressed so clearly the deep satisfaction of this

companionship when she wrote:

"It isn't that we talk so much, Sometimes the evening through You do not say a word to me I do not talk to you.

"You sit beside your reading lamp, I like my easy chair, And it is joy enough for me To know that you are there."

Stimulation and adventure both are to be found in the home of every resident of Spieker Terrace because each resident has a different life history upon which to draw and to enrich the life of his neighbors. For example, several months ago, I called upon a resident and saw the fine skill he had developed as an artisan glass etcher. He told us his hope that he might be able to pass along this fast disappearing craft of etching to some of the youth of Toledo. I took pictures of the examples of his work, and, my own life enriched by the encounter, have used the picture and told the story in many parts of the country and thus, enlarged the horizons of other older people. I'm sure that in every apartment of the ter-race there live equally striking examples of persons who have much to offer one another. High adventure, indeed, to pursue the paths of the past.

Throughout life, each person, each famfly establishes customs and habits which become for them prized traditions. Spieker Terrace, these traditional patterns can be continued without interruption. The holiday may be celebrated. Grandchildren may come for birthdays or for a night with grandma. Personal religious and spiritual observances may be carried out. And the homely little habits-airing the bedding. putting winter woolens away on the first day of May, leaving the dinner dishes till a better part of the day-these, too, may be practiced without the rules and regulations imposed from outside.

The physical assets and characteristics of the terrace are among the finest examples of good housing yet provided for the elderly in either private or public developments. Included among its features are an adequate number of rooms of good size; ample storage space in addition to three closets; private bathroom in each apartment; an entry way which offers the arriving guest and family privacy; bright, cheerful walls and a site which takes advantage of the sunshine but with 3-foot roof overhangs to protect old eyes from too great glare and reflection; electric outlets well above the floor to do away with the need of stooping; safety features, such as rails in the bathroom, inconspicuous ramping of walks, nonskid floors, are present but are not demandingly obvious. Every detail has been carefully studied and incorporated to assure a pattern of gracious safe living for Toledo's senior citizens.

5. TOLEDO'S STAKE IN THE A. GIDEON SPIEKER TERRACE

Through Spieker Terrace, Toledo has demonstrated to the Nation, and to every State and city in the country, that housing which meets the special needs of older people can be brought into being if the will to make it so is abroad in the land—be it either public housing for those of limited financial resources or privately built housing for those of more ample means.

And in Toledo the will to make it so has been found. It is no mere circumstance this project has been named the A. Gideon Spieker Terrace. You have known Mr. Spieker and the many others who cooperated for their deep interest in making a better way of life for all Toledo's citizens over the years. It is, then, no surprise that when the need became apparent, they turned their skills, under the leadership of Mr. Spieker, to improving the lot of the city's senior citizens.

And then, of course, there was that tireless worker in the vineyard-McClinton Nunn, director of the Toledo Housing Authority. Inspired by a deep understanding of and sympathy with people, he set about to learn the best possible ways to create the kind of homes that would meet the wishes and desires of older people, and would promote their well-being. But finding the answers to the difficult questions was not easy because so new is the idea of housing for older people that there are no well-established and tried patterns that require only mere replication. Mr. Nunn's task then was a pioneering one-first, to learn what to do, and, second, to find, and sometimes create, the administrative machinery for getting it done. And so, for several years, one met Mr. Nunn at meetings where housing for the elderly was being discussed; found him inspecting and evaluating the work of others; received letters from him asking for the new literature on the subject of old-age housing; and then, finally, came the report that Toledo had embarked upon a housing project for the elderly. Today-as we dictate this, the A. Gideon Spieker Terraceindirect tribute to Mr. Nunn and all those others whose vision and tireless efforts have made it possible.

And to you who are today's residents of Spieker Terrace, and to those who will live here in the future, is bequeathed a home for which John Ruskin long ago wrote a descrip-tion: "a place of peace; the shelter not only from injury, but from all terror, doubt, and division."

#### Our Om-nescient President

EXTENSION OF REMARKS OF

#### HON. ABRAHAM J. MULTER

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Friday, June 5, 1959

Mr. MULTER. Mr. Speaker, I commend to the attention of our colleagues the following article written by Frederic W. Collins which appeared in the June 1, 1959 issue of the New Republic. Mr. Collins, Washington correspondent of the Providence (R.I.) Journal since 1942, has reported on the White House through three administrations, beginning with the administration of Franklin D. Roosevelt.

OUR OM-NESCIENT PRESIDENT—SOME FORCES
OF HIS NOT-KNOWING

#### (By Frederic W. Collins)

At a recent press conference, President Eisenhower was asked what he thought about an Air Force desire to have strategic control Polaris missile submarines. duced his answer by saying, "I haven't heard this story, this charge, before."

A week later he was asked five questions about India, for the simple reason that Eric Johnston had been holding a big confab in Washington on India. "I didn't know that

Eric Johnston had a symposium on this matter," said the President.

The next week he was asked about a suggestion by Secretary of Defense Neil McElroy that Congress should "put the Pentagon's feet to the fire to force a decision in the competition between the Bomarc and the Nike-Hercules domestic defense weapons. "Well," said the President, "I did not know about any statements made by Mr. McElroy. He hasn't informed me of that particular incident.

All three of these stories had been given a good play, including some page one treatment, by the newspapers generally read in Washington. They involved important issues of Government. They represent the kind of information all people in Washington professionally interested in public affairs naturally absorb along with their air and nourishment. But the President drew a one-two-three blank on them.

The series of answers ought to dispose forever of the claim so manfully maintained by James C. Hagerty, his press secretary, that the President keeps up with current events by keeping up with the newspapers, even as you and I. It does much more than that. It suggests that Mr. Eisenhower does not take in very much information from sources other than those in the Government. It suggests further that his Government sources, while they serve him well, do not serve him per-fectly. ("He hasn't informed me of that particular incident.")

Variety is at least as useful in the discovery of the truth as is pure objectivity. But variety is something the President plainly lacks in his intake of information, and pure objectivity is as scarce in Washing-

ton as anywhere else.

It is pertinent to note also that there are two kinds of information which can be classed as indispensable to a President. There is official information, provided by the people who work for him, on what is going on in the Government and what is going on in the country. Official information about what is going on in the country tends to have all the juice squeezed out of it. Second, there is the kind of information about what the people are thinking and feeling. about their personal disasters, personal triumphs and personal aspirations. This can be collected only by a marvelously sensitive receiving apparatus in which the vital central tuner is provided by the President's own curiosity. It is not meant to be hard on the President in saying he lacks an active curiosity. The military training is not a humanist discipline, which political government certainly is, and the military profession can be served by a hard, technical kind of intelligence in which impressionistic sensibility may be quite out of place.

Eisenhower's conspicuous shortcomings as a newspaper reader leave him all the more dependent on personal contacts with unofficial sources of information for his knowledge of what is going on in his Government and in the country. And this raises the question: Whom does he see and hear,

outside of his official family?

It doesn't take much diligence to find out. It is pretty well agreed that the President sees only three men (outside the official circle) frequently and intimately. The three are William E. Robinson, chairman of the board of Coca-Cola; George E. Allen, a Washington lawyer and financier who has made a career of knowing Presidents; and Gen. Alfred M. Gruenther, president of the American National Red Cross.

Additions to the roster can be made up from published reports of the President's golfing, fishing, and bridge parties at Au-gusta, Gettysburg, and Newport: W. Alton "Pete" Jones, chairman of the board of Cities Service; Clifford Roberts, partner in Reyn-

olds & Co.; Robert W. Woodruff, former head of Coca-Cola; Barry T. Leithead, president of Cluett, Peabody, & Co.; Philip D. Reed, consultant to the chairman of the board of General Electric; and Sigurd S. Larmon, chairman of the board and president of Young & Rubicam.

Add Gen. Lucius D. Clay, chairman of the board of Continental Can; Paul Hoffman, former head of Studebaker, former administrator of ECA; Gen. Omar N. Bradley.

Then add Milton Eisenhower, the President's brother, and George M. Humphrey, former Secretary of the Treasury, the President's host from time to time on the plantation at Thomasville, Ga.

The method and frequency of communication the President maintains with General Clay, Paul Hoffman, and General Bradley is hard to establish. They have always been discreet about it. One has the impression that it proceeds by telephone and mail more than by direct meetings, and that it has tapered off during the years of the Eisen-

hower Presidency.

With respect to the friends from the golfing and business world, it is interesting to note that the list today is essentially what it was in June of 1954, when Fletcher Knebel attempted a definite study of the crony roster for Look magazine. To a considerable extent, the pattern was established by friendships made by Mr. Eisenhower right after the war, and during his presidency at Columbia, in a group which played golf at Blind Brook, Portchester, N.Y., and at the Augusta National Club.

This catalog, which is fair as a represen-tation even if it is not complete, shows one common characteristic among the Presidential pals. With minor reservations, they come from a single economic segment of the American society—the segment of successful

corporation leaders.

Indeed, when Mr. Elsenhower sees a labor leader, David McDonald, for example, it's front page news. Now corporation heads can hardly be expected to provide for the President anything even remotely approaching a cross section of opinion. It is an incidental handicap, from the point of view of the President's awareness of what is happening in his constituency, that this one segment is not noted for its sensitivity to Popular thought and emotion. They are no doubt estimable men, and they are no doubt instructed as to trends of popular taste in soft drinks, drip-dry shirts, and refrigerators. Some of them are active in such lively and Well-intentioned organizations as the Committee for Economic Development, the National Planning Association, and the Advertising Council. It is useless to contend, however, that as a group they rub elbows with the electorate-at-large.

By all indications, the President does not discuss public affairs while golfing, playing bridge or fishing. But it doesn't make much difference what he talks about. The plankton-like minutiae which can add up to a solid helping of information don't live in the part of the stream he visits on his days

President Eisenhower has another means of communication with the world that is outside the iron railings of the House grounds-by the writing of letters. This, however, seems to be something of a one-way operation, employed by the President to enlist support among the leaders of the workaday community for pet objectives. It is reported, for example, that as part of his crusade for economy and a balanced budget he wrote to Harry A. Bullis, chairman of the board of General Mills, an energetic man, a former sewing machine wholesaler and a CED workhorse, who brings a

kind of Billy Graham ferver to the spreading of fundamentalist mercantilism and could be counted on to start spraying letters of his own all through the business world in furtherance of the Eisenhower creed. This is communication, but it is not the collection of information.

The role of Milton Eisenhower George Humphrey in "talking to the Presiis well enough understood so that it need not be labored here. The President himself is the authority as to the importance of Milton's contributions, and one may assume that they are among the most valuable available to the President because Milton does carry over an intellectual curiosity from his New Deal days and is in touch with parts of the society not preoccupied with making, buying, and selling. As to George Humphrey, it is Washington's con-viction that it doesn't make much difference how often the former captain of the Cabinet sees the President or talks with him, because one treatment seems to carry Eisenhower a long, long time. Mr. Humphrey is considered to be the inspiration for Mr. Eisenhower's zeal for a balanced budget. (Much of this, it should be forthrightly acknowledged, is conjecture, because Mr. Humphrey guards the privacy of his privileged communication with the President.) But then here again the contribution is of something other than information on the living details of the contemporary American experience in all of its variety.

Going over the field of the President's close friends in search of people who might tell him how things really are brings insistently to mind the observation of a veteran journeyman of Republican politics. When a Republican makes a million dollars, said this observer, he drops out of sight. When a Democrat makes a million dollars, he's down at the corner saloon every night

drinking with the boys.

And picking up information. What about the staff close to the Presi-

dent? Can he really learn the current facts of American life from them?

Whatever may be said about them, and one thing which can be said is that many warm and pleasant people may be found among them, it cannot be said that as a group they are gregarious, and those who would like to be gregarious find little chance to indulge their bent in the monastic immurement, in some respects almost trappist, which is their way of life. Theirs, not necessarily by their own choice, is a world apart, a world of staff meetings and staff

luncheons and long hours and hard work. As they work as a group, so do they play as a group, with their own internal fun and games and their own internal problems, and patterns of activity so fixed that they could hardly break out if they tried. Trustees of executive confidence, large and small, in an administration which regards the maintenance of its privacy as a moral end in itself, the terms of trade are against them in their interchange with us, and their imports' of information are balanced at the painfully low level of their capacity to export.

It would be interesting to run a test: Take the following names and go out on the street anywhere in the country, in Washing-ton or in Pocatello, and ask passersby at random what connection the named people have with American life:

Wilton B. Persons, Gerald D. Morgan, Thomas E. Stephens, James C. Hagerty, Da-vid W. Kendall, Henry McPhee, Philip E. Areeda, Robert E. Merriam, Gordon Gray, Rocco Siciliano, James R. Killian, Karl G. Harr, Don Paarlberg, Jack Z. Anderson, Malcolm C. Moos, Edward A. McCabe, E. Frederic Morrow, Robert K. Gray, James M.

Lambie, Jr., Maurice H. Stans, Raymond J. Saulnier, Leo A. Hoegh.1

That list represents a thorough combing of names from the 1959 Congressional Directory in those echelons of the White House which for 20 preceding Democratic years had been inhabited by a spectacular collection of performing seals, wheels, pinwheels, prodigies, prodigals, fakers, double-dealers, scholars, zealots, political vaudevillians, geniuses, spoiled messiahs, buffoons, prima donnas, votaries, acolytes, neurotics, touts, politicians, first-class public servants and charming misfits, all of whom registered on the national consciousness and who, collectively, seemed to know everybody in the country and everything that was going on.

The resident of Pocatello can have two consolations if he does badly in identfying the names. One is that the resident of Washington wouldn't do much better. The other is that the people at the White House wouldn't recognize many names in Pocatello.

Beyond the executive staff is the Government, its functionaries arranged roughly in concentric circles according to the frequency, intimacy, and scope of their communication with the President, beginning with the National Security Council, going next to the Cabinet, and beyond that to the array of leading personages who go to the White House to brief the President on specific mat-

On efficial information, as has been noted, they do their job quite well. Everyone who ever worked with Mr. Eisenhower in any of the stages of his career testifies that he absorbs (or perhaps "records" would be a better word) briefings readily. In his press con-ferences, it is fairly easy to spot by the nature of his responses which subjects he has been briefed on and which he can comment on only out of his general fund of knowledge. In the same press conference in which he flunked the question about SAC's plot to kidnap the Polaris subs Mr. Eisenhower gave an A-plus standup recitation on the particle accelerator which is to be built at Stanford University, remarking, "I had a very long presentation" on it.

Taken all together, the ranking members of Mr. Eisenhower's government form a group so large that it must be assumed some of them are in contact with popular life. One cannot forget, however, that Mrs. Oveta Hobby, when she was Secretary of Health, Education, and Welfare, was astonished by the extent and intensity of the public de-mand for Salk vaccine. Mrs. Hobby is gone, and HEW has not been so far out of this world under Marion Folsom and Arthur Flemming. But even if some members of his Cabinet and the hinterlands of bureaucracy

Persons, the assistant to the President; Morgan, the deputy assistant to the President; Stephens, secretary to the President; Hagerty, press secretary; Kendall, special counsel; McPhee, associate special counsel; Areeda, assistant special counsel; Merriam, deputy assistant to the President for interdepartmental affairs; Gordon Gray, special assistant for national security affairs, Siciliano, special assistant for personnel management; Killian, special assistant (science); Harr, special assistant (for security operations coordination); Paarlberg, economic adviser; Anderson, administrative assistant; Moos, ditto (speech writing); McCabe, ditto (Senate liaison); Morrow, administrative office (special projects); Robert Gray, secretary to the Cabinet; Lambie, special assistant; Stans, director of the budget; Salunied, chairman, Council of Economic Advisers; Hoegh, Director, Office of Defense Mobiliza-

have effectively operating antennas the question remains whether their findings get, to Mr. Eisenhower. precious little evidence of it in his comments on the times. Who is going to talk to the President about fallout? Dr. Killian, his science adviser, can lecture to him on the technical details, reinforced by experts from other parts of the Government, such as the Atomic Energy Commission, and Public Health. But where, except from his own grandfatherly concerns, is he going to get a sense of the popular apprehensions about the somatic effects on the living and the genetic effects on the generations now being born and to be born in the years ahead?

The President has another category of contacts, the visitors who show up on the appointment list published every day he is in Washington by the wire services and some newspapers. For the purposes of this inquiry, a period was picked at random, during March and April of this year. Twenty-eight samples of the daybook provide a list which ought to enable the reader to make up his mind rather easily as to how much general information the President can possibly gain during his sessions:

Gordon Gray, the President's assistant for national security affairs, three times; the returning Canadian Ambassador, presenting credentials; the president of Optimists International, from Memphis; T. Keith Glennan, Director of the National Aeronautics and Space Administration, twice, once with the NASA Council; Dr. Killian; Gen. Nathan F. Twining, Chairman of the Joint Chiefs of Staff, three regular appointments; Democratic congressional leaders, as part of a bipartisan meeting; Republican congressional leaders, six times; the president of the Junior Chamber of Commerce, from Tulsa; the National Teacher of the Year, female, Oklahoma; a 4-H Club delegation; Secretary of Agriculture Ezra Taft Benson; Conrad Hilton; Secretary Flemming; Philip K. Crowe, leaving to be Ambassador to the Union of South Africa; the Cabinet, twice; news conferences, three times; the National Security Council, four times; Crown Prince Constantine of Greece; the President of El Salvador, who was met, dined, and conferred with; the president of the American Meat Institute, a high-pressure industry group; the head chaplains of the armed services; Clyde Wheeler, a new staff assistant to the President, another name to spring on the folks in Pocatello; the chairman of the Washington Flower and Garden Show; Representative James C. Auchincloss, Republican, of New Jersey; Roger W. Jones, a civil service commissioner; the new Ambassador from Malaya; the Ambassador of Austria; W. Allen Wallis, of the University of Chicago, being sworn as executive vice chairman of the Cabinet Committee on Price Stability for Economic Growth: Christian A. Herter, five times, three of them as Secretary of State; Livingston T. Merchant, Assistant Secretary of State; the Ambassador of Panama; the President of Ireland (who made a great hit); the Methodist Council of Paul-Henri Spaak, Secretary General of NATO; the Governors of Rhode Island, Massachusetts, and New Hampshire, together; Secretary of the Treasury Robert Anderson; Chairman William M. Martin of the Federal Reserve Board; Raymond J. Saulnier, Chairman of the Council of Economic Advisers; Don Paarlberg, economic adviser to the President; Irving S. Olds and Arthur A. Houghton, on business connected with the Cooper Union in New York; the new Ambassador from Guinea; Gen. Melvin Maas, Chairman, President's Committee on Employment of the Physically Handicapped; the American Battle Monuments Commission; the Archbishop of the Greek Orthodox Church for North and South America: the retiring Chairman of the Tariff Commission: the president of Florida Presbyterian Col-

lege; the Director General of UNESCO; and Andrew H. Berding, Assistant Secretary of State for Public Affairs.

The mind reels at the thought of the exactions imposed upon the small-talk resources of the President, even conceding the intensity of his training in making small talk in military society, by such a conglomeration of visitors. But, speculating on the probable yield of information, taken against the total outlay of Presidential time and energy, one is tempted to guess that it would be impossible to draw up any other list of the same number of people from whom it would be possible to learn so little.

There is, however, evidence that the effort is not a total loss. The three Governors from New England went in to see the President about the problems of the textile industry, involving tariffs and foreign competition. When they came out (two Republicans and a Democrat) they were united in the impression that until they had talked with him, the President had not been fully informed on the subject, particularly on such esoteric matters as the differing effects of a general tariff on wool fabrics and a system of schedules applying to specific categories of such fabrics (which is what they are after). They got action, too: The es tablishment by the President, less than a month later, of an interdepartmental committee to study textile industry problems. It may sound like just another committee, but it is what the Governors wanted.

It is probably safe to assume, too, that the President learns something from the Republican congressional leaders. After all, politicians are always conducting polis, taking soundings, feeling pulses, and going back home to put their ears to the ground. After all, too, they would automatically be more interested in telling the President those things which will set him on a course calculated to protect their political skins than they are in feeding him any old stuff to make him think any course he chooses is the right one. In fact, the bold estimate may be made that the congressional leaders give Mr. Elsenhower the broadest and truest picture of the United States, within the limits of their reportorial talents, that he

There is another source of information available to a President, his party structure, and particularly, the national party chair-The best information is that President makes such negligible use of this source, whoever is chairman, that it might well be disregarded (although the new chairman, Senator THRUSTON B. MORTON, has been introduced to the weekly conference of GOP legislative leaders).

Finally, there are the White House dinners, at which the President must engage in some conversation. A study of the guest list suggests that the inflow of information to the President is probably meager. The study does turn up one rich nugget. The list of 49 guests at Mr. Eisenhower's dinner for Sir Winston Churchill on May 6, a dinner at which the President was less restricted by protocol than usually, shows no fewer than of his golf and bridge buddies present: Messrs. Allen, Pete Jones, Larmo, Leithead, Roberts, Robinson, and Woodruff, plus 2 others who are card-carrying members: Ellis D. Slater (of the Augusta and Blind Brook Country Club set) and Charles S. Jones, California oil executive and director of Douglas Aircraft.

Two notes should be added. First, the President himself hardly ever goes out into the everyday world of America. Merriman Smith, White House correspondent To.
United Press International, did an extremely interesting story on this point last winter from Gettysburg, listing, to the length of a half column or more, the things most people do which the President never has done or hasn't done for years. No visits to a supermarket, for example, or a barber shop. Second, the President in important measure denies himself the guidance of popular reaction by denying to the populace any knowledge of policies in the stages of formu-There are a few leaks, of course, and somewhat fewer trial balloons, but it is the fixed doctrine of this administration that the secrecy of the National Security Council shall be absolute, and market research on NSC products, in the sense of test reactions to trial offerings, is prohibited. This seems to be a backward and upsidedown way to form policy in a democracy, but that's the way the man wants it, and that's the way it is.

To draw the meaning of all this, using the leverage of contrasting example, it will perhaps be permissible to refer at some length to Arthur Schlesinger, Jr.'s, study of Franklin D. Roosevelt's collection and use of information. ("The Age of Roosevelt" vol. II. "The Coming of the New Deal," pt. VIII, "Evolution of the Presidency.")

While breakfasting, we are told, President \* Roosevelt "looked rapidly through half a dozen newspapers, half of them bitterly criti-cal of his administration." In Cabinet meet-ings, he joshed members "about their latest appearances in the newspapers." As to the widely varying group around him: "The reaction he got from this miscellany of administrators perhaps gave him some idea of the range of public opinion. .

The first task of an executive, as he evidently saw it, was to guarantee himself an effective flow of information and ideas. (The ordained channels could never be enough.) An executive relying on a single information system became inevitably the prisoner of that system. Roosevelt's persistent effort, therefore, was to check and balance information acquired through a myriad of private, informal, and unorthodox channels and espionage networks. At times, he seemed almost to pit his personal sources against his public sources. \* \* \* Rooseveit \* \* \* required this approach to cross-check the official system and keep it alert as well as to assure himself the balanced and various product without which he could not comfortably reach decisions.

Mr. Schlesinger speaks of FDR's "systematic effort to augment the official intelli-gence." Newspapers were only the first stage in his battle for supplementary information. He preferred to acquire both information and ideas through conversation. He did not depend wholly on experts, but profited from the variety of reactions available to him in areas where no one is infallible and any intelligent person might make a contribution. The author calls information the first responsibility of the Executive, and speaks of a President's conquest of the problem of information.

"It might be argued," says Mr. Schlesinger, "that the essence of successful administration is: first, to acquire the ideas and information necessary for wise decisions; second, to maintain control over the actual making of decisions; third, to mobilize men and women who can make the first two things possible—that is, who can provide effective ideas and information, and who can reliably put decisions into effect."

It is the first and third essentials which concerns us here. Of course. Mr. Schlesinger's saying what he says doesn't automatically make it so, nor did Mr. Roosevelt's doing as he did automatically make it right. But any prolonged experience of Washington. including the closeup observation of Presidency, provides compelling evidence that what Mr. Schlesinger says is, indeed, so, and that what Mr. Roosevelt did in acquiring information and mobilizing men and women to supplement his own reporting was eminently right.

The independent conclusion of this writer, in other words, is that to the extent Mr. Eisenhower's performance has fallen short of what must have been his deeply-held hopes, and the hopes of those who twice elected him, blame must be ascribed in significant degree to the utter inadequacy of his information and his means of collecting it. Curiosity may be fatal to cats, but it is indispensable in a President.

## Graduates of Seton Hill College From Westmoreland County, Pa.

EXTENSION OF REMARKS

## HON. JOHN H. DENT

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Monday, June 1, 1959

Mr. DENT. Mr. Speaker, I note with a great deal of pride that 15 young ladies from my district are in the graduating class at Seton Hill College, Greensburg, Pa. This college is known as one of the outstanding schools for young ladies in the entire country. Its graduates are to be found in every field of endeavor. The list of Westmoreland County graduates follows:

LIST OF GRADUATES FROM WESTMORELAND
COUNTY

Dolores Bontempelli will receive the bachelor of science in elementary education degree. She has done her student teaching in the Greensburg public schools and hopes to teach in the intermediate grades next year. For the past two summers she has been a supervisor at Camp Byrne in Connecticut and will return to the same position this summer. She is a member of the Elementary Education Club at Seton Hill, Dolores is a graduate of Derry Area Joint High School. Her parents are Mr. and Mrs. Venanzio Bontempelli, of 1111 Burns Street, Latrobe.

Angelo Bruno, a graduate of New Kensington High School, will receive the bachelor of science in elementary education degree and will do graduate work in education this summer. She has been elected to teach in the elementary grades in the New Kensington School District next year. She is a member of the Elementary Education Club and of the French Club, and is a teacher in the Confraternity of Christian Doctrine. Angela is the second daughter of Mr. and Mrs. Thomas Bruno, of 428 Charles Avenue, New Kensington, to be graduated from Seton Hall. Sarah received the bachelor of arts degree 2 years ago.

Florence Delynko will receive the bachelor of science in home economics degree. Her field of major concentration was dietetics and she has received an appointment to a 1-year dietetics internship at the Henry Ford Hospital in Detroit. The work begins in September and includes the opportunity to work toward a master's degree at Wayne University. Florence is a graduate of Hurst High School and is the daughter of Mr. and Mrs. Alexander Delynko, of 644 Hillcrest Drive, Greensburg.

Patricia DiLorenzo will receive the bachelor of science in home economics degree. She chose clothing merchandising as her field of major concentration and did practice work in retailing at Troutman's Department Store in Greensburg. Patricia is a graduate of Sewickley Township High School. Her parents are Mr. and Mrs. Frank DiLorenzo, of Fourth and Highland Avenues, Herminie.

Louise Ferrante, of Vandergrift, will receive the bachelor of science in home economics degree. Her major is home economics education. She did her student teaching in the Greensburg public schools. She plans to teach next year. Louise is a member of Kappa Omicron Phi, national professional home economics honors fraternity, and in her senior year was treasurer of the campus chapter. Through 4 years she has been a member of the chapel choir, the glee club, the Rosa Mystica Sodality, and the Home Economics Club. Louise is the daughter of Mr. and Mrs. Anthony Ferrante, of 406 Jackson Avenue, Vandergrift. She is a graduate of Vandergrift High School.

Kathleen Ferrari majored in biology and minored in chemistry and will receive the bachelor of arts degree. She was an active member of the Student Affiliates of the American Chemical Society. She was treasurer of the campus chapter in her senior year and business manager of the 1959 "Chevron," the college yearbook. Kathleen hopes to go to graduate school in the fall. She is a graduate of St. Xavier Academy and the daughter of Mr. and Mrs. Louis Ferrari, of 500 Lowry Avenue, Jeannette.

Martha Haley completed major credits in psychology and a minor in sociology. She will receive a bachelor of arts degree, Through student teaching in the Greensburg High School, she also met State requirements for teaching certification, and she expects to teach next year. In her senior year Martha was president of the Student Journal Club of the American Psychological Association. She was graduated from Greensburg High School in 1955 and did her freshman college work at Mount Mercy. She is the daughter of Dr. James P. Haley, of Five Point Road, Greensburg.

Bernadette Hines will receive the bachelor of science in elementary education degree. She did her student teaching in the Greensburg public schools and expects to teach next year. She is a member of the Elementary Education Club. Bernadette is a graduate of Scottdale High School. Her parents are Mr. and Mrs. James J. Hines, of Broadford Road, South Everson.

Lois Jones has completed major credits in biology and a minor in chemistry and will receive the bachelor of arts degree. She has been employed the past four summers and part-time during the school years as a typist in a local letter shop. Lois is a graduate of the Greensburg High School, and the daughter of Mr. and Mrs. Laurence W. Jones, Sr.,

of 1219 Poplar Street, Greensburg.

Florentina Lavin will receive the bachelor of arts degree. Her major field in college was biology with a strong minor in psychology. In the fall she will enter the School of Physical Therapy at the University of Pennsylvania. She was an active member of the Student Journal Club of the American Psychological Association, and secretary in her senior year. Florentina is a graduate of Latrobe High School. She is the second daughter of Mrs. Ross B. Lavin to be graduated from Seton Hill. Joan received the bachelor of science in home economics degree in 1956.

Ellen Marker, the daughter of Mrs. Henry E. Marker, Jr., of 449 College Avenue, Greensburg, msjored in biology and minored in chemistry. She will receive the bachelor of arts degree. Ellen is a graduate of Greensburg High School and did her freshman college work at Mount Mercy. She plans to be married this month.

Marie Naples Miller will receive the bachelor of science in elementary education degree. She was graduated from St. Xavier Academy in 1955. Mrs. Miller's parents are Dr. and Mrs. Louis A. Naples, of Linden Drive, Jeannette.

Kathryn Petrosky completed major credits in history with a minor in sociology. In her

sophomore and junior years she was a delegate from Seton Hill to the intercollegiate conference on government in Harrisburg. In her senior year she was the college representative to the National Student Association. Kathryn is a graduate of Greensburg High School. Her parents are Mr. and Mrs. Anthony J. Petrosky, of Slickville.

Kay Rubright will receive the bachelor of

Kay Rubright will receive the bachelor of music degree. She did her student teaching in the Hempfield Area High School and is certified to teach public school music. She has accepted a position for next year teaching music in the Monroeville-Pitcairn Joint Schools. Kay is a member of Sigma Alpha Iota, national music honors fraternity, and was successively treasurer and vice president of the campus chapter. Through 4 years she was a member of the music club and of the glee club. In her senior year she was representative from her class to the superior court of the College Government Association. Kay is a graduate of Franklin Area Joint High School. Her parents are Mr. and Mrs. Archie Rubright, of Murrysville RD 1.

Dolores Sofranko majored in mathematics and minored in chemistry. She will receive a bachelor of arts degree. She did her student teaching in the Greensburg High School and hopes to teach next year. Dolores was an active member of the mathematics club and of Der Weirmarkreis (the German club). She is a graduate of Ramsay High School. Her parents are Mr. and Mrs. Andrew F. Sofranko, of 143 Quarry Street, Mt. Pleasant.

The Famed 28th Division, Pennsylvania
National Guard, Lost Its Identity as an
Infantry Unit on June 1, 1959, and Is
Now Known as a Pentomic Division
Due to Reorganization of the 212Year-Old Pennsylvania National Guard
in Meeting With Military Demands of
the Atomic Age

EXTENSION OF REMARKS

## HON. JAMES E. VAN ZANDT

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES
Friday, June 5, 1959

Mr. VAN ZANDT. Mr. Speaker, for over 80 years the 28th Division, Pennsylvania National Guard, has occupied a place of prominence in the military life of the great Keystone State and of the Nation.

Bowing to the demands of the atomic age, the recent reorganization of the Pennsylvania National Guard is the most drastic in its 212-year-old history. The famous 28th Division on June 1, 1959, completed its reorganization along pentomic lines, giving a new face to an infantry division whose record of loyalty, bravery, and patriotic heroism has never been excelled.

For over three-quarters of a century Pennsylvanians have been thrilled by the military exploits of its own 28th Division, Pennsylvania National Guard, which earned the distinction of being one of the finest infantry units in the history of the U.S. Army.

It is understandable that there is a nostalgic note in witnessing the changes

from an infantry to a pentomic division of a unit which has meant so much in the military annals of the Nation and that a spirit of reluctance is evident in the effort to become accustomed to the reorganization affecting especially the infantry element of the old 28th Division.

Nevertheless, it is recognized that the reorganization which brought about the change in the capabilities of the 28th Division is the result of many years of experimentation and was deemed imperative in meeting the demands of the atomic age.

The famed 28th Division now pentomic—so-called because of the five battle groups that will make up the infantry element of the 28th Division—takes its place in the new training program already in effect in many regular Army units and which is designed to provide effective operations in keeping with the methods of atomic warfare.

As a mark of respect and in gratitude for the glorious record of the 28th Division, Pennsylvania National Guard, I subscribe wholeheartedly to the sentiments expressed in the fine editorial which appeared in the June 1 issue of the Altoona (Pa.) Mirror. It is a fitting salute and a well-deserved tribute to one of the Nation's finest military divisions and discloses the history and activities of its units for the past 80 years in my home town of Altoona and Blair County where Company G, 110th Infantry, has been the backbone of the infantry elements of the 28th Division, Pennsylvania National Guard. We are going to miss the doughboy with his rifle as well as the infantry emblem that has identified the infantry branch of our Armed Forces.

The editorial follows:

OUR 28TH PASSES

Taps was sounded in honor of the heroto dead of all wars in all cemeteries in the country on Memorial Day and taps likewise was sounded for the oldest division in the Armed Forces of the United States, the 28th Division, Pennsylvania National Guard.

After a notable career, spanning 80 years, the 28th Division of the National Guard of Pennsylvania passed out of existence with the ceremonies of Memorial Day officially representing "taps," for on June 1 a transition become effective. It is now the Pentomic Division, a complete modernization in keeping with the atomic era.

In Altoona, Company G, 110th Infantry, was long the representative company in the 28th Division and the "Fighting 10th," as the organization has long been known, has a most extraordinary history of action.

On Memorial Day, Company G fired the last volleys at the gravesides in Altoona cemeteries. Today this same company is Troop C.

No longer will the unit wear the blue and the crossed rifles denoting the infantry branch of the armed services.

Today's Pentomic Division is a more flexible structure to meet modern war strategy. It's actually a five-part division, rather than the square division that had existed since 1878, namely, one of four regiments. The only 28th had a strength of 17,460. The new units comprise 13,748 men and all units will be different in duties and in classification.

For instance, there are antiaircraft artillery designations, armored cavalry, transportation battalions, tactical carriers, engineering battery, heavy construction, military police, tank battalion, and the five battalion

groups will be highly mobile, flexible with terrific firepower, capable of operating over a wider area in offensive and defensive action.

All units of the 28th Division were automatically transferred over the weekend into the new division, no change in command being necessary.

The old 28th Division is historically famous and it is designated by its Red Keystone. "We met them all" is the motto of the division. Prior to 1878 it was a colonial organization. Histories, however, date from the reorganization of 1878. It was training ground of Gen. George C. Marshall back in 1906 when he held a commission in Pennsylvania.

Locally, the history of the 28th deals with the 110th Infantry and Company G. In 1879 Company C, of Hollidaysburg, the 5th Regiment was the forerunner of Company G of Altoona, this designation being effective January 1, 1910. Frequent reorganizations have been made.

Altoona also has been the home of the 28th Division Band; Regimental Headquarters Company, 110th Infantry; 2d Battalion Headquarters Company; Company A, 125th Mounted Engineers; Troop C, 104th Cavalry, later redesignated Battery B, 200th Field Artillery; 28th Quartermaster Company, and others. Two armories have housed the units, with still another in the course of completion.

So today it is goodby to a grand old organization and the familiar Red Keystone as the 28th Division becomes the Pentomic Division. Altoona units continue in service and they'll most certainly achieve high honors in the new grouping, adding to their many laurels of the past.

## Clarifying Congressional Intent

EXTENSION OF REMARKS

OF

## HON. ALBERT H. QUIE

OF MINNESOTA

IN THE HOUSE OF REPRESENTATIVES
Friday, June 5, 1959

Mr. QUIE. Mr. Speaker, an editorial which recently appeared in the Faribault Daily News, Faribault, Minn., discusses the need for passage of H.R. 3. I am very happy that this important newspaper in the First Congressional District has taken a stand favorable to this legislation—and, under the unanimous consent of my colleagues, I include the editorial in the Congressional Record because it states very well the case for this bill:

#### STEPS TOWARD CLARITY

One of the burdens the Supreme Court must bear is trying to figure out what Congress means when it passes laws. Sometimes this must be done after the Congress that passed the law is dispersed—some dead, some retired, some defeated.

Now Congress is considering a new law—S. 3 in the Senate and H.R. 3 in the House—which would clear up one of the court's most vexing problems in this regard. The identical bills would make it plain whether Congress did or did not intend to keep State law from operating after the national law on a subject went into effect.

The absence of such a law has led to many injustices. One example is that the Supreme Court has held that Federal labor laws prevent State labor laws from operating. As the Federal machinery can't handle all

cases, many employees, unions and employers have found that neither Federal of State law remedies were available to them.

And the absence of such a law has taken all State and local law enforcement officials out of the fight on subversion, since the Court has ruled that Congress intended that the Smith Act should pre-empt the field of subversion.

Of course, Representative Howard Smith, of Virginia, who wrote the Smith Act, says Congress had no such intention. As the author of the act, he is in the best position to know. But there was nothing in the bill to tell the Supreme Court that Congress meant to leave the States free to fight subversion. And it isn't customary for the Court to canvass Congressmen and ask them to explain their intentions.

The "3" bills would clear up what has become something of a mess. They would not curtail the power of the court, but merely make the Court's job easier. The Constitution requires it to interpret the law, and as things now stand the puzzled justices often split 5 to 4 or 6 to 3 on what Congress' intentions really were

gress' intentions really were.

The new bills would make such headscratching unnecessary. Congress would
merely write into the bill that the new law
pre-empts State law, if that's what they
mean. If Congress did not write in such preemption, the Court could only conclude that
Congress meant to do no such thing.

## Cleveland's Great Rain of 1959

EXTENSION OF REMARKS

## HON. FRANCES P. BOLTON

OF OHIO

IN THE HOUSE OF REPRESENTATIVES
Friday, June 5, 1959

Mrs. BOLTON. Mr. Speaker, the Cleveland Plain Dealer of June 3 has written eloquently of what happens to a city when nature goes on a rampage and the noble heights men rise to in meeting such emergencies.

We had dramatic evidence of this in Cleveland just this week when a flash flood wreaked havoc in our streets.

Besides the heroic work of the Red Cross, civil defense, Lakeside Hospital and other civic organizations, the names of High Wells, a police reporter of the Cleveland News, Arnie Lande, Western Reserve University medical student, Jim Dallas, Ray Klopetek, Bill Shok, and many others, will long remain in the memory of Clevelanders for their personal bravery.

Under unanimous consent, Mr. Speaker, I include with my remarks a copy of the Plain Dealer editorial above referred to:

[From the Cleveland Plain Dealer, June 3, 1959]

#### THE GREAT RAIN OF 1959

The great rain of June 1, 1959, probably never will be forgotten in this area, and it will require weeks of work to clean up the ravages of the flood. When nature goes on a rampage, whether of wind, water or snow and ice, man is powerless.

But when nature goes wild it seems to bring out the best in man, who, instead of cowering fearfully, rises to noble heights. Monday's storm is a typical example of the way in which adversity produces heroism and danger begets heroes. And it is reason for prayerful rejoicing that although damage is in millions, not a soul was lost.

This was due, in large measure, to the heroic work of a number of Case and Reserve students who swam through a strong current of water to reach two buses, and to pull the dazed occupants to safety. It was a far cry from the popular conception of college boys who are often pictured as self-centered, irresponsible, concerned primarily with automobiles, panty raids, and stuffing telephone booths. The men of Case and Reserve were magnificent.

Typical of the seiflessness of those who braved danger to help people in trouble was the remark made by a Forest City Publishing Co. employee, Hugh Wells, a police reporter on our sister paper, the Cleveland News, who was sent out to help cover the flash flood.

was sent out to help cover the flash flood.

"Hell, I can swim," said Wells, when he saw a CTS bus being swept down Liberty Row. "What am I doing on shore?" Where-upon Wells, who swam competitively in college, stripped down to the irreducible minimum, churned through the deep, swift, dirty water, and (according to others who saw him do it) helped rescue the 30 people who were trapped in two buses. Naturally, we're proud of him.

And such names as Arnie Lande, W.R.U. medical student, and Jim Dallas and Ray Klopetek and Bill Schok—and others—will be remembered for a long time.

Everyone helped. The Civil Defense Organization rescued 30 people in its new duck vehicle, as well as providing 130 auxiliary policemen. The Red Cross performed nobly, as usual, getting its teams into operation quickly, thus relieving policemen and firemen for other duty; working through the night to relocate families and putting marooned persons into hotels until they could be taken home. Canteens were set up in several places.

Lakeside Hospital did yeoman duty, receiving, cleaning, warming and feeding victims of the flood. Three companies of the 107th Armored Cavalry, Ohio National Guard, were called into action, together with all available vehicles. The Salvation Army was on the job, as it always is. City health inspectors began searching for and condemning flood-contaminated food.

When daylight broke yesterday morning, muck was deep all over University Circle, but 300 city workmen and rubbish pickup trucks were busy starting the cleanup operation. But there was no muck in the story of how Cleveland responded to a graye emergency. For this was a shining story of brains and courage and unselfishness, worthy of a great American city which reacted in the typical American way.

#### The Realm of the Spirit

EXTENSION OF REMARKS

## HON. JEFFERY COHELAN

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, June 4, 1959

Mr. COHELAN. Mr. Speaker, it has long been a matter of distress to all Americans that we spend and spend for schools and still fail to keep up with our educational needs. I submit that the reason for our distress is that we fail to comprehend the scope of the problem and invest piecemeal in the hope that a little money from time to time will keep us out of trouble.

The truth of the matter, as Prof. Frederick Mayer, of the University of Redlands in California, points out in the following editorial from the Saturday Review, is that in every period of history education has to be reevaluated and reexamined, and that we must approach our school problems on this level. "If this is not done," he says, "a culture lag results and the schoolroom becomes only a minor footnote to life with teachers having little impact on the main events of our time."

Under permission to extend remarks in the Record, I submit this editorial for the attention of my colleagues:

#### THE REALM OF THE SPIRIT

(EDITOR'S NOTE.—The following guest editorial was written by Frederick Mayer, professor of philosophy at the University of Redlands, Calif.)

The story of education is the story of mankind. It is the saga of wisdom and folly, achievement and regression, creativity and lethargy, enlightenment and supersition. The aims of education represent the bases of social advancement. In every generation great educators, like Socrates, Epicurus, Comenius, Pestalozzi, Froebel, and James, have been in the vanguard of humanitarian causes and have made progress possible in man's relationship to himself and to society.

What should be the goals of education in our time? What should be its objectives? What should be its methods? These are significant questions, not merely for teachers and school administrators, but also for scientists, artists, statesmen—indeed, for all reflective human beings.

In every period, education has to be reevaluated and reexamined. If this is not done, a culture lag results and the schoolroom becomes only a minor footnote to life with teachers having little impact on the main events of our time. Thus, in the 14th and 15th centuries, medieval scholars were still debating about minor points of theology, while the world outside was rapidly changing and while a new science was being developed that would make their debates obsolete. When Locke was attending Oxford in the 17th century, scholastic methods were still being used while he yearned for a stress upon biological science. Too often in history, education has been isolated from the main currents of civilization. This has resulted in lacks of vitality and relevance of the educative process. Bergson, in his notable work, "Creative Evolution," shows how change governs all aspects of human existence. Every moment presents us with a new challenge. We are never the same and our abiding identity is only a postulate of experience. Social change, especially today, is even more rapid. To ignore it and to say it has no meaning for education, is to invite disaster for mankind.

In no field is change as rapid and breath-taking as it is in science. Indeed, more progress has been made in this field since the start of the 20th century than for the last 5,000 years. But scientists today are concerned about the direction of their inventions. Will they be used for destructive purposes? Will they contribute to the devastation of mankind? Will they create a new Leviathan that may make civilization more complex and more neurotic? Thus, scientists at conferences and through journals and books have been urgent and emphatic in their pleas for an educational system that shows the relationship between science and humanities, for they realize today that political issues have an immediate impact on their own researches and discoveries.

Artists in our society frequently feel a sense of alienation. They maintain that our taste is appalling and that, like the Romans, we tend to be exhibitionists and underrate creativity when it has no direct utilitarian consequences. A poet in our civilization ranks below the businessman, and there is a suspicion that anyone who is really concerned about art tends to be Bohemian. A classic voice of this viewpoint was Babbitt, in Lewis's great book, who admired successful artists because they made a great deal of money, but who had contempt for the dedicated artist who might live in an attic and who did not care for financial success.

It might be pointed out that we have today more courses in poetry, painting, and sculpture, more interest in dramatics, more emphasis on musical appreciation, more support of symphonies, more buyers of classical records than at any time in our history. This is true; but a real passion for art, as we find for example in the Renaissance, is lacking. Los Angeles and New York are not like Florence in the 16th century, which regarded the painters, sculptors, and architects as its foremost citizens. To create such a spirit a new type of education is needed.

But we must remember that universal education has not been achieved. Even in this Nation there are million of illiterates. What is worse, there are millions living in a twilight zone of semiliteracy.

Moreover, our investment in education has been minor compared with our investment in war. Walter Lippmann tells us that unless we make a more concentrated investment in our schools, we may experience a spiritual Pearl Harbor. We all know that we spend more on amusement than on education.

The main problem of education is not intellectual; it is the problem of human existence. How should we live? How should we look upon society? How should we act? What should be our aspirations? What is to be our vacation? These are the perennial problems of education, which fails unless it is applied to the realm of actuality and unless it creates lasting changes in man's behavior.

Real education, then, belongs to the future; most of our education is a form of tribal conditioning, a pilgrimage in routine and premature adjustment. When education becomes a journey in interior awareness, when it stirs our inner most feelings and loyalties, when it awakens us from the slumber of lethargy, when it brings individuals together through understanding and compassion, it becomes our foremost hope for lasting greatness.

In "Brothers Karamazov" we read: "Everyone is really responsible to all men for all and everything." This ideal should be the motto for the educated man of our time who can find himself only by transcending a feeling of futility and only by seeing the bonds which unite him to his neighbor and to the universe.

FREDERICK MAYER.

Poison in Your Water-No. 104

EXTENSION OF REMARKS

## HON. JOHN D. DINGELL

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES
Friday, June 5, 1959

Mr. DINGELL. Mr. Speaker, pursuant to permission granted I am inserting into the Appendix of the Record an article appearing in the Long Island, N.Y.

Star-Journal of May 1, 1959, entitled "Swamp Pollution Peril Feared."

SWAMP POLLUTION PERIL FEARED

Whitestone residents today are investigating the deplorable condition of the meadows between Flushing and College Point.

The Whitestone Civic Association said the swampy land east of the College Point causeway is becoming more and more polluted and that something should be done to rectify the situation before a major health problem develops.

The group has assigned its pollution watchdog committee to study the area in cooperation with College Point civic workers, said William Schwalm, association secretary.

A flooding problem started before when Mill Creek-a natural drain from the marshlands to Flushing Bay—became clogged and the excess water couldn't flow out of the area.

Borough Hall, the health department, the real estate department and the Triborough Bridge and Tunnel Authority are also study-

ing the complaints.

The Whitestone residents are also looking into a pollution problem in their own community-and this one is nothing new to

Although the association owns its own beach at the foot of 148th street it hasn't been able to use it for years because the waters off Whitestone have failed health department safe-swimming tests.

Schwalm said the group is now waiting for a report on this year's test although it doesn't have high hopes of much change.

He declared the sad thing about the swimming ban is that the water is often perfectly clear but health authorities have no means of making exceptions for these times.

During low tide or after heavy rains, which reportedly cause an overflow of sewage into the East River, the water there is "at its polluted worst.

"But in dry weather at high tide, the water would pass even the most rigid inspec-tion," said Schwalm. The civic workers make their own pollution checks from time to time.

## Hon. John Edgar Murdock

EXTENSION OF REMARKS OF

## HON. JOHN H. DENT

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES Monday, June 1, 1959

Mr. DENT. Mr. Speaker, although many years have passed since I've had the pleasure of visiting with a distinguished citizen of my district, the Honorable John Edgar Murdock, chief judge of the U.S. Tax Court, it gives me great pleasure to note his reappointment for the third consecutive time as chief judge of the court.

A brief summary of Judge Murdock's background follows:

Murdock, John Edgar: Judge, the Tax Court of the United States; born at Greensburg, Pa., July 11, 1894; son of Henry H. and Mary Martha (Machesney) Murdock; Litt. B; Princeton, 1916; LL.B., cum laude, University of Pittsburgh, 1921; married Sarah Lynch, September 24, 1923; children: John Edgar, Sarah Martha, Elizabeth. Admitted to Pennsylvania Bar, 1920; Second Assistant District Attorney, Westmoreland County, Pa., 1922-25, First assistant 1925-26; appointed member U.S. Board of Tax Appeals (now the Tax Court of the United States) for terms

1926, 32-68, elected chairman (title changed to presiding judge, 1942) for term 1941-43; reelected presiding judge for term 1944 45; elected chief judge, terms 1955-57. President of the Children's Hospital, Washington. First Lt., infantry, U.S. Army, 1917, captain, 1918; with A.E.F., 1918-19. Awarded silver star citation, Member American Bar Association, Order of Coif, Republican, Presbyterian. Clubs: Princeton (Wash); Chevy Chase; Rolling Rock. Home: 2940 Foxhill Road; Office the Tax Court of the United States, Internal Revenue Building, Washington, D.C.

Mr. Speaker, my gratitude, admiration, and best wishes are relayed to Chief Judge Murdock.

## Tribute to Pierre Harnois: Dedicated Police Officer

EXTENSION OF REMARKS OF

## HON. JAMES C. OLIVER

OF MATNE

IN THE HOUSE OF REPRESENTATIVES

Friday, June 5, 1959

Mr. OLIVER. Mr. Speaker, we, in Maine, continue to mourn deeply, the death of Pierre Harnois, the courageous Westbrook police chief who gave his life in the line of duty. "Pete" Harnois was a dedicated police officer, who saw his duty and did it without fear of the consequences.

One cannot help but reflect on what Pete Harnois would have accomplished if he had been able to live a full life. A standout athlete in high school and college, a diligent FBI agent, and a police chief of one of the largest communities in Maine at the age of 31, it is not difficult to envision the heights to which Pete would have risen.

Chief Harnois' devotion to duty is highly symbolic of the spirit of dedication possessed by law enforcement officers who continually guard our country, our lives, and our property. Americans tend to be overly critical of law enforcement officials. We are too prone to look for faults, not for the many ways in which police officers give so much of themselves in order to protect the public welfare. It takes the death of a dedicated officer like Pete Harnois to jar us our of our complacency, realizing the tremendous sacrifices that these public servants oftentimes are required to pay.

Mere words, Mr. Speaker, are inadequate to express society's debt to men of the caliber of Pierre Harnois.

Mr. Speaker, I wish to include an article from the Boston Daily Globe of May 24, outlining the highlights of Pete's career and the ordeal in which his life was ended:

## (By James H. Hammond)

PORTLAND, MAINE.-Tacked over the front doorbell of a small wooden frame house at 101 Woodford Street, is a sign advising callers to, "Please use the rear door."

The sign was placed there May 14, a few hours after Pierre Harnois, 31, Westbrook's police chief, had been killed in a battle with a berserk Limerick furniture manufacturer. It is still there tonight, and probably will be for some time.

The notice insures privacy for Pierre's mother, Evangeline, who collapsed on the kitchen floor when she heard of her son's death.

Now, just a mother with her memoriesmany trophies attesting Pierre's ability as an athlete are nearby—Evangeline Harnois is under the care of doctors and her two married daughters, Mrs. Melvin Deroche and Mrs. John Taliento, both of Portland, who are former nurses.

Arthur Harnois, the father, greets callers at the rear door, and escorts them to the kitchen in the ell which he built himself as his family of six-five girls and one boy. Pierre-outgrew the house.

"I turned the radio just in time to hear 'Chief Pierre Harnois of Westbrook is

dead'."

"My wife was standing beside me. She fell to the floor."

"She is still in shock."

Yvonne, a first year graduate student at the Boston College School of Social Work. slipped into the room through a door leading from the front of the house, and sat beside her father with a large scrapbook, filled with clippings.

"Pierre was a home boy," said his father. Even in his high school days he wanted

to be a law enforcement officer.

Yvonne interrupted with a burst of pride to say:

"You know Pierre was the first four-letter man at Cheverus High. Would you care to see this scrapbook? I've kept clippings on him."

The news items, for the most part, are devoted to Pierre's short tenure of 15 months as police chief of nearby Westbrook.

The clippings tell how he inaugurated a program of strict law enforcement; parking bans, speeding drivers. They also relate that he was a tireless worker on the community level, speaking at Kiwanis meetings, other luncheons, or referesing a basketball game.

Arthur traced his son's army career and higher education at Westbrook Junior College and Miami University.

'He came home from Miami and said that

he wanted to go into the FBI. "He was in the FBI for 2 years. One day a letter to his mother came from him in

California.

"He wanted to know if his room was still here. She said, 'Yes.'

"So he resigned and came home."

Arthur paused. The stillness of the room was broken only by the noise of an old-fashioned pendulum clock ticking away the lateness of the hour.

"Pierre had several jobs after coming home, but he was not happy.

"One day he saw a notification in the paper about an examination for the job as police chief of Westbrook. He topped the list and won the position.

"He'd been doing a remarkable job, too," the father added modestly.

Members of the Westbrook Police Department similarly praised their chief.

"Pierre was well liked," said Sgt. Philip Hansen, the officer on night duty at the Westbrook police station.

"He had a sense of humor. He always was 5 years ahead of you when he talked.

"Hansen revealed that while Harnois was strict, he was a great guy with the children in the city.

"The kids used to flock in here and he'd pass out money to them. I know, for my girl was one of them.

"When the Girl Scouts had their cookie sale, he loaded up with them.

"I'll bet he lived off them for a month. I thought he was going to turn into a cookie before he got through."

Another officer broke in to add:

"He'd never ask you to do anything he would not do himself.

"If there was a raid his was the first shoulder to hit the door."

It was this attitude of civic responsibility that led to Pierre's death.

On May 14, he and Sergeant Hansen had left the station when a call came in that a Maine State trooper was pinned down in

Limerick, 30 miles away.
"Do you have a tear gas-shotgun?" was the query. The officer on duty notified Pierre.

He could have sent the gun by police

But he didn't. True to the code of being a leader, he and Hansen roared off to help, with the tear-gas gun and shells.

On arrival at the scene, he found the

battle in progress.

Trooper Willard Parker and Game Warden Charles Corcoran, both of Limerick, were pinned down by the deadly accuracy of the fire of Gordon G. Hamlin.

Previously, Hamlin killed his wife with two shotgun blasts as she fied across the street to the home of a neighbor, Mrs. Jessie Mitchell.

He then blasted at Parker from inside the house as the trooper tried to talk through the front door.

Parker had fied slightly wounded and took refuge behind a big tree.

Corcoran was pinned down in an attempt to call for help through Parker's radio.

Most of the nearby residents had taken shelter as additional troopers, and other armed law enforcement officers converged.

Diagonally across the road at No. 3 Central

Avenue, was Doris Mongeau, 16, recovering from an operation to correct a curvature of the spine.

Doris was in a bed, her body in a cast from her neck to her hips. She had been studying to keep up with the other members of freshman class at Limerick High.

The sound of the shot startled her. father came into the living room and pulled the bed out from the living room wall so that Doris could peer through the venetian blinds.

Doris saw Parker walk up to the door and reel back under the blasts of Hamlin's shotgun.

She was propped up on one elbow and had

a commanding view of the entire scene.

As additional officers arrived, the battle Intensified.

Doris didn't know Pierre. She merely knew him as the man in a blue uniform. Later she learned his identity.

"I saw the officer (Pierre) run across the

"He leaped up and raised the gun in his arms to shoot through a first floor window. "I heard a gun go off and the officer fell back to the ground where he moved for a moment.

Doris didn't see the finish of the 5-hour battle.

She began to cry. Her father and mother lifted the mattress from the bed of the living room turned bedroom and carried the girl to the kitchen in the rear of the house.

She still finds it difficult to resume her studies at home. Until now with the aid of special instructions she had kept up with the rest of her class.

Doris' mind isn't the only one to carry the harrowing moments of the battle in this quiet Maine community. Many other

residents won't forget.

The fight took place a short distance away from the foot of Break Neck Hill.

But the area won't be known because of the steep downgrade after this.

The "Little Guy" Gets Soaked

EXTENSION OF REMARKS OF T

## HON, HOWARD W. ROBISON

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES Friday, June 5, 1959

Mr. ROBISON. Mr. Speaker, under leave to extend my remarks in the Rec-ORD, I include the following editorial from the current issue of the Saturday Evening Post which has a bearing on what this Congress is doing to the small taxpayer:

It's the "Little People" Who Pay the Taxes (By L. Robert Driver)

It is a strange American political phenomenon that, although most of the vocal protest against more Government spending and higher taxes comes from the well-to-do. it is actually the small- and middle-income people who pay the taxes. This is true simply because there are so many more people with low incomes. Even if we raised the income tax to 100 percent on all taxable incomes-that is, income, after exemptions and deductions, over \$6,000 a year-the extra revenue would not pay the annual interest on the Federal debt, much less take care of the new demands of the spenders.

We are now facing a Presidential budget for the year ending June 30, 1960, of \$77 billion and tax receipts estimated at \$77,100 million, indicating a surplus of \$100 million provided gasoline taxes are increased and other tax rates remain the same. These tax receipts are probably overestimated, and we face the likelihood of another deficit. The deficit for the year ending June 30, 1959, is now estimated at \$13 billion. Regardless of this, many Members of Congress are saying that the proposed expenditure of \$77 billion is too little in view of "human needs."

The same politicians who tell us that we should spend more for defense-and they could be right-also insist on more money for public power and handouts. Going into debt for national defense can be compared to a family's borrowing money to pay doctors' bills, but no prudent family would go further into debt to build a swimming pool in the back yard with more medical bills to be expected.

Not only does the "little fellow" pay the bulk of direct taxes, but as the Federal debt continues to mount he faces the prospect of paying an even crueler tax through the medium of inflation.

If we increase our expenditures, we must increase our taxes. The burden will fall on the lower income people-because the wealthy could not pay a substantial part of our taxes even if we took all of their income. About 53 precent of our Federal taxes are derived from the personal-income tax, but 73 percent of the revenue from the Federal income tax comes from people with annual taxable incomes of \$4,000 or less. The revenues from taxable incomes in excess of \$4,000 is only 14 percent of the total Federal taxes received.

At present, income tax rates are as high s 91 percent. The Tax Foundation has prepared a table showing that, with a maximum tax of 70 percent, the revenue for the year 1955 would have been reduced by no wear 1955 would have been reduced by ho more than \$145 million. This is not enough to operate the Federal Government for 1 day. But with a 70-percent tax on the highest income, an investor in American industry would find it more worthwhile to put his money into progressive American

industry. If this happened, the Treasury would soon get back the \$145 million which it "lost" because of the lower rate.

On the other hand, if the tax should be increased to 100 percent on taxable incomes above \$26,000 it would increase the Government's receipts by enough to pay about 1 percent of the total Federal taxes proposed. Hardly enough gain to justify the liquidation of many of our most productive people.

The idea of soaking the rich is good campaign material, but the figures show that the rich cannot help us much in paying off our large debt and meeting the costs of government. Taxes have to be laid where the income is, and that means on the middle-class and the lowest-income groups as well as the millions of people who pay no personal income tax.

Federal income taxes from corporations represent 28 percent of the estimated Federal taxes included in the \$77,100 million for the next year, and excise and other Federal taxes 19 percent. The public has been led to believe that, since these taxes are paid by corporations, the rest of us need worry about them. The simple fact is that these taxes are inevitably passed on by the corporations to the purchasers of their goods and services. A corporation which didn't include taxes in its cost structure would collapse.

is a paradox that those who urge reduction of Government expenditures, which would help the tax-ridden little fellow, are denounced as reactionaries, while the spenders, whose policies are leading to his ruin, are embraced as his friends.

## Some Interesting Figures on Free American Economy

EXTENSION OF REMARKS OF

#### HON. FRANCES P. BOLTON OF OHIO

IN THE HOUSE OF REPRESENTATIVES Friday, June 5, 1959

Mrs. BOLTON. Mr. Speaker, there is so much pessimism being voiced these days that it is particularly good to find an editorial in the Cleveland Press of June 3, commenting on the recuperative power of the free American economy. urging watchfulness in the matter of inflation. Under unanimous consent, I include the editorial with these remarks:

SOME INTERESTING FIGURES ON FREE AMERICAN ECONOMY

Recalling political hysterics of a short while back, it is well to take a look at some current figures from the Commerce Department:

Personal income in the United States soared to record sums in April-\$3,200 million above the month before.

Most of the increase-\$2,700 million-was in wages and salaries largely because jobs increased by more than a million. were 65 million at work.

Total personal income for 1958 was \$354 .-400 million. The estimate for this year is \$374 billion. At the present rate of increase, it will be considerably larger than that.

These are hard-dollar increases since the cost of living index has held stable now for nearly a year.

The generally favorable trend has dampened political ardor for recession busting measures which would spend more billions, just to get the money in circulation, and thus would cause more deficits and more inflation.

Here is an example of the strong recuperative powers of the free American economy, when given a chance free of additional government interference.

A principal reason for the upward trend in jobs and business is the relative stability of prices, inspiring new confidence in the

future.

The continuing fight against inflation is the thing to watch. Upon its success largely depends the prosperity of the country.

## The Terrible Thing

EXTENSION OF REMARKS

## HON. WATKINS M. ABBITT

OF VIRGINIA

IN THE HOUSE OF REPRESENTATIVES Friday, June 5, 1959

Mr. ABBITT. Mr. Speaker, for a number of years, Prince Edward County, Va., has been under the guns of the Federal judiciary. The board of supervisors, which is the governing body in the county, made a most momentous decision this week. This decision made headlines in many of the newspapers of the Nation.

There appeared in the Richmond News Leader of Wednesday, June 3, 1959, an editorial that explains very cogently the background and the reasons for this de-

cision.

Due to the interest in the situation and in the hope that at least some of the people of the Nation will know the true facts, I desire to include as a part of my remarks this editorial entitled "The Terrible Thing." The editorial is as follows:

## THE TERRIBLE THING

Clear across the country today, editorial writers and vocal politicians will select their very choicest adjectives, as a housewife picks the very ripest fruit, to fling at Prince Edward County, Va. The schools of Prince Edward are national news, and the county's decision to close those schools is a national story. By nightfall, the barrage of abuse, insult, scorn, and stupidity will be well underway.

Before the noise gets overwhelming, it may be useful to say a few things quietly.

Yes, this is a terrible thing. If the county's decision stands up (and we have in mind here only the uncertainties of Virginia law), it will mean the closing of three high schools and 18 elementary schools. For nearly 3,000 pupils—1,300 white children and almost 1,700 Negro children—it will mean a halt to public education. For 70 Negro teachers and principals, it will mean a search for new positions. For the county's white children and white teachers, the autumn will bring both the challenge and the hardship of a new private school operation.

If any of our northern critics believe Prince Edward reached this melancholy decision in any mood of defiance or bigotry or race hatred, such critics are woefully mistaken. There is not as much race hatred in the whole of Prince Edward County as there is in one precinct of Philadelphia or Detroit. The county is not defying any court. The county was ordered not to deny any child admission to a public school by reason of race, and the county will obey

that order to the letter. In September, no child will be denied admission to a public school for any reason. There will be no

public schools.

We would say to our uncomprehending brethren of the North that in the summer of 1959, in Prince Edward County, Va., there was nothing else the board of supervisors could have done but what the board did yesterday. The county had sought by every honorable means to avoid this step. White parents, whose children are numerically the minority group, taxed themselves heavily to build a new Negro high school in the hope that such an institution might satisfy legitimate demands of Negro residents. The county was fully prepared to take other steps, at the elementary level to achieve a public school system that would honestly fulfill the needs of both races.

But it swiftly became apparent, 8 years ago, that the National Association for the Advancement of Colored People was not interested in the education of Negro children in Prince Edward County. The NAACP's chief interest was not even in putting an end to segregation. The aim was compulsory integration—the intimate race-mixing of white and colored children in the classrooms, playgrounds, and buses of the county—and nothing less than this would suffice.

Prince Edward County resisted this demand as best it could. The county won in the district court, won again in the fourth circuit court of appeals, and then lost (the whole country lost) in the historic decision of May 17, 1954. Five years of further litigation followed, and for a time it appeared the county had won an extension to 1965. Then a few weeks ago, that wise and compassionate decision by an able district judge, Sterling Hutcheson, was rudely overthrown by a new fourth circuit court that bears no discernible resemblance to the former great court of John Parker and Armistead Dobie. The court angrily ordered an immediate beginning of integration. This fall, And while Prince Edward County is devoted, as only a rural county can be, to the cause of public schools, the county is not willing to pay for public schools at any price.

Perhaps the county could yet seek further delays in one more petition for appeal to the Supreme Court in Washington. In theory, perhaps this is what the county ought to do. But the people of Prince Edward have lived nearly 10 years in a state of suspense, apprehension and uncertainty; they have not the slightest reason to suppose that Earl Warren and his colleagues have learned anything in this time; they could expect only one more adverse decree. They are weary of litigation. The breaking point is at hand.

This newspaper alines itself solidly behind the decision of Prince Edward. We hope, in the course of time, to see some educational opportunities provided for all the children of the county. Meanwhile, we recommend to our readers, without reservation of any sort, the Prince Edward Educational Corp. We know the people at the head of this wholly private academic organization; they are good honest and upright people. Contributions or pledges may be addressed to the corporation simply at Farmville.

Let us say once more: Yes, the county's decision is a terrible thing. At a time when education is so vitally necessary to Western civilization, the closing of even a one-room country school is a pity. Yet the county's decision, made necessary by centuries of custom and by the very pattern of the county's life itself, is not nearly so terrible as the wicked and shameless act of the Supreme Court of the United States which led up to it. By abandoning every precept of constitutional construction, and arrogating power bratally to itself, the Court brought this tragedy about. The people of the county,

white and Negro alike, merit our sympathy. The Court merits only contempt.

So the lights of public education blink out in Prince Edward County. The NAACP has won its lawsuit, and the Negroes have lost their schools. It is a victory for no one. It is tragedy for everyone. But the greatest tragedy of all is the tragedy least understood outside the South—the destruction by judicial tyranny of the very safeguards once written into law to prevent such tragedies from coming to pass.

## The Spirit Lives On

EXTENSION OF REMARKS

## HON. EDWARD H. REES

OF KANSAS

IN THE HOUSE OF REPRESENTATIVES
Friday, June 5, 1959

Mr. REES of Kansas. Mr. Speaker, I am enclosing herewith a wonderful editorial by David Lawrence that appeared in a recent issue of the U.S. News & World Report. I am sure Members of the Congress, as well as others who read the Congressional Record, will be interested in this splendid tribute to a great American:

The accolades have been bestowed and the eulogies have been spoken. The tasks performed by the departed have been delegated to an able successor. What cencerns us now is whether the eminent statesman who has been lost to the free world has left an enduring legacy.

The fame of John Foster Dulles spread to

The fame of John Foster Dulles spread to the four corners of the earth because he was an indomitable fighter for a great cause. He was brave in life and braver still as, with a full awareness of his fate, he approached the

brink of death.

It is our duty now to examine carefully the legacy of moral principle which he bequeathed to us. For he strove indefatigably to spare the peoples of the world another big war. He was maligned as "inflexible" because he would not compromise with evil. He was denounced as too "rigid" because he refused to bow to the deceptive wiles of an unscrupulous adversary. But he invariably tried every resource of argument and every formula of honorable adjustment in order to achieve acceptance of a simple truth—that peoples must be free to work out their own destiny and that military force must be renounced as the sole means of settling international disputes.

Mr. Dulles believed in personal diplomacy. He tried with all the earnestness and sincerity of spoken words to overcome face to face the handicaps of long-range communication—the cumbersome language of instruc-

tion to faraway ambassadors.

In an age of air travel, the American Secretary felt it would take relatively little of his time to-maintain personal contact with high officials of other governments, and he didn't worry about the critics who said he was away from Washington too much. On accepting the post, Mr. Dulles explained to President Elsenhower why he believed in frequent missions overseas. He urged that he not be required to administer the details of his large department. As it turns out, a competent staff—from which the new Secretary of State was chosen—is still functioning today as it has in the past during the absences of Mr. Dulles.

But it is no criticism of the viewpoint which Mr. Dulles held to say that the multiple problems that he handled would appear to be too much for any one man. It would have been better if there could have been established, inside the Department of State, a council of five outstanding men to function without administrative duties but concerned primarily with the broad principles of foreign policy. Such a plan was outlined on this page on November 14, 1952. The problem deserves anew the careful attention of the Congress and the administration.

The world is fortunate that Mr. Dulles was able to carry the load so well. He could do so only because he derived added vigor from his unswerving confidence in the rightness of the principles he espoused. God gives inspired men extra strength to fight

the battles of mankind.

The essence of the Dulles philosophy in foreign policy was that morality must triumph over unmorality, that a surrender to expediency can only lead to eventual disaster. He was ever mindful of how the paths of appeasement led to two world wars. He saw no merit in cringing before the enemy or in taking any steps that could be construed as weak or irresolute. He believed that, to avoid war, it is necessary to risk war. On this he never deviated, though the cynics ridiculed his willingness to take risks as mere brinkmanship.

Nor did Mr. Dulles ever allow material considerations to sway him. His hardest decision undoubtedly was his recommendation that the United States publicly disapprove of the British-French policy in the attempted seizure of Suez by force in 1956. For this, he has never been forgiven in certain quarters in London and Paris where resentments still rankle. But the courageous application of a principle against friend and foe alike is a mark of true moral-

ity itself.

To withhold diplomatic recognition, moreover, from the regime in Peiping required a heroic determination and an unflinching devotion to principle. Too many people have been ready to forgive Red China's aggression and accept criminal rulers into respectable society, endowing them with a

prestige they do not deserve.

Are we who remain behind willing and ready to carry the banner that John Foster Dulles held aloft and, irrespective of political party, put moral values above the passion for material gain and ephemeral comforts that so often present such alluring alternatives in dealing with world affairs? Or are we to forsake ideals because that is seemingly the easier way?

The spirit of America has always been consecrated, on the battlefield and elsewhere, to the attainment of unselfish ends—that liberty and freedom might be enshrined throughout the world. This was the spirit that Mr. Dulles breathed throughout his whole career. This is the spirit which will live on because it was and is the spirit that from the birth of the Republic has guided the American people in war and in peace.

## Land Limitation Should Be Kept in Right Order

EXTENSION OF REMARKS

## HON. JOHN E. MOSS

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES
Tuesday, May 26, 1959

Mr. MOSS. Mr. Speaker, there has been a great deal of misinformation released recently by certain groups over the application of the Federal 160-acre

limitation to lands proposed to be served by the joint Federal-State San Luis project in California.

In this connection, under leave to extend my remarks in the RECORD, I commend to the attention of the Congress the following editorial from the Sacramento (Calif.) Bee of June 1, 1959:

LAND LIMITATION SHOULD BE KEPT IN RIGHT ORDER

Those who have injected the 160-acrelimitation issue into the congressional debate over the San Luis project may be well meaning enough, but by their misdirected efforts they are jeopardizing the chances of getting this much-needed project under way.

The question of applying an acreage limitation to the land to be served by the State's portion of the San Luis project is completely extraneous to the matter before Congress, which is to authorize the part of the dam and reservoir to be built by the Federal

Government.

Lands irrigated by Federal water will be subject to the 160-acre limitation in Federal law, and nothing in the proposed act would change that. It is for the State to determine what it will do in its service area, and for the Federal Government to attempt to impose Federal policy on lands irrigated with State water would be out of place and of dubious constitutionality.

Assemblyman Edwin L. Z'berg, of Sacra-

Assemblyman Edwin L. Z'berg, of Sacramento County, has introduced a resolution in the legislature calling for an interim study of acreage limitation and other policy matters in connection with the State's water

projects.

This investigation most certainly should be made and it should be made in time for legislative determination of these policies before the people are asked to vote on the huge State water bond issue.

Those who are churning the air in Washington, D.C., in respect to Federal legislation would be much better advised to exert these same efforts toward the adoption of the Z'berg resolution and in seeing that a full study is made of the issues at stake.

Congressman B. F. Sisk, of Fresno County, author of the Federal San Luis legislation, rightly is concerned by the idle furor in Washington. It does not seem to matter one whit whether the congressional act says Federal reclamation laws shall or shall not apply to the State service area since such a provision likely would have no legal standing whatsoever.

It is never easy to get legislation for western water projects through Congress and the meaningless tempest stirred up over the San Luis bill could be the straw to bring about its defeat, which would be ironic indeed.

U.S. Senator Paul Doughas of Illinois, who recently appeared in the zealot's role for the 160-acre limitation in the upper House, never has been an outstanding champion of western reclamation. And it is noteworthy that just a year ago Douglas himself sponsored a bill to modify the 160-acre clause in reclamation law.

The American Legion's Views on Pensions

EXTENSION OF REMARKS

## HON. OLIN E. TEAGUE

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES

Monday, May 18, 1959

Mr. TEAGUE of Texas. Mr. Speaker, under leave to extend my remarks I in-

clude the statement made this morning before the Committee on Veterans' Affairs by the national commander of the American Legion, Mr. Preston J. Moore.

The general subject of non-service-connected pensions has been under close and continuous study by the Committee on Veterans' Affairs and various veteran organizations for the past several years. The American Legion has been most cooperative in working with the committee and viewing this entire problem in the proper prospective.

I commend to the Members of the House the statement which the commander made before the committee this

morning:

STATEMENT BY PRESTON J. MOORE, NATIONAL COMMANDER, THE AMERICAN LEGION, BEFORE THE COMMITTEE ON VETERANS' AFFAIRS, HOUSE OF REPRESENTATIVES, CONCERNING THE OPERATION OF THE NON-SERVICE-CONNECTED VETERANS PENSION PROGRAM, FRIDAY, JUNE 5, 1959

Mr. Chairman, ladies and gentlemen, the American Legion appreciates the opportunity to appear before this committee to testify on the operation of the non-service-connected

veterans pension program.

For some time a number of persons have been studying the pension program in an effort to recommend improvements where indicated. Certainly, this committee has shown a great interest in that objective, and I am happy that the American Legion has been able to cooperate in the study. I would like this morning to review briefly the nature of the pension program, and to discuss those areas in which change seems in order.

The pension program is a needs program.

It is not a retirement plan.

Pension is made available by the Nation out of gratitude for service in time of war and is intended to be money which the beneficiary can accept without the slightest loss of self-respect. While it is a form of public welfare, it is not the same as a dole or charity. In fact, it is provided in an effort to keep war veterans from having to fall back on public or private charity. There is a distinction because the pension flows from gratitude and not social necessity.

It is interesting to note that when the disability pension program was initiated in 1930 the needs test was set at a level high enough to insure against anyone confusing the pension with charity, or associating the receipt of pension with indigency. The Congress wanted to avoid anything which resembled the form or substance of a pauper's oath.

The concept of need for purposes of ordinary public assistance is such that the recipient is given support only up to the subsistence level. In addition, the measurement of need under the State-administered programs is such that it sometimes tends to offend and humiliate applicants. In some States the application of property liens and stringent net worth standards tends to further pauperize recipients of public assistance.

Such a concept of need will not satisfy the purpose of the war veterans pension program.

While the Nation cannot provide full support through the pension system, it wants its veterans to be able to live at a level beyond the constant shadow of want—to be able to enjoy their remaining years in comfort and dignity and not merely exist on a "bare bones" standard.

The American Legion has had experience with those in need. We have been helping such persons since our organization was founded. It is in fact our mission and our reason for being. We do not have the resources of scientific investigation possessed

by the Government, but our position on this subject has been established by the barometer of public opinion, and our mandates reflect that public opinion. As a result our requests have shown a sensitivity and a sympathy and a high degree of humanitarianism which we sometimes find lacking to a conspicuous degree in statistical data presented.

We must bear in mind that when we are considering the disability pension program we are discussing men who are permanently and totally disabled and who are in financial need. As a matter of fact many of these have service-connected disabilities but elect to receive pension because it exceeds their compensation award.

And now I would like to discuss some of the areas in the pension program that have received attention recently. It has been pointed out that the flat income limitation is imperfect because it imposes an "all or nothing at all" concept, and because it falls to provide those in the greatest need with adequate pension. The American Legion sees merit in this observation and sub-scribes to a graduated scale, provided adequate payments are authorized. I feel that the following tables indicate rates which would provide adequate pension for all, and will give substantial increases to those most in need, the great bulk of our pensioners. Veteran:

Single:	
\$0 to \$600	\$90
\$600 to \$1,200	75
\$1,200 to \$1,800	
Married:	
\$0 to \$1,000	90
\$1,000 to \$2,000	75
\$2,000 to \$3,000	
Add \$70 for aid and attendance allows	nce.
Widow:	
80 to \$600	\$60
\$600 to \$1,200	50
\$1,200 to \$1,800	30
Widow with one child:	
\$0 to \$1,000	75
\$1,000 to \$2,000	60
\$2,000 to \$3,000	
Add \$12 for each additional child.	-
Children alone:	
\$0 to \$1.800:	
1 child	835
2 children	
3 children	59

Add \$12 for each additional child. The pension awards were last adjusted in 1954. There has been a 12 percent increase in the cost-of-living index since that year (110.3 to 123.8). The rates selected must at least compensate for that rise in the cost of living.

It has been said that existing pension leg-Islation is deficit in that it does not authorize the Veterans' Administration to count all moneys the veteran may have available. feel that it would be equitable to permit the VA to take cognizance of 50 percent of a spouse's income provided the money is available to the veteran. We suggest, therefore, that if spouse's income is counted the Administrator be given authority to allow a claim for pension notwithstanding spouse's income if the Administrator determines that to count such income would work a hardship upon the veteran. I have in mind a situation where the spouse's income is not available to the veteran because it is needed for other purposes, such as the wife's medical expenses. There are a number of existing administrative regulations and legislative enactments which exempt certain income. There is much to be said for continuing these exemptions. I have particular reference to such items as:

- 1. Donations from public or private welfare organizations.
  - 2. Payments by VA for disability or death.

3. Burial expenses (including amounts used for payment of just debts and last illness)

4. Proceeds of fire insurance policies.

5. Lump sum benefits under OASL

6. Six months death gratuity.

7. Recoupment of payments made to OASDI, endowment policies, annuities, and so forth.

It has also been indicated that the present law should be strengthened by authorizing the Administrator to consider a veteran's estate in determining eligibility to pension. We note that the Administrator has possessed this authority for a number of years in determining certain claims by dependent parents for death compensation It seems reasonable to extend this test to the pension field provided we can be assured that it would be applied in the same manner that it has been in the cases of dependent parents. We would oppose any requirement, for example, that would compel an applicant to diminish his homestead.

There is a serious deficiency in pension legislation which we have recognized for many years. I refer to the fact that widows of veterans of World War II and the Korean conflict must meet different and more severe eligibility standards than widows of veterans of World War I. Since 1946 the American Legion has sought legislation which would establish equalization of requirements. We renew our request at this time.

There are, I am sure, other imperfections in pension legislation, other areas in which improvement can be made. I have stressed the most important. We anticipate that time and experience will indicate the need for further adjustments in whatever amendatory legislation is proposed.

May I close by again expressing my gratitude for this opportunity to appear and for the interest manifested by this committee in our mutual problem.

## Publisher Sheldon Sackett Brings Matter to Attention of Congress

EXTENSION OF REMARKS OF

## HON. CHARLES O. PORTER

OF OREGON

IN THE HOUSE OF REPRESENTATIVES Tuesday, June 2, 1959

Mr. PORTER. Mr. Speaker, under leave to extend my remarks in the REC-ORD. I include the following article from the Wednesday, June 3, 1959, issue of the Coos Bay World at the request of Mr. Sheldon F. Sackett, editor and publisher of the World Newspapers, including the Coos Bay World. Editor Sackett has petitioned the Federal Communications Commission to void the proposed sale of radio station KLX to the Crowell-Collier Publishing Co. by the Knowland family.

Editor Sackett shipped copies of his June 3, 1959, Coos Bay World to Washington, D.C., this week. At his request a copy of the newspaper was distributed to each Member of the Congress.

SACKETT ACCUSES KNOWLANDS OF RADIO FRAUD, BUT SOME DOUBT ABOUT FCC, SEC ACCEPT-

(The World of Coos Bay is the first daily / newspaper in the world to break this story.) SAN FRANCISCO.-The Knowland family publishing empire today was accused of gaining fraudulent control of its radio station KLX, Oakland, and the Federal Communications Commission was asked to void the proposed sale of KLX to the Crowell-Collier Publishing Co.

The Knowlands-owners of the Oakland Tribune-are Joseph R. Knowland, elderly publisher of the paper, and his two sons, William, immediate past Republican leader in the U.S. Senate and defeated GOP California gubernatorial candidate, and his brother, J. Russell Knowland.

Bringing the charge in a petition to FCC in Washington, D.C., was Sheldon F. Sackett. Sackett is editor and publisher of The World Newspapers, including the Coos Bay He formerly owned radio KROW in Oakland.

There was some question, however, whether his petition was filed.

Mary Jane Morris, secretary of FCC, has not wired receipt of the petition up to 10 a.m., p.d.t. although the petition, and a mass of supporting documents, were sent by registered, airmail, special delivery at 8 p.m., p.d.t., Monday.

But Senator CLAIR ENGLE, Democrat of California, wired Sackett this morning he understands the petition was filed early this morning and that FCC sources said it was timely and to the point of the case now pending before FCC: transfer of the KLX license from the Tribune Building Co. to the Crowell-Collier Publishing Co.

Crux of Sackett's petition is that the Knowlands, in transferring the KLX license from the Tribune Publishing Co. to the Tribune Building Co. in 1933, failed to state in sworn affidavits that ratio of ownership of the station was affected in the switch.

The Federal Communications Commission and its predecessor, the Federal Radio Commission, have always insisted that true ownership of a company to which it grants a broadcasting license be a matter of record.

Sackett's contention is that true ownership was not a matter of record when the license was switched in 1933, and has not been since.

#### KNOWLAND GAINED CONTROL

The case goes back to the oft-quoted "Strange Case of the Oakland Tribune," whereby Joseph Knowland took over control of the big daily newspaper from Mrs. Herminia Dargie and from her estate in a long-drawn-out probate proceeding.

In Mrs. Dargie's later years, the Tribune Publishing Co. was owned 50-50 by she and Knowland, according to Sackett's petition to FCC. Mrs. Dargle was the widow of the Tribune's founder. The KLX license was in the name of the publishing company.

Sackett alleges the license was transferred with permission of the Federal Radio Commission to the Tribune Building Co. on a plea that labor difficulties would be avoided with the transfer.

What was not revealed to the FRC, however, Sackett's petition alleged, was that the Tribune Building Co. was owned approxi-mately 51 percent by Knowland and approximately 49 percent by the Dargie estate (she had died by 1933).

This, Sackett claims, is in violation of the Federal rule that true ownership of a station cannot be changed without being a matter of record.

#### PRICE SAID \$20,000

The price of the sale from the Tribune Publishing Co. to the Building Co. was only \$20,000, Sackett said. Later, the Knowland family gained control of the Dargle estate's shares in both the Publishing Co. and the Building Co. in a court sale, with the proceeds being distributed to the Dargie heirs.

The Knowlands now propose to sell KXL to the Crowell-Collier firm for \$750,000 cash. The proposition is before the FCC. Deadline for protests of Sackett's type is this coming Friday, June 5.

Regarding the sale of the station from the Publishing Co. to the Building Co., Sackett's petition said: "There is no scintilla of evidence whatsoever that the true purpose of the sale was disclosed. Nowhere does the application state that the Knowland family was moving KLX from a 50-50 ownership to a corporation controlled by the Knowlands. \* Nor is there any evidence \* \* \* that the estate of Mrs. Herminia Dargie going through probate in the superior court in Calif., was notified." Oakland.

The petition notes that sworn statements under penalty of perjury were signed by officials of the Building Co. that no true change of ownership of the license was taking place.

#### ASKS SALE DELAY

Sackett asked that the present sale be held up pending a full dress FCC probe.

Copies of the petition and evidence went to a number of persons, including President Eisenhower, Vice President Nixon, the Securities and Exchange Commission, U.S. Attorney General William P. Rogers, the California U.S. district attorney, the presiding judge of the Alameda County superior court, and the Alameda County district attorney.

But this morning there was some question in Sackett's mind, whether the FCC had received or had accepted his petition. His letter of transmittal asked that he be sent a collect wire of filing time. None had been received at midmorning, more than 31/2 hours after mailing, although Senator Engle wired that he understood the petition had been

filed early this morning.
Sackett last night sent the following night letter to Mary Jane Morris, secretary of the Federal Communications Commission in

Washington:

"At 8 p.m., p.d.t., I mailed to you from the Rincon Annex, San Francisco, post office certain matters for filing that day in the

"In my letter of transmittal I requested (1) if there were any questions to be asked about filing to call me collect at my given telephone number, 126 Sutter Street, World Newspapers, San Francisco, Calif., and (2) in lieu thereof to wire me collect at the same address the precise hour and minute of filing.

"Thus far I have received no wire what-

soever from you.

"I await your pleasure.

"For your full information, the Post Office Department informed me that the special delivery, certified, airmail letters would reach your office on about noon, June 2, e.d.t. Your silence is disquieting to citizen.

"I therefore feel obliged to wire the full text of this inquiry to President Eisenhower, who is charged with the administrative leadership of Government by his constitutional

"I am also concurrently wiring this to Senators Kefauver, Magnuson, Morse, and ENGLE, all of whom I know well. Three, as you know, represent the Pacific coast tier of States and Senator KEPAUVER is an ace investigator of proven standing.

"Frankly, I cannot understand why it is so difficult for a citizen to obtain ministerial service from a department charged by with a receipt of protest filed timely within the 30-day protest period.

"Your immediate response, collect, to this inquiry is respectfully demanded.

"SHELDON F. SACKETT Petition Pro Bono Publico, World Newspapers, San Francisco, Calif."

Western Union reported delivery of the wire to Miss Morris at 8:15 a.m., today eastern daylight time.

#### COPIES TRANSMITTED

Sackett sent the same night letter, plus a covering wire, to President Eisenhower. Senator Estes Kefauver, Senator Wayne Morse, Senator Warren Magnuson, Senator Clair Engle, and ex-President Harry S. Truman. The covering night letter said:

"The writer has just dispatched the following night letter to Miss Morris, secretary of the FCC. This matter is urgent. May you not give a citizen seeking ardently to file a perfectly proper document with his Government at Washington the consideration given to anyone else in having access to the facilities of orderly, public govern-

"I take it the right to petition is constitutional and I shall appreciate and hereby express my advance thanks, for your ve-hement, prompt, unyielding demand that there be no further suppression of my statutory and constitutional rights to petition for a redress of grievances and to have my complaints immediately, without delay and without questioning, accepted for Federal

"As you know, I have already provided each of you with full texts of my complaint plus the accompanying exhibits. wire me earliest Wednesday morning how you are faring in securing the right of an ordinary citizen to have his day in the administrative bodies chartered by the Con-

"With best regards, I am, sincerely yours,
"Sheldon F. Sackett,
"Editor and Publisher World Newspapers, San Francisco, Calif."

Western Union acknowledged delivery of the night letter to President Eisenhower at 5:32 a.m., e.d.t. and to Senator Engle, personally, at 9 a.m., e.d.t.

At noon there still had been no official confirmation from FCC of the filing. Nor had there been confirmation from the Securities and Exchange Commission of concurrent filing with that agency.

Sackett dispatched the following wires:

"Miss MARY JANE MORRIS.

"Secretary, Federal Communications Com-

mission, Washington, D.C .:

"Please immediately wire me collect replying to my letter of June 1 sent you airmail special that day. Please also reply straight wire collect to my letter of June 2 received by you 8:15 a.m. this morning. Needed for publication this day, World of Coos Bay and other publications. Expedition imperative.

"SHELDON F. SACKETT,
"World Newspapers, San Francisco, Calif."

"ORVAL L. DUBOIS.

"Secretary, Federal Securities and Exchange Commission, Washington, D.C.

"Re: my special delivery letter to you sent air mail from here 11 p.m. p.d.t. June 1, please advise wire collect if this is in your hands and if accompanying notarized petition has been filed with your Commission. Please state time of filing. Urgent. Need data for publication several newspapers this after-

"Advance thanks expeditious handling. "SHELDON F. SACKETT, "World Newspapers, San Francisco, Calif."

"Senator CLAIR ENGLE, "Senate Office Building,

"Washington, D.C .:

"Thanks for your wire. Thus far unable to obtain from FCC Secretary or anyone else any report on filing of protest although this has been asked by me three times via return wire collect.

"Similarly, SEC silent thus far as to whether or not June 1 airmail filing has been received as filed.

"Thanks for your cooperation. Extremely anxious to publish full text this afternoon but need agencies in Washington, D.C., to report filing time.

Your immediate help greatly appreciated. "Regards,

"SHELDON F. SACKETT. "World Newspapers, San Francisco, \_ Calif."

## Commencement Addresses: Smithfield. W. Va., High School

EXTENSION OF REMARKS OF

## HON. ARCH A. MOORE, JR.

OF WEST VIRGINIA

IN THE HOUSE OF REPRESENTATIVES Friday, June 5, 1959

Mr. MOORE. Mr. Speaker, Monday evening, May 26, 1959, I had the privilege and honor of delivering the commencement address at Smithfield High School, Smithfield, W. Va .Never have I been so impressed with such a fine looking group of young Americans. They simply radiated confidence, and I felt a new surge of hope and assurance that the destiny of our great country will indeed be in good hands,

The valedictory and salutatory addresses delivered by Miss Evelyn Frances Darling and Miss Colleen Ann Anderson respectively were particularly outstanding, I think, and I am submitting them herewith for consideration by my col-leagues. They are as follows:

NINETEEN HUNDRED AND FIFTY-NINE VALEDIC-TORY; COURAGE TO BE OURSELVES-THEME: YOUTH REBELLION MAY BE AN ORIGINAL IDEA TRYING TO COME OUT

## (By Miss Evelyn Frances Darling)

Ladies and gentlemen, I am pleased with the honor to give the valedictory for the senior class of 1959. The subject chosen represents an effort to defend some traits of youth which at times may be disturbing to the older generation.

You have known many of us in the graduating class as we have been growing up. You have seen us go through all sorts of growing pains. Many times we have rebelled when you, our elders, have tried to show us what was best for us. This was our way of trying to become ourselves. This was the way to prove to ourselves that we were grown and had minds of our own. This was our way of trying to convince ourselves we could get along without you.

We had to be free to be ourselves in order that we have self-respect. We could not de-pend upon you to tell us what to do and still be proud of our own accomplishments. think this is a lesson we must reflect upon and remember all our lives. Whenever we disagree with the ideas of those around us we must have the courage to hold onto our own ideas or convictions.

It is easy to be agreeable and to go along with the ideas of others. This requires no effort and we do not have to be concerned about people laughing at our ideas or telling us we are crazy.

Sometimes in our efforts and desires to be ourselves we might be criticized as just wishing to be nonconformists. But the thing which we are defending is the nonconformity which releases self expression. If the nonconformist merely wishes to attract attention to himself there may be no value in the characteristic. Such a person may wish only to shock or express contempt for more orderly people. The nonconformist who really has new and different ideas yet respects order in normal things is bound to be admired and respected.

I think a good way to become a worthwhile person is to try to forget the people who criticize or laugh at you and just go ahead and do what appears to be right. I feel that this is something people may become afraid to do. We are too often afraid to say something unusual or different. We are sometimes just afraid to be ourselves.

Winston Churchill could never have been the colorful and brilliant inspiration to the British people if he had not have had the courage to do what he saw was right regardless of those who disagreed with him.

Frank Lloyd Wright is a great architect because he has created and developed his own ideas so well that they have become a well recognized type of architecture.

Christian Dior could never have been the leading fashion designer of Paris for so long had he not been able to come forth with fresh and startling new designs each season.

Scientists like Albert Einstein have made fabulous discoveries by looking at scientific data and drawing different conclusions to the ones drawn by others.

The all-time great name in violin makers came into being only after a man rebelled against what he was being told to do and went out to make violins on his own. This man was Antonio Stradivarius, one of the greatest violin makers there has ever been. He spent a good part of his life working for another violin maker but all the time felt that he could be doing it better. A time came when he freed himself from the traditions of the celebrated master violin maker and provided an opportunity to exhibit a style of his own. His instruments reached a height of perfection which has never been equaled. They had a brilliance in tone, an excellence in form and wonderful precision in every minute detail. Once his own pattern was set he never deviated from it. just went on making the finest instruments which have ever been made.

The hope and urge of youth for the opportunity of self-expression covers the full scope of human life. The needs of national defense have focused attention upon physics, chemistry, and electronics. Teenagers have made noteworthy contributions in these fields, yet not all teenage minds run along these lines. If given opportunity, encouragement, and inspiration they might come forth with important and original ideas in social advances, in labor relations, in economics, in agricultural methods, in medicine, or in art.

It is important that any pupil who displays a natural bent should be given an opportunity with little limitation to see how much will come of it. Such pupils may find it easy to keep up with the crowd in the conventional classes and subjects. In our country people abhor the idea that they are required to limit their studies to what someone else thinks they should study. The basic courses naturally should be mastered by all. There is no question about that. However, many young people are looking eagerly for something they can do over and beyond the usual requirements. They are the ones for whom special guidance and facilities are We in high school are well aware that educators and the universities are at work on this problem.

We are aware that at times our rebellion against discipline and authority may seem completely undesirable to our parents and teachers. We hope you will believe that sometimes at least something good may be trying to come out.

Tonight is our farewell to high school days. Some tell us that we will find that high school will have been the best time of our lives. I do not want to believe that. I want each stage of my life to be more exciting and alive than the years before. I want to be capable of accomplishments that I am proud of all through my life. I want to keep learning and being excited about things even when I am old. This can be done by developing my own capabilities. Then I can offer something new to the world. I believe each of us has a unique set of talents and capabilities and only in developing them can we find the most satisfaction in living and do our part for humanity. The world needs new

ideas, new solutions to old problems and a recognition of new problems for which in turn there must be solutions.

In developing and contributing these new ideas we will find our greatest satisfactions. We will never feel that kind of thrill from just going along with the crowd. We can find it only by inventive and original thinking. We must have the courage to be ourselves.

NINETEEN HUNDRED AND FIFTY-NINE SALU-TATORY: THENAGE DAYDREAMS—ADDRESS OF WELCOME WITH STORY OF CONCEPTION OF TELEVISION BY HIGH SCHOOL BOY FARNS-WORTH

(By Miss Colleen Ann Anderson)

Ladies and gentlemen, we have often dreamed of this graduation. We welcome you to share it with us. We have been eager for our graduation because now we can start working toward our goals. Now we will each begin working toward the most important thing in our lives. This may be an enterprise or an education; it may be an idea or a conviction. I wonder how many of our high school dreams will develop into the revolutionary ideas of tomorrow.

In our schoolwork we have retraced many of the known paths of knowledge followed by the human mind. Educators have put into textbooks the lessons which they thought important for all to retrace in preparation for life.

But our minds do not always follow on the beaten path. Our studies have been planned to encourage us to think independently and to bring out new ideas. Some of our ideas are probably not very valuable. Yet it is likely that every revolutionary idea which will change some phase of life in the coming decades is a part of the dream of someone now in school. What is to come of our ideas will depend on how good the ideas are and how well we hold onto them and work with them.

How are we to develop our dreams? We may find help in an example of how an important idea recently developed from the mind of someone our age. This idea, like many, took a long time to materialize to the point of importance. But this man held onto his dream and never let it get pushed entirely out of his mind.

We think of television as something which has come to us in just the last few years. The story of its origin and development is one of the most exciting dreams of our age. This idea which has come into its own only recently had its beginning many years ago in the mind of a high school boy named Philo Farnsworth. He was sure his idea was a good one and he would never let it go yet it took a long time for the dream to become a reality. I wonder how many great ideas have been pushed aside or forgotten because they never had the proper encouragement.

The principle of television was worked out by this 16-year-old high school boy. This most revolutionary idea of our time came to light in a pleasant relationship between the high school boy and his science teacher. The boy was Farnsworth, the teacher was Justin Tolman who besides being school superintendent was teaching science. It was in Rigby, Idaho and the year was 1922. Pupil Farnsworth was in the chemistry class being taught by the school superintendent but the boy's mind wandered away from chemistry at times.

The boy had read an article in an old science magazine about a man who had studied the possibility of television and had tried to work out the idea but falled. Farnsworth thought this older scientist had come close to the right principle and he had it clear in his mind where he thought the older scientist had failed. The boy re-

peatedly went back through the steps which had been followed by the older scientist and always in his mind it was clear where the mistake had been made. The most convenient place where the boy could make drawings of anything so elaborate and complicated was on the blackboard at the high school.

One day the teacher had been helping the boy with chemistry. The teacher went about some other work and in his absence the boy's mind wandered back to his idea of television. He started making diagrams on the blackboards to show how it worked. He covered just about all the available blackboards with his drawings. The teacher returned, looked about at what the boy was doing and asked what that had to do with chemistry.

The boy, Farnsworth, said it was not chemistry but it was television and that he would explain it to the teacher if the teacher wished. The teacher was naturally very much interested in the idea. He knew the pupil to be one of unusual capability and ingenuity. He knew he had never television and he wondered if such a thing was possible, but he said to the boy that he would like to hear how it worked. The boy started at the beginning of his diagrams and went through explaining clearly every The teacher wondered about some of it but the boy was so sure about every detail that the teacher imagined it might really work the way the boy said it would.

The teacher, Tolman, next heard of the boy when the boy was trying to establish legally the exact date when he worked the idea out. He had no registered plans, no dated drawings, all he could say was that he had explained it with drawings to the school superintendent during that chemistry class and that he thought the teacher understood it all and would remember everything about it. The teacher was located and questioned and he verified everything the boy had said and that they had not seen each other or discussed the matter for many years. In this way Farsnworth established ownership of the idea and was granted basic patents on it.

This is a story of how one of the most modern of our ideas was originally the dream of a boy in high school, of how the teacher encouraged and aided the pupil with his idea and finally helped in obtaining his patent on it.

I wonder what dreams exist in the minds of this graduating class. I wonder which of us will hang onto our ideas and develop them into major improvements for tomorrow's civilization. We welcome you, our guests, tonight with the hope that you believe in our dreams. Our teenage dreams will be kept alive by your encouragement.

## D. T. Frymire and the Girl Scout Movement

EXTENSION OF REMARKS

## HON. HARLAN HAGEN

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES
Wednesday, May 20, 1959

Mr. HAGEN. Mr. Speaker, under leave to extend my remarks I would make brief comment on the personality of a distinguished constituent and offer for publication in the Record a poem he has written as part of his multiple contribu-

tions to the Girl Scout movement. The poem is the following:

TO A LITTLE GIRL SCOUT

Of all things 'round about,

Nothing is more precious than a little Girl Scout.

As they move about and whistle and sing And help their mothers with everything.

Cheerfully they go on their way, Doing a kind deed every day.

Soon we hope to have for them, A nice new home and den.

Let's give cheerfully and generously for their home.

That they may have found recollections of it. where'er they roam.

Brownies, Girl Scouts, and senior Scouts, too, Won't you help them so they may help you?

Let's cheer them on as they march with hat

and bag, As we teach them to salute our country's flag.

-By D. T. Frymire.

Mr. Frymire can be aptly described as a distinguished American citizen who believes in our institutions of government and other of our social institutions and who, more important has devoted a lifetime to making them work adequately for the general welfare. He recently retired as president of the Tulare Federal Savings & Loan Association, a successful representative of a typical private enterprise in the city of Tulare, Calif. He has retired from his principal work of a lifetime but not from an active life. Mr. Frymire will engage in an alternate principal business. In addition he will continue to devote his interest to matters of government and such splendid organizations as the Girl Scouts of America.

#### How To Raise Delinquents

EXTENSION OF REMARKS OF

## HON. PHILIP J. PHILBIN

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES Friday, June 5, 1959

Mr. PHILBIN. Mr. Speaker, under unanimous consent to revise and extend my remarks in the RECORD, I include therein, a very thoughtful article from the Tablet entitled "How To Raise Delinquents." as contained in a leaflet issued by the Police Department of Houston, Tex., captioned "Twelve Rules for Raising Delinquent Children."

As the House will observe, the rules take the indirect approach in that they satirically prescribe parental conduct or omissions that would encourage delinquency.

The problem of juvenile delinquency has been widely discussed in the press, but little reference has been made to adult delinquency, that is, the inability of parents to discharge their full parental obligations in the upbringing and the moral and spiritual guidance of their

All too often, commentators on the subject furnish comprehensive and in-

formative analysis of juvenile problems but do not always stress the home, the church, and the school as the fountainheads of responsible juvenile and adult citizenship.

Obviously, the church plays a great part in the moral guidance of the young and old alike. The school is a decisive factor in molding the character and attitude of the young. But neither of these agencies can be expected effectively to guide and nurture the young unless they receive wholehearted co-operation from the parents in the homes.

Perhaps it is in greater and more responsible supervision by the parents that the solution to our current problems of juvenile delinquency lies.

In any event, many people believe that this is the case, and the views of the Houston Police Department are of more than passing interest in clinching the point.

For my part, I have confidence in our young people. In my work, I meet many of them at close range and admire them greatly. They strike me as being little different from the youth of any generation I have known.

They live in a much different world. a faster moving world where epochal changes are occurring. But in my opinion, they are fundamentally sound and promising. It is for the elders of this generation to reevaluate their own attitude to see whether they are making their full contribution to the proper upbringing and guidance of the young. Perhaps that would be a very helpful factor in combating so-called juvenile delinguency.

The article follows:

[From the Tablet, May 23, 1959]

How To Raise Delinquents-Houston POLICE DEPARTMENT ISSUES 12 RULES TO

Houston, Tex.-The police department of the city after a study of juvenile delinquency has issued a leastet called "Twelve Rules for Raising Delinquent Children." The rules follow:

- 1. Begin with infancy to give the child everything he wants. In this way he will grow up to believe the world owes him a
- 2. When he picks up bad words, laugh at him. This will make him think he's cute. It will also encourage him to pick up "cuter" phrases that will blow off the top of your head later.
- 3. Never give him any spiritual training, Wait until he is 21 and then let him "decide for himself."
- Avoid use of the word "wrong." It may develop a guilt complex. This will condi-tion him to believe later, when he is arrested for stealing a car, that society is against him and he is being persecuted.
- 5. Pick up everything he leaves lying around—books, shoes, and clothes. Do everything for him so that he will be experienced in throwing all responsibility on others.
- 6. Let him read any printed matter he can get his hands on. Be careful that the silverware and drinking glasses are sterilized, but let his mind feast on garbage.
- 7. Quarrel frequently in the presence of your children. In this way they will not be too shocked when the home is broken up
- 8. Give a child all the spending money he wants. Never let him earn his own. Why

should he have things as tough as you had them?

9. Satisfy his every craving for food, drink, and comfort. See that every sensual desire is gratified. Denial may lead to harmful frustration.

10. Take his part against neighbors, teachers, policemen. They are all prejudiced against your child.

11. When he gets into real trouble, apologize for yourself by saying, "I never could do anything for him."

12. Prepare for a life of grief. You will be

likely to have it.

#### The Taxes We Can Afford

EXTENSION OF REMARKS OF

## HON. KATHARINE ST. GEORGE

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Friday, June 5, 1959

Mrs. ST. GEORGE. Mr. Speaker, the following remarks on our income tax structure appeared in the June letter of the First National City Bank of New York City.

It seems that the Congress of the United States is lagging way behind the Parliaments of the world in our handling of this very important problem. Surely we have men and women among the people's representatives capable of drafting legislation that will promote and foster opportunity and initiative instead of allowing both to be suffocated and gradually put to death:

THE TAXES WE CAN AFFORD

The President has urged some curtailment of Federal expenditures with a view to balancing the budget, retiring some of the public debt, and perhaps setting the stage for long postponed tax reforms. Chairman Wilbur D. Mills on May 17 announced that the House Ways and Means Committee was launching a study of the possibilities of broadening the tax base sufficiently to permit significant reductions in income tax rates in 1960. Mr. MnLs said that tax re-form must seek, among other things, a tax climate more favorable to economic growth: greater equity in distributing tax burdens; as little interference as possible with the operation of the free-market mechanism; and greater ease of compliance and adminis-

There are, to be sure, voices which urge the opposite course. Stressing how affluent we are, they ignore problems of execessive tax rates, disparage the idea of limiting Federal spending to the flush current revenues and commend enlarged appropriations for public services in almost every direction.

Advocates of bigger Federal outlays do not always face squarely the practical problem of where the money is coming from. Professor Galbraith, of Harvard, it is true, endorses sales taxes to take it out on the standard of living. That is where the bur-den is apt to fall anyhow in the final analysis. Others shrink from unpalatable truths and speak vaguely of closing tax loopholes, a selective form of tax increase; commend cheap money policies, a euphoni-ous way of saying print the stuff; or figure that a growing economy, stimulated by in-creased Federal spending, will enlarge in-comes and raise income tax liabilities disproportionately so that Government can take a bigger share of what we earn without formally raising the tax rates.

The idea is that, however much the indi-vidual must stint to make ends meet, our collective wealth is so great that Government can toss out millions as though they

were pennies.

It is a bad frame of mind to get into, feeling so rich we can afford anything the heart desires. Profligacy is the well-marked road to bankruptcy. Our esteemed wealth is very real but it is invested—in tools and machinery needed to equip the workman for efficient production. One thing we can least afford is to live off this capital-let our plant and machinery wear out. Yet that is what spending out of wealth implies. A growing economy demands quickened-not arrested-wealth accumulation.

What Government takes out of current production, the citizen is denied. denial may be enforced by tax rate increases, ration books, or price inflation. All these are taxes in the sense that they reduce the value of the dollar earned and saved. If taxes encourage consumption and impede saving, wealth accumulation may be ar-rested and with it our means to more

efficient production.

When we say we can afford more of one thing we mean we can give up something When we say Government can afford more we mean the citizens can get along

There is a bland assumption that we have great reserves of taxing capacity. This is open to serious question. It is possible to tax away the seed corn of future progress. But there are limits to what the citizen willingly will give up. When taxes get too high the symptoms may variously appear in lethargy, in tax avoidance, in distortions of business judgments, in inflation. All these symptoms are present.

We should not decide we are so rich we

can give up progress.

DIMINISHING RETURNS ON INCOME TAXES

In income taxation we have gone beyond what we can afford if we want work, enterprise, and a land of opportunity. Writing in the Saturday Evening Post last November, Roswell Magill, Under Secretary of the Treasury under President Roosevelt and now chairman of the Tax Foundation, pointed

"\* \* \* to raise an extra \$12 billion to meet this year's deficit, and to do it with present Federal income taxes, would require the confiscation of everyone's taxable income in excess of \$4,000; or increase of the rate on corporations from the present 52 percent to 82 percent. Income taxes of that magnitude are almost unthinkable in a democratic state. The result would be economic chaos.

As it is, our Federal income tax takes 50 percent of a single person's taxable income beyond \$16,000 and rises, step by step, up to 91 percent, the highest personal income tax known in the world. As though this were not enough, employment taxes, and sometimes State and city income taxes, get added on besides. These levies aim straight at the heart of progress.

The question is not whether we can afford to increase income tax rates further but whether we can afford so to punish the energetic, block accumulation of risk capital by normal taxpaying enterprise, and in-

vite outright evasion.

The rapidly growing number of tax loopholes in recent years has given the economy essential room to breathe but threatens to make the tax scoop into a sieve. Even people who helped set up the confiscatory rates have become alarmed and have called for rate reforms.

The latest of the special reliefs is the Keogh bill, recently passed by the House, which would permit employers or selfemployed people-small businessmen, doctors, lawyers, etc.—to put aside 10 percent of

their income free of tax, within a \$2,500 annual limit, in special retirement plans with banks or insurance companies. goal is equality of tax treatment between the self-employed and employees who already have tax deferral on employer con-

tributions to company retirement plans.

Congress is naturally sympathetic, for these people are invaluable members of our society. Congressmen know from personal experience how hard it is to build a nest egg in the face of our steep income tax rates.

The objection is that the Treasury cannot afford the revenue loss. Treasury experts figure that passage of the Keogh bill would cost \$365 million annually in lost revenues. If employees demanded and got the same tax treatment on their contributions to retirement plans the annual loss might run to \$3 billion.

Furthermore, the increasing number of special provisions in the tax law, many understandable only by tax specialists, tends to make the ordinary taxpayer feel that he is not being treated fairly, that other people "are getting away with something." Tax People morality begins to break down. learn to accept the idea that cheating the Government is not really bad, "everybody does it." The tax rates invite-indeed demand-diversion of effort from earning taxable incomes to saving on taxes. The end of this road is a demoralization of the voluntary tax system we have and its replacement by an authoritarian based on a massive army of tax "policemen."

Meanwhile, we are seeing a continuing expansion in fringe benefits, rewards for work which escape or defer the income tax burden. Although labor union leaders have assailed as loopholes such provisions for business executives, they have shifted emphasis in their own collective bargaining from taxable

wages to more fringes.

It is time we stopped using a piecemeal approach and went to the heart of the tax problem—the confiscatory rates.

#### THE GOAL OF GROWTH

Curiously, many advocates of faster economic growth ignore the drag of excessive tax rates on the economy. It has long been recognized that hardly anything surpasses tax policy in economic, political, and social importance Chief Justice John Marshall's crisp summary, "The power to tax involves the power to destroy" goes back to 1819. A 1955 congressional investigation into Federal tax policies resulted in a 930-page volume of papers on "Federal Tax Policy for Economic Growth and Stability" and evoked from Congressman Mn.1s the conclusion that: "One of the most important programs which will contribute to or detract from achieving steady, economic growth in the years ahead is our Federal tax policy." This solid evaluation we falled to heed.

It is not surprising that our tax struc-ture discourages growth. The steeply pro-gressive personal income rates we now have were put into effect in the 1930's when we thought we had all the productive capacity we needed and the aim was to discourage oversaving. However appropriate they might have seemed at the time, they have no help to give the expanding America of the space age. The problem now is not surpluses of saving and investment but shortages.

The key to economic growth is imaginative enterprise. What we need, on the one hand, are real savings for investment and. on the other, incentives to put funds to work and to attract sustained effort from creative individuals. As Arthur Burns, former Chairman of the President's Council of Economic Advisers, has said: "I don't know of a surer way of killing off the incentive to invest than by imposing taxes which are regarded by people as punitive."

At the same time, excessive tax rates sharp-

ly cut the rewards attainable for extra effort by ambitious and industrious people who are trying to climb the economic ladder. elder statesmen of American industry today moved up in an era when the demands of big jobs were matched by big rewards. The question is whether the rising young executive still has incentive to drive himself toward the rigors of top management positions or whether taxes have shaved the rewards to a point where a more relaxed life seems preferable. We are risking the deterioration of what Senator HUBERT H. HUMPHREY has called that greatest of American geniusesour managerial talent.

Although many people think we are soaking the rich, it is small business, the proving ground for so many business leaders and the seedbed for industrial giants, which suffers most under punitive tax rates. They dry up the sources of its most crucial need—venture capital. The personal income tax rate progression saps the unincorporated small businessman's ability to build his business. It also chokes off an important source of outside funds in years gone by: the successful individual, who once found pride and satisfaction as well as profit in giving a financial lift to a budding enterprise, no longer has the means to do so.

Government loans and subsidies to business are no substitute for tax reform. They breed dependence, destroy self-reliance. The task is to make self-reliance easier, more attractive.

Even under a fair and moderate tax rate structure, our economy may be hard pressed to generate all the savings needed to advance production and generate a rate of growth adequate to the Russian challenge. liam J. Grede, president of Grede Foundries and former president of the National Association of Manufacturers, has said: "Our survival as a nation of free people with a maximum of social values is dependent upon maximum economic development. We must strike from our system policies and practices which impede the accumulation and employment of capital on the largest possible

#### CANADIAN AND BRITISH TAX POLICIES

Our ruthless taxation of income offers a poor model for other nations, wanting progress, to follow. The resurgence of the new industrial Germany dates from the adoption of free market principles and the discard of a suffocating income tax progression that had been imposed as a result of American

It was Great Britain that set the general model of steep progression which we adopted during the Great Depression and World War Other English-speaking nations for years now have been moving away from tax policies directed at destroying initiative and wealth accumulation. Australia was first to break the bonds of socialism and reform its income tax progression. In 1952 Canada began a gradual, year-by-year reform/ In 1953 Great Britain itself, which had achieved the dubious honor of being the most heavily taxed country in the world, began to ease back its oppressive tax rate schedules. In the United States reform has been urged for years by members of both parties, as in the imaginative Sadiak-Herlong and Herlong-Baker bills which would spread out gradual income tax rate easement 5 years ahead. But nothing gets done because of political inertia and insistence that tax reductions be designed to stimulate consumption rather than enterprise and economic

The latest tax moves abroad came in April when the Canadian Government increased taxes by \$352 million, while the United Kingdom gave its taxpayers \$1 billion relief, the biggest immediate tax cut they have ever had. Although opposite in direction, there is a good deal we can learn from both these actions.

The main lesson of the Canadian experience for us is that the series of foresighted tax reforms earlier in the postwar years provided a reserve of taxable capacity for emergencies. Even with the April increases Canadian personal income tax rates are far below wartime peaks. The new 84 percent top rate for 1960 compares with a peak of 98 percent during World War II. The 11 percent rate on the first \$1,000 of taxable income compares with 30 percent on the first \$500 of taxable income during 1943. A 2 point increase to 47 percent in the corporate tax rate cancels a 1955 reduction.

Great Britain is providing an example of how a tax reform policy can invigorate an economy. A continuous string of tax concessions-including three reductions in income tax rates beginning in 1953-has cut United Kingdom income tax rates to the lowest levels since 1939-40, produced a new spirit of optimism in the business community, and helped regenerate confidence in the pound sterling. The April reductions lowered the standard rate of British income tax-to which other rates are tiedfrom 421/2 to 383/4 percent. The lowest rate of income tax payable was reduced to 83/4 percent, on the first \$168 of taxable income, While the highest rate (including a 50 percent surtax) was chiseled to 83% percent, down almost 9 points from the 97% percent peak level which prevailed from 1942 to 1953. Income tax on corporations was reduced from 521/2 to 483/4 percent; shareholders continue to get credit at the standard rate on their own tax returns for income taxes paid by corporations on dividends.

The taxation to shareholders of corporate profits paid out in dividends is now lower in many cases in Great Britain than here. The taxation of retained profits is lighter and depreciation allowances are more realistic. The top personal income tax limit, while applying at a lower income level, has been brought below ours. Capital gains are

tax free

Far from being depleted by the steady succession of tax cuts, the British Exchequer revenues have flourished. Britain's experience provides support for those in the United States who believe that a creative program of tax reliefs could pay its own way by freshening the flow of the revenues.

Congress might well ponder what The Economist of London had to say just before Britain's April tax cut: "One major incubus to a free economy alone remains, and it is the biggest of all: a rate of income tax that is blatantly higher than any society can for long carry in peacetime and still hope to remain dynamic."

#### A REFRESHING TONIC

The United States has not had a general tax reduction since 1954, when the Internal Revenue Code was rewritten, part of the tax increases invoked in the Korean war emergency were rescinded, and a number of provisions were enacted to make the excessive rates that remained more tolerable. It was understood that income tax rate reform would be undertaken at the earliest opportunity.

The result of inaction is that in an increasingly competitive world we are left with the highest rate of personal income tax—within 3 points of its wartime 94-percent peak—and a 52-percent rate of tax on corporations. It is no wonder that American industry is having trouble holding leadership in world markets under the double disadvantage of top-scale wages and top-scale taxes.

We have been adding to Government spending programs now for 4 straight years. We have felt able to afford something for everyone but the taxpayer. The time has come to change the prescription. There

could be no more refreshing tonic for the taxpayer and the economy than a wellthought-out program of income tax rate reductions.

There is no doubt that if we broadened the tax base and reduced the proportion of income which now escapes tax we could have considerably lower rates. It is not generally realized that exemptions, exclusions, and deductions of all kinds leave little more than 40 percent of total personal income subject to income tax. Congressman Mills has estimated that if we broadened the tax base "we could have a tax rate structure on individuals that began at 10 percent of the first thousands dollars and ended at 65 percent and take in as much money to the Federal Treasury as we now take in under the present Internal Revenue Code."

Whatever tax reform method is chosen will have to take account of the Treasury's revenue needs. But the important thing is to make a start by recognizing the mistake of concentrating taxes on what we want mostemployment, work, and opportunity. We need to strengthen the value of the dollar earned and saved. We need to go ahead with gradual income tax rate reform, not only to invite voluntary compliance and arrest erosion of the tax base, but to build an environment of forward-looking optimism.

If there is one thing we cannot afford any longer it is the idea that any Government spending program automatically should have priority over a citizen's use of his own money. When Government feels the necessity, for example, to spend more on defense or on aid for allies, the first place to turn is not to the citizens' standard of living through tax increases but to wasteful practices and programs within Government. In other words, our ability to afford a stronger Defense Establishment is partly measured by wastes of public funds on a variety of programs. It is not fair to expect the citizen to tighten his belt if Government does not tighten its own.

It is time we got our fiscal house in order. After all, as Roswell Magill pointed out in

the article cited earlier:

"A nation as great, as productive, as wealthy as ours cannot concede that its financial problems are beyond solution. It cannot rely continuously on borrowing and inflation as its regular method of paying its bills.

"It should not be content with patching up an inadequate and archalc tax system. We should not be satisfied with anything less than a system that will permit our economy to grow at a healthy rate, that will enable us to pay-as-we-go for the governmental services we want at home, as well as those required to maintain our place in world affairs. And we must have a means of preserving a reserve of resources that can be used to meet any great emergency that may arise—something our present tax structure and dwindling borrowing power do not provide.

"Surely American intelligence can be mustered to help our Government build a sound fiscal system, to match a sound economy and a sound defense."

Mountaineers Are Always Free

EXTENSION OF REMARKS

## HON. KEN HECHLER

OF WEST VIRGINIA
IN THE HOUSE OF REPRESENTATIVES

Friday, June 5, 1959

Mr. HECHLER. Mr. Speaker, an excellent article which traces the rich history and captures the spirit of the great State of West Virginia was printed in the Vancoram Review, published by the Vanadium Corp. of America. At Graham Station in Mason County, W. Va., the Vanadium Corp. produces Vancoram EXLO, a special low-carbon ferrochromium alloy used in making stainless and heat-resisting steels. The Vanadium Corp. is one of the great industries which have seen the vast advantages of establishing in the rapidly expanding Ohio River Valley. There follows the text of the article in the Vancoram Review:

MOUNTAINEERS ARE ALWAYS FREE

Men endowed with persistent visions of individual human rights under representative government created the State of West Virginia.

Strong men, with great objectives, they conquered rugged mountains, trackless wilderness and hostile Indian tribes. Their land was bloodled in the American Revolution and in the War Between the States, yet the dramatic history of the Mountain State is also the heroic story of legislative struggles for the democratic way of life.

The character of the founders is reflected in the motto upon their State's seal. Montani Semper Liberi, "Mountaineers Are Always Free." The State seal also appropriately carries symbols representing the cardinal, black bear, sugar maple and great laurel.

Sometimes called the most southerly of the northern, most northerly of the southern, most westerly of the eastern and most easterly of the Western States, West Virginia stretches north above the latitude of Pittsburgh, Pa., and reaches south below Roanoke, Va. Its western extremity is in the longitude of Port Huron, Mich., the eastern in that of Rochester, N.Y.

The State's area is slightly more than 24,000 square miles. An average altitude of 1,500 feet makes it the highest east of the Mississippi River. Of the State's boundary of 1,170 miles, only 200 are manmade. Natural boundaries are, the Ohio, Big Sandy, Tug Fork Rivers, and Potomac River; and the 365-mile crest of the Alleghenies. A northern panhandle—in one place barely 5 miles wide—adjoins Pennsylvania and Ohio. Maryland and Virginia squeeze an irregular eastern panhandle to a minimum width of 15 miles.

Forests occupy two-thirds of the State. Mountain ranges, peaks and deep, narrow valleys make some areas rough and isolated. Mistletoe and the great laurel grow wild. Hunting and fishing are rewarding.

#### TRANSPORTATION AIDS DEVELOPMENT

Natural barriers, which so long deterred settlement by any except the most determined, now are surmounted or detoured by highways, railroads, and airlines. Some 70,000 farms—blessed by a 40-inch annual rainfall—yield fruits, vegetables, wheat, corn, dairy products, poultry, and meats.

The transformation of part of this mountainous wilderness into an industrial empire began about 1797 with the establishment of water-driven saw and grist mills. Coal was discovered in 1742 and oil and natural gas in 1859. Many of the men who helped to create the world petroleum industry got their early training in West Virginia.

To this day, oil, natural gas, coal, glass, sait, limestone, clay, sand, and lumber are among the State's important products. Since 1931 West Virginia has been the Nation's second largest producer of bituminous coal. Reserves are estimated to be sufficient for 400 years.

In 1790 the first iron furnace west of the Alleghenies began operating in what is now West Virginia's Northern Panhandle. This furnace, of 2 tons daily capacity, made cannon balls used by Capt. Oliver H. Perry

against the British fleet on Lake Erie during the War of 1812.

Modern industrialization, while widely distributed, has shown a spectacular concentration in that relatively broad section of the Ohio River Valley known as "the American Ruhr." In the 125 miles between Moundsville to the north, and Point Pleasant to the south, nearly half a hundred modern industrial plants contribute to Weşt Virginia's growing economy. Their products range from ferro alloys, steel and aluminum to paper, glass, chemicals, abrasives, ceramics, as well as finished products such as oilfield equipment and ships.

By developing its natural resources, both coal and water. West Virginia has become a large producer of steam electric power. An extensive high-wire system is linked with interstate circuits.

Many peoples desired the land that is now West Virginia with its 55 counties. In 1675 the Iroquois controlled the Ohio Valley section, but ceded much of the area to the British three years later over the protests of the Shawnees, Delawares, Mingoes and other tribes. They fought to regain and retain it as a major source of fish and game. The land was claimed also by the French on the basis of expeditions down the Ohio River in 1749.

The original Indian rule was challenged by explorers from Virginia's Jamestown. Their 17th century search for short routes west culminated in an expedition led by Virginia's Lieutenant Governor Alexander Spotswood in 1716. His band crested the Blue Ridge and there drank a toast to Britain's king

Britain's king.

Returning to Williamsburg, Governor Spotswood organized his troop into the Transmountain Order, Knights of the Golden Horseshoe. He thought to extend crown possessions westward, but his efforts were less productive than the reports of the adventurers. There glowing tales of wooded mountains, fertile valleys and refreshing springs suggested that men might acquire and develop land in freedom.

In 1726 Morgan ap Morgan built a log home in what is now Berkeley County and thus became the first recorded settler. The next year a settlement sprang up at Packhorse Ford, now Shepherdstown. By 1735 much of the area of the Potomac Valley, or "Northern Neck." had been settled.

Many settlers—English, Scots, Irish, Welsh, Swiss, German, and the Quakers—poured into the broader valleys, especially that of the Ohio. By mid-18th century both the French and the Indians had abandoned all claims to the land. It was then proposed, by Benjamin Franklin among others, to make the region the 14th colony, Vandalia.

Men of Tidewater Virginia had been moving their families westward in an attempt to escape confiscatory taxation, to own and to retain land, to vote and to worship as they pleased. Above all, they wanted a government more representative and democratic than that dominated by Tidewater Virginia's aristocracy, which was influenced by feudal philosophies and enforced by despotic crown officials.

#### GRIEVANCES AND WAR

But King George III delayed recognition of the new colony and the breaking point came in 1774 when Lord Dunmore, Virginia's Crown Governor sought to distract attention from grievances and to discourage westward migrations by declaring war on the Indians. Under the guise of protecting the settlers, the Governor organized an army for what was to become known as Lord Dunmore's War. The army started westward in September 1774 and split into two forces. Lord Dunmore led one force northwest to Fort Pitt, now Pittsburgh, Pa. The other group, consisting of 1,200 men under a Virginian, Brig.

Gen. Andrew Lewis, was dispatched to the southwest.

Lewis brought his men to the junction of the Ohio and Great Kanawha Rivers, where they encamped on the wooded peninsula now occupied by Point Pleasant. On October 10, 1774, the Virginians were attacked by Indians led by a Shawnee warrior. Popular with the settlers, who knew him as Chief Cornstalk, he was opposed to the attack but had been overruled by the Indian council. The Virginians beat off the Indians, but lost nearly one-quarter of their men.

Chief Cornstalk sought out Lord Dunmore and pledged to keep peace for 3 years. The respite enabled settlers to fortify Point Pleasant and to extend their holdings in the valley. During the peace Cornstalk was murdered and Lord Dunmore removed from office.

#### FIRST BATTLE OF REVOLUTION

Histories customarily record the battles at Concord and Lexington, Mass., in 1775, as the first engagements of the Revolution. The honor is claimed also for Maj. John Sullivan's December 14, 1774, raid on Fort William and Mary at Portsmouth, N.H. However, in 1908 the U.S. Senate recognized the precedence of the October 10 Battle of Point Pleasant.

Historian Virgil A. Lewis, writing in 1887, described in this way the battle's priority and importance: "On that day the soil on which Point Pleasant now stands drank the first blood shed in defense of American liberty. It was here decided that the decaying institutions of the Middle Ages should not prevail in America, but that just laws and priceless liberty should be planted forever in the domains of the New World."

While the Revolution ended on October 19, 1781, with the formal surrender of Cornwallis at Yorktown, it is West Virginia tradition that the last battle was the September 10, 1782 attack on Fort Henry, now Wheeling.

The close of the 18th century marked the beginning of prolonged legislative battles for representative government. Differences of opinion as high as the Alleghenies separated Virginians of the east and the west. Review and revision of the Virginia State constitution in 1850 won some recognition for the people of the west. In 1860 they succeeded in electing a Governor, Joseph Johnson.

Virginians of the west had as yet no State, but they upheld principles of Federal union and of human freedom. When in 1861, Virginia approved an act of secession, the men of the western country met at Wheeling, restated their opposition to secession and initiated serious discussion of forming a separate State, New Virginia.

In June 1861, at a second Wheeling convention, plans were made for organizing a State government and electing a governor. In August formal work was begun to establish a new State to be called "Kanawha." By now Virginia was a State divided. For the east, Governor John Letcher held office at Richmond. For the west, Governor Francis H. Pierpont held office at Wheeling.

In 1862 another convention completed preparations for the State of West Virginia and adopted resolutions providing for the gradual abolition of slavery. The general assembly appealed to Congress for recognized statehood and President Abraham Lincoln signed a bill making West Virginia, as of June 20, 1863, the 35th State and member of the Federal Union.

Meanwhile the War Between the States had broken out. Its first land battle was fought at Philippi, W. Va., on June 3, 1861. Union forces under Colonel William J. Kelly defeated Confederates under Colonel George A. Porterfield and captured the covered bridge which still carries U.S. Route 250 across the Buckhannon River.

This minor engagement had major repercussions. It kept in union control the Baltimore & Ohio Railroad and opened a corridor south for passage of troops and supplies. It also started upon the part to military fame Union Gen. George B. McClellan, who had ordered the troops into action to prevent depredations by Porterfield's men.

West Virginia was the scene of many other battles, among them Rich Mountain, Laurel Hill, and Corrick's Ford. Skirmishes were frequent in the Kanawha Valley and in the eastern panhandle. One community, Romney, changed hands more than 50 times. Thousands of West Virginians enlisted in the Union Army; other thousands, among them Gen. Thomas J. "Stonewall" Jackson, joined the Confederates.

the Confederates.

The ending of the war and the achievement of statehood brought prosperous growth. Boundary agreements were reached with neighboring States. In 1872 a new State constitution was adopted, and in 1885 the capital was transferred from Wheeling, on the Ohio, to Charleston, on the Great Kanawha.

#### VCA COMES TO WEST VIRGINIA

Operations of Vanadium Corp. of America were started in this historic county in 1951 with the purchase of approximately 400 acres of land beside the Ohio River at Graham Station, Mason County. The site was developed by erecting a ferroalloy plant which, in 1952, was enlarged.

Since 1953 the plant, one of the most modern in the world, has been producing Vancoram Exlo, a special low-carbon ferrochromium alloy used in making stainless and heat-resisting steels; ferrosilicon, a deoxidizer and degasifier for irons and steels; and ferrochrome silicon alloys for stainless steels. Additionally Graham plant produces alsifer, noduloy, and silicomanganese alloys.

Normally providing year-round jobs for several hundred trained workmen and technicians, the Graham plant makes substantial contributions to the economies of four counties—Mason and Jackson, in West Virginia, and Meigs and Gallia, in Ohio.

#### THE PLANT ON THE BEND

The Graham plant is located in the American Ruhr at that sweeping turn in the Ohio River known as the Bend. It is served by railway, highway, and waterway. Electric power is supplied by the Appalachian Power Co.'s Philip Sporn Station, which adjoins the Graham plant property.

The site shares West Virginia's dramatic

The site shares West Virginia's dramatic history. Graham Station is named for Rev. William Graham, an early landowner, and, in the old days, was a terminus of a ferry service to Racine, Ohio.

Land in this region had been deeded by Lord Dunmore to Virginians who had served in the French and Indian Wars. Among them was George Washington, who headed a surveying party and received acreage immediately south of the Great Kanawha.

Another to receive a grant was John Polson who, in 1798, deeded a 6,000-acre tract bordering the Ohlo River to Reverend Graham. The Graham plant occupies a portion of this tract. Reverend Graham subsequently conveyed the tract to others and it became the subject of one of the first lawsuits instituted in Mason County, and an early and basic case reviewed by the U.S. Supreme Court.

Mason County, established in 1804, is named for George Mason, one of the framers of Federal and State Constitutions. Point Pleasant is the county seat. The county now contains about five times the area of the original land grants. Its place names—among them New Haven and Hartford—reflect the New England backgrounds of early settlers.

Mason County long has produced coal and sait, but farm production also has been extensive, especially of livestock, dairy products, tobacco, poultry, and eggs. The present trend is toward industrialization.

# Appendix

Senator Lyndon B. Johnson Delivers Commencement Address at Bethany College; Receives Honorary Degree

EXTENSION OF REMARKS

## HON. JENNINGS RANDOLPH

OF WEST VIRGINIA

IN THE SENATE OF THE UNITED STATES

Monday, June 8, 1959

Mr. RANDOLPH. Mr. President, on Sunday, June 7, 1959, I had the honor of presenting Senator Lyndon B. Johnson, the distinguished majority leader of this body, as the speaker for the 118th annual commencement at Bethany College, Bethany, W. Va. Approximately 1,500 persons were in attendance.

The able senior Senator from Texas, with whom I had the honor of having served in the House of Representatives before being privileged to be his colleague in this body, spoke of the graduation exercises as signifying the end of formal preparation and the beginning of formal participation. His address was a significant pronouncement to the class of 126 members from two foreign countries, 15 States, and the District of Columbia.

Indeed, the Texan's speech was stimulating. It had the quality of challenge. It was patterned in the tradition of the splendid Christian college founded by

Alexander Campbell.

Senator Johnson told of the faith of the presidents of Bethany College exemplified by the founder's philosophy of education, which was also a philosophy of life. It was a well-deserved tribute to Dr. Perry Epler Gresham, the president of the college, when the majority leader stressed the steadfastness to the founder's and the institution's traditions.

I have known President Gresham for more than 20 years. It was a pleasant and a delightful experience to have heard many persons in attendance at the commencement exercise tell of the devoted leadership he is providing at Bethany.

Mr. President, I ask unanimous consent that the text of the address by the senior Senator from Texas IMr. Johnson be printed in the Appendix of the

There being no objection, the address was ordered to be printed in the RECORD, as follows:

Address by Senate Majority Leader Lyndon B. Johnson at Commencement Exercises, June 7, 1959, Bethany College, West Vir-Ginia

#### FACING THE FUTURE

I come to Bethany with a sense of pilgrimage.

This campus has been—for nearly 120 Years—an American landmark of a faith from Which I have drawn strength and direction for my own life since boyhood. Until now, I have known Bethany only from afar. To walk at last on "God's half acre" is a rich reward of this day.

But there is more than personal inspira-

tion in this journey.

Here at Bethany—deep in the beginnings of your college—there is a compelling message for Americans to hear again—and give it heed today.

#### Bondage of traditions

In these hills, Alexander Campbell had a vision of a great American future. He saw here—in this New World—the hope for fulfillment of the human spirit if men would but break free of the bondage of traditions which had lost their meaning.

Alexander Campbell had a soul of fire. He preached with zeal. And he had a sense

of purpose

He did not propose that men cast loose from safe moorings. But it was his plea that men not allow vacant traditions and empty rituals to come between them and the sources of their real strength.

His philosophy of education was also a philosophy of life. When he said "Men, and not brick and mortar, make colleges, and these colleges make men" he was describing not only education but the Nation, the State, and every human institution.

And this tradition has been carried on by the presidents of Bethany College right down to your own Dr. Perry Epler Gresham.

It was natural that such a philosophy should arise in West Virginia. This State of rugged mountains is also a State of rugged men—men of self-reliance and integrity.

It is reflected in your leaders—men like my good friends Senator Jennings Randolph

and Senator ROBERT C. BYRD.

I suppose every college commencement speaker has admonished his audience to face the future with confidence. There is little that can be said on such an occasion that is original.

#### The end and the beginning

The commencement exercise signifies the end of formal preparation and the beginning of formal participation. But all of life is continuous preparation for the battles down the road and continuous participation in the struggles with us now.

In the year 1959, the cliches of the college commencement address have taken on a fresh and more vital meaning. It is because we live in a world where development is accelerating at a bewildering rate.

It is really true that you are stepping out

It is really true that you are facing challenges greater than any which faced your predecessors.

It is really true that your fellow Americans—and your fellow human beings—are going to look to you for leadership in the years that lie ahead.

And, I believe, it is also really true that you and all those who are graduating this year will be equal to your tasks.

#### Necessary broad vision

We are living in a world where the problems cannot be solved simply by brainpower and concentration. A necessary ingredient to success is also broad vision.

All of us have a tendency to become specialists—to concentrate on a specific area and become increasingly expert in constantly narrowing fields of knowledge.

This is as true in the public life of our Nation as it is in the professions and in private enterprise. We are inclined to view the world through the eyeglasses of specialization—and to assume that what we do not see clearly is subordinate.

There are a few overriding factors in the modern world which most of us can recog-

nize:

The drive of underdeveloped nations to independence and modern technology.

The cold war between communism and freedom.

The newly unleashed power of the atom. The breakthrough into outer space.

#### · Impact of basic factors

Every one of these basic factors has a direct impact not only on your country but on your daily lives. They even affect visibly the method by which you will make your living for yourselves and your families.

Although all of us are aware of the basic factors, our response to them is certain to vary. Our attitudes and our methods of thinking are necessarily conditioned by our background and our experience.

But even though it is inevitable that our viewpoints will differ, there is a trap into which we must not fall. It is to assume that our own specialized interests hold the key to all the problems of this complicated world.

All of us live two lives.

We are private individuals with our own thoughts, our own dreams, and our own individual communion with God. As such, we go about our daily rounds, taking care of our spiritual and material needs and earning the daily bread for our families.

## Collective obligations

But we are also members of a nation and, as such, we have a deep stake in the prosperity and well-being of that Nation. As citizens, there are collective obligations imposed upon us which must be met.

As private individuals, it is essential that we be specialists because of economic necessities. But as members of the Nation, we cannot allow our views to be warped by narrow vision.

There are those who believe that the whole key to our future lies in helping the underdeveloped people of the world to economic and social security. If we do not, it is argued, they will join the forces of communism out of desperation.

There are others who believe that our freedoms will survive only through a series-of military alliances backed by crushing force. Without such alliances, we are told, we will soon be overwhelmed.

There are others who believe that we must withdraw behind strong walls and concentrate only upon our own strength. Otherwise, we are told, we will soon be too weak to help either ourselves or anyone else.

## The valid viewpoint

The truth, we find, is somewhat more complicated. There is some validity in each viewpoint. But taken separately, they could be disastrous.

There can be little doubt—to a thinking man—that considerations of humanity and self-interest demand that we help the under-developed nations.

We live in a world one-third free, onethird Communist, and one-third uncommitted. The uncommitted world is by and large that part of the globe which has failed to keep pace with modern technology.

Should the uncommitted world join the Communist world, the forces alined against us would be overwhelming.

#### The problems at home

But we cannot permit ourselves to become so absorbed in the problems of the rest of the world that we are blind to the problems here at home. If we do, we will soon find that we do not have the strength to translate good intentions into good deeds.

There are people here at home who need

jobs and who need security.

There are people here at home who need decent houses for their families.

And there are also resources of men and materials here at home which are now wasted

and idle.

Most of our internal problems are not of the same magnitude as those which confront the underdeveloped nations.

They have hundreds of millions who hunger or who live on inadequate diets. We have only a few million who are unemployed, who are seeking jobs and who cannot find their jobs.

But if the soft spots in our economy are ignored, they will spread. And the good times which most of our people now enjoy can collapse because it has an inadequate foundation.

It is a narrow viewpoint to close our eves to the great forces which are shaking the world. But it is equally narrow to forget about the people who live within our own borders.

#### The essence of survival

To survive in this world, we need our friends. We need our military alliances. We need imaginative programs to promote peace. And we need strength-not just military but spiritual and economic strength.

And we cannot stake our future on one policy or one program anymore than we can rest our bodies on a one-legged stool.

I did not come here today to give you advice. That would be presumptuous on my part and properly resented on yours.

I did come to offer my congratulations and my best wishes for the future. And the only thing I want to tell you is that those of us who 20 or 30 years ago took part in a similar ceremony have found this to be a challenging world, a fascinating world, and a world worthy of the preparation you have made

RANDOLPH. Mr. President. after Senator Johnson had spoken, honorary degrees were conferred upon five distinguished Americans, including our honored guest and a great and venerable West Virginian, Michael L. Benedum.

The citation for the awarding of the honorary LL.D. degree to Lyndon Baines Johnson noted, among other items that "his record in Congress shows that he did, and does his own thinking"; that "he has been described as one of the hardest working Members of Congress and has the respect of members of both parties"; that "he is an individual who first collects the facts in a case and then makes his recommendations without fear and without respect to personalities involved"; that "this man is a person of prodigious energy," a man who, in order to keep up with his assignments, "has to live at a gallop"; that "he has been ever alert to strike down intolerance whenever it has raised its ugly head"; and in the citation were these significant questions ·and answers:

What has this man written-what is he writing? We can summarize his achievements in these few words: He is writing pages in the history of a great democracy. To what is this man devoting his life? To living out those beliefs which have been quoted, namely, his proclamation of his political and personal philosophy in the fol-lowing words: "I am a free man, an American, a U.S. Senator, and a Democrat-in that order. I am also a liberal a conservative, a Texan, a taxpayer, a rancher, a businessman, a consumer, a parent, a voter, and not as young as I used to be nor as old as I expect to be—and I am all of these things in no fixed order. \* \* In the heart of my own beliefs is a rebellion against this labeling and filing of Americans under headings regional, economic, occupational, racial or I regard the right to hold one's own political philosophy as a cornerstone of American freedom." \*

It is indeed fitting and proper that this historic old college, founded by Alexander Campbell, who held strongly to those, same principles of individual freedom, democracy, and self-sacrifice, should honor a follower of Campbell, a member of the Disciples of Christ, at this, the mother institution.

Mr. President, Mr. Paul G. Benedum, a distinguished native West Virginian and the nephew and close business associate of Michael L. Benedum-who will, God willing, achieve the age of 90 years on July 16-accepted the honorary LL.D. degree conferred by Bethany on the pioneer oil and gas explorer, producer, financier, philanthropist, and patriotic American:

Some men become wealthy because that is their purpose in life; others accumulate great fortunes as the result of the atlainment of specific objectives. Michael Benedum's objective was exploration and the genius of the man who found more oil than any other individual in history produced the wealth which is now being devoted to religious and educational philanthropy and the communities in which he has a personal interest.

In 1944, Mr. and Mrs. Benedum established the Claude Worthington Benedum Foundation as a memorial to their only son, who died in World War I. Three-fourths of the income of this foundation is designated for the benefit of the State of West Virginia and is being used to provide scholarship loans for needy and deserving students, and to respond to the needs of civic, religious, charitable, scientific and educational institutions. This will be the Benedums' principal instrument for public service.

Entirely too many of our contemporary standards are those of a sedative society whose symbols of achievement are the tranquilizer, the consultant's couch and affluence for all men irrespective of merit. It is, therefore, particularly appropriate that we should pay our highest respects to a philosopher of action whose 90 years of indefatigable living have been characterized by courage, optimism, excellence and a profound sense of personal responsibility.

It is my honor and pleasure to present Mr. Michael Late Benedum for the honorary degree of doctor of laws.

The histories of civilization record an infinite variety of ideas and aspirations but if there has been one dominant preoccupation common to the minds of men in all ages it is the search for a philosophy by which to live.

In the year 1885 in Bridgeport, W. Va., Michael Late Benedum reported at Davisson's Mill for his first job. He was 18 years old and the starting wage was \$16 per month and although the intervening time has altered all other circumstances the work has continued without interruption—for this is part of his philosophy. "I never expect to quit work. Idleness destroys everything within its influence. It will dissipate the largest fortune, and it will ultimately destroy nations and civilization."

Our literature and our art proclaim the impotence of the individual; our classrooms and pulpits echo their despair, and, at the first sign of adversity, we turn in supplication toward the Potomac and pray to be delivered from the evil of self-determination.

The bicgraphy of the man we honor is the romantic, adventurous and inspirational epic of the discovery of oil from the days when an official of the Standard Oil Co. declared he would "drink every gallon of oil produced west of the Mississippi" to the truly fabulous fields of Oklahoma, Louisiana, Mexico, Ru-mania, and South America. And, as we observe the bench marks which identify the significant moments of triumph, tragedy, success and catastrophy along the path from lease agent for the South Penn Oil Co. to the executive offices in the Benedum-Trees Building in Pittsburgh, it is not difficult to imagine the tolerant amusement with which Mike Benedum regards the current pessimism which classifies man as solely the mechanistic product of birth and environment.

## Mazama Bulletin Heralds Oregon Dunes Seashore Area

EXTENSION OF REMARKS

## HON. RICHARD L. NEUBERGER

OF OREGON

IN THE SENATE OF THE UNITED STATES Monday, June 8, 1959

Mr. NEUBERGER. Mr. President, the Mazama Club of Portland, Oreg., an organization of outstanding outdoors enthusiasts, recently printed a bulletin providing its members with detailed information concerning my bill, S. 1526, to establish the Oregon Dunes National Seashore Area. I am pleased and grateful for the excellent support given by the Mazama Conservation Committee to this proposal for adding a section of Oregon scenic shoreline to the national park system. The Mazamas are Oregon's foremost mountain-climbing club.

The Mazamas have performed numerout public services for improvement of outdoor recreation and for preservation of scenic and wildlife values. I can think of no finer endorsement for the Oregon Dunes proposal than the strong support given in the recent Mazama Bulletin, "Conservation Now." The Mazamas have provided leadership for many years in preservation of scenery of the Pacific Coast States. Its members and officials have worked tirelessly for such legislation as the Wilderness Preservation Act, and for control of billboard advertising along the Federal Interstate Highway System. I am certain that Mazama support for the Oregon Dunes Seashore Area will contribute greatly to better public understanding of the park development plan in the State of Oregon. I ask consent to have printed in the Appendix of the RECORD the article from the Mazama Bulletin entitled "Oregon Dunes National Seashore."

There being no objection, the article was ordered to be printed in the RECORD, as follows:

#### OREGON DUNES NATIONAL SEASHORE

Mazamas should take special notice that no congressional legislation has been enacted in almost 60 years to add significant Oregon scenery to the system of national parks. This situation has been altered recently by S. 1526 to establish the Oregon Dunes National Seashore, and this is so unusual and important that we are impelled to devote considerable precious space to examine this proposal. Mr. Malcolm Bauer of the Oregonian points out that "Even the most promising public development needs to be understood before it can be popularly accepted" so we are printing the entire text of S. 1526:

"A bill to establish the Oregon Dunes National Seashore in the State of Oregon, and for other purposes

"Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That, in order to Preserve for the benefit, inspiration, and use of the public certain unspoiled shoreline in the State of Oregon which possesses scenic, scientific, and recreation values of national importance, the Secretary of the Interior is authorized, as provided herein, to establish the Oregon Dunes National Seashore.

"Sec. 2. The Secretary of the Interior may designate for inclusion in the Oregon Dunes National Seashore not to exceed thirty-five thousand acres of land and such adjoining waters and submerged lands as he finds are required for the national seashore. Lands designated pursuant to this section shall consist of not more than thirty-four thousand six hundred sixty acres, referred to as Oregon Dunes, and lying between the Siuslaw and Umpqua Rivers in Lane and Douglas Counties; and not more than three hundred and forty acres, referred to as Sea Lion Caves, in Lane County, lying approximately seven and one-half miles north of the Siuslaw River

'SEC. 3. (a) Within the exterior boundaries designated by him, the Secretary of the Interior is authorized to procure, set aside, and develop in such manner as he finds to be in the public interest, the land and waters, or interests therein, that he considers necessary to assure adequate preservation and public use of such areas in furtherance of the purposes of this Act. The Secretary may procure said land and water, or interests therein, by donation or by purchase with donated or appropriated funds, and such authority to purchase with donated or appropriated funds shall include authority to condemn under the provisions of the Act of August 1, 1888: Provided, That land owned by the State or its political subdivision within the boundaries selected by the Secretary may be procured only with the concurrence of the State or political subdivisions. Any Federal land within the boundaries selected by the Secretary shall be transferred to the Department of the Interior for administration as a part of the national seashore: Provided further, That the Federal department or agency having administration over such land shall agree in advance to such transfer.

"(b) When the Secretary finds that land has been procured by the United States in sufficient quantity to afford an administerable unit, he shall declare the establishment of such national seashore by the publication of notice thereof in the Federal Register. Following such establishment, and subject to the aforesaid acreage limitation, the Secretary may continue to acquire lands for the national seashore as authorized in this Act.

"(c) The administration, protection, and development of national seashores pursuant to this Act shall be exercised by the Secretary of the Interior, subject to the provisions of the Act of August 25, 1916 (39 Stat. 535; 16 U.S.C., 1952 ed., secs. 1-4), as amended and supplemented, relating to the national park system, and in accordance with other laws of general application relating to that system as defined by the Act of August 8, 1953 (67 Stat. 496; 16 U.S.C. 1952 edi. supp. V, sec. 1c), except that authority otherwise available to the Secretary of the Inte-

rior for the conservation and management of natural resources may be utilized to the extent he finds such authority will further the establishment and preservation of the national seashore.

"SEC. 4. There are authorized to be appropriated such funds as may be required to carry out the purposes of this Act."

As was previously mentioned it has been a long time since legislation of this type affecting Oregon has been enacted—not since Crater Lake National Park was established in 1902. Oregon Caves National Monument was established by Presidential decree in 1909. There should be an impelling obligation to study and evaluate any legislation that will affect Oregon so extensively. Mazama members should visit these lands and obtain first-hand impressions, and they should also plan to attend and participate in congressional hearings which may be scheduled in Oregon this fall.

Any discussion of S. 1526 should begin with a review of the basic concepts of the National Park Service which are preservation, interpretation, and recreation compatible with protection of the main features of the designated area. To relate these concepts to the proposed legislation, the lands designated as the Sea Lion Caves in Lane County present an easy example. Their future protection would be assured and scientific management would be employed to perpetuate this wild-life resource for public enjoyment. There is general agreement that this would be wise and desirable procedure.

Some of the lands to be included in the Oregon Dunes area already enjoy develop-ment for recreation such as the excellent Forest Service camps and superb Honeyman State Park. What advantages, then, would be achieved? There could be value in having the one national agency which is responsible by law to plan, preserve, administer, and develop the entire area for recreation as a national seashore. But the unique advantage would be in the interpretation of the natural features by experts in the field of botany, land and marine biology, ornithology, geology, Outside of the Tillamook geology. Outside of the Museum with its remarkable curator, there is no place on the Oregon coast where authoritative, scientific information can be had on flowers, rocks, minerals, shells, birds, marine life, and land animals. Nowhere are there guided tours, special nature trails, natural history displays, programs, lectures, pamphlets, books, and other educational materials pertinent to the area available to the public.

Many people at the present time do not realize the significance or scientific potential of our coast area. Many people are eager for knowledge that is difficult to obtain or relate. Most need to be shown in order to know where and what to look for, and the meaning of their finds in order to appreciate "the magnificence of natural things." There are those who won't think this is important, but it is the observation and appreciation of our world around us that adds to the joy and wonder and enrichment of living. This is why tourist information centers are so popular and why there are guided tours and nature trails in national parks. Tourists flock to such places because they want to see something new, something different, something special.

Mazama tradition is rich in the lore of national parks. Our first president, Will Steel, worked 17 years for the establishment of Crater Lake National Park. He was its second Superintendent and later Commissioner, and his enthusiasm and knowledge enhanced the appreciation and enjoyment of all visitors for this scenic gem. Oregon Caves National Monument gives tourists a better experience because of its guides and information available. One may compare this with exploring caves in other parts of Oregon without any such service, and the

importance of interpretation is readily understood.

Of course there are some objections expressed, primarily by some people in and adjacent to the proposed area. These are based on dislocation or relocation of present landowners. Such changes would not be without fair compensation as for other public land uses whether for parks, schools, military use, for highways or freeways. differences are resolved in the public interest and the balance struck for the majority. should be remembered that S. 1526 is enabling legislation only with boundaries to be fixed after further survey and study. However, the introduction of S. 1526 is a fact, and future action on it will depend on public opinion, expressed to Senator RICHARD and Representative CHARLES NEUBERGER PORTER.

## Unemployment

EXTENSION OF REMARKS

## HON. ROBERT C. BYRD

OF WEST VIRGINIA

IN THE SENATE OF THE UNITED STATES
, Monday, June 8, 1959

Mr. BYRD of West Virginia. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a transcript of the program of the CBS television network program "Behind the News With Howard K. Smith: 'Unemployment,'" on Sunday, May 31, 1959.

There being no objection, the transcript of the program was ordered to be printe din the RECORD, as follows:
BEHIND THE NEWS WITH HOWARD K. SMITH:

"UNEMPLOYMENT"

Man's Voice. The people here in this county are starving. They haven't anything to go on; they're starving. They can't get no help.

Mr. Smith. Amid our prosperity, these Americans are unemployed. Amid our plenty,

they stand in line for food.

ANNOUNCER. The CBS Television Network presents "Behind the News With Howard K. Smith. Today's subject: "Unemployment."

Mr. SMITH. Early this month the Federal Government released its latest figures on unemployment. The news was good. Unemployment took a sharp drop in April. The number of Americans out of work declined by about 1 million.

But in the midst of our prosperity, the fact is that 3½ million Americans are still out of jobs. This is a good 5 percent of the total work force. In some cities, the percentage of unemployed goes higher.

In Bridgeport, Conn., 10 percent of the labor force is jobless; in Flint, Mich., 13 percent; in Morgantown, W. Va., 15 percent.

Much of the unemployment is seasonal or due to some other temporary factor. But some of it is long term. The areas which have the highest and most persistent unemployment are called depressed areas. The areas have one feature in common. All of them are largely dependent on a single industry and that industry is in trouble.

The coal industry, for instance, has been.

The coal industry, for instance, has been in difficulties in recent years. As a result, the areas dependent on coal have been among those hardest hit.

West Virginia is a good example. The State is the biggest coal producer in the Nation. Since coal is in trouble, West Virginia is in trouble. Its rate of unemployment is twice the national average. It has many breadlines.

Recently, the U.S. Senate voted to create a commission to investigate depressed areas.

Senator Lyndon Johnson of Texas, introduced the resolution. He promised that the Commission would in his words "taste, smell, and hear the despair of those parts of the country where men and women cannot find work.

. Today, we are going to try to taste, smell, feel, and hear some of that despair ourselves. In the next half-hour we are going to take a look at a depressed area.

We will focus on the coal industry, but we might just as well have focused on textiles

or the lumber industry.

We have selected Morgantown, W. Va., as our locale. Morgantown's story is fairly It is not the worst hit area in West Virginia or in the Nation, but it is depressed. In Morgantown, nearly one in every six persons in the labor force is out of

We want to examine in Morgantown: First, the conditions among the unemployed; second, the causes of unemployment; and third, what can be done about it? Some proposals for easing the situation. Let's take a look at conditions first.

Morgantown is located in the northwest corner of West Virginia in Monongalia County. It sprawls along the Monongahela River for a distance of several miles. It is home to some 30,000 people. It sits on top of the richest soft coal fields in the world.

To the casual observer Morgantown does not look like it's in trouble. West Virginia University is situated near the center of town. The campus is attractive and serene. The fine old homes in Hopecrest, Morgantown's best residential section, compare with any in the Nation. And in Suncrest comfortable homes are going up for the middle income groups. The town has a brand new bank building, and on Saturday mornings folks come down to High Street to shop.

But there is another side to Morgantown. The truth is the town is badly off. Like most West Virginia towns Morgantown depends on coal. When the coal economy is up, Morgantown is up; when it is down, Morgantown is down. In recent years coal has suffered. As a result, conditions in Morgantown have gone from bad to worse. Many mines have been shut down, and half of Morgantown's miners have been put out of work.

How do these men and their families manage? The answer is not pretty. It means taking a look at another part of Morgantown, the part where breadlines

This is Pleasant Street in Morgantown. The white building is the headquarters of the Salvation Army. The crowd of people in front is waiting for food. The food is distributed free the third Thursday of every month. To qualify for it, a person must show need. Among the unemployed in Morgantown, few fail to qualify.

On this day last month, 50 tons of food were given away. People came from all over Monongalia and neighboring Preston Counties to take it, women came, children and men. Each with a sack or box to lug his share away. The lines kept moving all day

In Monongalia County more than 10 per-cent of the population received food; in Preston County, more than 30 percent received it.

The miners call this food "commodities." It consists of flour, butter, rice, cornmeal, and powdered milk. The women make a kind of mash out of it which they call "molygrub."

The food comes from Federal Government surpluses. It's free, but each State and locality must pay for transportation. The county helps but it costs the Salvation Army about \$60 to distribute the food. The Salvation Army is running about \$1,500 behind in its

It's no pleasure to stand in a breadline. But these people have no choice. They need this food to keep their families going, and even this is not enough.

Man's Voice. I have three children; they all go to school and lots of times when they get up in the morning they have to go to school without something to eat.

WOMAN'S VOICE. I have 12 children. 'They come to me and they say: "Mommie, I'm hungry." Sometimes I have something to give them to eat and sometimes I don't have nothing to give them. And they go ahead and cry, and everything. Woman's Voice. I think we should have

more commodities than we do get. We don't get enough to provide for the bunch of them to eat through the month.

WOMAN'S VOICE. No, I do not believe we get enough commodities because the flour we get only lasts a week and we only get them once a month.

Man's Voice. I've been all over Preston County trying to find work and I can't find

any. There isn't any to find.

Man's Voice. But I've been over a year now looking for employment but I still have never found anything yet. There's coal mines, timber wood, hospitals, clinics, anything at all you mention and I haven't found anything yet. I haven't found a job at all.

Mr. Smith. Obviously, surplus food solves only part of the problem. What other sources of assistance are available? There are mainly three and these don't begin to meet the needs.

There is first unemployment compensation. But this money does not go very far. The most any unemployed worker receives is \$30 a week and some receive as little at \$10 a week. And the payments eventually run out. By now, more than a third of Morgantown's unemployed have exhausted their benefits.

There is next department of public assistance money or welfare. But this isn't too helpful either. In Morgantown, if a man is able to work, neither he nor his family is eligible for welfare even if he cannot find a job.

To qualify, a man must be unemployable. There is one way out. If a man deserts his family, at least his wife and children will receive help. Rather than see their families starve, many unemployed men in Morgantown have deserted their families. The only other major source of help is private charity. The wealthiest charity group in Morgantown has only \$3,500 at its disposal.

Bertha Hill is the name of a coal-mining community on the outskirts of Morgantown. Better mining communities exist but many are worse off. Bertha Hill is representative. About 50 families live on the hill but only 6 men in the entire community have full-time jobs. The rest, when they are not out looking for a job, fill their time as best they can. Many of the familles cultivate gardens. The work helps a man to feel useful.

Bertha Hill shows the impact of hard times. Many of the houses do not have sinks or hot water. There is electricity but few other conveniences.

This is a typical family on Bertha Hill. The family lives on the father's unemployment compensation, \$25 a week. We asked this mother what she feeds her family.

MOTHER. Well, I can tell you what I have in the refrigerator. A little bit of beans, a little bit of corn, and I'm fixing pork and beans for supper and some wienies and that's for six of us.

Mr. Smith. There are other expenses in addition to food, like rent and clothes and payments on the furniture. How does this family manage to meet them?

WOMAN'S VOICE. Well, we have had to borrow money and now we're back on our payments-we're way back on them. They just keep riding us for the money now and there's no way in the world I can given them any money on his unemployment check. It takes, all he gets to eat on. It's awful hard to pay bills out of it. Well, they threaten to come up and bring a truck, so I know what that means. They will take the furniture. Well. I told them they won't take nothing out of here. If they take it, they take it leg by leg because I'd bust it all up; I'd take a hatchet and bust it all up.

Mr. Smith. Despite the lack of money. Bertha Hill makes certain its children get at least one good meal a day. The community has pooled its resources to provide a school lunch program. Children whose families can afford it, pay 10 cents; those who can't eat free. It takes \$25 a week to run the program. housewife from Bertha Hill cooks the lunch. She gets \$7.50 a week from the U.S. Government, but does not keep it. for food to run the program. The rest of the money is donated by the community, nickel by nickel.

These children are eating chili, homemade bread, and salad. Their clothes are threatbare. Some are without shoes

What does this kind of struggle do to people? We went to this building to find out. It is Bertha Hill's church, recreation hall, and social center-all in one.

Rev. Walter Case, minister to Bertha Hill is 29 years old.

Case. The biggest problems that our families face may be the ones of physical need, makeshift meals and makeshift clothes. Wondering whether they are going to have to go back on the payment for their cars of their homes. How they are going to keep up on the bills. But there are other problems which are equally as important. Seems to me that hard times can do two things to people-one thing isn't necessarily bad. seen our people pull together as they've never pulled together; there is a close knit fit in some of our families which is directly related to the fact that they all have to work together. They have a wonderful way of accepting their problems. They know that life has to go on and they try to live with their chins up as if life is normal. I think that these things are good.

But then there are other problems which are created for our people. Sometimes if 3 man is out of work long enough, he gets to feeling that he's not needed, that he's use This is a terrible experience, and what it does to the human spirit is not right.

Mr. SMITH. It is not only Bertha Hill which suffers. The whole town has been hurt. This refrigerator is coming out of a home in Morgantown and going back to the appliance store. The customer wasn't able to meet the payments on it; the storeowner, Mr. Kenneth Chaplain, had to repossess.

Mr. Chaplin. We feel very badly about re possessing merchandise. We don't like to

do it and we lose money everytime we do. Mr. SMITH. With many of their customers failing to meet payments and retail sales down generally, Morgantown's small mer-chants like Mr. Chaplin have their backs to the wall.

Mr. CHAPLIN. I would say that if things continue to decline and get worse we along with many other small businesses would be forced to close.

Mr. SMITH. Because business is down and personal income is lower, the town's tax revenues have plummeted. This has meant a sharp cutback in public services. Parks and recreation facilities are neglected. The town can afford only 15 policemen.

Mr. Elmer Prince has been city manager in Morgantown for 26 years. We asked Mr. Prince what would happen if conditions did not improve.

Mr. PRINCE. If the condition becomes much worse, I am very fearful that we are back into a period of 1932 and 1933 where these folks who do not have employment, cannot buy food, cannot provide for their families through medical supplies, rent, clothing, then we are going to have that problem of people making up their minds that they are going to provide their families irrespective of how they have to do it. That means more crime, and major crime.

Mr. SMITH. "If conditions don't improve, we'll be back in the 1930's." That remark pretty well sums up what conditions are like in Morgantown today. And this brings us to our second question: What caused these Conditions?

Two factors are primarily responsible for Morgantown's unemployment. These are mechanization of work in the coal mines and a steady drop in the coal market. Let's take a look at the mechanization problem first

This is the interior of a small hand-worked mine near Morgantown. The operation is primitive. Miners attack the coal seam with picks. When they're loosened a big enough pile, they pick up a shovel and load their cart. Then the mine's donkey hauls the cart outside. The coal is dumped in a truck waiting below the loading platform.

The Christopher Coal Co. in Morgantown operates differently. Its mines are mechanized. Much of the work in the company's glant Humphrey mine is done by machines called Continuous Miners. These are huge machines that cut, load, and haul coal all in one mechanized process. The work is fast and efficient.

Hand operated mines are becoming a thing of the past. Today, about 85 percent of all soft coal produced in this Nation is cut by machine. Around 90 percent is loaded by machine. The machines are more productive, but the machines replace men. A single continuous miner, operating with a crew of 6, does the work of close to 40 hand miners. The displaced miners are put out of work.

The decline in employment has been steady. Ten years ago there were 125,000 soft coal miners working in West Virginia mines. Today, there are only about 65,000, a drop of almost half. The coal companies are aware of the problem and so are the United Mine Workers. But neither group wants to impede mechanization. Both regard it as inevitable and desirable.

Mechanization, however, is only one of the major causes of unemployment in coal. Another is the drop in coal's market. Since World War II, consumption of coal in the Nation has been declining. Today, we are using about one-third less coal than we did just 10 years ago. Competing fuels like oil and natural gas have displaced coal in several markets.

Railroads, for example, used coal exclusively at one time. Now they use practically none. Ironically, the same trains that haul coal out of Morgantown each day are pulled by diesel oil locomotives. We watched these trains as they left Morgantown bound for the steel mills of Pittsburgh.

The same displacement of coal has occurred in home heating and to a lesser extent in industry. The overall drop in coal's share of the fuel market has been great. Ten years ago, coal was the foremost source of power consumed in the United States. Today it lags behind oil and gas. The reasons for this shift from coal are complex.

One factor is price. The coal companies have done much to keep the price of coal competitive, but they are faced with two high fixed costs, one's labor and the other, transportation.

Coal miners, when they work are the highest paid industrial workers in the world. The current basic union scale is approximately \$25 a day.

Transportation of coal is also expensive. Oil and gas move through pipes or by water,

but coal moves largely on rails. And rail freight costs more money.

Another factor is convenience. Coal is bulky and dirty. It takes up space and leaves an ash. Its temperature is hard to control. Oil and gas take less space to store. They burn clean. Their temperature can be readily controlled.

Coal people are spending millions in research to lick some of these handicaps and have made much progress. But in the meantime, all this has meant unemployment for the miner. It is simple economics. When demand goes down, the labor force is reduced. Morgantown, W. Va., has felt the impact of this hard economic fact,

This brings us to our third question: What can be done about it? Obviously, there is no single, simple answer.

Mrs. LaVerne Fulton, a social worker in Morgantown, feels strongly that Federal aid is the only answer.

Mrs. Fulton. I feel that this is a bigger problem than Morgantown, and anything that can be done in a hurry needs to be done with the help of Federal grants. We could have public works but we need public works that are not on the drafting board for 1963 or 1967. We need something which can go into effect right now that would put people to work tomorrow so that next week they would draw a pay and would be able to get the food their family needs to pay the rent and to pay the mortgage payment on their home.

Mr. SMITH. Many people that Federal aid is required. But there is no massive Federal aid program in Morgantown today nor in any of the depressed areas. Congress is considering a depressed areas relief measure but there is disagreement on how much money such a measure should provide. The important point is no such money is available at present.

Other people in Morgantown, however, are opposed to Federal aid. Mr. Donald Potter, president of the power company in Morgantown, is one of these. Mr. Potter feels that Morgantown must help itself; that it must attract new industry.

Mr. POTTER. I can't see that Federal assistance is the long-range answer to West Virginia's problem. As a matter of fact, the only thing that Federal aid would do would be to eliminate the normal and natural desires the people might have to improve their own situation. We have in the past, since 1935 in fact, been engaged in an all out attempt to diversify industry in northern West Virginia. We have limestone, we have salt, we have gas, we have water transportation, and unlimited cooling water in the area, so that there is no doubt if we can call it to the attention of those industries which use those natural resources, we should be able to bring them into our territory.

Mr. Smith. But diversification of industry in Morgantown is not making much headway either. No new industry has come to town from the outside since the year 1955. The only bright spot in the immediate future is the university's new medical center in Morgantown. The center now under construction will be completed in 1961. There will be a medical school for the university and a 400-bed hospital. About 700 Morgantown residents will be employed at the center when it opens. These jobs will bring money to the town. But that is in the future.

Other proposals—the coal company operators want the Federal Government to place restrictions on oil and natural gas. They claim this will increase coal's share of the market and create more jobs. The United Mine Workers want a shorter workweek. They argue that this will spread employment around.

Perhaps the most frequently suggested remedy is relocation of the miners. It is

argued that since there is so little work in the coal-mining areas, the miners should pack up and look for work elsewhere. But there are problems involved in relocation. A husband and wife on Bertha Hill made it plain why moving away is not the answer for them.

WIFE. Well, mostly all these people are up here practically lived here all their lives and I mean they don't like the idea of going some place else. And then some of them have gone to different places and they couldn't find employment, and they went out and went to Ohio and different places and the rent and things were just too expensive for them and they couldn't make out. So they had to come back.

HUSBAND. Yeah, a lot of them came back, said that they couldn't make it.

Wife. And we're used to living out here like this. And then you go to a city. I mean there are a lot of problems there, especially when you have children, and put them in an apartment when you're used to playing out in a yard and everything like that. I mean it is really rough on the wife especially. Well, I mean, what makes it tough for the children, is they're used to having things and they still think you should give it to them, and now you don't have it to give to them.

HUSBAND. Yeah, I've tried to find work down here but can't seem to find anything.

WIFE. And there is no unemployment coming in now this week. We're trying to get something here that we can stay, but if not, we will have to leave later on if they don't get employment. Have to.

HUSBAND. It's hard to go some place when you ain't got no money. It takes a little money to go some place to hunt a job too.

Mr. SMITH. The problem of Morgantown and many other places paying the price for the progress we enjoy remains unsolved. The President has acknowledged the problem; Congress has too, but action has been slow and the effects so far doubtful. In March, the Senate approved a bill to spend nearly \$400 million on the problem. In May, a House committee approved a bill for \$250 millions for it feared the President would veto the higher amount. Two weeks ago the Commerce Department said the United States is the wealthlest society that ever existed. What it is that stands between our great means plus our ability on the one hand and a solution of this problem on the other is one of the unflatterying little mysteries of our time and our country. Good afternoon.

## Tribute to Gen. George C. Marshall

EXTENSION OF REMARKS

## HON. RALPH W. YARBOROUGH

OF TEXAS

IN THE SENATE OF THE UNITED STATES

Monday, June 8, 1959

Mr. YARBOROUGH. Mr. President, I was not on the floor of the Senate last week when the distinguished Senator from Oklahoma [Mr. Monroney] and others paid deserved tribute to Gen. George C. Marshall. As one who served in the Armed Forces in World War II, and saw firsthand the marvelous efficiency with which General Marshall directed the training, equipment, mobilization, and deployment of U.S. soldiers for victory, I desire to add a word to what has been said.

I ask unanimous consent to have printed in the Appendix of the RECORD a brief prepared statement on the lifetime of service rendered to this country by Gen. George C. Marshall.

There being no objection, the statement was ordered to be printed in the

RECORD, as follows:

TRIBUTE TO GEN. GEORGE C. MARSHALL; HIS SERVICES FOR WAR AND FOR PEACE

During the month of June, we commemorate the anniversaries of two great events in our Nation's history, one in war, D-day, the other in peace, the conception of the European recovery plan. These two events focus our thoughts on that great American whose unforgettable role in both was the culmination of a lifetime of service to this country in both war and peace, Gen. George C. Mar-

As Chief of Staff before and during the Second World War, General Marshall directed the Armed Forces of this country to victory, building them from a small unprepared force to one of the mightiest defense machines the world has ever known. His ability to choose the right man for the right job without regard to personal favoritism, his reorganization of the Army into ground, air, and service forces under the Chief of Staff and Operations Division under the General Staff, his coordination of military and naval strategy, his friendly relations with legislators, and the press, and his high repu-tation among the leaders of other nations are but a few of the achievements and qualities which made General Marshall a great wartime leader.

There is one accomplishment in General Marshall's military career which I would like to point out especially at this time, and that is his excellent organization and supervision of the Services of Supply. Too often, amid the justifiable tribute paid to heroes of battles, we forget the heroes whose quite, efficient, untiring labor behind the scenes is equally essential. To direct these forces well is as imperative as, in fact a vital part of, strategic planning. Shortly after Pearl Harbor, General Marshall and Secretary of War Henry L. Stimson decided on the creation of the Services of Supply, or the Army Service Forces, which took over many of the vital tasks which had be be performed for the support of military operations. Throughout the war, the service forces accomplished a prodigious task in the supply of food, clothing, munitions, and transportation, and were a decisive factor in our victory. General Marshall's role in the organization, selection of the commander, and supervision of these services, which have been described as General Marshall's own creation, should be viewed in its proper perspective as one of the most noteworthy achievements of this great man ...

Finally, I should like to pay tribute to General Marshall as one of our great peacetime leaders. As Secretary of State in one of the most critical times in our Nation's history, General Marshall played a vital role in some of those early, decisive actions which did so much to stem the tide of communism, the timely aid to Greece and Turkey and, above all, the plan to help Europe recover from the ravages of war which bears his name, the Marshall plan. Most of us would be proud if we could match even a small part of General Marshall's contributions to his country, or share even a bit of the deep effection which he enjoys from the American people. Like the Father of our Country, he is held high not only in the annals of war and peace but in the hearts of his countrymen.

## Juvenile Delinquency

EXTENSION OF REMARKS

## HON. JOHN E. FOGARTY

OF RHODE ISLAND

IN THE HOUSE OF REPRESENTATIVES Monday, June 8, 1959

Mr. FOGARTY. Mr. Speaker, under leave to extend my remarks I include an address which I delivered at the National Institute on Crime and Delinquency at New Ocean House, Swampscott, Mass., June 1, 1959:

SPEECH OF HON. JOHN E. FOGARTY, MEMBER OF CONGRESS, SECOND DISTRICT, RHODE ISLAND, AT THE NATIONAL INSTITUTE ON CRIME AND DELINQUENCY AT NEW OCEAN HOUSE SWAMPSCOTT, MASS., JUNE 1, 1959

It is a pleasure to be here with you this evening and I welcome the opportunity to share with you my thoughts on the problem

of juvenile delinquency.

It is a problem that causes grave concern, not only to you and to me, but to millions of our fellow Americans, and rightly so.

The statistics themselves are shocking. The number of delinquency cases has risen for 9 consecutive years, in fact such cases have doubled in the last decade.

Last year more than one-half million of our children were involved in court actions because of delinquent behavior. An additional million whose cases never reached the court required police attention.

Young people under 18 are committing an increasingly disproportionate number serious offenses, according to FBI reports.
Yet you know, as I do, that these figures,

shocking as they are, do not tell the whole story. They barely hint the magnitude of the problem in the human terms of parental distress, economic burden, and loss of future potentially useful citizens.

All over our broad land, parents, teachers, the courts, civic groups, and other organizations express concern over the problem. And there are many groups attempting to solve it.

Recently I have met several times with professional people who are tackling the juvenile-delinquency problem through what they call saturation programs. This was a new term to me, but the idea it expresses that of flooding high-delinquency areas with the united services of all the agencies of the community—seems to me to be a genuinely creative technique. What impresses me most about these total community programs is the breadth of concept. Here delinquency is tackled simultaneously with every available resource. Working through existing agencies-community, school, and civic groups; welfare and medical facilities; legal and police channels, youth organizations—these programs attempt to make available to the children of high-delinquency areas every type of help they will need. Through the schools, psychometric testing, remedial reading, and vocational guidance services are given as they are needed. The dentists and physicians of the community are drawn into contact with deprived groups who are ordinarily without such care, and mental health clinics are established to help untangle some of the complex psychological problems of the people of the area. Public and voluntary welfare agencies are utilized in their particular areas of concern. Interagency registries are set up to prevent duplication of effort and assure that each agency which has contact with a family knows which other

agencies have attempted to serve members of the same family. Probation and parole officers reach out to delinquent and potentially delinquent children at a level they can understand, gradually winning the confi-dence and respect of influential gang leaders.

Let me say a special word about the people who handle the difficult tasks of probation and parole work. These are grueling jobs, taxing every resource of the worker, often placing him in actual physical danger. Yet, in spite of the long hours, the emotional and physical strain, the inadequate pay, we find young men and young women ready and willing to devote themselves to these jobs in the hope of reaching a few of the unreach-able children. With these young men and women—many of you here today—lies much of the day-to-day supervision of disturbed and often rebellious children. To me, this type of service calls for a dedication to ideals—of vocation—of equal measure as that demanded of our medical or educational professions.

But the various techniques I have mentioned which bring together all available services are only the surface manifestations of a concept of far greater depth, which was also explained to me—a concept which I be-lieve to be a thoroughly sound one of far-reaching implications. This concept rec-ognizes the supreme importance of family and community, stability in freeing children of the tensions that lead to delinquency. Consequently, programs are focused especially on strengthening the family and com-

munity structures.

Special attention is given to the adjust-ment problems of families who move from familiar surroundings into Federal housing projects, and every effort is made to establish harmonious relationships among the new neighbors who are often of different cultural backgrounds.

Attempts are made to stimulate the more responsive members of the newly established communities to develop growing attitudes of civic responsibility. Special contacts with parents are made at the first sign of troubled behavior in the child, and the parents are educated to the need for positive parental influence and control while the children are still young enough to accept it.

The young people themselves are invited to participate in councils where specific problems can be ventilated and corrective action outlined by those most actively in and af-

fected by them.

I am told that programs utilizing some of these ideas have been developed in several of our major cities: Philadelphia, Chicago, Los Angeles, San Francisco and others, and that one of the most comprehensive at present, is mobilization for youth, the all-out total community program in New York's lower East Side. Mr. James McCarthy, executive secretary of this program, has been partly responsible for opening my eyes to the creative possibilities of this new toward comprehensive programs of action.

I am not naive enough to assume that this approach to delinquency prevention and control is a panacea. In fact the more I learn about it the more I became aware of certain additional needs in the fight against juvenile delinquency. Two important as-pects of the Mobilization of Youth project are simultaneous training of needed personnel and research to determine the effectiveness of techniques used in the effort to reduce deviant behavior. I feel that we need these training and evaluation procedures with each and every program of this type. We must set ourselves a goal of far more research in the field than is presently being We need to look into the possible

relationship between juvenile delinquency and mothers who work. We need to determine why delinquency rises in some communities and drops in others. We need to make full use of the tests which have been developed to help us identify delinquency-prone children early, before they actually get into trouble, and devise still more ways to recognize such children. We must evaluate the effectiveness of our prevention and treatment techniques and formulate new ones to fill the gaps we discover.

I have been pleased to note that as you who are active in juvenile delinquency have turned increasingly to the total treatment approach in combating it, you have also turned your attention to a consideration of our present court structures. We cannot doubt the need for strong and effective courts. We know that in the past decade the number of cases coming before the juvenile courts has increased almost five times as rapidly as the child population of juvenile court age. This is an alarming rate of increase, and projected into the future at the same rate would mean that in another 5 or 6 years the courts would be handling a million delinquent children each year.

We have seen it demonstrated again and again that the seeds of delinquency are most apt to lie within the early homelife of the child. In fact I have been told that certain tests have been devised by Sheldon and Eleanor Glueck which attempt to predict the probability of future delinquent behavior through an analysis of the family setting. The Gluecks found clues that certain factors within the home relate closely to the presence or absence of delinquent behavior in the children. These factors were supervision by the mother, discipline by the father, affection of the mother and of the father, and cohesiveness of the family group.

Recently I learned that a limited pilot study in Washington, D.C., indicates that of 60 disturbed children studied, over half had shown behavior problems in their preschool years, and an additional third had manifested difficulties by the time they were in kinder-garten. Poor family relationships and an unstable home environment were present in a significant number of the class. These facts, and other studied along the same line, indicate a clear need for family guidance facilities available while the children are in their preschool years, as well as during the school years—but they also bring me to the Point I wish to make about our present court structures.

At present in most areas juvenile offenses fall under the jurisdiction of one court while cases relating to other family matters are handled by other courts. Many of our juvenile courts are doing on excellent job of supplying the specialized services needed by the disturbed young people who come before them, but I feel it is possible that an even more effective job can be done if the total framework of family problems can be considered by a single agency. This is not a matter simply of adherence to certain constitutional guarantees about the rights of individual children, important as those guarantees are. If, as research seems to show, delinquency is usually an outgrowth of an inadequate home life, it seems logical that delinquency cases might best be handled by a court empowered to deal with all problems relating to family matters. This idea, of course, is not original with me. It is the substance of the Standard Family Court Act Which has recently been released after 4 Years of study by your organization, in co-operation with the Children's Bureau and the National Council of Juvenile Court Judges.

I think of the family court concept as a form of insurance. To return to the point I mentioned about the seeds of juvenile delinquency being sown most often in an unstable home environment, I think we might consider these questions: If, by the family court

approach we can strengthen and stabilize family relationships, may we not be supplying one more of the building blocks in our defense against juvenile delinquency? May we not help families toward the resolution of some of their problems while their children are small, before they have slipped—or been driven—into delinquent behavior?

The coordination of services to a given family seems to me to be one of the chief possible advantages of this system. You have all encountered cases where the same family may be known to several different courts at the same time. You have seen that this is confusing to the family involved and inefficient from the standpoint of the court because it results in duplication of effort and one-sided knowledge of the family's problems. A family in trouble often does not know to which court it should turn with its particular problems of the moment. The courts, in turn, acting independently of each other, with different policies and procedures, may actually be at cross-purposes in relation to the problems of a given family.

Commendable as are these efforts, I have been impressed, as I have discussed the juvenile delinquency problem for the past several years, with the lack of coordinated effort. No one group accepts responsibility for giving leadership in the attempts to prevent or ameliorate the problem. The same situation of necessity exists where there is a lack of unified probation and parole system.

Earlier, I mentioned the need for more research on various aspects of the problem. As you know, I have for many years served as chairman of the committee of the House of Representatives that hears appropriation requests for the Department of Health, Education, and Welfare. In the course of the years, hearing from leaders in medical and health research, it has become apparent to me and the other members of my committee that many of our scientists are, as they should be, increasingly turning their attention to study of the behavioral sciences. Such studies include inquiry into the psychological, emotional, and environmental factors affecting children and youth. From such studies can come knowledge of influences leading to deviant behavior-knowledge which in turn will, it seems to me, give us our best leads to means for preventing juvenile delinquency.

In the Department of Health, Education, and Welfare are the Children's Bureau and the National Institute of Mental Health, both with interest, experience, and resources in the fields of child behavior, child welfare, and child psychology. My deep personal conviction of the benefits to be gained from research in medical and related health fields has led me to believe that a collaborative effort by these two agencies, one oriented to research in behavioral, psychologic and psychiatric sciences and the other oriented to research in sociological science with emphasis on child welfare, could not help but lead to methods for helping reduce the tragic social burden that juvenile delinquency represents.

The members of my committee are also convinced of the desirability of such collaborative effort by these two agencies. In our report on the appropriations for the Department we, therefore, instructed the Children's Bureau and the National Institute of Mental Health to team up on the problem and let us know what can be accomplished by such collaborative effort. In addition, because we in the Congress have been convinced of the need for some one group to assume primary responsibility for leadership in this field, the National Institute of Mental Health was asked to take such primary leadership.

I hope that as a result, there may be constructive progress, or at least a clear path toward such progress, by the time your group meets next year. Meanwhile, I hope, and am confident, that you will continue your efforts to meet the problem. You may be equally confident that I, for my part, will continue my efforts in the Congress toward the end we both so greatly desire—an end to juvenile delinquency and a happier, more rewarding future for our Nation's children and young people.

## International Cooperation Can Make a Better World for all Nations

EXTENSION OF REMARKS

## HON. RALPH W. YARBOROUGH

OF TEXAS

IN THE SENATE OF THE UNITED STATES

Monday, June 8, 1959

Mr. YARBOROUGH. Mr. President, the meeting of the Atlantic Congress in London, to try to work out peaceful, constructive methods of international cooperation for the good of all, is worthy of a close watch by all of us.

International cooperation to fight disease and to improve agriculture and manufacturing techniques can benefit the entire world and best exemplifies the spirit of democracy.

Mr. President, I request unanimous consent to have printed in the Appendix of the RECORD an editorial from the Washington Post and Times Herald for Friday, June 5, 1959, entitled "NATO's Other Shield."

There being no objection, the editorial was ordered to be printed in the Record, as follows:

#### NATO'S OTHER SHIELD

It is a compelling coincidence that the Atlantic Congress begins in London today on the eve of the 15th anniversary of Day. The times still call for collective action among free nations, but of a different kind, and the character of the meeting is itself an indication of the change. Some 650 delegates from 14 NATO nations will discuss, not military questions, but instead, ways of forging stronger links among free peoples in the areas of economics, culture and politics.

The delegates are not official spokesmen, although the member governments strongly support the Congress, and that is as it should be. The aim of the Congress is to provide a forum without a party line where private citizens may bring their talents and ingenuity to bear so as to give deeper meaning to the Atlantic community.

From the viewpoint of longer perspective, the hope of the sponsors—the NATO Parliamentarians Conference—is to strengthen the alliance's other shield. When NATO was created a decade ago, the primary impetus was military, although the pact's second article pledges cooperation in non-military areas. Today it is evident that military alliances alone are not enough to contain the thrust of communism. NATO was formed to defend a limited military area, but, as one British sponsor observes, in the next decade "we shall find our frontline has become the mind of the youth of Asia and Africa."

It is imperative, therefore, that better ways be found of pooling the talents of the West to meet the nonmilitary challenge of the East. If the recommendations of the Congress enlarge just a little the area of cooperation in scientific discovery, in eco-

nomic development programs, and in the increased exchange of persons, then the meeting can claim an important measure of

Correspondence Between Dr. Walter Becher. Secretary-General and Member of Bavarian Landtag, and Senator Byrd, of West Virginia

> EXTENSION OF REMARKS OF

## HON. ROBERT C. BYRD

OF WEST VIRGINIA

IN THE SENATE OF THE UNITED STATES Monday, June 8, 1959

Mr. BYRD of West Virginia. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD letters which I have received from Dr. Walter Becher, Secretary-General and member of the Bavarian Landtag, commenting on speeches I have previously made with respect to the Berlin crisis.

There being no objection, the letters were ordered to be printed in the REC-ORD, as follows:

> SUDETEN GERMAN COUNCIL. München, den, June 1, 1959.

Hon. ROBERT C. BYRD, Senate Office Building, Washington, D.C.

DEAR SENATOR BYRD: I should like to thank you very much for sending me your fine speech on Germany. Please accept our best thanks for what you said in this speech. On our Sudeten German Day in Vienna.

Austria, about 400,000 Sudeten Germans took Festival speakers were several Austrian Federal Ministers, principal speakers on the Castle Hofburg's main square being the Austrian Federal Chancellor, Dr. Julius Raab, whose father was also a Sudeten German. Dr. Raab received also the Sudeten German Charles Prize

A third of the inhabitants of Vienna are of Sudeten German origin; they or their ancestors came from Sudetenland regions of Bohemia and Moravia/Silesia already before World War II and I. To the 3.3 million Sudeten Germans who were expelled after World War II from their Sudetenland by the Communists, Vienna has always been dear, it has been their capital in the past and their beloved city at present.

Your spech was brought to the knowledge of the Sudeten German political leaders. We greaty appreciate everything you said on behalf of Germany and of the free world. We shall never forget your words and will always be conscious of our duty to cooperate with the free nations in keeping freedom in the free world and in helping the enslaved people to regain their freedom.

Once more, our best thanks for your wonderful message.

With best personal regards, Yours very sincerely,

Dr. WALTER BECHER, Member of the Bavarian Landtag, Secretary-General.

> SUDETEN GERMAN COUNCIL, München, den, April 21, 1959.

Hon. ROBERT C. BYRD.

Senate Office Building, Washington, D.C. DEAR SENATOR BYRD: In addition to my earlier letter asking for your kind message for the Sudeten German Day in Vienna, Austria, I take the liberty to inform you that the principal festival speaker who will address the Sudeten German people in Vienna will be the Honorable Dr. Julius Raab, Chancellor of the Federal Republic of Austria, further speaker being the president of the Sudeten German Landsmannschaft, Dr. Rudolf Lodgman von Auen. Prominent guests will be members of the Austrian Federal Government, the West German Federal Minister of Transport, Dr. H. Ch. Seebohm (himself a Sudeten German), the Honorable Hans Schutz, Member of Parliament, the Honorable Reitzer, Member of Parliament, and many other members of the West German and Austrian Parliaments, members of the Landtags and West German State Ministers.

It would be a great honor for us if we could receive your kind message and we would appreciate greatly if we could receive it before May 1, 1959.

With best personal regards, Yours most sincerely,

Dr. WALTER BECHER, Secretary General, Member of the Bavarlan Landtag.

> SUDETEN GERMAN COUNCIL. München, den, April 8, 1959.

Hon. ROBERT C. BYRD. Senate Office Building, Washington, D.C.

DEAR SENATOR BYRD: I take the liberty to call your kind attention to the annual Sudeten German Day which will take place on Whitsuntide, May 17-18, in Vienna, Aus-tria. Hundreds of thousands of Sudeten German expellees are expected to visit the day, coming from Austria, West Germany, and other countries, members of the Austrian Federal Government being festival speakers at the rally.

The Sudeten German people will reassert their dedication to the cause of freedom. democracy, and anticommunism, their faith in the right for self-determination for every people and in the right to live in freedom in the native homeland for all those who have become victims of Communist totalitaraniism. The Sudeten Germans will appeal to the free world for freedom for the enslaved nations, Czechs, Slovaks, Poles, Ukrainians, Bates, Hungarians and all other nations and will take stand against any West German confederations with Communist regimes which could end only in the way they ended in China. The close and firm cooperation with the nations of the West, especially the United States is for the Sudeten German people the highest maxime.

It would be a great honor and encouragement for the 3.5 millions Sudeten German people if you would kindly send a few words of message for their Sudeten German Day.

With best personal regards.

Bavarian Lantag.

Yours very sincerely. Dr. WALTER BECHER, Secretary General, Member of the

Jewish War Veterans' Statement on Mutual Security Program

EXTENSION OF REMARKS

## HON. HUBERT H. HUMPHREY

OF MINNESOTA

IN THE SENATE OF THE UNITED STATES Monday, June 8, 1959

Mr. HUMPHREY. Mr. President, on May 21, 1959, Mr. Bernard Weitzer, national legislative director of the Jewish War Veterans of the United States of America, presented before the Committee on Foreign Relations a thoughtful statement concerning the mutual security program.

The statement emphasizes the fact that national security depends on economic strength as well as military strength, and goes on to say that we must face with vigor the economic development problems of the underdeveloped and undeveloped nations of the world. The statement calls for an expansion of our economic aid program especially through the instrumentality of the Development Loan Fund.

The statement also calls for more substantial U.S. participation in United Nations development programs. Even though this statement will be included in the record of the committee hearings, I ask unanimaus consent to have it printed in the Appendix of the RECORD because of its timeliness.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

STATEMENT ON THE MUTUAL SECURITY PRO-GRAM FOR THE FOREIGN RELATIONS COMMIT-TEE BY BERNARD WEITZER, NATIONAL LEGIS-LATIVE DIRECTOR, JEWISH WAR VETERANS OF THE UNITED STATES OF AMERICA, MAY 21,

On behalf of the Jewish War Veterans of the United States of America it is my pleasure to express appreciation for this opportunity to present, once again, the views of our organization in favor of the mutual security program which you are considering. For more than 10 years, our organization's support for foreign aid has regularly been affirmed and reaffirmed at our national conventions. The resolution unanimously approved at our recent national convention held in Los Angeles last August 1958, is attached to this statement and I respectfully request that it be included in the printed record of your hearings.

Your committee has had from the representatives of the State Department and other Government officials, a detailed presentation of the President's proposal for the fiscal 1960 mutual security program. In accordance with the attached resolution, I strongly support that proposal but I feel that the dollar amounts suggested should be greatly in-creased for both the military assistance and economic aid phases. The President should have greater latitude, up to 30 percent, in transferring funds from military aid to economic aid. As the Under Secretary of State stated, "I should like to emphasize my opinion that this is a minimum program. In fact, a stronger case can be made for increasing than for decreasing it."

As a veterans' organization, we naturally have a great interest in preserving our national security. We recognize that our national security depends upon economic strength as well as military strength. It is equally true that this combination of economic strength and military strength applies equally to our allies in the free world. The military assistance and the defense support which the mutual security program provides for them, adds to our national security, as the President has said, several times the strength which an equal amount of dollars spent in our country furnish.

Thus, for about 4 percent of our national defense budget for military assistance and about 2 percent of our national defense budget for defense support, we greatly in-crease the deterrents against aggression and the possibility of a world war.

However, it is clear now, as never before, that urgent as it has been and continues to be to maintain a military shield, it is equally urgent that we face up to, with vigor

and in magnitude, the economic development problems of the underdeveloped and undeveloped nations of the world. In these nations, many of which only recently became self-governing, there are hundreds of millions of people where the average per capita production is less than \$100 per year. Their lives have been marked for long years with the deep misery which flows from poverty, ignorance, hunger, and disease. Proud of their new nationhood, they expect relief from their despair which has persisted through many generations. Without help from the free nations of the world, among Which they recognize the United States as the leader, these people will not see fulfillment of their hopes and expectations. They lack know-how in government, in agriculture, and in production generally. Likewise, they lack capital and their low per capita income precludes any substantial savings from their already low consumption which could form the capital funds needed for increased production.

Your committee and the Congress have, during the past 10 years, taken important steps to make possible the measures which helped significantly, to restore and rehabili-tate the economy of the major countries in Europe. Through your action, the point 4 program was translated from an idea presented by President Truman, into a working force that has measurably transmitted American know-how to scores of nations. This has saved millions of lives, eliminated In some areas and cut down in others, debilitating diseases such as malaria. This en-abled millions of workers to work steadily and productively rather than fitfully and wastefully. Likewise, you have authorized billions of dollars in grants and loans which have furthered economic strength and increased production in many lands, too numerous to mention. Public Law 480 has permitted to us to distribute substantial amounts of our surplus agricultural commodities to relieve hunger and need. Vour committee has also initiated the authori-zation of funds to pay our share of the United Nations expanded technical assistance program and for the United Nations Special Project Fund. Finally, you have put into being, the Loan Development Fund.

In effect, you have created an enormous investment portfolio which has paid off handsomely in a field which presented and continues to present the most complicated problems the world has ever seen. These complications have been aggravated by the cruel, relentless pressures of the Communist tyranny of the Kremiin, to carry its imperialism to all corners of the earth. At the same time, the urgency for continuing and expanding this investment portfolio becomes more pressing due to the realization of millions of people that the misery and poverty which they have long endured can be sooner ended when they are helped to help themselves.

It is a key American tradition to help people help themselves. This is no time to slow down in the practice of that tradition. It will help us morally and materially to implement that tradition more vigorously than ever before. To achieve that end more effectively and more economically, the mutual security program should cease to be a year-to-year program and become at least a 5-year program with the Loan Development Fund increased to \$1½ billion per annum. The point 4 program must be stepped up and we must stimulate, in every way possible, the growth of the United Nations expanded technical assistance program. We must develop additional techniques to use Public Law 480 more effectively and more extensively.

Based on the experience of the past 10 Years, it is clear that we can get results which justify the expenditures that the

world situation requires. With a long-term and expanded program in effect, we can help to create improvements in the living conditions of the underdeveloped nations which will bring certain hope to their peoples and thus check Communist subversion by either political or economic means.

Your committee has the facts which will guide your deliberations in formulating this essential expanded program. Such a program will pay off in bringing us closer to peace and national security. This is a responsibility which will justify your uttermost favorable effort.

EXPANSION OF U.S. PROGRAM OF MUTUAL SECURITY AND TECHNICAL AID

Whereas the free nations of the world are engaged in a global struggle against the onslaught of world communism which seeks to gain world control through both overt and indirect aggression, through economic penetration, and devious propaganda attacks; and

Whereas we deem it the responsibility of the United States as a leader among the free nations of the world to organize resistance against Communist designs to subvert the free world; and

Whereas in this cold war struggle, the United States has the obligation to mobilize its moral and physical strength to help enable the free world to withstand the subversive and infiltrating activities of the Communists and frustrate the Communist intent to dominate the world; and

Whereas the programs for mutual security and technical assistance have demonstrated their value by blocking the Communist effort in many directions but are now of insufficient size and scope, particularly in the light of the Soviet's program of economic aid, trade penetration, and arms supplies, all of which are reflected in depressed economic conditions among the peoples of the have-not nations, by the drift toward neutralism of the many uncommitted nations, and by the hostility expressed by the Latin American people on the recent trips to that area by Vice President Nixon, Dr. Milton Eisenhower, and Secretary of State Dulles; and

Whereas many nations of the free world are not linked to the United States through

regional pacts; and

Whereas the United States has no effective plan whereby the nations who are members of regional pacts are encouraged to develop mutual security and technical assistance programs among themselves: Now, therefore, be it

Resolved. That the Jewish War Veterans of the United States assembled in 63d annual national convention in Los Angeles, Calif., August 3 to 10, 1958, hereby request the President and the Congress of the United States to reexamine the policy with regard to mutual security, economic aid, and technical assistance and adopt the following recommendations for expanding programs:

 The United States should reaffirm its wholehearted support of the mutual security program as the most effective expenditure which our country can make in its own national defense and for the security of the free nations of the world.

- 2. The United States should make every effort to expand, especially through the Loan Development Fund, its economic aid to those nations with whom it has entered into mutual security pacts, in order to raise the standard of living in these countries, as well as to the underdeveloped countries.
- The United States should encourage the nations of the free world to develop mutual security and technical assistance programs among themselves for their common good.
- 4. The United States should encourage new regional pacts among the uncommitted nations of the world in an effort to help in-

sure their national defense and to improve the economic conditions within these countries.

5. The United States should expand its technical assistance programs for underdeveloped countries through the bilateral technical assistance program (point 4) and through the United Nations technical assistance programs, as evidence that the American people are devoted to the cause of elevating the standard of living for the peoples within these countries. In so doing, the United States can best reaffirm its desire to help those nations which seek to implement their economic development, but wish to refrain from entering into military commitments.

## The Farm Program: Letter From Emil W. Heck

EXTENSION OF REMARKS

## HON. FRANK CARLSON

OF KANSAS

IN THE SENATE OF THE UNITED STATES

Monday, June 8, 1959

Mr. CARLSON. Mr. President, one of the outstanding farmers of Kansas, Mr. Emil W. Heck, of rural route 3, Lawrence, recently wrote to the editor of the Lawrence Journal-World a letter in regard to the farm program. His letter is one of the most practical and informative presentations of the present farm situation I have read, and I want to call it to the attention of the Senate.

In view of the fact that many persons are advocating that the Government remove itself from the price-support and other farm programs, I think it is fitting that we give some consideration to the point Mr. Heck mentions in his letter. He states—

To take the Government out of agriculture would be as ridiculous as advocating the removal of Government from the field of transportation, utilities, housing, and slum clearance.

There is no doubt that every farmer would like to be relieved of many of the restrictions and regulations that are now a part of the agricultural program. On the other hand, the complete removal of the Government from the price-support program, with the present farm surpluses, would be disastrous, not only to the farmer, but also to the economy of our Nation.

I ask unanimous consent that Mr. Heck's letter be made a part of these remarks and be printed in the Appendix of the Record.

There being no objection, the letter was ordered to be printed in the RECORD, as follows:

THE FARM PROGRAM

EDITOR, JOURNAL-WORLD:

I read with interest the letter to the editor from I. J. Stoneback, route 4, which appeared in the Journal-World on May 22, 1959, and which dealt with Farm Bureau policy on a grassroots basis. In the main, I am in accord with the ideas expressed by Mr. Stoneback and his letter brought to mind some of the thoughts I have been harboring on the matter of Government in agriculture.

For over 80 years, the Government has been part and parcel of the farm program in

this country, attempting to educate farmers to grow two or three blades where one formerly grew, how to maintain the fertility of the soil, and control erosion, and a thousand and one other advances which have brought about a condition of surplus which everyone now seems to deplore. Some of us can remember not too many years ago when shortages existed and a surplus would have been welcomed by everyone. When day after day we hear that farmers want the Government out of agriculture; what exactly is meant by this broad general statement? If it is as all inclusive as it sounds there would be no more extension service from the land-grant colleges, marketing reports, State board of agriculture aids, soil conservation service, or any of the many desirable practices designed to promote and encourage maximum farm production, which benefits not only the farmer but indirectly all of the people. To take the Government out of agriculture would be as ridiculous as advocating the removal of Government from the field of transportation, utilities, housing, and slum clearance. Farmers who ask the Government's withdrawal should take a long hard look at the overall problem as it affects all of the people in this country.

It seems to me that rather than pay farmers for idle acres, it would be more helpful to have men in high Government office sympathetic to agriculture, rather than looking at the problem from strictly a consumer point of view. By sympathy, we do not mean the shedding of crocodile tears, but a real and genuine interest in agriculture and its problems. Surely it does not take stark hunger in this country to make us appreclate the importance of agriculture upon the economy of this Nation. A stable agricul-ture is the keystone to a healthy economy. All the farmer should really ask is a fair and reasonable return on his investment, based on the costs he must pay in order to have an efficient operation. What he receives for his product should be directly related to costs involved in producing the same. No farmer should really expect a handout for letting land lie fallow but should, in my opinion, receive parity for crops raised on productive acreage.

A rather renowned educator, some 12 years ago, made the statement that extension services alone had increased production The statement was made dur-30 percent. ing a food shortage when increased production was a desirable goal. Now, having accomplished even greater gains along that line, we find the surplus occurs and that the farmer must accept the full responsibility for it. Agricultural economists now predict what will happen 20 years from now and it's unfortunate they did not do the same thing 20 years ago, so that more thought and attention could be given to the problem. It is now proposed to limit the payments to any one individual to \$35,000 and while no one in this county would be affected by such a limitation. I strongly feel that it is unfair and undesir-Why punish big farm operators any more than we would seek to punish business in any form?

We should do everything in our power to give incentive to young men and women to stay on the farm and thus be in a position to outproduce our aggressive neighbors. A famous general once said, "an Army travels on its stomach." Let's make sure that which we call a surplus is not a curse but a blessing. Billions of dollars spent on national defense weapons and material each year become obsolete in terms of new discoveries. No one is critical of that expenditure and why should the basic requirement (food) in national defense be a curse? Who, of you, really think government should get out of agriculture?

EMIL W. HECK.

The Youth Program of Whitefish Bay, Wis.

EXTENSION OF REMARKS OF

## HON. ALEXANDER WILEY

OF WISCONSIN

IN THE SENATE OF THE UNITED STATES Monday, June 8, 1959

Mr. WILEY. Mr. President, recently, I was pleased to call to the attention of my colleagues a constructive program in Whitefish Bay, Wis., that is serving as an effective antidote to juvenile delinquency

Specifically, I refer to the formation of a "Hot Rod Club," which—contrary to popular concepts of such clubs—is constructively serving the local community by promoting greater safety on the local roadways. In addition, members of the club are engaged in close cooperation with the local police:

By promoting greater safety on local

roadways;

By expanding safety instruction, which includes skill driving contests;

By participating in civic functions;

By providing members with invaluable experience in the automotive field; and generally by serving as a worthwhile program for the betterment-not detriment-of the community.

Today, I was pleased to receive from Lt. Alexander Boeder, of the Whitefish Bay Police Department, a résumé of additional programs by which this forwardlooking community is diverting young-sters from the path of delinquency, and is aiming them toward constructively serving the community.

Today, across the Nation, there is an ever-increasing problem of delinquency among youth. A number of factors contribute to this situation. The development of constructive programs, such as the one being carried forward in Whitefish Bay, I believe, is one of the most effective ways to curb delinquency and to channel the tremendous energies, wide interest, capabilities, and talents of our youth to worthwhile activities.

As an illustration of this type of fine work, I request unanimous consent to have printed in the Appendix of the REC-ORD the additional factors of this fine program, as outlined in an article entitled "The Youth Program of Whitefish Bay," written by Lieutenant Boeder.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

THE YOUTH PROGRAM OF WHITEFISH BAY, WIS. (By Lt. Alexander H. Boeder, Whitefish Bay Police Department)

Whitefish Bay, the largest village in the State of Wisconsin, is primarily a residential community of approximately 20,000 persons, and a northern suburb of Milwaukee. Its police department consists of 23 officers and three civilian employees headed by Chief Orval H. Meister. The Whitefish Bay Police Department has many organized activities which are designed to divert youngsters from the path of delinquency, one of which is its junior police program.

This organization consists of well over 500 youngsters at the present time and is grow-

ing. Its aim is to form a closer association between members of the Whitefish Bay Police Department, its citizens and their children; to build character and health; and promote good conduct among its members. Continued attempts are made to instill respect for law and obligations of citizenship in the members and also to eliminate fear of law enforcement officers through teaching the members of the group to properly discharge some of the delegated responsibilities of adults.

Safety is also promoted, as is loyalty to the American Constitution and the community, and development of clean minds and bodies. Once a year the members are feted at a local theater with a party, funds for which are provided by the village board.

In addition, the police department inaugurated a biannual Bicycle Safety Contest in 1957 which has as its aim the development of proper and safe blcycle habits. Police offi-cers carry with them "Safety Award" cards which the officers award to a youngster who is seen displaying courtesy and proper care while riding his bicycle. If the same rider wins another citation, the second officer merely endorses the back of the card. Records are, of course, kept at the station of each card issued, the reason the card was issued and the school the rider attends. Every time a rider is cited for a violation. this record is also placed on file and an award card must be surrended if the rider has one. Parents of the violator are of course notified. At the end of each week of the contest, a panel of officers of the police department reviews the record of citations made and selects the two boys and two girls who have the best records of the week These winners are awarded special safety trophies. At the end of the contest, the school having the greatest percentage of students cited for safe riding will receive the large, traveling trophy. Much publicity is given this twice-a-year contest, with the trophies being displayed beforehand in various stores on our business streets urging participation in the event. There are seven elementary schools in Whitefish Bay; and it appears the program has been highly effective in its purpose of instilling safer bicycle riding habits. Funds for this activity are provided by the Whitefish Bay Policemen's Protective Association.

In 1955, the police cooperated with local groups of young automobile enthusiasts, guided them to incorporation under Wisconsin statutes, provided a meeting place, guided the group to experts in the field for advice, provided safety instruction, encouraged participation in skill driving contests and civic functions. They have actually pro-vided excellent aid to the police themselves in such activities as regular auto safety checks, hubcap identification, etc. "Vagabonds, Inc." police themselves well and only once in 3 years has a member ever been arrested for a traffic offense. How many adult groups can say this? Good scholastic record must be maintained. One failing grade on a semester basis results in that person being dropped from the club. club is restricted by its constitution to 25 members at any one time; however, short of 100 young men have been members in the 3 years of its existence. Drag racing on the streets of Whitefish Bay is now rare and our citizens are coming to know that a hot rod club need not necessarily mean a group of rebellious youths determined to create,2 disturbance and race on village streets. A club like this could well be an asset to any community.

In May of 1958, the student representatives of the three high schools in Whitefish Bay worked out and adopted a "youth code" setting down a group of guiding principles to be used as a basis for determining acceptable conduct regarding social etiquette, hours, driving habits, drinking, smoking and legal responsibility. The principles are recommended for the guidance of the pupils in the 9th, 10th, 11th, and 12th grades and

seem to be working well.

The Whitefish Bay Police Department has trained, instructs, equips, and inspects a well trained corp of school safety cadets who assist in providing safe travel of fellow students from school to home, in the immediate vicinity of the school, and vice versa. The cadets work closely with the adult men crossing guards and very possibly we will never know the exact number of accidents prevented by this reliable, alert, dedicated, and competent group. The cadets are taken to a major league baseball game periodically as a reward for their excellent work. Funds are supplied by the police department for this activity.

Our police department works closely with all other civic organizations and maintains excellent liaison with all other local youth groups by providing speeches and guidance, etc. Assistance is provided local Scout groups by providing trained personnel to conduct examinations in such related merit

badge fields as there are.

The above activities have resulted in making Whitefish Bay, Wis., relatively free of major crime committed by juveniles, regardless of its proximity to Metropolitan Milwaukee. There have been no undesirable

gangs for years. Recognizing that there is some element of treatment in every contact between a juvenile and a policeman, efforts are made by the department's two youth officers, who have received intensive training in the field of juvenile control at the University of Wisconsin, to provide in-service training for the other officers on the department in the fields of prevention, control techniques, instruction in the juvenile code, and disposition of Juvenile cases. The officers are taught to handle all children as if they were handling their own and that while it is difficult to remain coolheaded with some young hoods, a dispassionate, professional approach is the mark of a good police officer. We all know that a youngster's first contact with the Police is ordinarily a highly emotional experience. It is our desire to guide this emotion in the right direction for the betterment both of public relations and citizen-

# Polar Explorers Are Helping This Nation Discover and Develop the Polar Regions

EXTENSION OF REMARKS

## HON. RALPH W. YARBOROUGH

OF TEXAS

IN THE SENATE OF THE UNITED STATES

Monday, June 8, 1959

Mr. YARBOROUGH. Mr. President, to the first view, the icy wastes of the Polar regions have no value. However, when considered from their geographical Position and from the viewpoint of the animal and marine life, they can be very Valuable.

Explorers of these icy regions are helping us to find more about the secrets and resources of the areas. This has proved and will continue to prove of value to our Nation

Mr. President, as a salute to these explorers, I request unanimous consent to have printed in the Appendix of the Record, an editorial from the New York

Times for April 19, 1959, entitled "Admirals of the Ice."

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

ADMIRALS OF THE ICE

From the icy blue-white reaches of Antarctica a man and a ship came to play roles last week in ceremonies that meant their parting. Aboard the Navy Icebreaker Glacier, Rear Adm. George J. Dufek, for 4 years the commander of the U.S. Naval Support Force in Antartica, turned over his command to Rear Adm. David M. Tyree, on April 16, 1959.

Both Admiral Dufek and the Glacier, his

Both Admiral Dufek and the Glacier, his flagship, are Antarctic veterans. Admiral Dufek directed three successive expeditions to Antarctica in support of the U.S. program of research and exploration under the International Geophysical Year that ended last December 31.

A big, bluff, direct man, George Dufek has been going down to the ice since 1939 when, as a licutenant, he volunteered to serve in an expedition to Antarctica under the late Rear Adm. Richard E. Byrd. He was the first American to set foot at the South Pole and at the same time—1956—the first person ever to land at the pole by airplane. He took risks, surviving two dangerous plunges into freezing Antarctic waters.

For many persons involved with that inhospitable frozen southern continent, George Dufek is linked inseparably with the Antarctic. It is to be hoped that Admiral Dufek, one of the most distinguished polar explorers of his time, will continue to contribute his knowledge to the further exploration and development of Antarctica. To Admiral Dufek we say: well done. To his successor, Admiral Tyree, we wish the best of luck.

#### International Olympic Committee

EXTENSION OF REMARKS

#### HON. FRANCIS E. DORN

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES
Thursday, May 28, 1959

Mr. DORN of New York. Mr. Speaker, under leave to extend my remarks in the Record, and in connection with my efforts to have Nationalist China readmitted to the International Olympic Committee, I should like to include a press release from the Department of State on the subject:

The decision of the International Olympic Committee to expel the athletes from the Republic of China is a clear act of political discrimination.

Prior to 1958, athletes from the Republic of China and from the Chinese Communist regime participated in the IOC in accordance with its principle of political non-discrimination. In 1958, the Chinese Communists, having previously withdrawn from the Australian games, withdrew also from the IOC because they decided they would no longer participate in organizations which permit participation by free Chinese.

It is evident that Communist pressures have been directed to obtaining the expulsion of the Chinese Nationalists. We can assume this is a prelude to pressures directed to obtain the later readmission of the Chinese Communists. This is a political and discriminatory attitude which has no place in the world of sports.

Even more is involved in the IOC decision than a manifest injustice to a member

which has throughout stanchly supported Olympic precepts. The maintenance of the respected character of the Olympic games is also at stake. It is their non-political character which has been the basis for the special attitude toward the games of both peoples and governments.

We trust that the public and sports organizations, both here and abroad, will recognize the Communist threats for what they are and will insist on restoring both the athletes from the Republic of China and the Olympic principles to their deserved positions.

#### Public Responsibilities in Science and Education

EXTENSION OF REMARKS

#### HON. JOHN E. FOGARTY

OF RHODE ISLAND

IN THE HOUSE OF REPRESENTATIVES Monday, June 8, 1959

Mr. FOGARTY. Mr. Speaker, under leave to extend my remarks I include an address which I delivered at the convocation of the graduate school of Brown University on June 1, 1959. The address is entitled "Public Responsibilities in Science and Education:"

Address of the Honorable John E. Fogarty, Member of Congress From the Second District of Rhode Island, at the Convocation of the Graduate School of Brown University on June 1, 1959

PUBLIC RESPONSIBILITIES IN SCIENCE AND EDUCATION

This indeed is a memorable day for all of us assembled here. You who are in the graduate school, and you who are the parents, friends, and mentors of the graduate students have reason to be proud today, And I, too, am proud—for I feel especially privileged to take an active part in these ceremonies.

I have always had great respect for Brown University. Not only is Brown the seventh oldest college in the Nation, but also the spirit of religious liberty—on which it was founded in 1764—is widely recognized as a particularly early and significant example of freedom of conscience in America. Brown's charter included the requirement that the public teaching should in general respect the sciences. This also was an unusually liberal stand for an educational institution to take in the mid-18th century, and it is relevant to what I shall have to say later. I admire Brown for this very early contribution to individual and intellectual freedom.

I like what your former president, Henry M. Wriston, has said about this university:

"Brown's central business is the increase of knowledge, the inculcation of wisdom, the refinement of emotional responses, and the development of spiritual awareness."

Surely, these four points are among the highest objectives for an institution of higher learning. Judging-from the caliber of the Brown faculty, the educational standards of the university, and the collective record of its graduates, the four objectives outlined by Dr. Wriston continue to be met in full measure

For you graduate students, this is a day of glory, a glory which should not be diminished in any way. But there are words that must be said and must be given thoughtful consideration by everyone. Think about this statement:

"The period since the war has witnessed some of the most rapid advances in science and at the same time same of the greatest revolutions in social, moral, and religious thought and practice of any time in the world's history. Yet humanity stands today in a position of unique peril. An unanswered question is written across the future: Is man to be the master of the civilization he has created, or is he to be the victim?"

Do these words sound particularly appropriate? Does the question provoke a timely challenge? The message and the question I have just quoted were spoken to the Brown graduating class in 1930; they were delivered by Edwin Grant Conklin 29 years ago today. In 1930, there were no hydrogen bombs, no so-called cold war involving one tense international crisis after another; no threat of a nuclear war. Still, men considered their peril unique. What shall we call the peril we face now? Twenty-nine years have passed since Edwin Conklin sounded the warning. The situation has intensified; we find advances in science coming even more rapidly than before, and almost it seems concomitantly, we find our peril more extreme. The basic fear is the same. The question of whether we can cope with the civilization that we have evolved and continue to modify must continue to be asked.

Let us go back to the year 1800. ence to the Brown commencement address given by Jonathan Maxey in that year, 159 years ago, could never be passed off to you as contemporary. The difference, I think, will be readily apparent to you. He said,

and I quote:

"We are baffled in explaining the causes of the most common appearances. We sigh to explore the hidden causes of things, their intimate constitutions, and their final destination. We sigh to wield a world, as we do an atom, to search the center of the earth and to sail among the stars. Experiment destroys our vain imagination."

In the intervening years, man has proved that he can explain the causes of many common appearances. He has proved that experiments no longer-perhaps never didwreck our imaginations. On the contrary the products of each generation's experiments have, in many cases, far exceeded the imagination of the previous one.

Thomas Huxley defined science as "commonsense at its best." Since his death in 1895, the commonsense of scientists has been getting better and better in many ways. Speaking as a layman who is vitally concerned with the well-being of people every-where, I would like to cite a few of these ways I consider important.

The scientist has vastly improved communications with his colleagues within the scientific community. He has done this despite the many technological advances that have created requirements for new

specialties and subspecialties.

At the same time, the scientist also has improved his communications processes with the general public. As a result, the public's image of the scientists is no longer one of an off-beat character who chases butterflies with a net or a highly introverted recluse in a basement corner or of an arrogant egotist who refuses to concede that his work and its results can be translated into words and phrases that might be undertood by those who support him.

Finally, the scientist has shown that given proper support and enlightened understanding on the part of an informed public, he can produce near miracles for the continuing benefit of mankind. In fact, researchers in the medical and biological sciences have performed so admirably that I am inclined to think of the last 15 years or so as the first chapter in what we might call the Golden Age of Medicine. The blometricians

provide us with some rather exciting projections on the health status of our people. By the year 2.000, they estimate that the average expectance of life after age 60 will increase from the current 17.5 to 22 years. They predict that the death rate from heart disease for men 50 years of age will be 50 percent of its current rate. And they predict the death rate from cancer for women aged 60 will also be only half the current

These are rather dramatic predictions, but they are not at all improbable. You may well ask, "Why is this so?" or "How can this be accomplished?" To answer these questions. I would like to review some of the developments in the recent past, from the standpoint of enlightened support and scientific accomplishment, that indicate a bright future for the health status of the American people.

Those of you who know of my principal interests and activities-both as a Representative to Congress from the Second District of Rhode Island and as chairman of the subcommittee in the House of Representatives having responsibility for Federal ap-propriations for the Nation's health programs-are well aware that my keenest interests are in the field of health research. have experienced considerable personal satisfaction in having a part in the formulation of our national program for conduct and support of scientific research for the past 18 years. In these years, there has been dramatic progress in the acquisition of new knowledge and in its application for positive health gains.

At the close of World War II, the country had its choice. Either we would return to the prewar levels of effort in medical research, or we would seek to capitalize on the opportunity to support man's effort to extend his horizons in the life sciences. question was resolved, as are all important questions in our society, by consensus. most people, whether scientists or laymen, the course seemed clear. If a nation's scientific effort could produce so well under the stress of war, surely it could flourish to provide an opportunity for better health in peace.

As a result, Congress began to increase appropriations for Federal funds used by the Government to stimulate medical research in private laboratories throughout the country-in universities and medical schools, in hospital laboratories, and in other research centers. Appropriations also were steadily increased for the operation in Bethesda, Md., of what is today one of the world's largest medical research centers-the National Institutes of Health of the U.S. Public Health Service. This is the research program in which I have been most deeply interested; my committee has had responsibility for its appropriations, which have become a significant part of the Nation's total investment in medical research.

The appropriations for NIH, including its own operations and grants for research projects and awards for fellowships and training, amounted to less than \$3.5 million in fiscal year 1946. For 1959, our current fiscal year, their appropriation stands at \$324 million. Lest you conceive of this expansion as a reckless effort to buy new knowledge, let me detail some of its elements.

First, in research project grants: In 1945, this appropriation totaled \$85,000; this year, the same appropriation is a little over \$141 million-supporting nearly 8,000 research projects in virtually every nonprofit research center in the country. Let me assure you now that prior to each year's increase, from 1946 through 1957, the Congress received convincing evidence of (1) the accomplishments and potentialities of existing research projects, and (2) the existence of promising ideas for new and needed research projects.

At the same time, it was necessary for those of us dealing with this program to keep well-informed on two other elements of medical research, namely, the existence of trained manpower to do the research and of adequately equipped facilities in which to carry out the research. To keep these three all-important elements of medical research in relative balance has been no easy task.

The level of support for research training, including fellowships, began to make solid advances in 1947. In that year the appropriation for fellowships and training grants totaled \$428,000 compared to \$57,000 in 1945. But as each year passed and as it became more and more evident that scientific manpower was the most important single factor limiting further progress in the life sciences, the program expanded until today the annual appropriation stands at about \$60 mil-

The third element of the Public Health Service's pattern for research support-research facilities-received only emergency attention during 1949 and 1950 for heart and cancer research facilities, totaling some \$22 million. More recently, again responding to an evident need for nationwide expansion of health research facilities and equipment, the Congress passed legislation authorizing \$90 million to be made available over a period of years for construction and equipment of research facilities in all the health fields. Now finishing its third year, the \$90 million available has been awarded to 256 nonprofit institutions in 38 States. Through matching funds, this initial investment of \$90 million in Federal money has been more than equally matched by funds from local SOUTCES

Your own university has grown in stature over the years to the point where its science department has merited increasing Federal support. Just in this past fiscal year, for example, the number of research projects that have won Federal support increased from 12 in 1958 to 22 in fiscal year 1959. Your Dr. Brooks, with his studies in cerebral palsy, Dr. Wilson in biology, and Dr. Mon-tagna in histophysiology are among the outstanding scientists receiving substantial grants in recognition of their excellent work.

So much for the expansion of Federal support for medical research. It is a fair as-sumption, I think, that it has played an important part in the progress that has taken place in the decade. I see these scientific achievements solely in the light of their meaning to the public as a whole. I am thinking, for example, of the discovery and development of synthetic hormones and related agents for rheumatic disease, the widespread availability of penicillin and the development of other antibotics, the development of chemical agents for control of high blood pressure, the discovery of chemical agents in the study and treatment of mental ilinesses, the improved protection against rheumatic fever and resulting heart damage. the new tests for detection of cancer, surgery of the heart, the discovery and application of a new vaccine for poliomyelitis, the use of radioactive isotopes for studies of body chemistry, the development of drugs and chemical agents for treatment of tuberculosis.

As a Congressman, I hear a great deal of discussion of new and better chemical agents. new drugs, new treatments, and even the claim that 50 percent of today's prescriptions could not have been written 10 years ago simply because the materials incorporated in them did not exist. But the acid test of progress against disease lies in statistics which show that progress in broad terms.

Perhaps the best single index of health progress is a comparison of overall death rates. I am told that the decline in death rates since World War II from some of the major illnesses dramatically shows how over a million lives have been saved by modern medicine.

Influenza, for example, has been reduced over 90 percent in its death rate. Once great killers like acute rheumatic fever, tuberculosis, diseases that cause maternal deaths, and appendicitis have all had the rate at Which they cause death reduced over 70 percent. The death rate from syphilis has been brought down over 60 percent; pneumonia, over 40 percent; some kidney disorders, 60 percent: Infant death rates, over 30 percent; and paralytic polio, the disease about which much is still unknown, has been reduced dramatically in the past 2 years. Even high blood pressure, one of the greatest medical problems in terms of the numbers afflicted, has seen some decline in death rates in the past few years.

It is this record of growth and accomplishment that gives me the confidence to support those who make such dramatic predictions concerning the future of medical research.

I would like to make one further point that emerges when one considers the human dynamics, the tangible results, and the potentials for advancement that have had a part in this first chapter of the golden age of medicine. It is this: that when the public is adequately informed, when it is assured that the basic resources and mechanisms exist to accomplish certain problems common to all people, when it is asked to support the efforts to meet these problems, the public will respond and will continue to respond almost in direct ratio to the results and Potentials realized.

It is most interesting, therefore, to speculate as to whether this principle that an informed public is a responsive public would be as effective in meeting the impending educational challengs as it has been in writing a brillian first capter in the golden age of medicine.

The statistics on education indicate at least a part of the impending challenge. In 1939, only 154 of 1,000 high school pupils went on to college; in 1954, 283 of every 1,000 entered college. Illiteracy has declined to a new low. In 1870, 20 percent of the population over 14 years of age could neither read nor write. In 1920, the figure had gone down to 6 percent; in 1952, only 2.5 percent of the Population were illiterate. The number of students enrolled in America's colleges and universities this year exceeds last year's figure by more than a quarter million. In 10 years it should pass 6 million—nearly double today's enrollment.

These statistics provide just a hint as to the problems that confront education. Certainly we cannot expect the public to respond to an array of statistics without an examination of the factors and problems that are necessarily a part of those statistics.

The U.S. educational system, as you know, has come under very close scrutiny in the Past few years due to the sudden challenges Produced by the Soviet Union. It was clearly shown that there is much room for improvement. But the fact is that our universities face the very real danger of being engulfed by sheer numbers of undergradaute students. Not only must we find staffs to handle the influx, but we must beware of their being loaded down with repetitive undergraduate teaching which leaves them with no time for imagination, contemplation, and other intellectual pursuits. Within a decade, some 495,000 college teachers may be neededmore than twice the present number. And On the salaries which the average college teacher receives, it is no wonder that quality sometimes suffers. Faculty salaries are woefully out of kilter in the current American scene.

I consider it a glaring failure—at least to date—that new impetus to American education has not been given by providing Federal assistance in the construction of schools. It is my conviction that the

strength of our democracy is intimately related to the strength of our educational processes, and I find it somewhat distressing that special interest pressures have contributed so much to this national fallure—fallure, first, to provide adequate school facilities for the increasing numbers of boys and girls in our society, and second, fallure to provide other support to decrease the teacher deficit. Here is the goal of the people which is not being met.

Today's educational effort has not been raised to the levels of other essential elements in the space age. We need not spend public money irresponsibly to show our interest. What we need is a completely revised attitude toward education and the public support of education. We must make the same order of radical change in our attitude toward education as we have made in our attitude toward medical research. We must measure our educational effort as we do our medical research effort. That is to say, we must measure it not by what it would be easy and convenient to do, but by what it is necessary to do in order that the Nation may survive and flourish. We have learned that the support of medical research, whatever the cost, pays rich dividends in the long run. We must now learn that higher education for the academically oriented is an investment in the Nation's future.

You who have just finished your graduate work today and you who have made that possible—faculty and families—have a direct responsibility as harbingers of enlightened information about the importance of higher education. Education has been called study for the purpose of understanding. You have received understanding that opens doors to you, and you will wish to share it with others. You in the class of 1959 will want your children someday to receive an education as you have done, and as good a one as possible. Support for quality education must come from every single available source.

The Federal Government, I am glad to say, has taken several steps in the right direction toward alleviation of the problem, though it has not gone far enough at all. I am speaking of the National Defense Education Act of 1958, which in its aid to students is good, in its lack of aid to teachers is bad.

The act which became a public law in September of last year is almed at strengthening the national defense and encouraging and assisting in the expansion and improvement of education programs to meet critical needs. It recognizes that our present emergency demands more adequate educational opportunities, and emphasizes that what is being offered is financial support, and not control.

The program of providing loans to students in institutions of higher education is the largest; in the 4 years from 1959 to 1962. a total of \$295 million will be lent. In selecting the students to receive loans, spe-cial consideration will be given to those who express a desire to teach in elementary or secondary schools and to those whose academic background indicates a superior capacity or preparation in science, mathematics, engineering, or a modern foreign language—the subjects where we are re-To strengthen the instruction in these subjects, \$280 million will be paid to State educational agencies over the same 4-year period. The money is to be spent for equip-ment. And here I ask—why not some financial assistance for the subject teachers themselves?

The only provision which has bearing on the teachers' situation is the program for national defense fellowships. Fifty-five hundred fellowships are to be awarded over the 4-year period 1959-1952, and preference will be given to persons interested in teaching in institutions of higher education. An important part of this is that in order to win a fellowship, the graduate program in which the student is to participate must be approved by the Commissioner of Education, and only those institutions with new or expanded graduate programs will receive such approval. The institution itself will be awarded up to \$2,500 a year. Thus, by direct pressure, encouragement is being given to higher institutions to improve their graduate training facilities. I like this provision, but I think it could stand much expansion. The stipends awarded do not exceed \$2,400; students are discouraged from taking outside work unless it pertains to their study—and rightfully so—but the temptation must be great in our time of economic inflation.

The other provisions of the act are generally admirable. Programs for the guidance, counseling, and testing of students which are aimed at identifying and encouraging the most able students will be set up in the States which desire them and which submit a State plan for their execution. Language centers and institutes are a part of the act as is research in the utilization of radio, television, and motion pictures for educational purposes. Vocational education and science information are partially covered.

College professors were strangely left out of all this. They should not have been. They deserve not only much more money than they are now receiving, but also much more prestige and distinction among their fellow Americans. Raising faculty salaries is a necessary step in giving recognition where it is long overdue.

These, then, are some of the problems that are universal to education today. Although medical research and its features that have an implication in medical education have achieved an outstanding measure of success in recent years, the leaders in these fields continue to reevaluate their roles and the foreseeable challenges that lie ahead. In a recent and unusually forthright report, a group of distinguished advisers brought to the attention of the Secretary of Health, Education, and Welfare, that if the predictable needs for physicians and scientists are to be met, this country needs some 15 to 20 additional medical schools. The same report estimates that it will cost nearly half a billion dollars to bring these new schools into being. Implicit in the report, too, is the belief that the Federal Government must bear a part of the cost of constructing these new schools.

Someday, I believe that one of these new medical schools should be brought into being in this State, preferably right here at Brown. I realize that this recommendation cannot be taken lightly, and I assure you that it is not offered without serious consideration. The location and operation of a school of medicine entail considerable responsibility.

What are some of the responsibilities of a medical school? First, it is an institution for the training of gifted young men and women to practice the greatest of all healing arts. Second, it is a haven for community services related to and including the practice of medicine. Third, it is a point of focus for medical research, both in the laboratory and in the clinic. And fourth, it is most often an extension of a university, expending and strengthening the university's traditional role as intellectual and cultural center for its community.

I do not pretend to know how Rhode Island

I do not pretend to know how Rhode Island can develop its own medical school. I do not know when it can. But I do know that it can. For ours is a proud and progressive State, and Brown University has a tradition of progress and forthright action. If we want it enough, we can have a medical school and cease to be one of the nine States that do not have one today.

This is not a decision to be made hastily. There are many critical problems to be considered. How would the new construction be financed? Would the Federal Government make funds available without insisting on a degree of control? Could an effective set of working relationships be developed with local hospitals and physicians?

There are more questions than there is

time to phrase them.

I am sure there are answers for them.

And I intend to see that the answers are sought, and my hope is that they may lead to a course of action that will add one further resource to the array of medical resources in Rhode Island that do credit to the State. These facilities and programs are a source of pride to all of us who have worked, each in his own way, to help bring them into being. I am confident that once again we will be successful in expressing the public need and carrying out the public responsibility in this important cause.

Almost a hundred years ago, in 1864, when Brown University was celebrating its centennial, the then president said this:

"We are about to open a new century, Shall it be one of increasing brightness for our university? Shall our successors, at the end of the new century, be able to give a good account of our doings?"

Here you are, his successors, and that "new century" is almost over. It would be my sincere wish for Brown to be able to include the addition of the medical school as part of its "good account" by the time it celebrates its bicentennial anniversary.

I have found, as I have said before, that when the public is informed the public will respond. Now is the time for the friends of Brown to carry their story to the people in somewhat the same manner that medical science has taken its story to the people. There is no possible reason why either the medical scientist or the educator should have to be solely responsible for his field when his work touches the lives of everyone. We, the public, have a duty which has become more important than ever before; we must share the increasing load of problems facing science and education. The public must keep informed and concerned and must be willing to give special effort and provide other resources to see that the task is accomplished that lies ahead.

I salute you upon the completion of your work at this fine university. In closing, I would like to recall for you a line written by H. G. Wells:

"Human history becomes more and more a race between education and catastrophe."

And I say let us leave no doubt; we must win the race for education.

#### Why I Want To Go to College

EXTENSION OF REMARKS

## HON. JAMES ROOSEVELT

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES Monday, June 8, 1959

Mr. ROOSEVELT. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following paper written by Raymond Howard Scudder entitled "Why I Want To Go to College."

Mr. Speaker, it was with pride that I learned that one of my young constituents, Raymond Howard Scudder, of Los Angeles, a senior at Huntington Park High School, recently won first place in the national Thom McAn leadership

awards program. He will receive a college scholarship and an all-expense trip to Washington, D.C., and New York City.

Young Scudder, an A student and four-letter athlete, was selected by the judges from candidates from more than 1,000 high schools across the country. The son of a postal clerk, Raymond won the \$1,000 scholarship for his outstanding scholastic record, extracurricular activities, and an original paper on "Why I Want To Go to College." He plans to attend the University of Southern California and major in chemical engineering.

Despite the necessity of working afternoons and evenings, Raymond stands third in a class of 320 students, is president of the student body, and president of the Los Angeles Association of Student Councils, chairman of the Governor's traffic safety committee for California, and sealbearer of the California scholarship federation, among many of the honors and offices he has received. He has an outstanding athletic record, including his designation as all-city tennis No. 1 player for the past 2 years.

His paper is such a striking testimonial to the fine character of American youth—in contrast to all that we hear of juvenile delinquency—that I am inspired to place it in the Congressional Record for my colleagues to read and consider.

WHY I WANT TO GO TO COLLEGE (By Raymond Howard Scudder)

In these times, youth has never been so self-sufficient and so capable of self-direction as now. Moral maturity comes early in our culture, for the teenage suddenly becomes a member of the young adult group. Young adulthood is a group apart from adult-society—independent, wise, and self-determining in its own way. This group of young people makes decisions for themselves, decisions that their ancestors were never expected to make even in adulthood, for the ancestors always moved in the protective environs of adult opinion.

As a member of this young adult society and ready to make many important decisions in life, I feel that college is the focal point of transition to adulthood and the open door to educational development. \*I have decided that seeking an education is my major goal at this period of my life. With a substantial education, I feel that I can become the kind of person that I really want

My vocational plans for the future are directed toward chemical engineering and I shall enter the University of Southern California in Los Angeles in September 1959, to prepare for this field. Yet college could expose me to many subjects I have never metefore, and I may discover that any of these new fields may stir my intellectual curlosity toward other channels. I would like college to enrich me with something truly fine so that, when anyone penetrates beneath my professional outer covering, he will fiind, not a naked shred of a man, but a complete human being, clothed in beauty, color and warmth.

Social responsibilities, ethical sensitiveness, breadth of interest in all interesting things, and a will to follow the direction that a clear and informed mind points out, are included in my motivations for going to college.

One aspect college can afford me is the enlargement of my opportunities and associations; a whole field of positions open up to the person with college experience and trainThe social and athletic side of college are also motivations, but are far from being the most prominent. I realize that social and extracurricular activities are secondary and should be kept in their proper place, but still should be developed as a part of college experience. My participation in college athletics would be to maintain a sound body and to satisfy my competitive desires.

I realize that my motivations for attending college are numerous and varied, but I feel that this is a good omen for college

success and self-realization.

Summing up, I would like college to open up to me an emotional awakening equalled by few other experiences in my life, with an intellectual vista of no less significance. I will try to further these goals by letting intelligence, education, and Christian principles by my guides.

#### A Thrust Toward World Leadership

EXTENSION OF REMARKS

## HON. HUBERT H. HUMPHREY

OF MINNESOTA

IN THE SENATE OF THE UNITED STATES

Monday, June 8, 1959

Mr. HUMPHREY. Mr. President, my attention was recently called to a most thought-provoking paper entitled "A Thrust Toward World Leadership," which was written by Howard G. Kurtz.

In his paper, Mr. Kurtz states that public safety can no longer be adequately maintained and protected by the individual nations. Due to the means of destruction which are now available, such as long-range missiles and nuclear bombs, it is necessary that there be some type of worldwide organization which has the responsibility of protecting people of the world against common dangers which we all face.

Mr. Kurtz suggests that the United States propose and work toward the creation of a world safety organization which would provide physical safety for all people, of all creeds and beliefs, and of all patriotisms and political opinions.

This paper is a condensation of a book manuscript which Mr. Kurtz recently completed. The book was begun more than 10 years ago, while the author was engaged in 2 years of graduate study into Russian-American problems at the Russian Institute at Columbia University in New York.

I ask unanimous consent that the article be printed in the Appendix of the

There being no objection, the article was ordered to be printed in the RECORD, as follows:

A THRUST TOWARD WORLD LEADERSHIP BY THE UNITED STATES OF AMERICA

ANALYSIS OF WORLD SITUATION

For the first time since time began, world population faces simultaneous and identical overwhelming danger, the effective end of civilization as a result of nuclear war. Common, simultaneous world public anxiety is a new fact.

There is a worldwide yearning that a new leadership will arise to show the way out of crisis, rather than leading deeper and deeper into crisis. For the first time in history, world leadership is possible, sustained by worldwide public anxiety.

For 12 years the United States has had a solely defensive policy of "containment." This assumes initiative by the opponent. The United States has waited for each new enemy-inspired event to reach the White House, then the United States reacts with a defensive maneuver and increased show of military Power. Each new show of U.S. military power has two adverse effects: (1) It intensifies Public anxiety in the enemy countries, making it easier for the opponent to mobilize its public hostility to the United States; and (2) it intensifies public anxiety in the inbetween countries, increasing their hopelessness for survival no matter whether the United States or the U.S.S.R actually starts the nuclear war. Each defensive act under U.S. policy, therefore, has the effect of strengthening the enemy's resolution to fight the United States, and the effect of weakening the resolution to fight among countries needed as allies. Each sincere and thoughtful conditioned military reflex reaction of defensive U.S. policy leads all mankind deeper and deeper into final crisis, just the opposite of the universal human need and yearning for a way out of crisis and danger.

No game can be won by defensive strategy alone. The United States has not yet seized the available opportunity for positive, or of-Iensive, or winning world leadership.

#### THE PROBLEM

The basic assumption from which all U.S. military and policy planning and action is created is a cherished concept that no longer is valid. The most serious and sincere top policy decisions are being made on the conditioned reflexes of military experience from the past, and are leading all civilization and the American people toward extermination, not toward public safety.

Man's greatest safety invention in all history has been the nation. Public safety was a basic motivation drawing men together in self-defense in increasingly larger safety units from the family, to the tribe, to the principality, then to the nation. In moments of national emergency, such as Pearl Harbor, public safety commandeers all policy of the nation and becomes the supreme

objective of national policy.

But right here there has been a rupture. The concept of national safety no longer is Valid. If every department in National Government were to be given not only its present budget requests, but twice, or three times, the money requested, for unlimited satellite launchings, unlimited nuclear bomb testing, unlimited pure research and development, unlimited stockpiling of military hardware and manpower, no nation, ever again, can assure safety to its citizens against modern scientific enemy attack. The concept of hational security has flamed out.

Public safety cannot be achieved by the U.S. Government, nor by the Soviet Government, nor by any other national government In the future. Yet it would be fatal to any people to relax present military posture until a new-dimension world safety organization is designed and in being. Safety against the total danger to all civilization now threatening can be achieved only by the evolution of a worldwide safety structure stronger than the League of Nations. stronger than the present United Nations, yet far short of the "one world" dreams of maximum world government. Worldwide Public safety is the one goal of world leadership that can magnetize worldwide Public opinion in support of such leadership, and a program of action leading civilization out of crisis, supported by people of all the world's religions and philosophies and nationalities.

This may be the moment in history for the United States to make a thrust toward leadership.

AVAILABLE ACTION BY THE PRESIDENT OF THE UNITED STATES

The President could now electrify world public opinion by announcing U.S. dedication to the long-range, difficult challenge of creating a world safety organization that would provide physical safety for all people, of all creeds and beliefs, and of all patriotisms and political opinions. This would clarify new goals for U.S. policy, to provide safety against war for all people, in direct contrast to the present world trend toward final war. Details of this world safety organization need not be spelled out, but left as a challenge to the best available brains of mankind, everywhere. No political or other leader in the world could refuse to publicly support this call for world public safety. The President's challenge might read:

"The fantastic progress of science and technology in recent years has created such overwhelming new danger to all mankind that no national government in the future can assure safety to its citizens against modern scientific enemy attack. Nuclear and even more horrible war will wipe out the Soviet people, the Chinese people, the American people, and the people of all other countries.

"The American people are perfectly willing to die, if necessary, rather than have their country dominated by any foreign power. The American people are willing to grant that every other people have equal courage and equal determination to die, if necessary, to free their country from foreign domination.

"The American people hereby dedicate themselves to the principle that all men are created with an equal need for physical safety, and a right to survival. The American people covet safety and welfare for their enemies and for their neighbors, as they do for themselves.

"American future policy will be dedicated to the eventual creation of a world safety organization stronger than the League of Nations which could not provide safety against the danger of war, stronger than the present United Nations which still cannot provide safety against the danger of war, strong enough that it can assure:

That no nation ever again will have the capacity to threaten or to wage war against

other people.

"2. That each nation and area will exist in an environment of safety, and will have its sovereignty restored to it, that henceforth, for all future time, it will not have any facet of its domestic political economy controlled by or afraid of the majority, minority, or veto whims of persons or governments in foreign nations.

"3. That, after the world has been made safe from war and safe from foreign domination manpower, money, and material now dissipated in preparation for war can be transformed into creative effort to feed, clothe, house, educate, and bring health and welfare to people of every emerging country to the extent they desire to achieve through their own efforts, with the help of all moral forces available from outside.

"The world safety organization, itself, will have to be designed and constructed with balance of power and authority and responsibility that it cannot become a tyrant supergovernment dominating sovereign national governments or dominating the minds of citizens of any nation.

"The United States invites the widest possible, freest possible, debate and discussion and exploration of the nonpolitical design details of such a world safety organization in what might be called survival seminars throughout the world, among all of the engineering and scientific and professional societies of all countries, among scholars of all academic disciplines in all of the world's colleges and universities, among philosophers and theologians of all points of view, among the publics of all countries, each person remaining 100 percent patriotic to his own native land, and each person maintaining 100 percent integrity with his religious or philosophic beliefs, but simultaneously all striving for complete interchange of ideas and recommendations for design of a safety shelter assuring existence and survival as rights of all mankind."

## Farm Organization Opposes Benson Wheat Program

EXTENSION OF REMARKS OF

#### HON. LeROY H. ANDERSON

OF MONTANA

IN THE HOUSE OF REPRESENTATIVES Monday, June 8, 1959

Mr. ANDERSON of Montana. Mr. Speaker, as we approach our discussion of wheat legislation, I would like my colleagues to think about the telling arguments advanced by a group of wheat farmers in Montana.

They are absolutely opposed to the Benson program of cutting support levels and prices.

Tomorrow you will have an opportunity to vote for a wheat bill that will reduce the surplus, reduce the cost of the program, and, in the long run, help the American farmer.

I commend to you the following letter for your guidance. It is one which a good friend of mine in my hometown wrote to the chairmen of the Committees on Agriculture in the House and the Senate.

CONRAD MONT.

Hon. ALLEN ELLENDER. Hon, HAROLD COOLEY,

Chairmen, House and Senate Agricultural Committees, Washington, D.C.

DEAR SIRS: At a meeting on April 14, 1959, we discussed the farm problem and also the Talmadge farm bill. The feeling of our group was that \$25,000 was much too high and that \$10,000 was high enough, for any one producer.

We believe that as long as we have a surplus of wheat or any other crop that we need production control. Manufacturers of all kinds control their production by laying off men, so that they can get their price and a profit and the farmer must do the same. The only difference is that the manufacturers are organized and the farmers are The farmers were organized on the referendum for quotas for the past 6 years voting over 80 percent for quotas to get a better price, and willing to control production. But about 15 to 18 percent wanted to plant or seed all they could, and that's the reason we have a surplus.

When the majority of farmers vote to control production, the rest of the farmers must abide with that decision, like any other election, on problems of any and every kind.

Flexible parity is out, it's suicide for the farmer, the last few years have proven that. If it were not for the bumper crops the last few years, many farmers would be out looking for jobs and there are none to get.

Parity should be 90 to 100 percent and nothing less. No business could last 6 months on 60 to 75 percent of parity, like Mr. Benson wants. We wonder what Secretary Benson would say if he were cut to 60 percent of the salary he gets.

Soil bank is no good when farmers are paid from \$20 an acre and up, that ground should not be put in any other crop to cause surplus of feed, or produce of any kind, like has been done in the last few years, and this caused barley to drop to 95 cents per 100 pounds or 47 cent per bushel on our local market.

Corn and cotton taken out of production should not be permitted to plant 15 acres of wheat or any other crop like has been done in the past. That is why past farm programs did not solve the problem as well as they should have.

Any farmer who overseeds or plants should not be permitted to pay any penalty, and then market his wheat, but it should be his wheat, and keep it and store it at his expense, and the Government should not loan him money to build granaries for it or loan any money on it, like it is at present, 50 percent for noncompliance for overseed-That's why we have such a surplus, no teeth in the program to keep these 15 to 18 percent of the farmers in line; that causes these large surpluses.

The question is, are we going to let 15 to 18 percent of the farmers tell 80 to 85 percent, a great majority, what to do, and shout about free enterprise, this is a free country? It's not very free when a farmer loses his home and farm and can't find a

Congress cannot pass a farm bill that is worth the paper it is written on that will please the President or Secretary Benson. Mr. Benson's record the past 5 years has proven that, by driving down prices every year. Wheat is not \$1.45 per bushel here at Conrad and bread is 29 cents per loaf. In 1948, prices for wheat were \$3.20 a bushel and bread 18 cents a loaf, so it is not the price that the farmer gets that makes food high in cost, as Mr. Benson says, and tries to make the consumer believe. The farmer is pricing himself out of the market, with high price supports.

The farmer could give the wheat and all produce and deliver it free to market and the consumer would still have to pay a high price for his food, and Mr. Benson knows it, if he would just admit it, but he won't.

I read in the paper this morning of the House proposal of raising the parity to 85 percent; that is not enough, it should be at 90 percent at the least. And cutting production is not a fair proposal for as much as 20 percent. It should be as follows:

Perce	nt
100 acres or less	2
	5
301 to 500 acres	
	10
	15
	20
	25

Large farmers can stand a larger cut in acres or bushels because small farmers haven't enough acres in the first place. That was the trouble with the 1938 Farm Act; that was the gripe of the family-size farm for 20 years, cutting the small farmer the same percentage as large producers.

Mr. Benson's proposal for 75 to 90 percent of the average market price for the last 3 years is nothing but, as the Chinaman said, "slow die, but sure die," for the small

So we hope that you will come out with a good farm bill and the President will sign. But if he does veto it, pass it over his veto and/or go down fighting.

CONRAD FARMERS UNION LOCAL NO. 34. SIMON F. NIGG, President.

#### Unemployment in West Virginia

EXTENSION OF REMARKS OF

## HON. ROBERT C. BYRD

OF WEST VIRGINIA

IN THE SENATE OF THE UNITED STATES Monday, June 8, 1959

Mr. BYRD of West Virginia. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD the statement which was given this morning by Mr. Miles C. Stanley, president of the West Virginia Labor Federation, AFL-CIO, before the Subcommittee on Agricultural Production, Marketing, and Stabilization of the Senate Committee on Agriculture and Forestry. Mr. Stanley spoke concerning the necessity for the enactment of legislation to provide for the distribution of greater quantities and varieties of surplus foods to needy families in West Virginia and other States of the Union.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

STATEMENT OF MILES C. STANLEY, PRESIDENT OF THE WEST VIRGINIA LABOR FEDERATION, AFL-CIO, BEFORE THE SUBCOMMITTEE ON AGRICULTURAL PRODUCTION, MARKETING, AND STABILIZATION OF THE U.S. SENATE COMMIT-TEE ON AGRICULTURE AND FORESTRY, JUNE 8, 1959, ON S. 1884

Mr. Chairman and members of the committee, I deeply appreciate this opportunity to appear before this committee on behalf of the organization I represent and, if I may be a bit presumptuous, on behalf of the tens of thousands of West Virginia citizens whose primary sustenance is derived from surplus food commodities or molly grub, as they are commonly referred to in our State.

#### THE COMMODITY DISTRIBUTION PROGRAM IN WEST VIRGINIA

The surplus agricultural food commodity program is administered in West Virginia by the commodity distribution division of the State department of public assistance. In the fiscal year of 1958-59 the legislature appropriated a total of \$10,466,480 to the department of public assistance. Of this amount, \$143,400, or approximately 1.3 percent, was allocated to the commodity distribution division. This figure represents approximately 2.5 percent of the \$6 million cost of the surplus foods which this division was charged with distributing to an average monthly caseload during the calendar year of 1958 of 237,503 recipients and reaching a high of 301,264 in March 1959.

These claimants are widely disbursed over the State with heaviest concentration in the southern coal-producing counties. On the budget indicated, the division has been able to maintain only five warehouses to serve the entire State. These warehouses are located in Beckley, Charleston, Fairmont, Logan, and Welch. These warehouses serv-ice approximately 400 distributing agencies located in practically every county within the State. These agencies, in the main, are composed of church groups, civic clubs, and labor organizations. The tremendous amount of work and expense involved in processing applications, transporting, packaging and distributing the commodities is contributed by members of the respective organizations.

#### PROBLEMS INCURRED IN THE PROGRAM

At the outset of this portion of my statement, which is intended to be a critical view of the program's operation in West Virginia, let me make it clear that, in my judgment, the division of commodity distribution has generally done a commendable tob with the resources being made available to it in terms of foods available and finances with which to administer the program.

Basically the most serious problems to come to light in West Virginia are attributable in most part to the lack of finances properly to administer the program.

In November of 1958 the U.S. Department of Agriculture investigated the program in the State and indicated that unless certain changes were made prior to March of 1959 there was a possibility of a stoppage of all surplus food shipments to West Virginia. Chief among their criticisms was the procedure used in certifying claimants and the monetary contributions which were being collected from the recipients by certain distributing agencies to pay for transporting the surplus foods from the warehouses to the point of distribution.

Faced with the possibility of having the program terminated by the USDA unless remedial steps were taken, the State legislature, meeting in January, passed a supplemental budget of \$38,000 for the current fiscal year allocable to the commodity distribution division, which would alleviate the possibility of this precipitate action. However, as the following statement will show the problem of distribution is still a major one in West Virginia.

#### WAREHOUSING AND DISTRIBUTION

As previously stated, the division is currently maintaining five warehouses in the State under the new budget for 1959-60 of \$302,000, effective July 1. It is my under-standing, it is the intention of the division to establish two additional warehouses, one in Keyser, Mineral County, to service the eastern Panhandle, and one in Parkersburg. Wood County, to service the central and northern Ohio Valley. The map [not print-ed in RECORD] shows the location of these warehouses and the approximate distances to points to be serviced.

As noted, these distances in some instances will involve more than 200 miles of driving, which, of course, is time consuming and expensive. Although the new budgfor the division provides for 14 trucks and drivers as opposed to the present 8, it is almost a foregone conclusion that division trucks alone will not be able to transport the surplus foods to the 400 distributing agencies to be serviced.

This means, of course, that many of the volunteer agencies must assume the responsibility for transporting the commodities from the warehouse to the community in which they are located. Therefore, whether eligible recipients in a given locality receive the much needed food depends upon the willingness of a local organization to bear the expense of transporting as well as packaging and distributing the surplus commodities.

We believe that so many unknown factors in what should be a public welfare program leaves a great deal to be desired in order to properly fulfill its intended purpose of relieving to some degree the hunger and suffering which exists in the midst of plenty.

Sections 5 and 9 of S. 1884 will, in our opinion, do much to remove the objections raised above; section 5 by transferring the responsibility for administering the program to the Department of Health, Education, and Welfare and thus identifying it as a welfare program properly concerned with the welfare of the recipients, and section 9 will supply a measure of financial assistance to the State and its political subdivisions in storing and distributing the food.

NEED FOR AN INCREASED, VARIED DIET

Sections 6 and 8 of the bill contain certain Provisions which, if enacted, would increase and enrich the diet of the recipients of surplus foods.

The following items and amounts currently being distributed in our State could not be termed either adequate or varied:

Deliveries made once a month:

Flour, 10 pound bags: 1 through 3, 1 bag; 4 through 6, 2 bags; 7 through 9, 3 bags; 10 through 12, 4 bags; 13 up, 5 bags.

Meal, 5 pound bags: 1 through 3, 1 bag; 4 through 6, 2 bags; 7 through 9, 3 bags; 10 through 12, 4 bags; 13 up, 5 bags.

Dried milk, 4½-pound packages: 1 through 3, 1 package; 4 through 6; 2 packages; 7 through 9; 3 packages; 10 through 12, 4 packages; 13 up, 5 packages.

Rice,—pound: 1 through 3, 2 pounds; 4 through 8, 4 pounds; 9 up, 6 pounds.

Butter,-pound: 1 pound per person with a 6-pound limit.

According to the information we have received, although dried eggs will be made available for the July distribution, butter Will be canceled at the same time.

Thousands of pinched faces and obviously undernourished bodies in the depressed areas of West Virginia give mute testimony to the need for the action contemplated by these two sections of the bill.

As one who has been long active not only in the labor movement but community welfare agencies as well, I am personally famillar with many such cases.

#### ELIGIBILITY REQUIREMENTS

Section 10 of the bill under discussion provides that the Secretary of the Health, Education, and Welfare Department shall be authorized to establish minimum and maximum standards of eligibility for participation in the commodity distribution pro-

There is probably no other phase of the program in West Virginia which has fallen so far below accepted standards as in the one of eligibility.

Although there are no official figures available on the question, my organization is confident that a great number of very low income families are being denied the benefits of the program because of much too stringent eligibility provisions. Information obtained in two conferences with the State director of the department of public assistance has indicated that comparatively difficult eligibility requirements were purposely maintained to avoid an even higher caseload which would make the cost of the program prohibitive to the department.

However, despite this anticipated danger It was and is our opinion that the rules as promulgated were unfair and discriminatory. For example, until recently a rule was in effect that provided that no employed person was eligible for surplus foods irrespective of what their earnings were. At the same time unemployed claimants who were drawing unemployment compensation which could total in excess of \$120 per month and recipients of cash grants from the department which in many cases ran as high as \$165 were declared eligible.

Although this particular order has been scinded there remains an income eligibility provision and a liquid assets disqualifying provision which in each case are far too low.

Following is the monthly income eligibility schedule and liquid asset schedule currently in effect in West Virginia, Maryland, and Pennsylvania:

	West	Mary-	Pennsyl-
	Virginia	land	vania
Family size:  1	\$50	\$100	\$110

- 1 Maximum allowance.
- Runs to \$320.

  None specified.

From the above chart it can be readily determined that West Virginia is far below that which is accepted as maximum income allowances in two neighboring States.

Inasmuch as the surplus food commodities are made available through a Federal program, it seems only right and proper that standards pertaining to their distribution should originate at the same source.

For the further information of the committee, attached hereto in addition to the map referred to previously, are the following items which we thought would be of some assistance:

1. A copy of the agreement which must be signed by all agencies that propose to become distributors of surplus foods.

2. The application form for welfare commodities which is completed by each applicant and submitted to the agency through

which they are applying.

3. The commodity distribution list which is filled in by the office of the warehouse from which the agency being utilized is serviced; returned with the commodities to the agency and signed by the recipient at the time the foods are distributed.

4. A copy of the policies and procedures governing certification and distribution of commodities issued in March 1958 and currently in effect.

#### CONCLUSION

May I say in closing that I note with pleasure that both Senators RANDOLPH and BYRD, of West Virginia, are cosponsors of

It is a privilege for our organization to join with all the sponsors of this important piece of humanitarian legislation in urging its favorable consideration by this committee and its ultimate passage.

#### Passport Regulations

EXTENSION OF REMARKS OF

## HON. HUBERT H. HUMPHREY

OF MINNESOTA

IN THE SENATE OF THE UNITED STATES Monday, June 8, 1959

Mr. HUMPHREY. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a letter written by Jonathan Bingham to the editor of the New York Times and published in that newspaper on May 24,

In this letter, Mr. Bingham offers an alternative suggestion to the present law which requires that a person leaving the United States obtain a passport from the Government. Mr. Bingham's suggestion, I believe, is worthy of wide circulation and serious thought.

There being no objection, the letter was ordered to be printed in the RECORD. as follows:

TRAVEL PERMIT PROPOSED-PLAN BELIEVED TO OFFER ALTERNATIVE IN PASSPORT DILEMMA

(The writer of the following letter, a lawyer, was formerly Assistant Director of the State Department's Office of International Security Affairs.)

To the EDITOR OF THE NEW YORK TIMES:

The State Department has been asking Congress to give it broad powers to deny passports to Communists and so prevent them from traveling. Last year the Supreme Court held that existing statutes did not, as the State Department thought, give the Secretary this power, and has implied that such power unless very closely safeguarded might well be unconstitutional anyway.

The Congress is obviously torn, and the prognosis for passage of the State Department's bill is not particularly good. Mean-while, the State Department has let it be known, hundreds of Communists have been applying for passports for the first time, and the State Department has felt compelled to grant them.

In this situation, which is characteristic of both the strength and the weakness of our form of government, it seems that a new approach is needed to end the stale-

What if the Department were to ask Congress for the authority to issue simple exit and reentry permits to American citizens whose travel it finds to be undesirable? It might well find the Congress more amenable to the idea. And the Department would, by that means, have very likely evaded the threat of a finding of unconstitutionality by the Supreme Court.

#### CONSTITUTIONAL RIGHTS

For the Supreme Court has suggested that freedom to travel is "a constitutional right," but it has never implied that there is any equivalent "right to a passport." And the two are by no means coequal.

An American passport is more than a necessary permit to leave the country. It is also a kind of letter of introduction, an indication that the traveler's government will stand behind him, within limits, if he gets into trouble. As a high State Department official has said, a passport "\* \* \* invokes for him [the traveler] the full prestige of the United States Government; and foreign governments usually accept it as meaning that he is a reputable person."

The incredible thing is that the Department has never suggested the possibility of issuing some lesser form of travel document. Such a document could be a simple certificate of American citizenship, together with a permit to leave this country and a permit to reenter within a specified time.

The Department would have to determine the standards for denying a full passport, and issue some sort of public explanation. It would also have to establish reasonable procedures. In order to satisfy the Su-preme Court—and, indeed, basic concepts of fair play—the Department would doubtless have to specify to each applicant its reasons for denying a full passport and would have to grant a hearing on the issue if requested.

However, it could probably-and this is perhaps at the heart of the Department's present dilemma—get away with refusing to disclose all its sources of information adverse to the applicant. Where a citizen is entitled to "due process" in the denial of a right such as the "right to travel," the

courts are likely to hold that he must be "confronted" with the witnesses against him, so that they can be subjected to cross-examination. The difficulty is that this is likely to destroy important sources of information for the Government.

#### LIMITING DISCLOSURES

If the question, however, were not denial of the right to travel, but the denial of a full passport, with all the support and approval that it connotes, the courts would probably not insist on so high a standard of disclosure, i.e., confrontation and cross-examination.

What would be the practical result for the individual traveler concerned if he were to be given an exit and reentry permit instead of a passport? Probably different countries would react in different ways. It is safe to say, however, that such a permit would make travel far less convenient, secure and predictable than it is with a passport. It is also safe to say that such permits would not be popular. They would be, in effect, second-class travel documents, and would identify the holders as persons whose travel the U.S. Government did not approve of.

It is true, of course, that with such a document a determined espionage agent could leave this country to carry on his work. But such a person can do this today by using the Latin-American or Canadian route, where passports are not required. Moreover, if espionage is involved and the Government knows it, the person should be indicted and actually detained.

Such permits could also be a device for solving the problem of travel to countries not recognized by the United States, where regular passports are not valid. Enterprising newsmen might well be eager to use such "travel-at-your-own-risk documents" for travel to areas such as Hungary or Communist China. They would have no assurance of being permitted to enter, but they would be free to use their ingenuity and courage to carry out such travel and report their findings to the American public. This would avoid the ridiculous situation which now exists today in which the adventurous Americans who attempts to travel where his passport is not valid is likely to have his passport revoked.

JONATHAN BINGHAM. NEW YORK, May 19, 1959.

## The Oregon Centennial

EXTENSION OF REMARKS

## HON. RICHARD L. NEUBERGER

OF OREGON

IN THE SENATE OF THE UNITED STATES

Monday, June 8, 1959

Mr. NEUBERGER. Mr. President, in this centennial year of Oregon statehood, we take particular pride in the magnificent scenic vistas of our State. These mountains, valleys, and sweeping stretches of seacoast abound in wildlife, fisheries, and birds. Few places in America are so characterized by snowy peaks and timbered hills rising far above the ocean's foaming strands.

In Sports Afield magazine for June 1959, I have been privileged to contribute an article entitled "Oregon at 100." The theme of the article is expressed in the headline added by the editors, which refers to Oregon as "one of America's great outdoor States."

Already, Mr. President, my office is receiving many inquiries from fishermen, hunters, campers, and outdoor lovers throughout the Nation. These people have read the article and they desire to spend their vacation in Oregon, the State which thrills all newcomers—whether they be bold frontiersmen like Lewis and Clark in pine-log canoes, or modern wayfarers in sleek station wagons. This is Oregon's 100th anniversary of statehood.

I wish it were possible, Mr. President, to include in the Congressional Record some of the lovely colored photographs of the McKenzie River, the Wallowa Mountains, the Rogue River, the mouth of the mighty Columbia River, and other Oregon beauty spots which have been featured by the editors of Sports Afield magazine.

Mr. President, I ask unanimous consent to have printed in the Appendix of the Record my article entitled "Oregon at 100" from the June issue of Sports Afield.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

[From Sports Afield magazine for June 1959]

OREGON AT 100

(By Senator RICHARD L. NEUBERGER)

(This year celebrating a century of statehood is one of America's great outdoor States. Here an eminent native son tells of her vast hunting-fishing-camping potential.)

When my wife Maurine and I are trudging through a wooded glade or beside an ocean strand, we have a game we play. What would be our choice if a mythical Paul Bunyan could transport us back in time to some earlier period in history? And always we come to one event. We would have chosen to go along with Meriwether Lewis and William Clark on that original westward pligrimage across this vast continent by Americans.

To us, no thrill could compare even remotely with the adventure of being the first of all our countrymen to see the marvels of Oregon—to paddle in pine-log cances down the mighty Columbia, to glimpse the snowy pyramid of Mount Hood rising out of the foothills of the Cascade Range, to peer up the chasms of the Snake and the Deschutes, to glory in the incredible quantities of fish in the swift reaches of these mountain rivers and of game on their shores, to see evergreen forests measured only by horizons, and finally to sight the great Pacific where it breaks in whitecapped splendor beyond the Columbia's bar.

Oregon affects us that way. Whenever we are separated from our native State, we are unable to feel really content or satisfied. Its surf and booming waterfalls call to us from afar. In this year of 1959, which marks the 100th anniversary of Oregon statehood, we still are dazzied by the fact that any realm on earth could be so generously supplied with all the wonders of the outdoors. And our affection for Oregon is expressed in more than mere words. One day Felton M. (Skeeter) Johnston, secretary of the U.S. Senate, said to me: "Senator Neuberger, I believe you spend more time in your home State and less time in Washington, D.C., than any other member of the Senate.

"Skeeter," I replied, "there's a good reason for that. Both my wife and I were born and raised in Oregon. We can hardly wait to see our favorite campgrounds or picnic spot in the Oregon wilderness, once the Vice

President has banged his gavel and announced the adjournment of the Senate until the next session."

Perhaps I can make you understand our fervent devotion to Oregon.

Oregon contains in abundance the three ingredients essential to a healthy and permanent wildlife community—forests, water, and ample space not yet taken over by pavement or real-estate subdivisions.

Oregon's 434 billion board feet of standing timber make it first in the Nation in forest growth. No sister State anywhere can rival Oregon's immense green blanket of fir, pine, cedar, and other needled species. Even my hometown of Portland contains more trees than any other city in the world, regardless of size. The humblest bungalow can have a Douglas-fir as high as a 20-floor office building in its backyard.

And the rivers of Oregon match the forests which guard and protect their sources. These rivers rib seacoast and upland alike with their gorges. Some idea of Oregon's prodigious quantity of water may be gained from the fact that the Columbia carries 180 million acre-feet to the ocean. The gnawing Colorado River, architect of the Grand Canyon, has a runoff with barely 10 percent this much water. Many mountain ranges in Oregon pay glacial tribute to the Columbia and its tributaries—the Cascades, Coast, Wallowas, and Blue Mountains. They soak up winter's deep cushions of snow and let the later seep downhill with the dependable regularity of a honker flock's annual migration.

Indeed, Oregon has so many rivers stockaded by awesome scenery and filled with fighting fish that each sportsman has a different favorite. That author of innumerable western tales, Zane Grey, was partial to the saucy Rogue with its salmon and steelhead. Ex-President Herbert Hoover has told me that the foaming McKenzle, with its rainbow trout, is his special jewel. The Lostine River. which claws at granite boulders with rockets of spray, is the particular trout fishing bailiwick of Supreme Court Justice William O. Douglas. This illustrates Oregon's versatility, for the Rogue splashes directly into the ocean, while the McKenzie and Lostine are mountain rivers which reach tidewater only through a network of distant tributaries. Gen. George C. Marshall is another who, like Zane Grey of old, prefers Oregon streams murmuring straight to the sea-His choice is the picturesque Umpqua, which has an infinite variety of fishing—salmon, searun cutthroats, striped bass, and German

Of course, the ordinary angler, who is not on the split-second schedule of a famous military commander or former President, can try his luck both at sea level and high among the crags when he visits Oregon. Our State, in common with such favored places as Norway and the new 49th State of Alaska, has mountains whose timbered headlands kneel in the ocean. In fact, I know of no outdoor recreation which Oregon fails to afford, unless it be scrambling up coconut palms or some other tropical tree.

Giacial ascents in Oregon of varying difficulty beckon the alpinist. A whole necklace of lakes offers boating, swimming, surfboarding and fishing. My wife, who must have mermaid corpuscles in her veins, insists that no swimming—either in salt water or freshis half so invigorating as that available in Oregon. The water is cold, however, and thus not for any bather who is faint of heart or pulse. Nearly one-fourth of Oregon lies inside the boundaries of national forests, which are crosshatched with excellent trails. Timber sales are twice the value of those in any other State, but the U.S. Forest Service maintains a program of sustained-yield, which means that the annual cut is kept closely in balance with new forest growth.

Their wealth of natural resources has made Oregon's people extremely conserva-tion-conscious. When an unwise termination-conscious. tion act put in jeopardy the extensive pine forest and waterfowl marsh of the Klamath Indian Reservation, public opinion in the State mobilized speedily. This made it pos-sible for me to sponsor successfully in the Senate a \$90 million authorization for Federal purchase and preservation of such priceless outdoor assets. The saving of the Klamath marsh—which otherwise might have been drained for use as grazing landwas of special importance, because it is used for nesting and feeding by some 85 percent of the birds traveling the Pacific flyway. Of great assistance to this rescue operation in Oregon was the effective crusading carried on by Michael Hudoba, able Washington correspondent of Sports Afield.

Because of its wealth of water and trees, all of Oregon bristles with wild creatures of one kind of another. This is attested by the purchase last year of over 800,000 fishing and hunting licenses and kill-tags of various sorts, a statistic of amazing proportions in a State of only 1,700,000 population. Oregon has almost 3 percent of the country's land area, but about 1 percent of its people. This explains why there still are wide-open spaces in Oregon free of cities and supermarkets. Such spaces can be either gaunt rimrock, primeval groves or seashore sand dunes. Yet they have one characteristic in common—freedom from civilization. Forest fastnesses in Oregon stretch away to the skyllne, untouched except by an occasional lookout tower or ranger's cabin.

We have a lean and rugged friend named Rank Lewis, who recently spent 5 weeks with his family on the Skyline Trail, which threads along the summit of the Cascades. They saw other human beings only once—when they deliberately left the mountain pathway at Cresent Lake to stock up on grub. This is a rare kind of solitude in our frenzied existence. "I wouldn't have believed we could be so all alone anywhere in the continental United States," sald Hank's resourceful wife Jean, who is a member of the Oregon State Senate.

I myself remember sitting, winded and tired, on the dizzy shoulder of Olallie Butte, in the Mount Hood National Forest, just after we had returned to Oregon from a tense and hectic session of Congress. While we munched our cheese sandwiches and listened to the hum of insects in the late summer afternoon, it seemed difficult to recall that we had only just come from an environment where hordes of people pulled at our lapels and tugged at our elbows during every waking hour.

This is what Oregon means to us—rest and Peace and sanctuary from the litters of bigtime politics.

But Oregon is not only a refuge for the Pecies homo sapiens. The Malheur National Wildlife Refuge, in the State's Southeastern corner, is about the biggest migratory-bird reserve in the country primarily set aside for waterfowl, Sandhill Cranes, herons, pelicans, egrets, all kinds of ducks and geese, gulls, quall, sage hens, and loons are among its winged inhabitants.
This is the farthest north that egrets nest on our continent. A monument recently was dedicated at the heart of the refuge in tribute to a pair of illustrious Oregon naturalists, Stanley G. Jewett and Bill Finley, who fought to keep such wetlands from be ing drained for agricultural purposes. former resident of Oregon, Dr. Ira N. Gabrielson, president of the Wildlife Management Institute, journeyed 3,000 miles to make the dedicatory address while birds rustled in the reeds.

From the very beginning, Oregon's abundance of wildlife has made a vivid impact on visitors. Lewis and Clark arrived in Oregon

after having had their narrowest brush with starvation when crossing the bleak Bitter-root Range. Game had been nonexistent. Oregon's first impression was to awe the explorers with the countless thousands of salmon in the rivers and the endless procession The great of ducks and geese overhead. numbers of elk on the south bank of the Columbia, within sight of the river's wide mouth, induced the location of Fort Clatsop, which soon will be made a permanent memorial by the National Park Service. Lewis and Clark needed meat and also hides to replace their tattered garments. Therefore, they built their crude log stockade where the elk foraged, and thus it was that the first habitation ever erected by Americans on the shores of the Pacific Ocean came to be located in what today is Oregon State.

The same Roosevelt elk that befriended Lewis and Clark are numerous in Oregon now, especially along the timbered seacoast. They are larger in size and darker in color than the Rocky Mountain elk, which roam the mountains and plateaus in the interior of the State. Before I was born in Oregon 46 years ago, some of the famous Jackson Hole elk herd in Wyoming had been transplanted to the uplands of Oregon. They thrived immediately in their new habitat and have flourished ever since. These animals with such a historic past give Oregon a virtual photo-finish tie with Montana for second among the States in elk population. Idaho, with its sprawling herd on the steep slopes of the Lochsa River, leads the country in this big-game category. Ironically, the famous Lochsa elk were not in the vicinity when Lewis and Clark, stricken with hunger, staggered across the area which now is Idaho.

Nearly every wayfarer has eaten well in Oregon. Explorers like Lewis and Clark or Gen. John Charles Fremont or Capt. Benjamin Bonneville might find lean pickings elsewhere, but they dined in style on elk rump, salmon steak, and goose liver when Oregon was reached. Although he got there after pioneer times, Rudyard Kipling was the happiest traveler of all. He caught seven or eight whopping Chinook salmon on lures in the Clackamas River within a few hours, near the foot of the riffles pecking at a Southern Pacific trestle. Kipling then reported to friends at his home fishing club across the globe in India: "I have lived. The American Continent may now sink under the sea, for I have taken the best that it yields, and the best was neither dollars, love, nor real estate."

The modern sportsman may not have Kipling's gift of expression, but he will be just as pleased with Oregon. Come with me for a quick survey of this far-flung outdoor paradise on its 100th birthday as a State of the Union.

If you arrive with creel and rod, plan to fish both in the mountains and along the ocean. Oregon has at least 15,000 miles of fishing streams and more lakes than an IBM machine could tabulate. An alert and wellstaffed State game commission has kept waters efficiently stocked despite the inroads of fishing and an occasional overdose of sewage from cities or paper mills. At least 15 rivers of Oregon empty directly into the Pacific. Salmon are taken principally through trolling, casting, or still fishing. Spinners, artificial minnows, and cluster eggs are the most reliable lures. Steelhead. which I like to describe as rainbow trout that got inquisitive and went to sea, are at their peak during the damp but mild coastal winters. Chinook salmon, king of their kind, spawn in the gravel of fast-running creeks. But the smaller sockeye or bluebacks will hatch the next generation of salmon only in streams which have lakes lurking at their headwaters. Chinooks frequently weigh up to 50 pounds, and the world record sportcaught Chinook was taken from the Umpqua River of Oregon. Its avoirdupois was 83 pounds.

Fishing in the Oregon mountains depends less on poundage and more on fight for its thrills. Just about every sort of trout can be enumerated in one or another of the States' myriad of rivers. The Deschutes watershed, near the central portion of Oregon, offers steelhead, rainbows, eastern brook trout, German browns, lake trout, and the Kokanee, which is a landlocked sockeye salmon. The Deschutes, like many other Oregon streams, can be fished from boats or from the banks. If you prefer to cast your flies in a wilderness, try the Wallowa Range in the extreme northeastern sector of Oregon. A Swiss guide told me this idyllic valley was more like his native land than any spot he had yet seen in the United States. I never have visited Switzerland, but if it is anything like the needled and spired Wallowas, with their gem-shaped lakes, then I believe all the favorable comments I have heard about the domain of William Tell.

Snow in the high passes keeps wayfarers out of the Wallowa uplands before July 4. Trails are steep and no place for a tenderfoot addicted to dizzy spells. But the reward is rich in rainbow, eastern brook, and cutthroat trout, once the high alpine meadows are attained. This is the advantage of a State as diversified as Oregon. It combines the mountain wonders of a Colorado with the seacoast attractions of another Maine. If you are stout of heart and limb, you can invade the Wallowa Range or the Cascades with your fishing equipment. But if a coronary condition keeps you close to sea levelas it does in the case of that doughty angler. President Dwight David Eisenhower-then the 15 fretted streams pouring into the Pacific Ocean are your deepdish cobbler in

I myself am not a hunter. I have never pulled a trigger on a fellow mammal. But I refuse to be hypocritical about my friends who do like to hunt, because I eat meat and thus share in the benefits of a kill, whether it takes place in a packing plant or grove of Douglas fir.

I have been along on hunting trips, from the moose and brown bear ranges of the Yukon to the deer-plentiful plateaus of northern California, and I think it can safely be claimed that Oregon ranks among the major hunting areas of the Far West. Indeed, the populace takes its hunting so seriously that Governors of Oregon have lost their jobs at the next election, because they closed down deer season too hurriedly when there was forest-fire peril.

Oregon is among the few States with an abundance both of mule deer and of the majestic Columbian blacktails. Blacktails abound in the gentle Coast Range, mule deer in the lofty interior. In fact, Oregon contains more deer of these two species than any other State except vast California. Deer hunting season generally takes place during the first 3 weeks of October. Elk season then follows conveniently-from late October or early November until midway through the month. Here, again, the nomad has his choice between seacoast and alpine environment. If you are hunting Roosevelt elk near the ocean, remember that they favor burned-over or logged-off hillsides to those where extensive evergreen forests still grow. By contrast, the Rocky Mountain elk of the high uplands usually lurk in thickets of lodgepole pine, where it is difficult to distinguish dark hide from rough brown bark.

Upland game in the form of birds is also a lure in our State. These include ring-necked pheasants, Hungarian and chukar partridge, three kinds of quail, and virtually every variety of grouse. The State's lush foliage and ample supplies of water make it certain that few of these species ever die

out. Furthermore, we of Oregon are extraordinarily proud of our State game commission and its able director, Phil Schneider. It is not a quarrelsome, yapping commission which forever lectures and scolds sportsmen. Skillful game management is its goal, and Oregon's superiority as a site of hunting and fishing demonstrates that the goal has been consistently attained.

Space precludes me from listing all the outdoor recreational opportunities easily accessible in Oregon. But you name it, and Oregon has it. For example, Timberline Lodge and nearby Government Camp, in the Mount Hood National Forest, comprise the Northwest's most famous ski resort. More winter-sports visits are undertaken each year to this one area than throughout all the rest of the region combined. Ski tows, ski lifts, skyways with bus bodies on heavy cables—there is just about every possible facility except human projectiles for getting skiers back up the powdery slopes of Mount Hood so they can swoop down again. The long, cool springs keep the snow from melting away early. Ski tournaments are sponsored at Timberline as late as the middle of June, while Portland's celebrated Rose Festival is being dedicated to this most fragrant of flowers only 50 miles away.

of flowers only 50 miles away.

Timberline Lodge is a spectacle in and of itself. It was wedged into the rock-andsnow south face of Mount Hood, loftlest peak in Oregon, during dpression years as a WPA project. Master craftsmen decorated the lodge, by hand, in symbols of the Northwest Indian tribes and with mosaics portraying the lumberjack legend of Paul Bunyan and his blue ox Babe. It is one of the finest examples of hand carving and hand weaving anywhere in the Nation. President Franklin D. Roosevelt fourneyed into the heart of the Cascades to dedicate Timberline Lodge over 20 years ago. Timberline now is rented from the U.S. Forest Service by a wealthy and enthusiastic skier from New York named Dick Kohnstamm. He has installed a glassenclosed swimming pool, so that an adventurer (or adventuress) can glide in a few moments from the icy heights of Mount Hood to a diving board suspended over

steam-heated water. Oregon contains many great vistas of scenic grandeur, and I never can quite decide which is the most spectacular. It always has seemed natural to me that Oregon should have more State parks than any other State—167. Our unparalleled national park, Crater Lake, is in a class by itself. The lake, of a deep blue which puts even the Mediterranean to shame, lies in the immense vat formed when a prehistoric volcano blew its summit to kingdom come. It is 2,000 giddy feet from the rim to the indigo water far below. But is Crater Lake any more stuning than Hells Canyon of the Snake River. 6,500 feet deep, as glimpsed from Buckhorn Ranger Station in the Wallowas? As if every day were bargain day, the sightseer also can peer up the corridor carved by the Salmon River, where it joins the Snake, and this chasm is likewise more than a mile deep. And what of the fabulous Columbia River Gorge, where the country's second mightiest river has gnawed its way through the backbone of the Cascade Range? Lacy waterfalls topple into the defile from the distant snowfields of Mount Hood, while the Columbia itself slows down in pace for the meeting with the first brine of tidewater from the Pacific.

When I was barely out of college, I stood on the basaltic palisades above the Columbia with a learned man who was chairman of Sweden's Royal Board of Waterfalls. I can still recall his words. "What a fabulous river!" he exclaimed. "It falls as far as some of our brooks in Scandinavia, and yet it has all the dimensions of the Volga or Rhine."

If you seek to climb mountains when you visit Oregon, get in touch with the Mazamas of Portland or the Crag Rats of Hood River. These are our most proficient groups of mountaineers. Membership in either organization is selective, for you must conquer a peak with a "living glacier" in order to qualify. This has been done by grandmothers and grandfathers, but it should be kept in mind that such elderly folks were natives of Oregon who stayed in trim by making ascents the year round. Alpine tests in Oregon are varied. Mount Hood, for example, is a long, tedious trudge which generally is completely safe, despite the 11,245-foot elevation of its top. But slightly lower Mount deferson, by comparison, is surmounted by a sheer spire where many inexperienced lives have been forfeit. Unless you are tired of this earthly realm, never attempt any of Oregon's snowy sentinels without a veteran mountaineer.

It is good to be alive in Oregon on Oregon's first centennial anniversary of statehood. I envy those lucky people who will be reveling in the Oregon outdoors in the year 2059, when the second centennial comes around. Yet I am thankful for having been born and raised in the grandeur of this State, where the outdoors is king. I think I understand and thoroughly appreciate the sentiments of Chief Joseph of the Nez Perce, whose people were ordered to leave the beautiful Wallowa Valley so that settlers could take over their lands. Joseph looked around him at the granite mountains, at the pine forests rich with deer and elk, at the rivers bursting with salmon and trout, at grassy meadows where the ponies of the Nez Perce foraged.

"This is our homeland," said Joseph. "For as long as the grass shall grow on the hills and the sun shall set in the sky, we of the Nez Perce will fight to live here."

And fight they did—against endless reinforcements of blue-coated cavalry troopers. And when at last the Nez Perce were overwhelmed by superior numbers, in 1877, Joseph's captors could not look him in the face. They might have been recruited by the Army from afar, but they sympathized with Joseph's love for Oregon.

Today, the great peak which broods over the Wallawa Valley is known as Chief Joseph. Oregon's citizens proudly salute a man who was willing to stake his life so he and his people could stay in Oregon.

## American Politics Has No Room for Religious Intolerance

EXTENSION OF REMARKS

## HON. DAVID S. KING

OF UTAH

IN THE HOUSE OF REPRESENTATIVES Monday, June 8, 1959

Mr. KING of Utah. Mr. Speaker, recently I received in the mail an intemperate and inflammatory diatribe against the Roman Catholic Church. It was plainly inspired by the prospective candidacy for President of the United States of a prominent member of that church.

I do not question the right of a man to publicly criticize any religious group, and, with Voltaire, I will "defend with my life his right to do so." Furthermore, I should like to make it perfectly clear that I have made no commitment and, indeed, have no learnings whatsoever in favor of, or against, any one of the many splendid Democrats whose names have been prominently mentioned in recent months as presidential possibilities. When I do make my choice, you may be certain I will be in no way influenced by religious blas-

I should like to say a word, however, upon the subject of religious bigotry in American politics. Until recent times my own church, the Church of Jesus Christ of Latter-day Saints, repeatedly felt the stinging lash of this demon bigotry. For that reason my people are strongly resolved that unreasoning intolerance shall never become a part of their culture.

The Mormon people zealously teach that the American Constitution was Divinely inspired. They are intensely loyal. The basic principles of their fatth clearly require their unswerving loyalty to the Government, its laws, and the constitutional ideals under which they live. One of their basic principles, as proclaimed in their articles of faith, declares:

"We claim the privilege of worshiping Almighty God according to the dictates of our own conscience, and allow all men the same privilege, let them worship how, where, or what they may."

The articles also declare, in part:

"We believe \* \* in obeying, honoring and sustaining the law."

Utah history reflects the tolerance and understanding which the above articles call to mind. The Salt Lake Tribune newspaper grew into one of the most influential institutions of the State and one of the finest newspapers of America, under Roman Catholic ownership. One of its distinguished owners and publishers, the Honorable Thomas Kearns, was elected to the U.S. Senate in 1901, 5 years after Utah became a State.

The fourth Governor of Utah was a distinguished Jew, the Honorable Simon Bamberger. He was elected governor at a time when Utah probably had as small a percentage of Jews among its population as any other State in the

Tolerance and understanding are reflected today in the general respect which Utahans show religious institutions and leaders of every faith, including such Roman Catholic institutions as Salt Lake City's Holy Cross Hospital, the Judge Memorial School, and the Cathedral of the Madeleine, and including, too, the distinguished bishop of the Catholic Diocese of Salt Lake City, the Most Reverend Duane G. Hunt.

Throughout our State history, the Mormons and Catholics have lived side by side, in harmony and peace. I pray in my heart that it may remain that way, and I have resolved that no political act of mine shall ever disturb the tranquillity of that relationship.

Although, as I have indicated, I do try to live the tenents of my own particular faith, I should add that I had the privilege of attending for 4 years the famous Jesuit institution of higher learning, Georgetown University. Many of the warmest friends I have are mem-

bers of the Roman Catholic faith. Individuals are justified, I believe, in drawing conclusions from their own personal experiences. My conclusions, drawn from such experience, are that the Catholic institutions of learning are dedicated to the teaching of a type of American patriotism whose high quality and fidelity to American principles match those of any other educational institutions in this country.

To suggest that the pledge of allegiance taken by a Roman Catholic is in any way less sincere than that taken by any other member of our Commonwealth, or that such pledge taken by the Catholic carries personal reservations which another's does not, is to ignore the facts which I know to be otherwise.

If we were to subtract from the rich and variegated pattern of our national history every contribution made by the many Catholic nationalities such as the Irish, the Italians, the Spanish-Americans, and the Poles, we would find ourselves confronted by an irreparable loss. It would be heartbreaking to live in an America who knew not these wonderful people.

Over 90 Members of the Congress of the United States belong to the Roman Catholic Church, including our very distinguished majority leader, the Honorable John W. McCormack, of Massachusetts. I consider it an honor to associate with these outstanding gentlemen and distinguished Americans.

As an American, I plead with all Americans to resolve never to stoop to place a single faggot on the fire of religious bigotry and intolerance. America is great because America is bigger than the cramped provincialism which excludes diversity of belief. I can only express the hope that during the coming campaign the bigness of the American mind may spurn the confinements of the narrow sphere of intolerance, and may move out into the vast sunlight of understanding.

#### Dick Fitzpatrick: Example of Courage

EXTENSION OF REMARKS OF

#### HON. ALEXANDER WILEY

OF WISCONSIN

IN THE SENATE OF THE UNITED STATES Monday, June 8, 1959

Mr. WILEY. Mr. President, every once in a while a person who crosses our path sets an example of high courage in the face of adversity. Such a man is Dr. Richard Fitzpatrick. "Dick" as he is known to hundreds of friends, both in Washington and in Milwaukee, has had muscular dystrophy since childhood. He has been confined to a wheelchair. But, in spite of this serious handicap, he has graduated from Marquette University, in Milwaukee, Wis., and, yesterday, he re-ceived his degree of doctor of social psychology, at American University, in Washington, D.C.

I ask consent to have printed in the Appendix of the RECORD an article from

the Washington Sunday Star which tells about Dick Fitzpatrick. I should like especially to call attention to his philosophy, as quoted in the news story:

One fact you've got to realize is that life is going to go on. Either you participate in it or you don't.

People with handicaps would be better off if they knew that there are so many willing to give another a hand if he shows them he doesn't want to sit still and withdraw.

Dick Fitzpatrick has been active. He has not withdrawn. He has accumulated a host of freiends willing to give him a hand. I congratulate and salute

There being no objection, the article was ordered to be printed in the RECORD, as follows:

CRIPPLED SINCE 4, HE GETS DEGREE TODAY

Richard S. Fitzpatrick will receive his doctor's degree in social psychology today from American University while sitting in a wheelchair.

He is a muscular dystrophy victim, confined to a chair since he was 4 years old. How has he managed to persevere, despite his handicap?

"One fact you've got to realize is that life is going to go on," he said. "Either you participate in it or you don't."

Mr. Fitzpatrick, 38, is an editorial adviser for the U.S. Information Service. He has lived here since early in World War II, when his family moved to Washington.

At the time, he had a bachelor of science degree from Marquette University in Milwaukee. He was interested in journalism in his college days and reported campus news for the Milwaukee Sentinel.

After taking on some information jobs during the war, he joined the USIA in 1948. At this point he had added his master's degree from American University. Wanting to do more, he began teaching psychology in 1947 in the Agriculture Department's graduate school program.

Another favorite task is the journalism fraternity, Sigma Delta Chi, which Mr. Fitzpatrick serves here as secretary, a job he has held for 16 years. He also is associate editor of the fraternity's magazine, the Quill, and serves as a book reviewer for several other publications.

Mr. Fitzpatrick lives with an attendant at 4830 North 22d Road, Arlington. His appetite for-new psychology works is insatiable. "I'll say with no little pride that I've amassed some 1,200 books on psychology in my own library," he said.

#### SEES PEOPLE KIND

In another part of his house are several file cabinets filled with case studies conducted by Mr. Fitzptarick during his university work. He's not surprised when a friend drops by with a son or daughter seeking vocational guidance.

Although Mr. Fitzpatrick is unable to drive or negotiate downtown streets, he says there always seems to be someone who can spare a little time to "give me a push when I need it. My wonderful friends have really made the difference."

A few days ago the USIA editor received word that he had been elected to American University's honor society and a psychology honor fraternity.

Mr. Pitzpatrick plans to give a party for his friends a few days after graduation. "You know," he said, "people with handicaps would be a lot better off if they knew that there are so many willing to give another a hand if he shows them he doesn't want to sit still and withdraw."

#### The Labor Bill Vote

EXTENSION OF REMARKS

#### HON. GEORGE A. SMATHERS

OF FLORIDA

IN THE SENATE OF THE UNITED STATES Monday, June 8, 1959

Mr. SMATHERS. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a wellwritten, provocative article entitled "Labor Bill Vote Can Be a Brand," written by Roscoe Drummond, and published in the Washington Post and Times Herald of June 7, 1959.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

WHOSE VETO GUIDES YOU?-LABOR BILL VOTE CAN BE A BRAND

#### (By Roscoe Drummond)

The image which the two parties present to the voters in the 1960 elections will be shaped to a large degree by the kind of labor reform legislation Congress passes—or fails to pass—this session.

If the House Democrats support a weak law, rejecting every provision the union leaders want them to reject, they will be going a long way toward showing themselves a political party with a union veto.

If the majority of the House Republicans insists on everything which the U.S. Chamber of Commerce wants by way of labor reform legislation or else opposes everything. they will be going a long way toward show-ing themselves a political party with a business veto.

Some would like to avoid this test by postponing it. But that would be the worst kind of abdication. It would be a confession that Congress did not have the will to legislate against the will of opposing pressure groups.

Postponement would only make the decision more difficult. If the hurdles of labor reform legislation cannot be surmounted now, what chance is there of surmounting them on the eve of a Presidential election?

The House Labor Committee is so divided that there can be no valid forecast of what will come out of it. But whatever does come will probably go to the House with an open rule, which means that amendments can be proposed from the floor.

This means that anything the House Labor Committee offers can be strengthened or weakened; that the real test is yet to come, and that when it does, both parties will have to stand up and be counted.

Neither labor nor industry is a disinterested witness on labor reform legislation. They are the interested parties. Just as Wall Street did not write the Securities and Exchange Act, neither labor nor industry should write the labor reform legislation.

I don't mean they shouldn't be heard. They should be heard and they are-all over

Jimmy Hoffa, the Teamster union boss, is quoted as threatening a general strike if Congress dares to pass any labor reform law at all, and he is also quoted as saying that he was misquoted. Perhaps he wouldn't call it a general strike but just a little po-

lice action to keep Congress in line.

John L. Lewis, president of the United
Mine Workers, has also served notice on Congress that he wants it to keep hands off. forget the abuses and scandals revealed by the McClellan committee, do nothing about

George Meany, president of the AFL-CIO, wants as little as possible and less than that, if it can be arranged. He is against the modest measure passed by the Senate and wants some of its teeth extracted.

This Congress is certainly not going to put any antilabor union-busting provisions in its reform package. And it shouldn't. But the interests of the union leaders in the management of the powerful unions are not always and automatically the same as the interests of the union members.

There is a need to safeguard the rights of union members to run their unions democratically, to require free, secret-ballot elections of officers periodically and to protect union funds through strict accounting.

It is doubtful if the Senate bill provides adequate enforcement. It seems to me that Secretary of Labor Mitchell's proposed curbs on secondary boycotts and "blackmail" picketing are reasonable, moderate, and in the public interest.

We need to bear in mind that we are not dealing with an infant labor movement or an impotent labor movement.

#### Fish-Farm Project in Arkansas

EXTENSION OF REMARKS

#### HON. J. W. FULBRIGHT

OF ARKANSAS

IN THE SENATE OF THE UNITED STATES

Monday, June 8, 1959

Mr. FULBRIGHT. Mr. President, I am proud to have been the author of the bill to establish a fish-farm research project which is designed to solve many of the problems plaguing farmers who engage in this new field of agriculture.

I am pleased to report that two tracts of land in Arkansas have been purchased for the establishment of the experiment station. Headquarters for the project will be located at Stuttgart on a tract of 85 acres adjacent to the rice branch experiment station operated by the University of Arkansas. The second tract consists of 211 acres near Kelso, Ark., and it will be used for larger scale experimentation to test the laboratory findings. An appropriation of \$350,000 was included in the Interior appropriation bill for the project when the bill passed the House of Representatives. This sum should be sufficient to complete the construction of the experiment station, and I hope the station will be in operation by the end of the coming fiscal year.

I ask unanimous consent to have printed in the Appendix a press release by the Department of the Interior concerning the purchase of the land for the

There being no objection, the release was ordered to be printed in the RECORD, as follows:

LAND PURCHASED IN ARKANSAS FOR FISH-FARMING RESEARCH

Purchase of two tracts of land in two important Arkansas rice, soybean, and cotton growing areas for the development of a fish-farming research station was announced today by the Department of the Interior. The land acquired for the projects totaled 296 acres.

The purpose of the research is to provide practical ways by which fish-farming can be conducted profitably in conjunction with agricultural crop growing. The University of Arkansas, through its network of agricultural experiment stations, has long been

interested in finding income crops for rotation with rice production, and experience in recent years indicates that fish might be such a crop. However, numerous problems on stocking, disease control, predation, competition and reservoir management must be solved before that type of fish-farming can be economically feasible.

On March 15, 1958, the President signed a bill which authorizes two major fields of

activity

(1) Biological research on all the problems of fish rearing—selection of species, parasites and diseases, reproduction, food requirements, water quality, predation and competition and selective breeding for special qualities of growth, disease resistance, and tolerance to special conditions.

(2) Technological improvement—harvesting methods and preparation of fish for

the market.

The two Bureaus of the U.S. Fish and Wildlife Service—the Bureau of Sport Fisheries and Wildlife and the Bureau of Commercial Fisheries—will work together to carry out all the provisions of the Act. The former, which does research on fish cultural problems and freshwater fishery management, and operates some 100 fish hatcheries over the country, will have responsibility for the biological research, and the latter for technological and market promotion aspects.

One of the purchased tracts comprises 85 acres immediately adjacent to the Rice Branch Experiment Station near Stuttgart. The other is 211 acres adjoining the Southeast Branch Experiment Station at Kelso (post office, Rohwer). Thus there will be excellent opportunity for close cooperation, joint research effort, especially in crop rotation, and day-to-day consultation. These opportunities are enhanced by the fact that crop research specialists of the U.S. department of Agriculture are stationed at one of the two university experiment stations.

Biologists of the Arkansas Game and Fish Commission, the Agricultural Extension Service, and the Soil Conservation Service of the Department of Agriculture have had a longtime interest in managed farm ponds and reservoirs for multiple use, including fish and waterfowl. They have provided technical and extension services and consultation to farmers and the general public on pond and reservoir construction, stocking, and management with the best information available.

Other activities, like fishery economics and market promotion and development, are long-established functions of the U.S. Fish and Wildlife Service, and limited assistance has been given to fish farmers already. The very great problem of weed control will be given attention principally by the University or Arkansas Agricultural Experiment Station, Department of Agriculture, in cooperation with fishery biologists.

The Bureau of Sport Fisheries and Wildlife of the Fish and Wildlife Service is making plans for construction and staffing the new station. The Stuttgart site will have a headquarters and laboratory building, experimental ponds and a small reservoir. The southeastern land will be developed for larger scale experimentation to extend and test the laboratory findings. Although longrange and fundamental research will be included in the program, it can reasonably be expected that useful results will come from time to time for practical application. These will be made available promptly through publication to all interested, and to the State game and fish commission, the Agricultural Extension Service, other State conservation agencies and soil conservation service for use in their technical and extension activities

The Stuttgart property will have a modern, functional laboratory, fish holding facilities, a service building for shop, garage, and storage, a reservoir of about 30 acres, and experimental ponds ranging from one-tenth acre to 1 acre in surface area. The Kelso land already has a building and a high gallonage rice well, and an adequate surface water supply. Well-stabilized levees have been constructed on three sides of 160 acres of the plot. Five-, ten-, and twenty-acre reservoirs are planned for the site. There is excellent prospect for experimental work on two nearby 80-acre reservoirs to be constructed by the landowner.

Construction of facilities and the development of the two tracts of land for research purposes, and initial staffing will proceed as soon as appropriations are made. Engineering specifications have not been drawn up, but a general layout plan has been made with the advice and assistance of Dr. S. W. Ling, fishery expert for the Food and Agricultural Organization of the United Nations. Dr. Ling recently visited the sites in Arkansas as well as several research stations and fish hatcheries in the South.

Professional staffing contemplates a team of research specialists in aquatic biology, microbiology and parasitology, physiology, biochemistry, biostatistics, and genetics. Three will also be supporting personnel for fish handling, water management, and maintenance,

Work with several groups of fish can be foreseen now. The catfishes, buffalo fishes, and basses will be important, and additional good possibility is for carefully controlled experiments with a desirable import which has not yet been tried in the United States.

### British Objections to U.S. Maritime Policies

EXTENSION OF REMARKS

## HON. WARREN G. MAGNUSON

OF WASHINGTON

IN THE SENATE OF THE UNITED STATES

Monday, June 8, 1959

Mr. MAGNUSON. Mr. President, today, and possibly all this week, the State Department will be host to representatives of European maritime nations who have asked opportunity to present formally their objections to this country's maritime policies.

Senators will be interested in the British views on these meetings, as reported in the New York Times on Thursday last.

Mr. Harold Watkinson, Minister of Transportation and Civil Aviation, who will head the British delegation, is quoted as telling the House of Commons that he believes he will receive a sympathetic hearing from the American administration. Let me say here that American shipping leaders fear that he will be so received.

Mr. Shinwell, Labor member of the House of Commons, is quoted as having asked Mr. Watkinson to "make it quite clear that they—America's shipping operators—should not seek to take action detrimental to the interests of British shipping."

Another member urged Mr. Watkinson to argue "that Great Britain will no longer tolerate anything in the shape of discrimination against British shipping."

I ask unanimous consent that the article from the Times be printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

[From the New York Times, June 4, 1959] BRITAIN PLANNING SHIPPING PROTEST-MIN-ISTER TO LEAD DELEGATION TO U.S. PARLEY NEXT WEEK TO URGE POLICY CHANGE

LONDON, JUNE 3 .- Harold Watkinson, Minister of Transport and Civil Aviation, told the House of Commons today that he would lead the British delegation to the shipping conference in Washington next week.

He was urged by both Conservative and Labor members to talk tough to the Amer-

"We do not think the declared joint policy of interdependence is working at all well on the sea, so far as our shipping policy is concerned," Mr. Watkinson declared. He added:

'I hope to say that very frankly and I believe I shall receive a sympathetic hearing from the American administration."

One of the main British complaints is the registration of a large number of U.S.owned freighters under so-called flags of convenience to escape U.S. taxation. Another is a U.S. law that shipments under aid programs must be carried in U.S. bottoms.

Dame Irene Ward, Conservative member, said Mr. Watkinson "will have the support of the whole House when he argues, as I am sure he will, that this country will no longer tolerate anything in the shape of discrimination against British shipping."

She urged the Minister to "argue for fair treatment, which we have not had for very

many decades."

Emanuel Shinwell, Labor member, asked Mr. Watkinson to "make it quite clear to the representatives of American maritime interests that their failure to conduct their affairs as British shipping conducts its affairs, is no reason why they should seek to take action detrimental to the interests of British shipping."

To this Mr. Watkinson said:
"I do not think that Mr. Shinwell and I are in the slightest degree of disagreement."

## Take One Giant Step: An Equitable Energy Policy

EXTENSION OF REMARKS OF

## HON. JENNINGS RANDOLPH

OF WEST VINGINIA

IN THE SENATE OF THE UNITED STATES Monday, June 8, 1959

Mr. RANDOLPH. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD the text of an address by the Honorable William R. Connole, Vice Chairman of the Federal Power Commission at the National Coal Association 42d anniversary convention, the Shoreham Hotel, Washington, D.C. , on June 3, 1959.

The Government official spoke forcefully of the need for a meaningful, practical, and equitable energy policy for this Nation. There is no hesitancy on my part in endorsing Mr. Connole's objectivity in this connection. And it is again a privilege to speak of the National Coal Policy Conference as a useful organization formed not only to advance the interests of the bituminous coal industry, but, also, to work for the achievement of a national fuels policy which would deal with the country's energy resources as a whole.

There being no objection, the address was ordered printed in the RECORD, as follows:

TAKE ONE GIANT STEP

(By William R. Connole, Vice Chairman, Federal Power Commission, at the National Coal Association, 42d anniversary convention, the Shoreham Hotel, Washington, D.C., June 3, 1959)

When many of us were young children we enjoyed playing the game we knew as "giant steps." Remember that if we were so told by the person who was "it" we advanced toward the goal by taking one or more steps. We were especially pleased when told to take

I propose to take advantage of my position here and tell you people in the coal industry to take a real glant step in the direction of your goal. Whether I will have a similar opportunity so to invite other segments of the energy business, I do not know. You recall that the players in the children's game always had to initiate the request before the invitation was issued. Perhaps, however, the echoes of this invitation will bounce around enough that they may be heard by the oil and gas industry, the electric utility industry, and the more esoteric fields of energy production and use that are just now being born.

The goal I speak of, of course, is the same goal everybody in this business should be looking for. I am talking about a meaningful, practical, and equitable energy policy

for this Nation.

Let me begin by congratulating the coal industry, the mineworkers, the equipment manufacturing industries, the electric utility industry, and the railroads for their fore sight and courage in setting up the National Coal Policy Conference. I think the creation of this group was significant not only as an unprecedented example of cooperation and unity among groups that are often widely separated in their goals, but perhaps more importantly because it forms a jumping-off spot from which even greater progress can be made.

All of us, I suppose, have heard unfavorable comments on the conference. These have ranged all over the lot. Some have observed cynically that it was just another study and wondered with undisguised derision how often this ground would be picked over.

Some others have objected that it was obviously a one-fuel approach to the energy problem and that it promised very little for any group other than the coal operators and those dependent upon the coal industry directly. Some have even suggested it was an effort to build up one or more particular coal producing companies or coal carrying railroads.

In these days when restraint in public comment is as rare as common courtesy in the streetcar, we have become hardened to such intemperate and ill-advised comments. But it is of controlling importance, I think, that we not let this indifference to discourtesy obscure the insidious effect such comments have. Unfortunately, however, there is only one effective way of combating them. That is to make it'so abundantly clear by actions and not merely by words that all of these criticisms are as erroneous as they are ill-advised.

Positive action, then, is needed. No concentration on batting down random accusations hurled at such an organization as the National Coal Policy Conference will make such positive progress. The only effective way is the successful development and untiring promotion of a true national energy policy. It is the only completely effective way to demonstrate that an organization such as this one which you have created is more than an offshoot of a coal operators' meeting and something more valuable than a lodge meeting.

I suggest to you, then, that this positive action be in the form of a giant step forward, immodestly if you will, but confidently and without concern that you are risking the criticism of those who would be convinced you are wrong no matter what you

did.

The need for a national energy policy seems so patently obvious that I am simply unable to understand how thoughtful people concerned with this business can overlook it. I don't believe the issue is whether we ought to have a national fuels policy. The only question is what energy policy are we making and where does it lead us. fact of the matter is that everything energy producing and distributing industries do and everything that consumer preference does and everything that governmental action in the energy field does is part of an emerging energy policy. In other words, whether it is an unconscious or a conscious act on the part of the people of this country we are creating a national energy policy.

Now you might well ask: Why, then, is it

necessary for industry, consumers and Gov-ernment to exercise itself over the need for an energy policy if we are already creating one? A logical question, true. which has a ready answer. Much more important than whether we are making an energy policy is the qualitative judgment whether that energy policy is best for all segments of the economy for as many years in the future as it is possible reasonably to

plan for.

We are told that one of the proofs of the higher nature of man is the ability of his mind to withdraw from itself and look upon itself in objective judgment. This practice of self-evaluation, so indispensable to the deliberations of mankind, has applications outside the limits of the human skull. Indeed, it is only when a unit of society, whether it be a family, a community, a political unit or even an industry, can exercise the same critical ability to examine and judge itself that it, too, will measurably succeed.

I urge that the National Coal Policy Conference take steps to evaluate its segment of the industry in just that fashion. I further urge that it enlist the aid of as many other units or areas of the economy as possible so that all sides of the problem

will be seen and evaluated.

Perhaps the best starting point is to ask ourselves in what form will the ultimate judgment appear. If the effort is successful, with what will it come up? Under our system of society in which government is a matter of law and not a matter of whim, it seems clear that the ultimate conclusion will be legislation. That legislation, to be acceptable, must have been the joint product of as many groups as possible and it must have been motivated by as independent an analysis as possible.

Elimination of what should not be in a national energy policy is the quickest way to narrow down the field of choice. Such a process undoubtedly will occupy those who undertake the consideration I propose. mit me to give what I believe are two of the

most important factors to avoid.

First, I do not believe a national energy policy should be so detailed that it will set out an order of priorities in which fuels will be used in each home or industry. Indeed, it ought not to attempt to dictate what part of the country will use any particular fuel or method of burning it. That type of "social planning" comes too close to the idea of a big brother in Washington issuing

idea of a big brother in Washington issuedecrees to a slavish population.

Neither, I believe, should an energy policy for this country needlessly prefer one area of this land to another. Naturally, the economic growth of a Nation can be fundamentally altered by the kind of energy that is used in various parts and by the amount of it. To avoid a dwarfed or misshapen nation we had best be sure we know what the full grown healthy specimen is supposed to look like. There is grave danger in using our energy balance as a means of subsidy or artificial stimulus to one part of the Nation or another.

Of course, we must consider carefully the need to avoid the exact opposite. I refer to the unnatural stunting of the growth of one segment of the energy economy or the other. This can be the result of misguided, conscious government or business policy. Or, more likely, it can be the result of unconscious government or business policies that lead to that result unknown to those who are doing the damage. Only a well-planned analysis of the present direction of our energy policy can avoid this.

Starting with a firm resolve to avoid these pitfalls, a study could soon isolate the direction in which the various forces, all pushing in apparent random directions are taking us. I recall working out problems in physics involving several forces acting on one object. The idea was to see where these combined forces would push the object. I should consider the first task of an energy study would be to make such an analysis of the forces now pushing our energy economy to

see where it is headed.

Now there are two ways in which such a study or effort to evaluate an energy policy can be carried out. It can be financed and staffed by the joint efforts of the private industries and interests affected or it can be financed by public funds and staffed wholly or in part by public employees working with the agents of private interests. I have neither the right nor the inclination to recommend to you the procedure the conference ought to follow. However, certain things stand out that seem to require consideration in any study such as this.

Looking back at the experience which others have had in attempting to persuade competing industries to accept their conclusions and considering likewise the unsuccessful efforts competing industries have made—to reach voluntary cooperation it seems rather plain that if our effort to evaluate our energy policy and propose needed modifications is to succeed the direction at the top must come from a source identified

with the broadest base possible.

The practicalities of public law are such that never will there be found in a sprawling thing like the Federal Government an agency which has all the virtues of objectivity and dispassion needed to make the type of study I envision. An ad hoc institution, then, taken from sources within the Government and from industry composed of as few people as possible who start business with an agenda whose first item will be a determination of a deadline beyond which they will cease operation seems the easiest and cleanest way of doing what I suggest is necessary. The usefulness of organizations such as Resources for the Future and other research groups should not be ignored.

Such a committee could be formed of people with a broad background in the various energy fields not necessarily technical but certainly of sufficient breadth and depth that the significance of new facts would not be lost on them. It should have men with demonstrated judicial temperament and demonstrated devotion to the welfare of all

the country and not one segment of it and should be composed of men whose opinions are likely to command respect among their fellow men. Once such a body was formed, it could devote a period of time to investigation, public hearings, and task force study of the characteristics of our energy structure and at the end of this predetermined period arrive at some conclusions. These would be first, what energy use policy have we been creating; secondly, how well suited to the needs of this Nation is that policy and, finally, what changes, if any, could be made.

This independent judgment reached after public hearing and reconsideration of all affected views could then be addressed to the Congress and be used to form the background for confirmation of or changes in existing statutes, principles of taxation, governmental policies both national and local, antitrust policies, regulatory commission policies and every other aspect of the public economy involved in the pervasive business of energy use.

The genius and value of the National Coal Policy Conference is that it has been organized by a sufficiently broad base of industries to command immediate attention and respect. If it should adopt and encourage a study along such lines as I have indicated, it would be clear that this is no crackpot idea of a textbook idealist but rather the considered opinion of sound and sober businessmen.

I do not propose to enter the controversial field of what changes should be made and what is wrong, if anything, with our present policy. I am not adverse to commenting, however, that in the privacy of my own mind and not speaking as a member of the Federal Power Commission, I see much that could be improved in our present energy use pattern. I do say again that a body organized as I have suggested will be able to reach these conclusions in its official capacity, that those conclusions will be respected by legislators and opinionmakers throughout the country. I believe that a body which has the stature of a quasi-public institution which numbers among its members and staff men of the talents and qualities I have suggested and whose deliberations are based on information received in public hearings, and serious academic investigations and whose conclusions are contained in well-reasoned, clearly worked-out reports, is the only way in which the meaningful, practical, and equitable energy policy I urged at the outset of this talk will be developed. There are simply too many interests in this country ever volun-tarily to bring them together. There are too many who would be hurt at that particularly sensitive place in the human body, the pocketbook, ever to expect voluntary energy policymaking.

The key suggestions I make, in summary, are these. The study ought to be wide enough to cover all forms of energy, not just one or two. The study ought to decide first where our present policy is taking us. The study ought to be made by an objective group dominated by Government but using the facilities of industry and independent research groups. The study should employ public hearings across the Nation as well as task force studies. The study should have as its aim, legislation.

When we think that our energy resources are being consumed at such an incredible rate that, for an example, all the fossil fuel consumed in the history of the world up to the year 1900 would last only 5 years at today's rate of consumption, we know how important this whole subject is to all the peoples of the world.

And when we think how directly and acutely Government and business policies affect our energy industries, we know how important a policy is to industry. Natural gas

pipeline certification and ratemaking, natural gas and oil importing problems, freight ratemaking for coal movements, tax structures and their effect on incentive and development of competing fuels, all these are but a partial catalog. Indeed, there is much that needs doing here.

With our strong and good neighbor to the north, Canada, just now considering legislation to create a National Energy Board to administer that nation's energy policy, a more propitious time could scarcely be imagined. And, with world peace such a delicate matter that a change in the energy balance could upset it, a more necessary time would be hard to find.

Again, I congratulate the National Coal Policy Conference. Again, I urge you to take a glant step forward to promote the creation of an energy study board of the type I have suggested to avoid the criticisms which inevitably will be directed to you but, and this is of infinitely greater importance, to achieve the lofty and honorable purpose which you have set out for yourselves.

## A Pension for World War I Veterans Is Long Overdue

EXTENSION OF REMARKS

## HON. JAMES E. VAN ZANDT

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Monday, June 8, 1959

Mr. VAN ZANDT. Mr. Speaker, following is my statement to the House Committee on Veterans' Affairs, June 3, 1959, in support of my bill, H.R. 1181, which provides for payment of a pension of \$100 monthly to World War I veterans who have attained the age of 60 years based on income limitations of \$2,400 if single, and \$3,800 with dependents:

STATEMENT BY REPRESENTATIVE JAMES E. VAN ZANDT, MEMBER OF CONGRESS, 20TH DISTRICT OF PENNSYLVANIA, BEFORE THE HOUSE COMMITTEE ON VETERANS' AFFAIRS, JUNE 8, 1959, IN SUPPORT OF THE VAN ZANDT BILL, H.R. 1181, AT HEARINGS ON VETERANS' PENSION LEGISLATION

Mr. Chairman, the announcement of the decision to hold these hearings on pension legislation has been the means of providing a ray of hope to the 2,796,000 World War I veterans still living out of the 4,744,000 Americans who served their country in 1917 and 1918.

It is well known that as a State and national commander of the Veterans of Foreign Wars of the United States and since coming to Congress some 20 years ago, I have always been a stanch advocate of a pension for the veteran of World War I. Bills bearing my name have been sponsored by me in each Congress. When privileged to do so, I appear before this committee in support of them. In addition, when such legislation reached the floor of the House the Congres-SIONAL RECORD will show my active support both in debate as well as in rollcall votes. In other words, let no one misunderstand my position in favoring a pension for World War I veterans because it is in accord with a traditional American principle adopted following the Revolutionary War.

Today the average age of the 2,769,000 surviving veterans of World War I is 64.8 years and from April 1958 to April 1959, the Veterans' Administration reports 96,000 died, of which 33,303 were listed as receiving pension benefits at the time of their death.

It is on behalf of the veterans of World War I—truly the forgotten veteran of the Nation—that I appeal to this committee for favorable consideration of my bill H.R. 1181. The bill is designed to provide \$100 monthly to veterans of World War I at age 60 with 90 days of honorable service, with income limitations of \$2,400 to those with no dependents and \$3,800 to those with dependents and providing that social security or other pension and annuities payable to the veteran be excluded by the Veterans' Administration in computing income.

In this connection, on May 19, 1959 President Eisenhower signed into law a bill amending the Railroad Retirement Act which contained a provision excluding railroad retirement benefits from being counted as income in establishing eligibility for non-service-connected disability pension benefits

In fact, similar legislation is now pending before the House Ways and Means Committee that would grant the same privilege with respect to social security benefits.

Mr. Chairman, H.R. 1181 was introduced by me on January 7 and was followed by my request to the chairman of this committee for departmental reports and hearings at an early date. According to the information furnished by this committee, departmental reports were requested January 19, 1959 and as late of June 3 had not been received.

Meanwhile, H.R. 6432 was introduced and heralded as a measure to modernize the pension programs for certain veterans and their dependents. It did not take long for the major veterans organizations to recognize that the so-called new look was nothing but a bold attempt to destroy the traditional American concept of a pension system for aging veterans.

The result was that H.R. 6432 was promptly assailed as pauper legislation for its approval would in reality be a high-sounding method of placing aged and alling veterans on a par with non veterans re-

ceiving public assistance.

At this point, I wish to make it emphatically clear that I join the several veterans' organizations in denouncing H.R. 6432 as a pauper bill. It is an affront to the veterans it proposes to benefit, and further it is an insult to our ailing and aged veterans and especially to the dwindling ranks of World War I veterans who, with an average age of nearly 65 years, are dying at the rate of nearly 100,000 a year.

Reverting to a discussion of my bill, H.R. 1181. let me emphasize that, despite criticism of those who seek to destroy the veterans' benefits programs, the proposed legislation does not—as is often insisted by antiveteran groups—make Treasury raiders out of our World War I veteran population.

H.R. 1181, as previously explained, is no "hand-out" to wealthy veterans because it provides for income limitations that must be considered before eligibility for a pension of \$100 monthly at age 60 can be established.

It should be remembered that nearly 100,000 World War I veterans died during 1958 and since the average age of surviving veterans of the First World War is about 65 years, their fast-dwindling ranks due to a high death rate will reduce from year to year the cost of my bill, H.R. 1181.

From an economic standpoint, approval of a pension of \$100 monthly to veterans of World War I who meet the income limitations gives assurance that pension money will be channeled into the economic stream of the Nation.

It will be spent for the necessities of life and will include the grocer, landlord and the family physician. It will serve as an effective builder of morale by aiding in preserv-

ing the self-respect and pardonable pride of veterans who served their country with honor in a national emergency and who, it is understandable, have a natural reluctance against becoming objects of public charity in their declining years.

In theory, Congress has always considered the pension rate as an adjunct to income rather than as supporting income. In this connection, however, many World War I veterans because of advanced age and disability have no other income to support them.

At this point I should like to discuss briefly the situation faced by members of our Armed Forces serving in World War I. At that time, the American doughboy in 1917 received \$21 monthly pay which later was increased to \$30, with 10 percent additional for overseas service.

There was no family allotment plan as in World War II whereby the Government contributed to the serviceman's deduction from his pay and the total contributions resulted in a family allowance check being mailed monthly to dependents.

In 1917 and 1918 the doughboy was strictly on his own in worrying about the comfort and health of his loved ones and any so-called allotment could only be paid out of the meager \$30 monthly pay he received, as there was no helping hand from Uncle Sam.

When time for discharge arrived, the World War I veteran was given \$60 as a separation allowance to assist him in adjusting himself to civilian life.

Mr. Chairman, contrast this treatment with the many fringe benefits made to World War II veterans in the form of GI home and business loans, mustering out pay, and unemployment insurance benefits for 52 weeks at the rate of \$20 weekly which commonly became known as the 52-20 Club.

In addition, World War II veterans were given the option of continuing their education in trade schools, colleges, and universities with the cost of tuition, books, and a subsistance allowance for them and their dependents—all paid for by a grateful Government.

Compare these fringe benefits for service in World War II to the \$60 separation allowance paid to veterans of World War I—an amount of money that was not sufficient to purchase a good overcoat because as many will recall, the \$60 was received in an era that boasted of high wartime wages accompanied by skyrocketing prices and a craze for silk shirts that cost from \$12 to \$15 each.

Mr. Chairman, let me make it unmistakably clear that I am not critical of the treatment accorded World War II veterans because I served in both world conflicts. While I have not found it necessary to avail myself of GI loan and educational benefits: provided for my comrades in World War II, I thank God they were made available for those who deserved them as they represent an expression of gratitude by a grateful Government and serve as a measure of compensation for the sacrifices of those who served in World War II.

My point in comparing the treatment accorded veterans of World War I and World War II is to emphasize that Congress has been negligent in recognizing the economic plight of the veteran of World War I.

Congress met its responsibility to veterans of the Spanish-American War by approving legislation to pay them and their dependents a reasonable pension and has from time to time granted increases in such benefits.

In like manner the benefits made available to those of us who served in World War II were not possible until Congress placed its stamp of approval on them.

In all sincerity, I ask, "How much longer are we going to ignore the economic status of the World War I veteran?"

When you search your conscience for an answer keep in mind the paltry \$60 separation allowance paid veterans of World War I which in reality was an amount insufficient to purchase a good suit of clothes.

Later you will recall the so-called bonus issue rocked the country because of high unemployment among returned veterans and the absence at that time of any 52-20 Clubs to serve as a crutch in adjusting to civilian life.

Finally, the issue was decided by Congress when it overrode President Roosevelt's veto of the adjusted service bonus which was in the form of 20-year certificates and averaged about \$300 per veteran. On the other hand, World War II veterans received mustering-out pay immediately upon discharge, which is further evidence of the disparity in the treatment accorded veterans of the First World War.

It is ironical that many of those in Congress and elsewhere opposing a pension for World War I veterans are themselves veterans of World War II.

Frankly, it is difficult to understand their lack of appreciation for the fact that World War I veterans have been in the frontline of battle since their discharge from service nearly 40 years ago in seeking improvement in hospital and medical care for veterans of our Nation's wars.

In fact, the veteran of World War I has for years been occupied in improving the Government's program of caring for veterans of all wars and pioneered in the struggle to establish what is now the Veterans' Administration as the successor of the old Pension Bureau.

Now at an average age of 65 the World War I veteran's span of life is nearing the end and it is unthinkable that some of his comrades from World War II are proving to be the most vociferous in urging that the World War I pension bill, H.R. 1181, be defeated.

As a veteran of World War I and while serving the Veterans of Foreign Wars of the United States as a department and national officer, I joined with other veteran leaders in the country in alding the Spanish-American War veteran in obtaining increases in his pension granted him 20 years after the close of the war and which today amounts to \$101.50.

My support of the Spanish-American War pension was based on my belief in the traditional American concept of giving special grants of one kind or another to those who have performed honorable military service not as pay but in token of their fellowcitizens' appreciation.

As I have said before, this traditional policy of our Government was established in the days of George Washington and recognized by Congress which granted service pensions to the veterans of all wars from the days of Valley Forge to and including the Spanish-American War.

Unfortunately, Congress has ignored the World War I veteran while approving various fringe benefits to World War II veterans. The approval of these deserving benefits is proof positive that Congress recognizes military service requires great sacrifices and merits recognition.

But again I ask why ignore the ailing and aged World War I veteran and be guilty of such rank discrimination?

When you stop to consider the merits of my bill, H.R. 1181, keeping in mind that the income limitations make the measure no so-called handout I am convinced that you will find the legislation worthy of your favorable consideration.

Therefore, I respectfully request that you give thought to the obligation Congress owes to the forgotten veteran of America's wars as revealed by the plight of the ailing and aged indomitable doughboy of 1917 and

Congress has an opportunity through enactment of my bill, H.R. 1181, or any one of the pending bills to give tangible and practical evidence that the World War I veteran is not to be left a pension orphan while his comrades of other wars have been taken care of in more generous terms.

In closing, I would remind the members of this committee that since the precedent has been established of requiring income limitations for non-service-connected pensions, it is the World War I veteran against whom such departure in the pension policy of the Nation has been made effective. Prior to that time there were no strings attached to pensions for honorable military service.

Be that as it may, H.R. 1181, in meeting the new requirement, has income limitations which definitely provide that the \$100 monthly pension will be payable strictly in adherence to such limitations.

It is my sincere hope that upon the conclusion of these hearings, this committee will find it possible to report H.R. 1181 to the House or one of over 100 similar measures since I have no pride of authorship so that the House of Representatives may have an early opportunity to approve the legislation as an important step in wiping out the discrimination that has prevailed against World War I veterans when legislating for the veteran population of the Nation.

#### The Progress of Socialism

EXTENSION OF REMARKS

#### HON. SPESSARD L. HOLLAND

OF FLORIDA

IN THE SENATE OF THE UNITED STATES

Monday, June 8, 1959

Mr. HOLLAND. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD excerpts from the June Letter of the First National City Bank of New York entitled. "Business and Economic Conditions. These excerpts appear under sub-headings entitled, "The Progress of Socialism," "'Liberalism' and "Progressivism.'" "Taxes and Forced Philanthropy," "Socialism by Fragments," and "Opportunity and Progress." They bring out forcefully the dangerous and disturbing trend toward socialism in our country today. I ask to have this matter printed in the Record so that Senators who desire to do so may have the opportunity to read this most enlightening treatment of a subject which is of tremendous importance to all the people of the Nation.

There being no objection, the excerpts were ordered to be printed in the Record, as follows:

#### THE PROGRESS OF SOCIALISM

The role of Government in economic life—a topic of earnest, often heated debate since Plato's time—has lately come in for increased attention. More and more thoughtful people, public officials as well as private citizens, have been expressing concern, even alarm, over our steady drift away from individual to Government responsibility.

A Cabinet official warns that Government "impinges on our lives every hour of the day and night." A business leader decries "creeping interventionism" by Government. A distinguished lawyer refers to the defeatist view: "The democratic process is fast with-

ering in the nuclear blast. We must have total, secret, monolithic Government; the individual no longer counts." An historian predicts: "We are entering an era when there will be less emphasis on private enterprise, and more on public, and when there will be less need for the 'rugged individualist' and more for the social-minded civil servant." A respected newsletter sums up 1958 for its clients: "This has been a year during which the United States has taken further strides down the inflationary road to socialism." Although a threat of natinalization hung

Although a threat of natinalization hung over the steel industry in 1952, Government ownership of industry, communication, transportation has never been popular in this country. Our traditions of private property and free enterprise are deeply rooted in custom and in law. Nevertheless, modern-day welfare economics contain the most essential element of socialism which is, in the name of social justice, to weaken self-reliance.

A business enterprise can become dependent upon Government for orders, for protection of property during labor disputes, for reasonableness in the enactment and administration of rules and regulations. Taxation, carried to extremes, can take away funds needed for self-support. Meanwhile, benefits dispensed free of charge represent an invitation to dependence.

#### LIBERALISM AND PROGRESSIVISM

Through European eyes, the American usage of liberalism or progressivism in place of socialism seems a bit strange. The distinguished Socialist, Ernest Bevin, then Foreign Minister in the British Labor Government, commented in 1949 that "the United States of America is as much a welfare state as we are. Only it is a different form." Earl Browder, former leader of the U.S. Communist Party, wrote in 1950: "State capitalism has progressed farther in America than in Great Britain."

Senator Harry Byrd, long a critic of wasteful Government spending, warned in 1951:

"In many Federal programs we are chasing a mirage of easy money in the form of deficit dollars. Some of us have been duped into believing that the easy dollars handed out by the Federal Government are something for nothing but, actually, these programs are adding to the public debt, are undermining the will of individuals, regimenting the production of agriculture and labor, controlling the practices of business, curtailing the solvency of States, and destroying the self-determination privileges which are traditional in our local governments and domestic customs.

"Make no mistake: It is socialism which lies at the end of this rainbow and, in this rainbow, the predominating color is the red of Federal deficit spending under which a whole new generation of Americans has grown and developed."

Part of the reason for growth of government is that our country is bigger, social and economic problems more complex. In this age of specialization, we are interdependent as never before. Yet there is a need to guard against undue interference by government in our Gally lives.

It was concern over where we are headed that provoked Edgar Eisenhower, the President's older brother, it to commenting last fall:

"For a great many years I have watched our country rushing down the road to socialism. We have allowed fuzzy thinkers to pull their welfare wool over our eyes. \* \* \*

"I have two grandchildren and I would like them to enjoy the kind of Government I experienced in this country when I was a boy.

"In those days the Government didn't tell my employer what he must pay me, it didn't limit my hours of work, it didn't furnish me with school lunches, it didn't require me to

belong to some kind of organization in order to work."

#### TAXES AND FORCED PHILANTHROPY

Socialist reformers, in their quest for "economic justice for the masses," display two qualities: Impatience and doubt as to the charitable instincts of man. The feeling is that individuals are slow about giving and, in any case, their generosity is insufficient. Thus, the power of government must abolish "income inequalities."

The income "leveling" process goes forward on many fronts—e.g., with Government-decreed minimum wages, social-security programs, Government-subsidized housing. The major tool, however, is the tax system which forcibly redistributes income, compels people to give. The idea is to tax away income from some and spread it around among the "less fortunate"—what has been aptly described as robbing selected Peter to pay collective Paul.

This philosophy reached its high-water mark among English-speaking peoples generally during the early postwar years. In Great Britain, especially, tax rates were at confiscation levels while the Government, with its cradle-to-grave social security, assumed vast areas of responsibility once left to the people.

Such programs, even though well meaning, defeat themselves by dealing a double blow to the real ingredients for economic progress and rising living standards. Sharply progressive taxes penalize the productive and cripple accumulation of capital for risky ventures, while welfare programs make more remote the tie between a person's income and what he contributes to society. Individual responsibility and the will to work are undermined and people become increasingly dependent on a paternal government.

Loss of opportunity takes the zest out of life for those who, in other circumstances, might have built great enterprises and made great gifts. Government meanwhile accumulates more and more dependents, removed from the labor force. The growing tax burdens shift inexorably toward the same masses the Socialist state is intended to help. In the end everyone is poorer than he would have been if rare and gifted individuals had been stimulated to go ahead and seek out new and better ways to produce and satisfy human needs and wants.

Individual income-tax rates in this country climb above 90 percent. Although there is no direct Government ownership of a major industry, the 52 percent corporate tax rate in effect makes the Government the major stockholder. Or, as a business leader describes it: "We are already over half way to socialism with respect to three-quarters of the Nation's production."

Social welfare spending in this country has more than doubled in the postwar period. Last year these Government transfer payments, which include such major programs as old-age pensions, veterans' benefits, unemployment compensation, and public assistance, totaled more than \$24 billion—equal to about 10 percent of the pay people earned before deductions, in wages and salaries for working. Public assistance payments alone, which were supposed to "wither away" with the advent of the social security program, amounted to \$3.4 billion in 1958—double their level only 10 years ago.

Robert Tyson, chairman of the finance committee of United States Steel, commented not long ago on what he termed the American people's wholesale resort to the "political means of getting something for nothing from each other":

"Through progressively bitter tax punishment of the more productive and an everwidening rewarding of the nonproductive, we are steadily adopting the Marxian dictum: 'From each according to his ability, to each according to his need.' "This is something that Communists warmly advocate we adopt, but which they themselves would not think of practicing because they know, having tried it out, that there is no more certain way to divert people from being productive to being indolent than to tell them that no one will be allowed to benefit very much from working harder, better, or longer than his neighbors, and that no one needs to suffer very much from not working diligently."

It is worthy of incidental note that Soviet Russia itself makes sparing use of income taxation. Indeed, Mr. Khrushchev spoke not long ago of plans to discard income taxation entirely. Adial Stevenson, who visited Russia last fail, reported that a Soviet construction chief made "perhaps \$18,000 a year and his taxes are only about 6 percent." It could be that the speeding of industrial progress in the Soviet Union may be related to the new emphasis given to reward for achievement.

Crawford H. Greenewalt, president of Du Pont, noted in his recent book, "The Un-

common Man":

"If financial rewards in the two countries are examined quantitatively, the Russians are not far behind us. What troubles me is to note that at the very time the the Soviets are embracing our principle of incentive and show signs of benefiting thereby, we ourselves seem intent upon abandoning it."

#### SOCIALISM BY FRAGMENT

Norman Thomas, six times an unsuccessful candidate for President on the Socialist Party ticket, is reported to have declared: "\* \* this country would never vote for socialism as such, but \* \* under the label of liberalism, the people will vote for every fragment of socialism until one day we'll have it. \* \* ""

If we are in danger of such socialism by fragment, it is because there has developed among the people a willingness to let government assume a bigger role. A generation ago people relied more on their own efforts to solve problems, meet difficulties; now, all too often, the tendency is to turn to government—especially Federal Government.

President Eisenhower, at the 1957 Governors' Conference at Williamsburg, described

this tendency:

"Year by year, responding to transient popular demands, the Congress has increased Federal functions. So, slowly at first, but in recent times more and more rapidly, the pendulum of power has swung from our States toward Central Government. \* \* \*

"Those who would be and would stay free must stand eternal watch against excessive concentration of power in government."

Each day's newspapers bring reports of new demands on government—for subsidies at the State level to provide middle income housing (defined, in New York, as families with earnings from \$5,000 to \$12,000 a year); for Federal funds to clear slums, purify streams, aid distressed areas, build H-bomb shelters; for a national fair trade law to protect consumers; and for Federal standards for State unemployment compensation laws.

Some of these things are good and worth the cost. But should the responsibility be accepted at home or should it be shrugged off onto the shoulders of ever-burgeoning Federal agencies? Which way is appropriate in a society which puts its faith in the selfrellance of the individual?

Inevitably, as government programs proliferate and spending totals and tax exactions mount, impetus is given to inflation. This breeds even more government encroachment as people, discouraged by rising prices, seek protection—with price, wage, and profits controls—and more government handouts—e.g., payments for medical and hospital bilis and for education costs.

William A. McDonnell, chairman of the First National Bank in St. Louis, warned last month that infiation and democracy are not congenial bedfellows:

"Time and time again freedom has been won by blood and lost by handouts of the people's own money—handouts usually financed by depreciation of the currency. In the days of old Rome, these handouts were called bread and circuses. In modern times they go by the more euphemistic term of social welfare."

#### OPPORTUNITY AND PROGRESS

We look upon our society as free and our country as the land of opportunity. Our forebears came to escape the regimentation of old Europe.

Opportunity for self-reliant people makes progress. Less than three centuries after the landings at Plymouth the United States had moved up to the head of the procession in production and levels of living. A social system of incentives and rewards, with reliance on private rather than Government enterprise, brought unparalleled economic progress and security. Here was the most promising path to the universally sought goal of maximum human welfare.

There is a great tendency to forget how we got ahead in the past and to seek progress on a foundation of government-administered weifare, displacing charitable instincts of the individual and making the Government a philanthropic institution.

Treasury Secretary Robert B. Anderson, in an April address before the Associated Press, reached back in history for this solemn

warning:

"In writing of the Greeks and Romans, one of our greatest classical scholars summed up their story in these words: 'In the end, more than they wanted freedom, they wanted security, they wanted a comfortable life, and they lost it all—security and comfort and freedom. \* \* When the Athenians finally wanted not to give to society but for society to give to them, when the freedom they wished most for was freedom from responsibility, then Athens ceased to be free and was never free again."

We are morally bound—and can afford—to help the unfortunate. But we cannot afford, by vote-buying handouts, to destroy initiative or, by oppressive taxes and regulations, to remove opportunity for honest people to

get ahead in life.

#### **Immigration Quotas**

EXTENSION OF REMARKS

#### HON. CLARENCE CANNON

OF MISSOURI

IN THE HOUSE OF REPRESENTATIVES

Monday, June 8, 1959

Mr. CANNON. Mr. Speaker, under leave to extend remarks in the Record I am including a resolution by the Missouri House of Representatives at their concluding session May 31, 1959:

House Resolution 161

Whereas there are many Americans who have filed petitions with the immigration authorities of the United States for the entry of their sons, daughters, brothers, and sisters, which petitions are classified in the fourth preference quota of the Immigration and Nationality Act; and

Whereas of the four preference quotas established by the Federal Immigration and Nationality Act, the first, second, and third quotas are allotted 100 percent of the total annual entry quota; and

Whereas, as a result, those persons who fall

within the fourth preference section must depend for entry into this country upon deficiencies in the first three quotas; and

Whereas there is frustration and despair resulting from the law that gives hope to Americans by permitting them to file petitions, getting them approved, and then compelling them to wait for their kin who may never come; and

Whereas thousands of discontented people abroad, whose hopes are first raised and then dashed, certainly cannot believe in the good will we try to engender through our foreign policy, and thus become easy prey to the propaganda of unfriendly nations; and

Whereas Congress has recognized and alleviated a similar problem through Public Law 85-316, which includes provision for reuniting spouses and minor children of aliens legally residing in this country whose petitions were approved prior to July 1, 1957:

Now, therefore be it

Resolved by the House of Representatives of the 70th General Assembly of the State of Missouri, That this house respectfully request the Senate and House of Representatives of the United States to amend the provisions of Public Law 85–316 to include cases which fall within the fourth preference quota, in order to provide for entry of the many thousands, petitions for whom have piled up in a backlog in prior years, that in order not to create another problem of separated families, those applicants who are married and have families be permitted to bring them; and that a suitable copy of this resolution be sent by the chief clerk of the house to each Congressman and U.S. Senator from the State of Missouri.

#### Poison in Your Water-No. 105

EXTENSION OF REMARKS

#### HON. JOHN D. DINGELL

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Monday, June 8, 1959

Mr. DINGELL. Mr. Speaker, pursuant to permission granted I am inserting into the Appendix of the Record an article appearing in the Charleston (S.C.) Post, of April 25, 1959, entitled "Local Water Pollution Is Discussed":

LOCAL WATER POLLUTION IS DISCUSSED—STATE
OFFICIAL CITES NEED FOR SEWAGE TREATMENT

W. T. Linton, of the State board of health outlined pollution condition of waters in the Charleston area at the initial meeting yesterday of a special citizen's committee to study methods of controlling water pollution.

At the meeting in the Francis Marion Hotel, Mr. Linton said large areas of Charleston Harbor have been condemned for swimming and the taking of shellfish because of pollution from untreated sewage.

He said this has influenced the basic condition of waters at some of the beaches around Charleston, but not to the extent that they are condemned.

At the present rate of development of the Charleston area, he warned, the degree of pollution would probably double within 8 or 10 years and then the health department would have to take more stringent measures.

Mr. Linton, who is director of the State water pollution control authority and of the State health department's sanitation division, said the pollution control authority has already refused to approve discharge of any more raw sewage.

He said the authority is now requiring that all sewage receive at least chlorination and comminution treatment, which is not a highly acceptable type of treatment.

He suggested that the problem be considered as a problem of the entire area and added that the only method for correcting the problem is to treat the sewage.

The citizens committee, which is headed by Edward Kronsberg, was appointed to develop recommendations for county council on how to control water pollution.

The committee plans to meet monthly with pollution officials and engineers to develop a program. The first meeting will be held May 7. Representatives from Dorchester and Berkeley Counties will also be invited to attend the meeting.

Mr. Kronsberg said he felt the committee's job was to develop a recommended program and sell the community on the need for it.

He said the first problem facing the committee would be to determine methods for financing the engineering studies which are needed.

#### Industrial Uses for Corn

EXTENSION OF REMARKS

## HON. CHARLES B. HOEVEN

OF IOWA

IN THE HOUSE OF REPRESENTATIVES

Monday, June 8, 1959

Mr. HOEVEN. Mr. Speaker, the Department of Agriculture recently reported an encouraging development in the search for industrial uses of corn. The USDA scientists who are experimenting with amylose corns predict a bright future for a new high amylose starch. This research development is extremely significant not only to farmers, but to the public as well. Corn is grown in every State in our great country. Farmers receive more income from corn than from any other crop. Corn is truly vital to the basic economy of our country.

Under leave to extend my remarks, I wish to insert into the Record the following USDA press release setting forth the program toward industrial use for corn:

PROGRESS TOWARD NEW INDUSTRIAL USE FOR CORN, REPORTED IN USDA RESEARCH

Washington, June 1, 1959.—An industrial future for high-amylose starch—a new starch from a new corn—is predicted by scientists of the U.S. Department of Agriculture. High-amylose corn would be a new raw material for the corn-refining industry, which normally uses about 140 million bushels a year.

Assistant Secretary of Agriculture Ervin L. Peterson terms this promising new industrial use for a farm product another example of the Department's broad-ranging and farreaching utilization research effort.

In 20 years—a relatively short history for a research program—USDA's utilization on research has found many useful products. Scientists have contributed to the development of industrial uses for vegetable oils, animal fats, and fiber crops; they have developed industrial processes that have increased the use of these and other farm products, and, in the food field, their research has provided such market-developing

innovations as frozen concentrated orange justice, powdered eggs, and potato flakes and granules.

Mr. Peterson believes that a strong Department Utilization Research effort will materially broaden the markets for farm-produced commodities. It will also prevent inroads into the farm market by commodities of nonagricultural origin.

High amylose starch is but one example of many present and potential benefits to farmers from utilization research.

Mr. Peterson states that USDA has the administrative organization, the experience, and the ability to operate as extensive a utilization research program as can be provided. It has a long record of close cooperation and collaboration with the State experiment stations and with private industry which enables it to bring to bear most effectively the full force of agricultural science to the benefit of farm producers.

Chemists of USDA's Agricultural Research Service have demonstrated that amylose starch forms tough, durable films with many industrial packaging, wrapping, and coating possibilities. Department, State, and private plant breeders have shown the feasibility of developing corn hybrids with a high—perhaps 100 percent—amylose starch content,

A 16-year search for ways of broadening the industrial market for corn has turned up these potential uses for amylose or amylose derivatives:

As transparent wrappers in the general packaging field.

As water-soluble films for packaging measured amounts of such water-dispersible products as detergents, dyes, insecticides,

medicines, and industrial chemicals.

As transparent, edible, and water-soluble films for wrapping foods. Quick-frozen meats and vegetables might be cooked without unwrapping.

As grease-resistant sausage casings and coatings for special kinds of food-packaging paper.

As a coating of high adhesive strength for paper.

As a binder between pulp fibers in paper. As a permanent finish on fabrics. As suspending agents in detergents.

As a constituent in molded plastics.

As a constituent in lacquers.

Standing as an obstacle to the commercial development of these uses has been the lack of an economic source of amylose—a problem being attacked by plant breeders, who in 10 years have raised the level of amylose starch in experimental corn hybrids from 27 to more than 80 percent. Their rapid progress has encouraged them to ultimately hope for a 100-percent amylose starch corn. Reinforcing this hope is their earlier success in developing corn hybrids containing 100 percent amylopectin, another starch of commercial importance.

A more practical measure of progress was the 1958 harvest by commercial interests of several thousand bushels of corn with starch of 50-60 percent amylose. This provides, for the first time, enough high-amylose corn for industrial-scale milling and processing trials, Department scientists, meanwhile, are continuing studies of pilot-piant separation of starch from gluten and of chemical modifications of high-amylose starches to adapt the starches to the potential uses.

Scientists at the ARS Northern Utilization Research and Development Division, in Peoria, Il., early recognized the potential of amylose as raw material for films and fibers and saw the need for an economical source of it. They studied the physical, chemical, and mechanical characteristics of films made from amylose and from mixtures containing amylose, and measured the tensile strength, stretch, flexibility, and burst resistance of these films. They found that these qualities

increased with the percentage of amylose in the films.

They learned that amylose film is insoluble in water, but that its solubility can be modified by chemical means. They reasoned that amylose should be digestible because it is a component of ordinary starch, which is digestible. They measured the permeability of amylose films to water, to vapors, and to a variety of organic and inorganic chemicals. They established the fact that, for all-around industrial usefulness, amylose starch should contain no less than 80 percent amylose. Ideally, it should have 100 percent amylose.

A natural source of a high-amylose starch would relieve the need for removing amylose from ordinary corn starch which contains about 25 percent amylose and 75 percent amylopectin. Such fractionation is costly, and the high cost would have to be borne almost entirely by the amylose fraction. The amylopectin fraction would have to compete with waxy corn starch, which would bear no fractionation cost because it is 100 percent amylopectin. These facts called for a search among plant species for a natural source of high-amylose starch. This search led to the cooperative effort between plant scientists and chemists.

Hundreds of samples of starch in corn, wheat, sorghum, root crops and other crops, including inbred lines and crosses from both the United States and foreign countries were tested by Northern Laboratory chemists. The trail led, at first, to wrinkle-seeded peas in which the starch contains as high as 60 to 70 percent of amylose. Peas, however, contain too little total starch—only about 45 percent. Corn is 70 percent.

A study at Harvard University found that certain combinations of genes could give corn containing starch with 65 percent amylose. Unfortunately, total starch content of these new strains was very low. In 1950, the Northern Division and Crops Research Division of ARS, the Missouri Agricultural Experiment Station, and the Bear Hybrid Seed Co. of Decatur, Ill., initiated cooperative research to develop a field type corn with high amylose content. More than a thousand samples a year were examined for amylose content over the next several years.

In 1952, the Bear Co. reported one of the most important findings in the breeding effort-discovery of a gene (usually referred to as ae) that substantially increased the amylose content of corn in which it appeared. Using gene ae, breeders had, by 1954, developed corn with 60 percent starch of which 62 percent was amylose. Today. samples of corn with more than 70 percent amylose are quite common, and a sample with more than 80 percent amylose was analyzed at the Northern Laboratory in 1957. These higher amylose corns are the work of the Missouri station and the Bear Hybrid Co. utilizing a "modifier gene complex" which combines specifically with the ae gene to boast amylose above the normal ae level of 50 percent.

Until recently, most scientists in the amylose research effort have referred to high-amylose corn. Now they are thinking in terms of high amylose corns. They believe that when breeding is completed, it will be possible to produce a whole series of high-amylose corns, with starch ranging from 50 percent amylose up to whatever upper limit breeders achieve. Preliminary research with amylose-amylopectin mixtures indicates that the different starches may well find a wide range of industrial uses.

Carried to a successful conclusion, the research for high-amylose corns will offer an example of how a crop can be tailored through cooperative work of plant breeders and chemists to meet specific industrial needs.

Life. Because of the Lack of True Charity and Faith

> EXTENSION OF REMARKS OF

HON, ROLAND V. LIBONATI

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES Wednesday, May 20, 1959

Mr. LIBONATI. Mr. Speaker, I have heard pretty words used by great orators of my time. Fitting words, too, like, "No man walks alone." The late Secretary of State, Dulles, did. Right to the hospital as a patient of the select few of the medical fraternity. And he died there soon enough because, as God knows, and man learned, he was refused his last chance—to be administered krebiozen, the nontoxic drug which, in similar cases, holds an impressive medical record in terminal cases of his type of ailment, cancer of the lower bowel and rectum.

Only the lack of pure charity, a growing malignancy in the "doubters" of the medical profession, prevented the late John Foster Dulles, former Secretary of State, from receiving krebiozen.

Dr. Andrew C. Ivy and the Krebiozen Foundation offered the drug but it was refused. Its use could have done no harm. It might have helped. But John Foster Dulles lost his chance to live. Who dictates the policy of the medical profession and controls the very medical life career of a doctor? Why the pseudopolitical leaders of the American Medical Association, of course. Its hatred for krebiozen and all persons connected with its present and future progress is well known to informed per-

In a letter to General Heaton, Chief of Walter Reed Hospital, where the ailing Secretary of State, Dulles, was treated, Dr. Ivy wrote that 70 cancer patients. similar to Dulles' case, were treated with krebiozen. Of these 70 cases, 23 were helped and 7 had a dramatic recovery. But, perhaps because of the bitter prejudice and hostility of organized medicine against krebiozen, the offer was refused. All medical men who have used krebiozen say it might have saved or prolonged his life. And they say it would, at the very least, have alleviated his pains. In their unscrupulous fight against krebiozen, which several AMA officials have declared worthless, based on forged data, presented by an underling with 2 years of experience in the cancer field. possibility that the drug may show beneficial effect on such an illustrious patient; and so they preferred to let him die in a comatose state, under narcotics, than to try a nontoxic substance which, according to the reports on similar cases, could only have helped him. Millions of Americans will die under the same conditions if the problem of an honest evaluation of kreblozen, without prejudice and hate, is not resolved.

More than 300 physicians in this country who tried krebiozen on 1,500 patients support the opinion of Dr. Andrew C. Ivy, world-known scientist, that

And So He Went to His God. Unspared in krebiozen is active in the treatment of cancer. These opinions together with other scientific medical data were given in the Report of Krebiozen Research Foundation, which I introduced in the Appendix of the Congressional Record on Wednesday, May 27, 1959.

Not even the greatness of this great American counted with these cruel men. His determined study of the political dimensions of world events, as well as the moral values of nations, won for him the high praise and confidence of world leaders in every field, meant nothing to them. His accepted philosophy in public service, measured him as a dedicated man, with deep devotion to the belief that power, force, diplomacy, arms and negotiation were parts of our living world, but that the definition of these matters was in the other world of moral and spiritual values. We cannot lose face they said.

And so, this devoted friend of mankind died when his services were needed the most, because the conscience of man failed to conceive the meaning of true charity. Humanitarianism is dving before corrupt materialism and the medical profession is fast falling victim to corrupted man's philosophy.

Bring back true charity, so that human life will enjoy its highest dignity and medicine will again take its valued place of honor, healing the wounds and the hurts; restoring the health, the hope and confidence of men. Man deserves the chance to keep alive. So did Dulles.

The correspondence referred to fol-

CHICAGO, ILL., May 28, 1959. The Honorable ROLAND V. LIBONATI,

Congressman from Illinois, House Office Building, Washington, D.C.

DEAR CONGRESSMAN LIBONATI: I am responding to your letter of May 27 regarding the results obtained following the use of krebiozen in patients with advanced cancer of the colon, patients who have been written off as hopeless.

On February 24 of this year I was asked by a U.S. Senator to send the same information to Dr. Leonard D. Heaton, the attending physician to Mr. Dulles. The information I sent is as follows:

"Insofar as carcinoma of the colon is concerned, as I recall, we have treated with krebiozen roughly some 70 patients. I have not made an accurate review of the colon cases since November 1955. However, we have observed definite improvement for a variable period of time and to a variable extent in approximately 30 percent of the cases. Decided and dramatic improvement has occurred in about 12 percent of these cases.

"(1) I enclose a brief of the history of a - which I prepared some time ago to illustrate recurrences and remissions on stopping and starting krebiozen therapy.

"(2) Another patient, whose name I cannot disclose because he does not know that he has a cancer, was opened in 1951. An inoperable carcinoma of the colon was found with widespread metastases. The patient was closed. It was thought useless to give X-ray therapy, so he was given krebiozen. All complaints disappeared, the patient gained weight and is in perfect health to-

"(3) A third patient's name is Mrs. -She is a patient of Dr. - Chicago. She was opened for carcinoma of the colon in 1950. The lesion in the colon was resected; there was widespread lymph node and peritoneal involvement which could not be completely removed. She was given krebiozen and is alive and in good health today. You may call Dr. - about this patient.

"(4) A fourth patient's name is Miss — (age 34). She is a patient of Dr.

Toledo, Ohio. She had a carcinoma of the caecum. She had, like the above patients, lost a great deal of weight and was out of bed only some of the time. She was operated in 1954. At the operation there was widespread metastases which could not all be removed. Three months after the operation the patient had considerable pain requiring 100 milligrams demerol, q. 3-4 hr., and nembutal gr 1.5, q. 4-8 hrs. This patient after the start of krebiozen required no narcotic or analgesic or sedative and gained much weight. About 2 years after the start of krebiozen she developed an intestinal obstruction which was thought to be due to a recurrence of the cancer. On exploratory laparotomy, the abdomen was clear of cancer and the adhesions causing the obstruction were removed. You may call Dr. if you wish.
"I could give you several other dramatic examples but the hour is late.

"If you would like to send someone to Chicago I could show him the records of these and other cases.

You will find one of these four cases referred to in the monograph on krebiozen by

Ivy, Pick, and Phillips.

"You may call me by phone at any time.
"There is one other item of information which I should give you. That is x-radiation, all radiation, all substances like nitrogen mustard which depress the reticuloendothelial system including some upper respiratory infections and cortisone annul or reduce the effectiveness of krebiozen. However, we have observed that krebiogen given to persons susceptible to radiation sickness decreases or abolishes the sickness. So Krebiozen may be given along with x-ray but it will have little effect on the progress of the cancer although it will probably make the patient feel better.

- and I would be willing to visit Washington, if you desire, to discuss the dosage-rate in more detail in relation to the clinical condition of the patient. However, this can be discussed with me by phone, if

you desire.'

With best wishes, I am,

Yours sincerely, A. C. Ivy, Ph.D., M.D.

FEBRUARY 25, 1959.

DEAR DR. HEATON: Among the items of information I sent you last evening, I forgot to include the forms which must be completed before krebiozen is sent to a physician. This is in compliance with the regulations of the Food and Drug Administration for the distribution of new drugs to physicians for clinical trial.

I forgot to give you the name of the physician of the second patient. He is - Chicago. The name of the physician of the first patient is given in the abstract of her case.

Yours sincerely, A. C. Ivy, Ph.D., M.D.

Atomic World of Affairs -

EXTENSION OF REMARKS OF

## HON. JAMES E. VAN ZANDT

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES Monday, June 8, 1959

Mr. VAN ZANDT. Mr. Speaker, on Saturday, June 6, 1959, the Pennsylvania State University held its annual commencement day program at which time some 3,300 graduates received their degrees. The principal address entitled "Atomic World of Affairs," was delivered by the Honorable John A. McCone, chairman of the Atomic Energy Commission, and his address follows:

THE ATOMIC WORLD OF AFFAIRS

Mr. President, faculty, and graduating class, it warms my heart to come to this great university which I have known for so long but never before visited and to find a few old friends and to have an opportunity to make new ones. In my present responsibility it is most encouraging to find here, as I have this morning, a great center of nuclear physics and engineering. Indeed, you pioneered in this effort, being the second university to have a research reactor on your campus.

The Atomic Energy Commission is proud to play a part by helping with this important activity. I assure you, Mr. President, of our continuing interest in you and in all that you do. We are determined to help you whenever and wherever we can. You have made a great step forward by acquiring a particle accelerator—a most important research tool and we are pleased to join with you in contracts for its use in the field of

low energy nuclear physics.

You are equipping men and women in a field of science and engineering more advanced and difficult than any other. In doing so, you are serving the Commission for we need men and women equipped with this special knowledge. Also, you are serving the great industrial complex which is rapidly building around the atom.

In doing so, you have introduced your students to the most rapidly developing field of science and engineering. The nuclear sciences are young, very young, but they are destined to grow and, as they grow, they will affect every one of our life's activities. Therefore, this subject should be understood by you regardless of the path of your future life. If you are a doctor or a lawyer, a businessman or banker, a writer or a teacher of our young, you will find the atom commanding your attention on an ever-increasing scale.

I will not now discuss the infinite horizon of the atom in its peaceful role. It is sufficient, I believe, to tell you that its use in agriculture, in research, in industry, and in biology and medicine has increased thirtyfold in the past 5 years and its use is forecast in increase another 4 or 5 times in the next

few years,

Nuclear power is now in its very infancy. It is destined to take its place as one of our principal sources of electrical energy. Power demands in the United States will double every 10 years. More and more large generating plants must be constructed to meet the ever-increasing needs of our people for electricity. Many of these plants

will be nuclear powerplants.

We believe the 10 years immediately ahead of us will see nuclear plants perfected. They will be competitive in areas where power is costly because of absence of local fuels. We believe that in the 10 years following, and these are important years to the young men and women who have today received their diplomas, the atom will furnish a substantial percentage of all new energy sources constructed to meet this country's ever-growing demand for power.

Standing here, in the heart of one of America's most productive coal regions, our attention turns, at this prospect, to the question of the impact of nuclear power on coal production.

It is reckless to say that nuclear energy will replace coal and oil. What it will do is to supplement coal and oil as a source of

power. It will provide a percentage of the tremendous growth of the Nation's power industry.

The central question here is economics. Nuclear power is proving more expensive, and more difficult to produce than was once thought. It is hard to harness the atom and a plant designed to do it safely is expensive. Consequently, the power produced in the plant is also expensive.

But, this condition will not always exist. Improvements are being made and these improvements will reduce the cost of nuclear power. Then the atom will take its place beside coal and oil as a source of our electrical energy on a strictly competitive basis. Thus, it will prove to be an added resource; an additional tool in our economic structure; a spur to growth of all industry and all of our Nation's activity.

The atom must also continue as the guardian of peace and the protector of our way of life. When World War II abruptly ended with the capitulation of Germany and the surrender of Japan, the world looked forward eagerly to peace. Men had suffered for the cause of justice and freedom, and they determined to now go their way of life in a peaceful world.

Our leaders did likewise. They felt that the arrangements agreed upon among the victorious allies would be honored. A peaceful word for years ahead was their

confident hope.

We, therefore, turned away from conflict. We were confident that differences, if they arose, would be resolved through understanding, not through military conflict or the constant threat of war.

We found, however, the Soviet dictator felt differently. Joining the free world in its bitter fight against Nazism was merely an incident in the Communists' plan to dominate all people and subject all people to their dictates.

We demobilized; they did not. We opened our country freely; they created an Iron Curtain around theirs. We urged nations throughout the world, many of which had been occupied and destroyed, to rebuild and to develop politically as they freely chose. They occupied one country after another, subjugating all to their will, destroying individual freedom and eliminating the most precious of all of man's rights, the privilege to worship as he chooses.

The Soviets intensified the war of international communism against the free world. A war designed to destroy our way of life

and to replace it with theirs.

It is a cold war, but back of it to guarantee the Communist dictator's success are 175 line divisions, trained and fully equipped; supported by vast air power and now a missile capability of alarming proportions.

The West faced a danger of being crushed by the sheer weight of the manpower of the East. It was apparent that only through strength could we counter the ruthlessness of the Soviet dictator. How could we provide this strength so necessary for our security? It would be futile to match him man for man or division for division. Hence, we determined to build our defenses around nuclear weapons—a new and mighty source of power which providentially had fallen into our hands.

This we have done with great determination and skill. Because we have done this well, there is no hot war today. Nuclear defense has guaranteed freedom for ourselves and for our allies.

The decision to build our military security around the atom was a wise one. It was a decision of all of America and has stood the test of passing years. I believe the decision valid today, just as it was originally. Nuclear weapons are costly, yet cheap compared to the cost of the massive armies nec-

essary to balance the manpower of the Soviets.

The atom has provided for our security and for the protection of you and of your families. We must never let it deteriorate or take a second place in the armament race in which we are now unfortunately engaged. If we do, our strength will disappear. Free men throughout the world will fall to the domination of the Soviet dictator. Gradually our own freedom would be lost.

To avoid deterioration of the bulwark of our military strength, the atom has had to keep pace with the latest technological developments. As weapons systems have changed and become more complex, nuclear weapons have had to change and improve. For example, delivery of nuclear weapons by aircraft poses entirely different problems from delivery of nuclear weapons by mis-Development of new, improved and more efficient nuclear weapons require developmental tests to prove evolving concepts. Such testing is as necessary for nuclear weapons as for any other military equipment, or for that matter commercial products. Testing is equally essential for developing your automobile and your television set.

Have we gone too far with testing? Have unnecessarily created a radiation condition which endangers our people and our future generations? This question has given me great concern. I have sought the advice of the most competent scientists and as a result have reached two conclusions.

First, the radiation hazard from all tests conducted to date-ours, the British, and the Soviets'-has not reached dangerous proportions. Second, unrestricted and with no limitations, continued nuclear weapons testing in the atmosphere might so increase the radioactive content of the atmosphere that a serious hazard could result. This must be avoided. Your Government has sought a dependable agreement with other nuclear powers for the cessation of tests. The basic purpose for such an agreement is the hope of easing the world tensions which add momentum to the disastrous conventional and nuclear armament race. While such an agreement will not of itself stop the production of nuclear and conventional arms, it may be a helpful first step toward this vital objective. Moreover, fears of the con-sequences of radioactivity fallout do exist. even though expert opinion says these fears are greatly exaggerated. Stopping all nuclear tests would allay these fears.

Protracted and exhaustive meetings to accomplish this goal have taken place in recent years in New York, in London, and now are being carried on in Geneva. A principal concern has always been finding acceptable means of effectively safeguarding an agreement. The American people and the people of the free world must know as they lay aside their means of further developing their nuclear defenses that the Communists will do the same. We must know the Soviets cannot cheat and proceed in secrecy with their own nuclear weapons developments.

This is an essential point. It must not be discounted. The central point is finding means to assure the world that all parties are abiding by the agreement. The U.S. Government will give its sacred promise to live up to the letter and the intent of an agreement. It will back up this promise by permitting the installation in the United Straes of inspection posts internationally manned and equipped with proper instruments, as well as mobile inspection teams. Moreover, we will permit on-site inspection teams to go to any area where the instruments indicate that a nuclear explosion might have taken place.

Adequate inspection is essential. The Soviets will not agree. For months they have attempted to cripple the entire control system by steadfastly insisting on veto rights. particularly with respect to the dispatch of

on-site inspection teams. For months they have insisted that the control stations and inspection teams manned by nationals of the country wherein they are located.

Can the American people accept these conditions? Can the American people be expected to lay aside developments so important to the preservation of their security on uncertain Soviet promises? Can we close our eyes to the scores of broken treaties and ignored sacred agreements and enter a treaty in this vital field without reasonably adequate safeguards?

We have answered that question with an emphatic "No." We will continue to insist upon an agreement which will insure to the world that once agreement is reached to stop testing, all parties will conform to the agreement. The world will know by the reports of the international inspection teams that

no cheating goes on.

This we have made abundantly clear in these long months of negotiations. World opinion and the constancy of our position have brought limited concessions from the Soviet side. They have agreed that a few American and British personnel might be allowed in control stations in the Soviet Union. They have indicated that they might consider a few on-site inspections over which no veto would be exercised. However, they do not relate this number to what the seismographs say or other instruments indicate. On the contrary, they insist this is a political matter. They ignore the scientific realities of the problem. To this we cannot agree. It is imperative that the number of inspections be based upon the technical capabilities of the control system.

On Monday, negotiations are to resume in Geneva. We are hopeful that agreement can be reached. We will not, however, depart from the basic principles which I have just

reviewed.

Nuclear tests can be conducted in three environments. Let me review them briefly.

First, tests in the lower atmosphere. Tests up to about 30 miles in the atmosphere can be adequately detected and there are good prospects of attaining adequate capability for identification. Properly equipped con-trol posts in the principal land masses and oceans of the earth, together with aircraft sampling flights to look for radioactive debris, can determine with an acceptable degree of assurance whether a nuclear explosion has taken place in this portion of the atmosphere. An occasional natural event, such as a volcano, or a very large falling meteor might create disturbances which would confuse the instruments. But we believe the system could adequately distinguish such natural events from weapons tests.

An agreement to suspend tests in the lower atmosphere, to establish the necessary properly equipped control posts, and to man them with an international organization would be a feasible first step that could be taken to solve this problem. This we have proposed to the Soviets.

Secondly, tests in the higher atmosphere and at extremely high altitudes, above 30 miles to thousands and perhaps hundreds of thousands of miles above the surface of the earth. Tests in the higher atmosphere would not eliminate the fallout problem. However, almost no fallout would be expected from tests well beyond the atmosphere in space. Detection here poses serious questions to known scientific technology. Much further research is necessary before a dependable method of detection can be developed. It is possible, although no one knows, a system of satellites equipped with sensitive instruments for measuring signals and reporting back to receiving stations on the earth might be one of the answers to this problem. The problem of identifying an event as a nuclear explosion, and not a celestial disturbance is even more severe. Moreover, identifying the responsible nation becomes very difficult. As we proposed at Geneva, we believe that the nuclear powers, the Soviet Union, Britain, and the United States, should work together on developing this technology and inaugurating a system under international auspices.

Thirdly, there are the underground explosions where weapons are buried in the earth so that radioactive debris does not escape into the atmosphere. Although this is a difficult environment for testing nuclear weapons, it can be done, and very significant advances in weapons technology, particularly with respect to missiles and small weapons, would result from such testing.

In this area detection and identification become extremely difficult. Here, the principal signal to the control system is the earth shock, registered on seismographs spaced around the world. As you know, many thousands of natural earth tremors occur every year. Not only is it difficult to detect many underground nuclear explosions, but once detected, it is difficult to distinguished them from these earthquakes. For this reason, it is necessary for men to freely inspect the area where the instruments indicate a nuclear explosion might have occurred. Even then, final proof that a nuclear explosion had occurred would be difficult, as it requires drilling deep into the earth and securing a sample of radioactive debris.

These are some of the technical difficulties that confront us. Added to this problem is Soviet unwillingness to forego the veto over a great many important aspects of effective inspections. Despite these problems, our objective remains unchanged—an eventual cessation of all nuclear weapons tests.

If we are to be sure our agreements are safeguarded, and this is the announced policy of our Government, then we must find ways to detect violations of such an agreement with reasonable certainty. This is the most difficult of all of the problems our negotiators face at Geneva. It is difficult because the instruments, irrespective of how sensitive, may not record and will not identify all explosions. The small ones will go undetected. Therefore, we must have the right to go to the site and actually inspect the area where the event has taken place.

An added complication is the fact that scientists and engineers believe they can devise ways of muffling underground nuclear explosions. Muffling has been done for many years with dynamite and with TNT in mining operations and in construction work. Other techniques producing this effect can probably be applied here. This, then, would further reduce the effectiveness of any detection system and would remove from the people of the world the assurance that the agreement is being properly and adequately safeguarded.

We believe, however, that by research and study answers to this problem can be found. We have proposed that the Soviets join with us in the research necessary to devise an effective control system. We have laid before them technical information of great significance, and will present them with extensive additional information for consideration during the forthcoming meeting.

So far the Soviet negotiators have refused to continue some of the most vital technical discussions. They prefer to adhere to the position that the first conclusions reached by technical experts in the summer of 1958 must be considered as final. With this we cannot agree, for we know as do they that the conclusions reached at the meetings of last summer were based on the limited data then available, some of which has been superseded by better data from subsequent experiments and research.

There must be a resolution of the technical problems involved in establishing a proper and agreed method for detecting and identifying underground explosions. Unless the Soviets agree to such discussions, and to the necessary experimentation and research, no satisfactory assurances can be given that all parties to a suspension agreement will comply at all times.

The temptations to cheat will be very great for the Soviet scientists, and military planners will see, as ours do now, that small tactical weapons will enormously improve the effectiveness of ground forces. Indeed, some believe that these weapons might entirely revolutionize ground warfare.

These are the problems which we face in this Geneva negotiation concerning which so much has been written. It is our fervent hope that through patience and careful negotiation the questions can be satisfactorily disposed of. We believe, as I have said, that a dependable and safe agreement to stop nuclear weapons tests is a first hopeful step toward disarmament. This step, if taken properly, and with understanding, could lead to others and better understanding among people will result.

If disarmament, both conventional and nuclear, could be achieved eventually, and an initial step taken now, tension would be relieved. The fear that entire cities, indeed nations, will be instantly destroyed by weapons of unbelievable power will disappear. Then, the full efforts of the nations of the world can be devoted to meeting man's needs and to his welfare and his betterment. This must be our objective. It must represent a goal which we must seek with determination. But in seeking our goal, we must not reach for it recklessly. We must not lay down our arms until we can assure the people of the world that others are doing likewise.

I realize this complex problem of nuclear weapons testing and the arrangements under which it might be stopped is a serious subject for such a pleasant occasion as this graduation. I would have preferred to have devoted these minutes to discussing the vast opportunities of your future, to indicating the extent to which the atom, the subject of my principal concern, will play an ever-increasing role in your lives, and to discussing how it will offer to each of you new and exciting interests.

However, the world today with its hope and its great opportunities is in grave danger. This danger will continue until a better understanding is established among men, and this understanding will permit them to willingly and safely lay aside their means to destroy. To accomplish this understanding means thought and work and patience. If we succeed, the future becomes your challenge. You are the young—the courageous—and the imaginative. You must assume the burden and the challenge of the future.

I congratulate you sincerely and enthusiastically upon your graduation day. Also, I congratulate you on the new duties and responsibilities you will assume tomorrow.

## Archbishop Francis P. Keough

EXTENSION OF REMARKS

## HON. EMILIO Q. DADDARIO

OF CONNECTICUT

IN THE HOUSE OF REPRESENTATIVES

Monday, June 8, 1959

Mr. DADDARIO. Mr. Speaker, it was with some pride that I noted in the Record a few days ago a tribute inserted by the distinguished gentleman from Maryland [Mr. Fallon], on the occasion of the silver jubilee of Archbishop Francis

P. Keough of the archidocese of Balti-

I should like to lend my wholehearted suppor to the justified praise that is being heaped upon Archbishop Keough and add to it the praise of my district—of which Archbishop Keough is a native. He was born in New Britain, Conn.

Archbishop Keough, who has devoted his life to the betterment of mankind, is beloved by all who know him. He has administered to his flock as a priest of the Roman Catholic Church in his home State of Connecticut, as bishop of Providence, R.I., and now in the primal see of the great metropolis of Baltimore.

He has exemplified not only a devotion to the principles and teachings of his church, but a genuine loyalty and love for the principles of Americanism.

On May 10, 1948, in the city of his birth, New Britain, the Connecticut Council of B'nai B'rith, a worldwide Jewish fraternal organization, presented Archbishop Keough a citation for his impressive achievements in sponsoring the spread of Americanism. This was a wonderful demonstration of the respect in which Archbishop Keough is held.

Born on December 30, 1891, of hardworking parents in a community which is known far and wide as the Hardware City of the World, Archbishop Keough is the first native of New Britain to reach that exalted station in the Catholic Church.

He attended St. Mary's Parochial School in his native city and St. Thomas Seminary in neighboring Hartford, and St. Sulpice Seminary, Issy, Paris. He completed his training for the priesthood at St. Bernard's Seminary, Rochester, N.Y., and was ordained in St. Joseph's Cathedral, Hartford, June 10, 1916.

The archbishop of Baltimore is concerned not only with the spiritual life of his people but also with their material pursuit of peace and happiness. He is often called the archbishop of the poor, aged, and infirm because it is to these he has devoted special care and consideration.

My fervent prayer at this time—as Archbishop Keough marks 25 years in his exalted office—is that he continue to serve God and country for many, many years ahead.

## Do Our Critics Ask Return to No. 1 Problem Status?

EXTENSION OF REMARKS

#### HON. J. CARLTON LOSER

OF TENNESSEE

IN THE HOUSE OF REPRESENTATIVES Monday, June 8, 1959

Mr.\LOSER. Mr. Speaker, under leave to extend my remarks in the Record, I am including an excellent editorial which appeared in the Nashville Tennessean on June 5, 1959, concerning the claim by some New York Congressmen that TVA has taken away industries from New York.

Representative Charles A. Buckley, of New York, and chairman of the House Committee on Public Works, challenged such unsubstantiated generalities in a recent statement, and the editorial commends Representative Buckley for speaking out for TVA at this particular time. The editorial follows, and I suggest that every friend and critic of TVA read it:

Do OUR CRITICS ASK RETURN TO No. 1 PROBLEM STATUS?

"Republican Congressmen from New York are trying to make an issue of the TVA vote on the ground that TVA has taken industry away from New York. This is a phony issue raised by the private power companies and their spokesmen, the chambers of commerce. I am a little tired of these unsubstantiated generalities. It would be more enlightening if they would name the industries so affected and the dates they were lured away."

This refreshing statement from a New York Democrat, Republican Charles A. Buckley, chairman of the House Committee on Public Works, could apply to widespread critics of the TVA, as well as to the propaganda disseminated by those who fear encroachment on their vested interests.

Complaints of industry luring omit some rather important facts. Since World War II, the trend of industry has been toward dispersal, so plants no longer are being built in bunches around or on top of home offices. Secondly, the vast majority of new plants in the South are branches or subsidiary operations. They were going to be built somewhere.

When the South turned toward industrialization in a big way, it had to turn to sources of capital and know-how. Where else could it go except to the heavy industrialized areas?

Finally, and most importantly of all, these shouters against industry kidnaping over-look the fact that industrial growth of the Nation as a whole far exceeds the Valley States. Even some Southern States outside the valley—Florida and North Carolina, for example—have attracted new plants at a greater rate than the valley.

Another argument often used against the TVA area is that it is subsidized by the rest

of the country.

First, this view overlooks the fact the TVA pays in lieu of tax money to the States and also repays the Government for its investment. But to examine the picture further: Recently, Gen. Herbert Vogel, Chairman

Recently, Gen. Herbert Vogel, Chairman of the TVA Board, told a House committee that per capita Federal expenditures in the Tennessee Valley from 1934 to 1953, including the TVA, totaled \$2,600. For the Nation as a whole, and including Federal installations, expenditures of the Federal Government per capita totaled \$5,400 for the same period.

Thus, the valley is getting only half its share in Federal outlays for welfare, match-

ing funds, social security, etc.

It is also true, as Representative Buckley asserted, that Tennesseans help pay for such projects as the St. Lawrence power project, Lake Champlain Waterway, and even the port of New York itself, on which \$80 million in Federal funds has been spent since 1881.

Now, to look backward. Before the advent of the TVA, the South was labeled the Nation's No. 1 economic problem. It had a one-crop economy. It was at the mercy of annual floods which destroyed millions of dollars worth of property. It was malaria ridden and poor. Per capita income was only 45 preent of the national average. The TVA region, in 1933, contributed only 3.4 percent of the total Federal income tax.

Since the TVA, the rivers have been tamed, the economy diversified, and malaria eradicated. The region is healthy and progressive, and it is fairly prosperous. Its Federal tax

contribution has doubled. The Government's gain in taxation alone between 1933 and now is five times the amount invested in the whole of the TVA. There is another benefit. Since 1933, the valley region has made purchases outside the area amounting to more than \$3 billion.

But the valley is not, however, the economic Eden its critics like to picture. Other than trailing the Nation in new industry, it still has a per capita income slightly above \$1,400 annually. The national average is

\$2,100.

The paramount question for the valley's critics is: What would they have it do? Shall it go back to the dark decades of pre-1933, and fail to exist as partner in the Nation's progress? Do these critics prefer it as an area paying only a small percentage of the tax burden, and buying only tiny amounts of products produced elsewhere? Do they prefer it economically backward, and perhaps draining off double the national average in Federal expenditures?

We do not believe they would, for it is a part of the Nation and shares in a common progress. We believe the critics would not deny that each area is entitled to make the most of its own resources and, by so

doing, strengthen the whole.

The problem is misinformation which amounts to a fraud against the country through half-truths and generalities and propaganda of those who think it is good local politics to stir envy and enmity against another area.

It is fortunate there are such discerning people as Representative BUCKLEY to speak out in the interests of the whole Nation. The valley is grateful. The entire country should be.

#### Tennessee Colony, One of Texas' Top Communities

EXTENSION OF REMARKS

## HON. JOHN DOWDY

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES

Monday, June 8, 1959

Mr. DOWDY. Mr. Speaker, a recent issue of the Athens (Tex.) Daily Review carried an article about Tennessee Colony, a fine community of splendid people in the Seventh Congressional District of Texas. Their untiring campaign for community improvement has been so successful that this year Tennessee Colony was ranked second in the State of Texas in the competition for Texas' outstanding rural community.

Under leave to extend my remarks, I include the article in the Appendix of the RECORD:

TENNESSEE COLONY, ONE OF STATE'S TOP COMMUNITIES

"We work together, play together, and pray together."

This statement, often expressed by the people of Tennessee Colony, is the foundation on which their community builds.

Back of it all and the hub of activity is the Old Union Church which is the house of worship for the people of all faiths. On the second and fourth Sundays a Baptist preacher fills the pulpit. On the third Sunday a Methodist and the other Sundays will find a Christian minister preaching.

find a Christian minister preaching.

In 1954, after repeated urgings by the Methodist minister, the people of Tennessee Colony decided to organize for community improvement. Lonnie Carroll was the first

President. Since that time there have been five others, and each year visible improvements have taken place in the old Anderson County community which lies west of Montalba a few short miles.

Henderson countians have heard of Tennessee Colony. It was known for its ollfields for years. Now it is better known for its community spirit and progress and for the Union Church that binds its people in their goal to provide a more abundant life for themselves, for those about them and for their children.

Friday was judging day at Tennessee Colony in the statewide contest sponsored by the Farmer Stockman magazine to name Texas' outstanding rural community. Tennessee Colony was chosen as the outstanding community in a 22-county district and one of the five in the State. Through the judging Friday, the position that this community will occupy among the top five will be decided. Announcement of the State winner will probably be made Monday afternoon.

The area included in the improvement organization extends approximately 3 miles in all directions from Tennessee Colony. Most of the people in the area are among the 56 families that work in this worthwhile

program.

Five other communities in Henderson County are organized along the same lines as Tennessee. Many of them are outstanding but the one that stands next to Tennessee for their record of work this year is Bethel. It is only in its second year of organization.

Hamlet DuPuy, president, moved into the top job in the community in mid-1958 when Clifford Gore, who was president at the time, moved away. He said Friday that there were 38 people who actively worked on various

committees this past year.

Their group meets each month and has a program. This is by no means the only activity. It is one small part of the overall program. Their committees set up objectives at the first of the year after taking an inventory of the community's needs. With this as the basis for community action, they develop a program and during this past year it included everything from taking part in five community workshops to landscaping the community center, around private residences and even the highways.

During the year the Union Church underwent a remodeling which cost \$6,000. This amount was raised by popular subscription.

The main objective, as expresed by Hollis Hudson, was to increase family income and to help the families in the management of family income. This was done through soil testing, pasture improvement, upgrading of cattle and in many other ways.

Health comes in for its share of consideration. This included such things as conducting first aid courses which were attended by 38 who received their certificates. There were 65 who attended the 4-hour refresher course on driver education. Ten of the younger children took swimming lessons last summer. Even the dogs had their day when all of them in the area were vaccinated against rables.

The scrapbook showed that improved pastures increased in acreage during the past Year from 10,000 to 17,000; crop acreage dropped from 3,400 to 3,300; the number of head of beef cattle went from 1,932 to 2,495 and dairy cattle jumped from 573 head to 931.

The youth of Tennessee Colony held their meetings the same night each month as the adults. They had their own aggressive program and much of the adult work was centered around the youth.

There are 675 organized communities in Texas. The four judges who will pick the State's top community said that the competition this year is the greatest it has ever

been. They spend 1 day in each of the top five communities. Friday's visit to Tennessee Colony concluded their week-long tour. They spend equal time in each of the communities arriving at 10 a.m., and concluding their stay at 2 in the afternoon.

The competition is judged for the Farmer Stockman by Mrs. Katharine Randall, woman's editor of the magazine; Sam Whitlow, Texas editor of the Farmer Stockman; Miss Peggy Williford, assistant 4-H director for the Extension Service of Texas A. & M. College; and Bob Cooper, agricultural economist for the extension service.

The community that is selected as the top one will receive \$500; the second place one gets \$400 and so forth with the community judged fifth, receiving a plaque.

Commencement Address by James Francis Reilly at Mount St. Mary's College, Emmitsburg, Md.

EXTENSION OF REMARKS

#### HON. LOUIS C. RABAUT

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Monday, June 8, 1959

Mr. RABAUT, Mr. Speaker, Mount St. Mary's College at Emmitsburg, Md., was founded on September 24, 1808, by Farther John Dubois, a French priest. It is the second oldest Catholic college in the United States and has a rich heritage of accomplishments in the field of Christian and Catholic education. On June 3, the college held its 151st annual commencement exercises which were presided over by the Most Reverend Francis P. Keough, archbishop of Baltimore. One hundred and thirty-six young men received their degrees at these exercises. The college honored five of its alumni with the honorary degree of LL.D.: Rt. Rev. Francis A. Costello, Wilkes-Barre, Pa.; Rev. Thomas J. Barrett, Schenectady, N.Y.; Thomas L. Golibart, Detroit, Mich.; John V. Morgan, New York City; and my good friend, James Francis Reilly, a prominent lawyer in the District of Columbia. Mr. Reilly also delivered the commencement address and I am proud to insert his address in the RECORD:

COMMENCEMENT ADDRESS BY JAMES FRANCIS REILLY, MOUNT ST. MARY'S COLLEGE, EM-MITSBURG, MD., JUNE 3, 1959

No one at any time, at any place, has ever been happier and more grateful than I am this morning.

I am grateful to the president and council for the highly coveted honorary degree which has been bestowed on me and for the privilege of being your commencement speaker. My happiness is unbounded because the award comes from my alma mater, the second oldest Catholic college in the United States, a school whose history and tradition in the field of Catholic and Christian education in America has been and is unequaled.

However, in a larger sense, I consider that this honorary degree is not so much a personal tribute to myself as it is a tribute to all my fellow alumni everywhere because I feel that I am but a symbol of or representative for them on this occasion. I am particularly happy and thankful that a number of my fellow alumni from the District of

Columbia area have arranged to be at these exercises.

As I stand on this platform this morning, I am reminded of an occasion 29 years ago when almost by physical force by Monsignor Culhane, I was a last-minute entry in the oratorical contest in June 1930. But the pressure of time and other things were just too great for me because in the middle of my oratorical effort, I forgot my lines. I promise you, Monsignor Culhane, that I will not forget my lines this morning, at least not as noticeably as I did in 1930.

I have fond recollections of many other incidents of my student days here, but the time which my family has allotted to me for my speech this morning will permit me

to recall only one more.

It is a recollection of grateful appreciation for the opportunity given me to be a student here. I was given a secretarial job in return for free tuition and board, but I must confess that I have always felt that the school by that arrangement was trading a horse for a rabbit because the education which I received far surpassed by insignificant contributions to the administrative affairs of the college.

I say to you, Monsignor Sheridan, that since 1929 I have promised myself that some day in some more substantial way than I have to date I would endeavor to reciprocate for the education and training which I received at the Mount; and I live by the Irish proverb that "a promise is a debt."

Everyone in this auditorium sensed the relaxed and good feeling which you young men had when you received your degrees this morning. You have worked and studied hard for four long years and all of us in this fine gathering pay tribute to each of you on the consummation of a job well done.

I am not so rash as to expect that what I say here will be remembered by you graduates in any detail for very long; but if I could be certain that only one thing which I do say thall be helpful to you in the future, in even a very small way, then I will have justified the council's judgment in selecting me to be your speaker this morning.

What then can or should I speak about this morning which will be most fitting and appropriate as you young men prepare to cross over another and greater threshhold of life?

Should I call upon my experience as a prosecutor in the criminal courts and talk about crime, or juvenile delinquency and parental responsibility? Or, from my ex-perience in the commercial air transport industry since 1940, should I talk of the coming of the jet and space ages and the great hopes that they hold for all men every-where? Or, should I call upon my experience as trial and legislative counsel to a large electric utility company and speak to you about the high promises which the atom or nuclear age holds for this and coming generations? Despite the temptation to talk on one or all of these subjects, I have decided to be a bit more personal in my remarks this morning, even at the risk of being tagged provincial.

Suffice to say on these other and probably more dynamic and dramatic subjects, I am an enthusiastic optimist about the future. To me, the future will bring material rewards, luxuries and pleasures far beyond the most fantastic imagination and vision of the human specie.

And I have infinite optimism about your generation's mental and physical capacities to fulfill these great promises of and for the future.

My only reservation about the future is a prayer—that my generation, your generation, and the generations which are to come will accept and use the amazing scientific, medical, and other great benefits, which are to come, as gifts from the omnipotent and omnipresent God and shall be ever mindful that it is only by and through Him that these

benefits are and shall be ours.

Undoubtedly, each of you graduates has resolved to be successful. Indeed, such a resolution is natural and praiseworthy, provided that you have a proper understanding of success. Since your education and training here at the Mount has thoroughly indoctrinated you in the God-given truth that it is what you give, not what you get, that counts, you know that true success cannot be measured solely in the terms of either financial reward or rank in life, or both. Believe me, the achievement of mere riches and rank simply intensifies frustration and unhappi-The careers of men like Henry Ford II, Peter Grace, and Frank Folsom, and two of our own esteemed and beloved honorary alumni, President Eisenhower and Thomas Pangborn, clearly demonstrates that one may achieve wealth and rank and, at the same time, be a success in the best sense; but too often rank and riches becloud the perspective of the best of men as they rush down the short corridor of earthly time.

After more than half a century of life, I am convinced that the basic, fundamental rules for true success, which can be measured only in terms of how effectively one serves his fellow man, remain unchanged from the days Christ walked this earth.

The cynic, the nihilist, the iconoclast, and even many of the well-intentioned will consider me pedestrian to talk about the basic fundamental rules or standards for true success. But I reiterate them with enthusiasm because I believe that each repetition of these basic rules—like the repetition of the Lord's Prayer, the Sermon on the Mount, the Bill of Rights, and the Pledge of Allegiance—adds to their meaning and significance—both to those who repeat them and to those who hear them again.

Basically, and admittedly, the whole secret of success in life is wrapped up in the first two commandments—love of God and love of neighbor. But this is stating the matter just too simply for a generation which appears hellbent on making everything in life more complicated.

Every human being has a continuing need for love, affection, sympathy, and understanding; and true love spends itself in action. If you remember this in your daily dealing with people with whom you must associate in the years to come, you will attain and maintain a success more satisfying and more enduring than all the dollars in the world and passing prestige can ever bring to you.

Every worthwhile vocation and avocation in life serves some human need. The minister serves the sinless and the sinful; the husband and wife comfort each other and their children; the doctor attends and cures the sick; the lawyer instructs and counsels to maintain justice; the businessman, the chemist, the clerk, the laborer, and the skilled mechanic each in his own way contributes to the bodily and spiritual needs of his neighbors.

First, if you aspire for success, you must perspire freely and often to achieve it. There is no substitute for industry and hard work. For almost 30 years I have been exposed to, associated with, and opposed to, many so-called geniuses; and I have been inspired, sometimes almost mesmerized, by their flashes of intellectual alertness and brilliance, but more often I have been disheartened by their consistent erratic behavior and intellectual instability.

In any event, I am generally not unhappy when the other side has the geniuses and I have the workers. Believe me, I not only have more comfort of mind but am also more confident of enduring success. You can see that I agree wholly with Thomas Edison that

genius represents 1 percent inspiration and 59 percent perspiration.

On the other side of the intellectual coin, I don't believe that I have ever met a really dumb person in my life; and I urge you never to be careless in your dealings with a so-called dumb person—or you may find that his I smart minute, hour, day, or month may be when you have your intellectual guard down.

In my opinion, an absolute essential for true success is integrity of desire, purpose, and action. Honesty is not only the best policy but the only safe policy; and that means not only honesty with others but also honesty with one's self.

Without exception, the people whom I have found the most widely respected and genuinely admired are those whose motives are beyond reproach as to truth and veracity; even when others violently disagree with their decisions and conclusions. Take it from me, the best merchandise in anyone's spiritual, mental, physical, and material storehouse is honesty. Honesty not only creates and maintains an unimpeachable reputation, but its rewards are enduring beyond the measurement of time and material value. As success begets success, honesty begets honesty from others.

Successful people also have a passion for loyalty. They are loyal to God, to church, to country, to their families, to their associates, their patients, their clients, and the causes they espouse, defend, or represent. Loyalty is a priceless ingredient of true success; and absolute loyalty is so rare these days that it seems as if it were a birthright, a heritage; it cannot be taught, learned, or simulated. As an example of what I mean by loyalty, I cite the recent warming exemplary loyalty of President Eisenhower to his and our former great Secretary of State John Foster Dulles, during the latter's last and fatal illness.

Successful people have an affinity for perseverence, stick-to-it-iveness; the so-called never-say-die spirit. Too many people quit too soon. Too many people tire just before the finish line. Too many people discourage too easily; and discouragement breeds pessimism, a mortal obstacle to success. Too many people lack that extra bit of faith in God, in themselves, in their fellow man and in their cause.

You have to be an optimist and to learn to laugh at yourself, and enjoy it. People avoid the pessimist and the sourpuss like the plague, and since you must live and work with people to achieve success, you just have to learn to be attractive to people and to get along with them.

A great deterrent to success is fear of the future and for one's personal security. As Lloyd Douglas said: "He who harbors a fear, plays landlord to a ghost."

There is rather general agreement today that probably the worst obstacle which your generation has placed in your own path is the increasing tendency of young people to concentrate on personal security. This conconcentrate on personal security. This con-centration on security is particularly unfortunate in light of the infinite challenges, opportunities and the new and great economic, industrial, social and moral frontiers which are opening all over the world for the brave. the intrepid, for those who have the heart mind and will to conquer in order that all men everywhere will more effectively and justly know and serve each other. These opportunities and challenges, my young men, are the legacies of my generation to Please cherish and nourish them to the full so that you may participate in their divine-designed fruition.

You might keep in your heart the words of the so-called Lost Prayer:

"O God, give us serenity to accept what cannot be changed courage to change what should be changed and wisdom to distinguish the one from the other."

You must learn to recognize, accept and discharge responsibility. This will require the making of decisions, sometimes very hard and difficult ones; but make them you must, if you are to succeed. Be sure of your facts; test them against truth and morals, then make your decision sharply and clearly. You won't be right all the time but you will be most of the time; and the indecisive person even when he is right is most often too late.

However, this doesn't mean that you should never change your mind, particularly when to do so would be sound, right, just and fair. The cemetery of failures has a long waiting list for graves for the stubborn, the inflexible.

Be curious, inquisitive and a good listener. As the old adage goes, "You ain't learning when you're talking."

Improve your ability to communicate your thoughts and actions to others. Most of the violent and costly controversies, of which I have personal knowledge, were basically nothing more than overheated misunder-standings, resulting almost entirely because the people involved just never understoodin most cases didn't even attempt to understand—each other's purpose and position. So make sure you understand the other fellow, and that he understands you—then, if he wants an argument, let him have one, but good.

Don't be depressed about your imperfections, but be thankful for them. It isn't your accomplishments which are important but your mistakes. It is through your mistakes that you will become more perfect, more resolute in virtue and more tolerant of your fellow man. It is a fortunate person who knows his limitations; indeed even learns to use them in the achievement of real success in both his public and private life.

One of the great lessons my beloved and heroic mother taught me was to never succumb easily to the adversities which I would suffer; but to try hard to learn something from each defeat, repulse or setback. And I assure you that any measure of success which I have achieved can be directly traced to what I learned in my many adversities. You young men will be well advised also to follow implicitly this excellent advice of my mother.

Be tolerant and kind to your less fortunate brethern and always find time to give help and comfort to these people. This is the silent phase of a successful life but oftentimes the most effective way of serving one's fellow man.

Be a good citizen, and take an active interest in your local, State, and National Governments. Become informed on the various phases of our laws and of our history. Vote, run for office, and take a posttion on local and national issues. Join a political party-be an active Democrat of Republican. I remind you of the statement of Elihu Root, Secretary of State in President Theodore Roosevelt's Cabinet and one of the really outstanding lawyers ever produced by our country, that "Politics is the art of good government." I firmly believe that next to the Roman Catholic Church the strongest bulwark against any kind of "Ism" in this country is the continued maintenance of a truly strong two-party system of government.

Have respect for duly constituted authority. Unquestionably, the evil root most responsible for the deterioration—yes, even the destruction—of every fallen government has been a breakdown in respect for authority. On this subject, I am going to quote from an article I read recently, not by a Cardinal, not by a Justice of the Supreme Court, nor by an eminent lawyer, nor by a Senator, or Congressman, but by a baseball umpire; and I quote:

"The umpire's job is tought enough, but what makes it even harder is the basic lack

of respect for authority that exists in the world today. Take teachers. When I was a kid, if there was trouble between the teacher the pupil the parent backed up the teacher. Today he backs up his kid. 'It can't be my kid's fault,' he says. No respect for authority. People don't respect policemen or even, in many places, the Government. So when they come out to the ball park, why should they respect the umpire?

I'll wager that there was and is proper respect for authority within the home of

this umpire-philosopher.

Follow the example of truly successful People, since example is one of life's most Potent instructors, though it teaches without a tongue. It is the practical school of mankind, working by action which is always more forcible than words. All persons are more or less apt to learn through the eye rather than the ear. The best advice that I can give to you this morning on this matter of example is to pattern your lives after your parents.

Your parents are true successes; the pure exemplification of love, sacrifice, tolerance, and charity. It is their example which you have imitated; which has culminated in this great occasion for you-and for them. You are dramatic proof of the vast importance

of proper domestic training.

For whatever may be the efforts of Mount St. Mary's or any other school, the example set in the home is of vastly greater influence in forming the characters of our future

men and women.

The home is the crystal of society, the nucleus of national character; and from that source, be it pure or tainted, issue the habits, Principles, and maxims which govern public as well as private life. Truly, the Nation comes from the nursery. The characters of Parents are constantly repeated in their children; and the acts of affection, discipline. industry, and self-control, which they dally exemplify, live and act when all else which may have been learned through the ear has long been forgotten. So this morning, I know that each of you

join me in a loving salute to your parents as successes in the truest and purest sense and in a silent prayer that the example you shall set and the image which you shall create in your own homes shall continue unbroken the rich heritage with which your fathers and mothers have endowed you.

I promise you young men that if you build your future upon the solid foundation of the education and self-discipline training Which you have had here at Mount St Mary's; and, if your conduct meets the rules and standards which I have outlined this morning, you shall achieve success in the moral and best sense and also a quality and a quantity of material reward necessary to bring to you and yours happiness beyond your fondest dreams.

I urge each of you graduates to remember always the lessons which you have learned here and to firmly resolve that you will make repeated pilgrimages back to your mountain home to pay homage to Mary at her grotto on the hillside and to give thanks again, again, and again to the omnipresent and omnipotent God for the great gift He gave you in permitting you to be educated in the arts and sciences and trained in Catholic self-discipline here at Mount St. Mary's under the patronage of His devoted and beneficent mother.

In closing, I quote for your thoughtful consideration an ancient Chinese proverb:

"Life is like climbing mountains. Looking up after reaching a summit, You still find other peaks towering above you.

"Or at times you may feel lost Among huge waves in the midst of the ocean.

Yet a way is found wherever there is a will."

Military Surplus, a Defense Headache

EXTENSION OF REMARKS

OF

#### HON. WINT SMITH

OF KANSAS

IN THE HOUSE OF REPRESENTATIVES Monday, June 8, 1959

Mr. SMITH of Kansas. Mr. Speaker, our former colleague, Hon. Errett P. Scrivner, now special assistant to Assistant Secretary of Defense McNeil, on June 2, addressed the Kansas City, Kans., Rotary Club on "Billions for Defense". In his speech Mr. Scrivner discussed the problem of defense surplus. This portion of his remarks follows:

One of the Pentagon's big headaches is the matter of surplus. It is a \$9 billion headache created by obsolescence—old age and the rapid advance in military science. Yes, \$9 billion-new cost-but today's actual value is less than 10 percent of the original price.

Tomorrow's wars cannot be won with yesterday's weapons. If and when the call comes there will be no time for buildup, and with missiles in the picture, that time may be measured in minutes. to fight with what we have at the time. That simply means we must keep modern, securing the new-discarding the old, the obsolescent and obsolete.

The new cost personal property inventory of the Army, Navy, and Air Force is \$120 billion, more than the 10, 12, or more biggest corporations in the United States of America. Each year an added \$15 billion worth of new material goes into the inventory. If war comes, that may not be enough; if it does not, it is too much. Ninety percent of this huge inventory is military equipment with little or no civilian use: ships, planes, tanks, guns, ammunition, and military vehicles.

A large portion of each year's purchases are consumed-used up. But the majority of it has a long useful life—3, 5, 10 years, or 20 years in such items as ships. The useful life of a military plane cannot be safely stretched to more than 10 years. Vehicles have an average life of 6 to 8 years.

Radar could have a very long useful life were it not for the advances made in weapons. But a radar, costly though it was—which could detect big, comparatively slow, low-flying bombers, just cannot do the job required against fast, high-flying bombers, not to mention missiles. So science produces new, more complex, more costly radars to replace the old ones which go into surplus-the scrap heap.

Not very long ago, 10 or 12 years, the B-36 was halled as the world's finest bomber. It could go far, carry enormous bomb loads, and had the capacity of dropping bombs on any chosen enemy target. Our B-36 fleet cost more than \$2 billion. Just a few weeks ago the last B-36 went out of the inventory. Motors and electronics were salvaged: the rest of the planes will be melted down into aluminum ingots.

Waste? Down the drain? Kicked away? No. Although no B-36 ever dropped a bomb in anger, who can say that the mere existence of the powerful fleet has not been one of the big reasons we have been at peace—a big price for preparedness and peace, but it's been worth it.

Tanks, another costly weapon, must be constantly improved with lower lines to make a smaller target, faster, with greater protection against improved antitank weapons and ammunition, and now, against atomic radiation, with better guns, better communications and more powerful, better engines. No civilian market exists for obsolete tanks. So it is with battleships, cruisers, destroyers, submarines and many other naval craft, originally costing hun-dreds of millions of deliars.

Weapons, once capable of splendid service, are now outdated and outranged. The expensive, much-heralded sky sweeper, the almost automatic antiaircraft gun is a thing of the past due to the new ground-to-air missiles, such as the Nike-Ajax, already obsolescent as a result of the new Hercules model. There is no civilian market for the multimillion dollar antiaircraft guns-so, they too go to surplus.

In a more familiar field—vehicles, the old must make way for the new as the mileage runs up. As a general rule, no military vehicle is retired until it is at least 6 years old or has run at least 60,000 miles.

Everyone realizes that any car-Cadillac. Olds, Buick, Plymouth, Ford, or Chevrolet, just isn't worth its original purchase price after 4, 6, 8, or 10 years of service-or, for that matter, if it stood idle. So it is with military equipment, much of which was rolled up at the end of World War II and the Korean war, and is now made old by the rapid progress of science.

It is not waste, but actually good, sound business for Uncle Sam to dispose of surplus just as rapidly as possible. It costs over \$100 million a year to manage, control and

store old useless equipment.

So Uncle Sam is engaged in disposing of \$6½ to \$9 billion of old items each year. But mark this—that is the new cost, not the present worth, which is about 10 percent of its original cost. So we are talking about getting rid of \$600 to \$900 million worth of military material.

All surplus items are under constant review. Some goes to other military services and government agencies; some goes to classrooms for instruction purposes; some goes to allies, although they too want the new, and finally, there is no alternative except junk. Another fact often overlooked is that this "junk" returns about \$300 million each year to the U.S. Government.

As each day brings new scientific advances, new equipment, better, faster and more complex, more accurate and more deadly weapons, the old must make way for the new.

Commencement Address of Hon. Thomas J. Dodd, of Connecticut, at Dean Academy and Junior College

> EXTENSION OF REMARKS OF

## HON. EDWARD P. BOLAND

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES Wednesday, June 3, 1959

Mr. BOLAND. Mr. Speaker, yesterday Senator Thomas J. Donn, of Connecticut, delivered the commencement address at Dean Academy and Junior College in Franklin, Mass.

It was a notable address that made a real contribution in clarifying the basic issues invoved in our struggle with world communism.

I think it deserves the widest possible circular, and I include it in the Appendix of the RECORD:

COMMENCEMENT ADDRESS OF SENATOR THOMAS J. Dodd, Democrat of Connecticut, at Dean Academy and Junior College on JUNE 7, 1959

It is a very great honor and personal pleasure for me to be here with you today. I say this because of my high regard for

President Garner and for all the faculty members of this great institution, and because it is graduation for my son, Jeremy, It is an additional honor in that one of the trustees of Dean is and old friend of mine and one of the great Americans of our time, Representative JOSEPH W. MARTIN Who has represented this district in Congress so long and so well. I could not appear here without saying that there is no more admired respected or genuinely beloved man in the Congress than JOE MARTIN

And if I may add a personal word, I would like to say to Jerry, that I am pleased and grateful for the progress that he has made here and throughout his life. He is a good man. He has always been a good man. And he is a better man for his years at Dean.

Commencement day is an occasion to reflect upon the past and to attempt to assess the future. No assessment of the future can be in any way realistic that does not include the great problem of our time, the danger of aggressive world communism.

World communism, like a mammoth cloud, darkens the future of individuals and of nations. One-third of the world's people is already enslaved by it; another one-third is teetering on the edge of the chasm: and the lives of all who live in the avowedly anti-Communist world are altered and complicated because of it.

You will pay the heavy price of commu-nism whether you realize it or not.

At the least, your lives may be interrupted by military service; you will have to pay the expense of resistance to communism in the form of high taxes and continuing inflation; you must sacrifice the inestimable benefits that could otherwise have resulted from the enormous amount of national energy that must go into resisting communism; and day-to-day anxiety and uncertainty over the future will continue to affect the daily lives of each of us. Thinking and compassionate men and women must be deeply and continually saddened by the knowledge that one billion fellow human beings are at the mercy of a ruthless, conscienceless barbarism. Communism stands in the way of peace, of progress, and of security for all mankind.

At the worst, it poses for all of us the threat of war, of enslavement and even of annihilation.

That is why it is so important that we have a proper understanding of this fearful specter walking the earth. Unfortunately. there is a great deal of confusion, fuzziness, and apathy abroad concerning communism, some of it stemming from academic circles.

There are a number of stock arguments which one hears continuously that tend to obscure the real nature of communism and dissipate one of the principal weapons against it, the moral condemnation of decent people.

We hear repeatedly that nothing is gained by calling Communists harsh names or con-tinually raking over their past crimes, as though it would somehow be better to forget the true nature of the enemy.

We read a lot of newspaper accounts of how things have improved behind the Iron Curtain, but precious little about the essential barbarism upon which communism is founded and which sustains it in power.

There is a philosophy current that much of our difficulties with the Communists are due to misunderstanding, which implies that the Soviets and the Red Chinese are perhaps well meaning and that our difficulties could be resolved if we would only look at their side of things and get them to look at our

Perhaps the most popular phrase of those who minimize the evils of communism is that we cannot look at the world scene in terms of "black and white," which of course carries the implication that both the free world and the Communist world are at fault for the present danger and that each side has its good points and its bad points. I will-ingly concede our bad points, but I have never been able to discover the good points of communism.

This type of thinking, seeping into the American consciousness from all sides, amounts to a tremendous cumulative attrition which is utterly confusing. People who are weary after long years of anxiety are only too happy to seize upon such news items as the building of children's playgrounds in Moscow as an indication that the Kremlin masters are human and after all

that everything is going to be all right.
This sort of thing, constantly repeated, causes us to let down our guard, to look for an easy way out, and it eventually leads to fatal concessions to the Kremlin.

So first of all, let's get one thing straight.

Let's get communism in true focus.

Communism is total evil. It is all black. There is nothing gray about it. There is nothing good about it. Its ends are evil. Its means to those ends are evil.

If, by force of circumstance, Communists are for something right, it is only as an expedient to advance their evil ends.

If they occasionally appear in a worthy light, it is because they must make some

appeal to human needs and aspirations.

When they educate the ignorant, it is to perfect their apparatus of enslavement.

When they industrialize, it is to strength-

en their capacity for aggression.

When they talk peace, it is just another

means of waging war. When they allow long overdue improve-

ments in living conditions, it is evidence that even Communist oppressors must make some concessions to the wishes of the onpressed.

There is no evil so appalling that communists would shrink from it, if it would effectively advance their ends. There is no atrocity so hideous that they would not willingly commit it if it served their pur-

The Red Chinese regime, in the 10 short years of its existence, has a matter of governmental policy murdered 30 million men, women, and children. The horror con-tained in this statistic is too great for the human mind to assimilate or the human soul to ponder. And this is but a repetition of the crimes of the Russian communists, which have been committed on the same scale.

A penetrating New York Times editorial pointed out a few days ago that more shocking than the Red crimes themselves, are the reasons behind them. I quote from that editorial:

"The whole 'commune' system, it comes out, is an attempt to destroy the accepted moral and rational basis of the society.

"Thus the atrocities are directed not merely against the human body. They are It is not aimed at the heart and soul. merely the man and woman who must be killed but the ideas, concepts, hopes, sense of values and traditions that have made the lives of those persons worthwhile.

"The details of the killings as related in the testimony are shocking. They are, however, not nearly as profoundly terrifying as what underlies them."

Communism is at war with the whole human race. It is based on the blasphemy that a human being is just a particle of matter, without independent mind or spirit. It seeks to destroy the family as an institution. It seeks to wipe out religion. It seeks to blot out the human conscience and to distort all concepts of right and wrong. It seeks to reduce man to a mere beast of burden, without a will, without a personality, without a home, without personal property, without knowledge of God, without hope of eternal life.

Of course, they have not vet been successful in this task. They have found the objective of permanently defacing human nature somewhat beyond them. The task has been too great. There have been many retreats, deviations, new approaches.

But the end goal never changes. We must always remember that; and we must continually renew our understanding of it.

Certainly we must live in the world with them, but we must never forget what they

Certainly we must confer with them, but we must never concede to them on any basic principle

The Western World is presently engaged in negotiations with the Communists. Unless there is a fundamental change in Communist doctrine, there is no hope that these negotiations will lead to peace.

I say this for three reasons:

First, communism is fundamentally dedicated to the destruction of the free world and of the ethical and rational bases of that world. Its fixed and unswerving objective is to destroy us. The Communists may have to postpone this destruction, they may have to adopt new approaches to it, but it remains their central objective in foreign affairs. As long as this remains true, there is no hope of any lasting settlement, or of any relaxation of tensions, since such things must be based on some common interest between East and West.

Second, whereas we in the West regard peace as the normal order of things, and warfare as an interruption of that order, Communist doctrine regards warfare, ceaseless conflict, and violence as the essential order of life. There is no such thing as peace to them. There is only the absence of armed conflict, an absence which must be utilized for other forms of warfare. Therefore, it is only the West that seeks peace, and the notion that peace is being prevented by mere misunderstandings or resolvable differences is absurd.

Third, there is almost no hope that arguments based on reason and truth will have any effect whatsoever on Communists at the bargaining table. For the true Communist, there is no criterion of truth but Communist dogma. While we in the West subject our policies and our principles to many tests of truth which are above, beyond, and independent of our political credo, the Communist is incapable of doing so. Argumentation will not move him. Truth will not pierce his dialectical armor. Only the force of events, demonstrating the falsity of Communist doctrine, can erode away Communist certainty.

These facts are fundamental to any successful coping with communism. It is impossible to exaggerate their importance.

It is all too easy to fall into the error of assuming that the Communists are essentially like ourselves. They look like us; they dress like us; they can be affable and good-natured; their capacity for pretense is infinite.

It is hard to keep our eye on the Communist ball continually and keep in mind the fact that on basic issues we do not have and can never have anything in common with them.

This having been said, I hasten to add that mere rejection by us of communism offers no solution to the worldwide danger. It is not rejection that the world is seeking. but affirmation.

The impoverished, despairing peoples of the world are in search of a prophet, a philosophy, an ideology that promises a way out of their present degradation.

Americans have an old familiar saying you can't beat something with nothing We cannot beat false prophets with no prophets. We cannot beat dedication to evil with lack of dedication. We cannot solve the desperate problems afflicting half

the world by merely rejecting the Communist solution. We must offer a solution of our own.

We must put forward our solution in the face of many disadvantages. The uncommitted peoples of the world are generally so impoverished that they feel a kinship with the Communist masses, a kinship that they could not feel with the prosperous and advanced peoples of the West.

The record of colonialism of our European allies stands against us in the eyes of those Who do not understand that communism is the most ruthless and total imperialism the world has ever known. The totalitarian Communist bloc can act with a unity, a decisiveness, and a single-mindedness that is impossible for the democratic coalition. And in the nature of things, the aggressor has an initiative that the free world cannot seem to wrest from it.

But communism possesses on fatal disadvantage. It runs against the grain of human nature. It chokes and destroys the spirit of man.

Communism is essentially evil and man is essentially good. Communism cannot satisfy any of the higher needs of man, the aspirations, the hopes, the yearnings that distinguish man from lower forms of life.

Only ignorance or despair will drive men to communism. Therefore the principal task of the West is to offer light and hope.

But the battleground today is not the higher needs of man. It is the lower needs, the more tangible, the immediate day-to-day necessities of existence.

Freedom, and all the values that this term suggests, cannot flourish or have meaning Without the existence of certain material conditions.

We in America have become used to a constantly rising standard of living. We have come to expect it, as though it were in the nature of things. The college students of today live better than their parents, and you expect your children to enjoy higher standards than you now have. But for a large part of the world, living standards have actually been declining despite the enormous technical advances of the past century.

It is a commonplace to say that one-third of the world goes to bed hungry at night. But it is not so generally understood that a large portion of this one-third is eating even less than they were 10 or 20 years ago. And 10 years hence, the outlook for them is even bleaker.

This inevitably feeds the hopelessness upon which communism thrives.

To men who are faced with these basic problems of existence, communism offers a coherent, exciting, tempting body of ideas and programs. And Russia provides the example of a nation which in a short period of time has bridged the chasm from a primitiev, agricultural order to that of a highly industrialized state.

The West, despite its primacy in the realm of the spirit, seems unable to offer a con-

Vincing ideological antidote.

Nor is the example of our high standard of living or of our flourishing political institutions causing the unfortunate peoples Of the world to flock to our colors.

Our talk of democracy, of free institutions, of representative government seems too parochial, too involved, too concerned with forms, to go to the heart of man's basic needs. And in the eyes of millions our alliances with totalitarian regimes make a mockery of our professional ideals.

We seem unable to make our ideological system intelligible to others.

At a time of crucial importance to Western civilization we seem unable to produce leaders who can so articulate the needs and hopes of men as to inspire the love and admiration and trust that America once enjoyed.

In our history, in our philosophy, in our religion, in the practical programs of assistance already in effect, we have all the needed elements for a new order of justice and peace and plenty—an order that will satisfy the lowest and the highest needs of men. We lack only the statesmen, the prophets, who can combine these elements in a form that will rekindle the hope and enthusiasm of the world.

Perhaps the young men and women of your generation will fill this need.

If the Western World, with its unparalleled capacity for producing material wealth, can meet the immediate material needs of men, if we can lead the way to the eradication of social injustice, of poverty, of discrimination, of material degradation, then the battleground for the hearts and minds of the world's people will change to a conflict in which we of the West will have all the advantages.

For man's higher needs are the very things that Western civilization answers and which the cold, merciless dogma of communism

cannot supply.

The highest value that Stalin could put upon man was that he was the most precious form of capital. If that were true, if that were the full signifiance of man, then communism would indeed inherit the earth.

But it is not true. Man possesses mental and spiritual attributes above and beyond the material world. Man has needs and appetites that no material order or philosophy can satisfy.

He needs friendship. He needs understanding. He needs truth. He needs love. Our Judaic-Christian civilization, nourished by contributions from the Greco-Roman world, is in its finest aspects the highest response to these higher needs of mankind.

Whatever may be our weaknesses in the West, we have one great strength. Our universities are free. Our churches are free.

We have preserved unbroken the tradition of free inquiry started by Plato and Aristotle. We have preserved the knowledge of the tradition, the revelation, and the moral law of God.

The people of the West remain free to seek truth and to love God. It is we and not the Communists, who are able to satisfy man's highest needs. This and this alone will save us.

Our alliances, our weaponry, our economic strength, important as they are, will never establish peace on earth. But the church and the university, in God's good time, will do so.

Ten years ago Dr. Charles Malik, President of the General Assembly of the United Nations, made one of the most profound statements of our century when he

"Communism is a doctrine of despair. Its only and complete answer therefore lies in the existence of hope. If the Western World can show a way to eradicate the shame and scandal of poverty, of exploitation, of op-pression, of greed, without resort to social revolution and class struggle and dictatorship; if it can place these material values in their proper subordinate place within the context of a mighty spiritual movement which will be revolutionary without being subversive, and which will draw its substance from the infinite riches of the Western positive tradition, then the necessity for communism will vanish and the specter which now walks the earth will be laid for-

The terrible example of communism is having one salutary effect on the Western World. It is purging us of our own follies.

The example of their total materialism is

making us righly ashamed of our own materialism.

The example of their total atheism is calling forth a spiritual rejuvenation in the West.

Their attempt to destroy all moral values is causing us to reexamine our own neglect of those values.

Their record of ruthless imperialism has caused the West to be ashamed of its own imperialism.

Their brutality is enlarging our compassion.

In the sins of communism, we see our own sins writ large.

In our desperate need to overcome evil, we are rediscovering our own capacity for

To the young men and women in our colleges, there opens the greatest challenge, the greatest responsibility in the long history of our civilization. If you, the products of our free institutions, cannot refine from our heritage a ringing message, an inspiring, uplifting ideology that will satisfy the universal hunger for truth and justice, then our civilization will have lost the capacity to lead, and leadership will pass on to others. Perhaps never in human history has so much been staked upon the performance of a single generation. The stakes are mortal, for they are the preservation of all that we have known and cared for, all that is worth preserving.

Thus your lives are endowed with an enormous significance. Always keep in mind the fact that you must not toil for yourself alone but for the whole future of man.

I hope, I pray, I believe that the young men and women of this class and of this country will make an effort worthy of the noble task and that, with the grace of God, they shall not fail.

Congressman Patman Awarded Doctor of Laws Degree by Cumberland University, Tennessee's Famed Law School

EXTENSION OF REMARKS

HON. JOE L. EVINS

OF TENNESSEE

IN THE HOUSE OF REPRESENTATIVES Monday, June 8, 1959

Mr. EVINS. Mr. Speaker, Cumberland University, Tennessee's famed law school, on June 6 conferred an honorary degree of doctor of laws upon our distinguished colleague the gentleman from Texas [Mr. Parman]. Congressman Parman delivered the commencement address at Cumberland on this occasion-Cumberland being his alma mater. Cumberland University is justly proud of the accomplishments and achievements of Congressman Parman and conferred upon him a doctor of law degree on this occasion. Others receiving an honorary doctor of law degree on this occasion were Dr. Harry L. Armstrong, president of Castle Heights Military Academy, Mr. Lewis Gruber, chairman of the board and chief executive officer of the P. Lorillard Co., Dr. Athens Clay Pullias, president of David Lipscomb College, and Dr. L. L. Rice, noted author and lecturer and former president of Cumberland University. In this connection, Mr. Speaker, I desire to have reproduced and preserved in the Congressional RECORD the commencement address of Congressman Parman delivered at Cumberland on the occasion of the university conferring upon him the degree of

doctor of law. The address of Congressman Patman follows:

Address by Wright Patman, Member of Congress, at Cumberland University, Lebanon, Tenn., June 6, 1959

President Stockton, members of the board of trustees, distinguished alumni, graduates, and friends: It was 43 years ago that I walked away from this campus with the diploma of bachelor of laws under my arm. In the years since some very highly prized honors have been accorded me, but I doubt that any of them has filled my heart with the pride I felt at having earned a degree from Cumberland University. That was an honor which is exceeded only by the honor of being with you here today.

This campus looks much different from

This campus looks much different from the way it did 43 years ago. The physical plant is much changed and greatly improved. And it is still being improved. Certainly it is wonderful to know that such good progress is being made on the Cordell Hull Library, on the new dormitories, and on other

physical improvements.

But the real substance of this great university has, I think, not changed. The real substance of any university is in its continuing philosophy, its dedication to imparting the spirit of learning, the traditional attitudes and ideals which it instills in its students. These are, of course, the intangible things; yet they are the things which move the world. They are the things which give a university its reason for being. They are the qualities which make one university distinctive from another, as they are the qualities which make one man distinctive from another. As Woodrow Wilson put it:

from another. As Woodrow Wilson put it:

"The final synthesis of learning is in philosophy. You shall most clearly judge the spirit of a university if you judge it by the philosophy it teaches; and the philosophy of conduct is what every wise man should wish to derive." This is what he meant when he said that the ideal at the heart of the university is an "awakening

of the whole man."

Cumberland University was founded in the spirit of the pioneer days and committed to the revolution of the human spirit which brought our Nation together. It has carried this spirit of pioneering into the learning processes, always opening new frontiers of learning, new approaches and new methods, while at the same time preserving the stout principles of democracy, self-reliance, and assistance to one's fellow men which have marked our pioneer traditions. Let us hope that the heart and spirit of this great uni-

versity will never change.

You who are graduating today are joining a very distinguished company. One hundred and forty times before this Cumberland University has sent out into the world groups of men and women to help mold our Nation closer to its ideals. And through these 140 years there has been something special about the stamp that Cumberland has placed upon its graduates. The remarkable contributions it has made to molding the great men of our Nation include two justices of the U.S. Supreme Court, 16 U.S. Senators, and more than 116 Members of the House of Representatives. And as you probably know, at least nine almuni of Cumberland are now serving in Congress. Among these is my distinguished friend and colleague, the Honorable Joe L. Evins, who represents this congressional district—this land of Andrew Jackson. These distinguished alumni also include the Honorable OREN HARRIS of Arkansas, chairman of the Interstate and Foreign Commerce Committee; the Honorable OMAR Burleson of Texas, chairman of the House Administration Committee; the Honorable FRANK CHELF of Kentucky, a ranking member of the Committee on the Judiciary; the Honorable Morgan Moulder of Missouri, famous for his investigation of the regulatory commissions of the Government; and last

but not least, two other outstanding Members of the House of Representatives from Tennessee, the Honorable J. Carlton Loser, member of the great Committee on the Judiciary, and the Honorable Tom Murray, chairman of the House Committee on Post Office and Civil Service.

We have had among our fellow alumni some 450 ministers of the gospel—many distinguished ones among them—some 50 college and university presidents, more than 100 professors, and a great many leaders and outstanding administrators of business.

I have been reflecting on this extraordinary contribution that Cumberland University has made to the list of distinguished citizens of our country—a contribution which very few other universities can surpass, regardless of their size or age.

And, by way of contrast, a quotation comes

to mind:

"Give me the making of the songs of a nation, and I care not who makes the laws." My Bartlett's tells me that Andrew Fletcher said it.

That quotation has always struck me as containing a useful idea—provided your purpose is to make a revolution. If you wish an overthrow of order, an era of mob rule, a backward step of civilization, then perhaps those things can be accomplished by songs of a martial sort.

Perhaps even indolence, stagnation, and slow deterioration of a society can be accomplished through the mood of song.

But if our objective is progress by orderly processes—if our objective is a social order which expands the individual freedoms and moves constantly toward the elimination of poverty, ignorance, disease, and crime—then I would say, "Give me the making of the Nation's universities." I would make universities such as Cumberland to educate not merely the minds of men but to educate the hearts of men.

How seriously do we mean it when we say we wish only to have a Nation of laws and not of men?

There can be tyranny under law. There can be tyranny when the laws are made by the wrong men. There can be tyranny when the wrong men are on the bench to interpret the laws. And there can be tyranny under good laws when the practice of law is in the hands of bad lawyers.

The written law—the statute—is only negative. It only proscribes. It says only "you shall not." Where is the affirmative law, the law which says "you shall"?

Where is the law which says to every man you shall strive to make our community, our Nation and our world a better, wiser, and happier place for people to live? Where is the law which says you shall work untiringly to see a job well done? Where is that law which says you shall speak out against injustice done to any man? Where is the law which says to the lawyer "you shall love the law, you shall be bound by an inner com-pulsion, not to manipulate the technicalities of the law, but to search without rest for the justice in the law"? What is the source of this compulsion to find in the law what justice Holmes called "a hint of the universal law"? These are, of course, the laws in the hearts of men. They are in part innate; they come from inner compulsions, from every man's instinct for workmanship, and from our religious heritage. But they are also largely a product of our university They are in the ethics and philostraining. ophy which we acquire here. They are at least polished and made into meaningful, conscious ideals by this training.

Yes, of course, we all want a nation of laws. We do not want ad hoc laws nor arbitrary, capricious judgments. We do not want different ultimate standards of justice for different men. But we can progress toward ideal justice only when we have the right kind of men making the laws, inter-

preting the laws, and practicing the law. We want more than mechanics, more than the kind of justice that might be dispensed by an electronic computer or a punched card.

We want to strive for the more perfect justice that can be achieved only by having a nation of men who understand the relationship of the law to our whole social order and to the ideals and aspirations which have brought about this order. This measure of concern which the individual develops for his fellow man is, of course, the measure to which civilization progresses.

Incidentally, they tell me that a book on the best seller list out in cannibal country is one titled "How To Serve Your Fellow Man."

The distinctive character of Cumberland University, the distinctive philosophy it imparts to its students, has been given it by its teachers, past and present. It has always seemed to me that nowhere does a man's good works live after him, continuing to multiply, as in the teaching profession. I have always regarded it as my extreme good fortune to be a student here under Dr. Nathan Green, Dr. Andrew Martin, and Judge E. E. Beard. Surely these teachers were among the alltime great. But I think that the present graduating class has profited from these teachers no less than I. It is such men as these whose inspiration and ideals live on to give this university its continuing substance.

I want to speak now about a rather peculiar role which lawyers play in society today. It is not the role we usually think about, but it is no less important than the practice of

law.

Lawyers are, it seems to me, the nearest modern-day counterpart of what we used to call the liberally educated man. This was the man who was trained not just in a specialized field, but who was informed at least in a general way with the state of progress and culture in all fields. He was the kind of man we used to ridicule as one who "learned more and more about less and less until he ended up knowing everything about nothing."

Yet this was the cultured man, and the articulate man. He was a man well grounded in the principles and ideals of his society. He could interpret events in terms of their meaning to the whole society. He was the "whole man." He communicated ideas, he expressed individual judgments, and he took positions on right and wrong. He was, as we would say in politics, a man who made issues. Unfortunately, he has tended to

I believe, as I have said, his role has fallen to the lawyers today more than to the people of any other profession. It is an important role. It must somehow be expanded, not only for lawyers, but for all educated individuals in our Nation.

The increasing specialization and complexity of the modern world have somehow brought about a breakdown in the communication of individual ideas. And this, it seems to me, is one of the most serious prob-

lems facing our country today.

In many ways the increasing complexity of the world in which we live has served our national aspirations extremely well. scientific and technological revolution which has been made possible by the increasingly fine divisions of labor has gone a long way toward eliminating poverty and eliminating many of the diseases which formerly racked men's bodies and sapped their thinking abilities. This scientific and technological revolution has also created opportunities for an expansion of individual freedoms-opportunities for larger numbers of people to participate in the decisions which affect the welfare of all of us. It has given people more leisure time, freed them from drudgery and disease, and given them the time and the frame of mind in which to think. Yet I doubt if these opportunities have really resulted in an expansion of the individual freedoms. Rather, it seems to me that in many ways individual freedoms have been narrowed and individual participation in the decision-making has been contracted. Two

things have happened.

First, along with the increasing productivity and increasing outpouring of material wealth, there has taken place the socalled organizational revolution which has brought about giant business, giant labor unions, and giant government. The number of decisions important to all individuals is multiplying, and they are being made in giant bureaucracies of one kind or another. The fashion today is the organization man—the individual with no opinions or only good gray opinions worked out and approved by the bureaucracy. There is an expert bureau for everything. Only the scientist can speak on matters of science, only the educator can speak on matters of education, only the banker can speak about banking, and so on. After all too frequently the individual specialist does not speak his individual views, but feels constrained to parrot the party line of his bureaucracy—his organization or his trade or professional association.

A second thing which has happened to restrict the communication of ideas has occurred in the communications industry itself. At the same time that new electronic devices and other techniques of communication have developed, actual communications have been restricted. Yes; these new techniques of communication give us the so-called news with remarkable speed. The so-called news is communicated to all the local newspapers of the country within minutes or hours after the news occurs. And We can on television frequently see the news by means of on-the-spot movie cameras. But such news has come to consist more and more of only the surface facts. The new form of communication is well adapted to a selective kind of news, such as street crimes. auto and plane accidents, and so on, and the human experiences involved in such events are frequently conveyed in dramatic and meaningful ways. But as to the substance of the big decisions, the meanings underlying the surface facts-in short, the ideas—these tend to be omitted or capsuled into a slogan or phrase which is likely to be more misleading than informative. For example, most of the laws enacted by Congress these days are never mentioned in the press, on the radio or the television. Even the debate and enactment of major bills Which affect the lives of all of us frequently go unmentioned. And it is rare, indeed, that the public receives any real explanation of the content and significance of important new laws.

Here, then, is where the lawyer-the independent man, the articulate man-must play a larger role, the role of communicating ideas and making moral judgments, on both individual and group conduct. And this is especially true, I think, of the Cumberland lawyer. Why? Two reasons. For one thing, there has always been an awareness here at Cumberland of the importance of intelligent participation in government, and particularly of the lawyer's place in good government. When other law schools have become in-creasingly preoccupied with producing cor-poration lawyers, tax lawyers, patent law-yers, and so on, Cumberland has continued to stress the contribution the lawyer can and should make to his community, to his State, and to his Nation.

Second, a quotation lives in my memory. It is associated in my mind with my first few months here at Cumberland. It is this:
"A man will never amount to something

unless he stands for something."

It is to the everlasting credit of Cumberland that it has turned out men and women who stand for something.

Jefferson is our philosopher. He set down the principles in clear and glowing words. Jackson is our example. He demonstrated the principles in dramatic, unhesitating action. Can anyone imagine Jefferson or Jackson as an organization man? Can anyone imagine Jefferson or Jackson deferring individual opinion to the party line of some vast bureaucracy of government, business, or labor? Can anyone imagine Jefferson or Jackson as men without judgment and failing to articulate judgment on the morality of conduct in any field, save in the narrow field of his particular expertness? Can anyone imagine Jefferson or Jackson making a big fanfare over the small immoralities and remaining silent about great abuses of power? Can anyone imagine Jefferson or Jackson being confused about the principles of democracy or uncertain as to where the power of government should reside?

No; and I cannot imagine any Cumberland man or woman in such a state of mind

either.

No: I cannot imagine any Cumberland graduate as an organization man.

To complete my theme, let me read a quotation from Mr. Justice Holmes:

"General propositions do not decide concrete cases. The decision will depend on a judgment or intuition more subtle than any articulate major premise."

Because I know the judgment and intuition of this graduating class to be good, I know that the practice of law will be in good hands, the role of citizen will be well performed, and our Nation's ideals are a step nearer achievement.

#### - End the Foreign Handouts

EXTENSION OF REMARKS

## HON. H. R. GROSS

OF IOWA

IN THE HOUSE OF REPRESENTATIVES Friday, June 5, 1959

Mr. GROSS. Mr. Speaker, in a few days the House of Representatives will be confronted with the foreign handout bill—the annual multibillion dollar gouge of American taxpayers. I have started reading the hearings and report in connection with this bill and I can say that seldom have I found more hogwash assembled in one package as alleged justification for dissipation of this Nation's resources.

A veteran newspaper columnist, Mr. Constantine Brown of the Washington Evening Star, has written an excellent and timely article, "Time To Appraise Foreign Aid," which was published in the June 2, 1959, issue of that newspaper. It is in the hope that others beyond the primary circulation area of the Star will read Mr. Brown's article that I ask to have it reprinted in the RECORD at this point:

#### TIME TO APPRAISE FOREIGN AID

At long last it begins to look as if our freespending Government might take a careful, appraising look at the whole business of foreign aid.

In the past a few determined but outnumbered lawmakers, with an occasional assist from conscientious administrators in the executive branch, have every year called attention to the wastefulness, inefficiency, and, in many cases, the foolhardiness of the program. But they have never been able to

do more than force moderate cuts in the billions appropriated for our lavish bureaucrats to strew about

This year, however, some of the stanch friends of foreign aid have questioned the further propriety of scattering American taxpayers' resources in the hit-or-miss fashion pursued for so long.

Of course, men like Senator Mansfield, who suggested recently that the whole aid program ought to be totally reorganized or totally abandoned, are not opposed to the principle of foreign aid. They would spend more, not less, in the long run. But they want to know where the money is going and whether it is doing any good.

Few Americans realize the stupendous scale

Few Americans realize the stupendous scale on which American funds are distributed around the world. The total of our aid to the little nation of Laos in Indochina is about double the entire budget of that country. What will Laos do if and when that immense financial contribution is with-

drawn?

Then there is the question of effectiveness, in which we should be interested. Is the foreign-aid program achieving the purposes for which it was created? There are a great many informed voices which say "no." And not all of these are perennial foes of all foreign aid. Many of them see American assistance as a necessary arm of international policy and as a dependable prop against the constant pressures of Communist infiltration.

Some of the criticism is directed at the character of the aid being rendered. Overemphasis on military assistance, for example, is cited as a major drawback in the program. It is charged, with some justification, that sending military equipment and technical missions to certain countries merely bolsters existing regimes, many of them hated dictatorships. Quite naturally, this earns the undying hatred of the people concerned for the United States.

Of course, while tensions threatening our security continue, it will be necessary to help out countries such as Turkey, Pakistan, Iran, Vietnam, China, and Korea. They continue to be our first line of defense.

Whatever details or aspects of the program may be attacked as mistaken, it certainly appears to be demonstrable by this time that the entire program has outlived its usefulness in many areas. Despite the staggering amounts poured into foreign countries since 1945, the actual disparity between the haves and have-nots is wider than ever. The underdeveloped nations are still underdeveloped. American loans and grants-in-ald, however large, vanish like drops of water in the sands of the desert.

If Congress will face up to the realities this year, perhaps this costly absurdity will be on the way off the books. It will be very difficult indeed to end all indiscriminate foreign aid programs, principally because the greatest (and one is tempted to say the only) beneficiaries are the fat American bureaucrats who administer them. They are entrenched behind a multimillion dollar fortress supported by all those persons and interests who gain financially from the continuation of Uncle Sam's generosity.

But when the traditional congressional supporters of the giveaways begin to ask questions, there is hope that reason and commonsense will finally conquer the emotional, sloganized nonsense that has been used to justify the expenditure of America's resources for so long. At the very least, some of the more glaring wastes may be ended. Perhaps we will finally quit building expensive highways where there are no automobiles to use them. Or we might venture to insist that Governments such as that of Afghanistan tell the people that the wheat in Russian-built silos is American and not Russian.

Let the lawmakers measure up to their responsibilities. American exhaustion cannot help the free world to resist Communist imperialism.

#### Booze in the Sky

EXTENSION OF REMARKS

## HON. CHARLES B. HOEVEN

OF TOWA

IN THE HOUSE OF REPRESENTATIVES

Monday, June 8, 1959

Mr. HOEVEN. Mr. Speaker, the June 8-13, 1959, release, this week in Washington with Clinton Davidson, entitled, "Booze in the Sky," should stimulate and arouse the thinking of all Members of Congress as to the need for legislation to ban the serving of liquor on airplanes. The article is as follows:

I flew between New York and Miami at 15,000 feet and watched a man who had had too much to drink toss a lighted match into a container for discarded drinking cups.

No sober person would have taken such a terrible risk. If the plane had caught fire and been destroyed no one would have known the cause.

The liquor on which the man became intoxicated was served him by the airline stewardess. He made himself so objectionable to the stewardess that she had left her post near the drinking fountain to get away from him.

House Speaker Sam Rayburn, who makes frequent airplane trips, has become so concerned that he has asked for action on bills before the House Interstate Commerce Committee to ban the serving of liquor on airplanes.

#### APPREHENSIVE OF ACCIDENT

"I am apprehensive," Mr. RAYBURN said, "that the serving of liquor in excessive amounts to airplane passengers could cause a serious disaster."

Representative OREN HARRIS of Arkansas chairman of the Interstate Commerce Committee, expects to hold public hearings later this month or early next on seven bills before the committee to ban the serving of liquor in the air.

The bills pending are by Representatives John Bell Williams of Mississippi, Roy Wife of Minnesota, Thomas Lane of Massachusetts, Ken Hechler of West Virginia, Robert Hemphill of South Carolina, Carl Elliott of Alabama, and Walter Judd of Minnesota.

A spokesman for the Civil Aeronautics Board, which investigates all air accidents, told us the CAB has no evidence that any crash has been caused by a drunken passenger. But, he conceded, there have been many accidents for which no cause was ever determined.

The associations representing both the airline pilots and the stewardesses have urged legislation to ban the serving of drinks to passengers. The Federal Aviation Agency, which administers safety regulations, told us "the serving of drinks aloft is strictly a concern of the airlines" so long as there is no law against it.

#### TIME FOR ACTION

The time for action is now, before a drunken passenger causes an accident. Besides the safety factor, the annoyance of other passengers by someone made noisy and boisterous by drink is reason for action.

It may be that some of the unexplained causes of airplane accidents are due to liquor being served, but whether that is so or not,

it is certain that accidents will be due to the serving of liquor if it continues.

On a recent overnight flight I watched a man who had had several drinks try to light a cigarette while standing up. A pillow slip hanging from the upper rack was within two inches of the match.

I feit certain that he was going to set the pillow slip on fire unless it was fireproofed. Later I asked the stewardess if the pillows and upholstery were all fireproof. "No," she said. "they are not."

I am not in favor of parents on such flights turning over a box of matches to little children to play with, but that is no more danderous than handing them to drunks.

#### **Everett Proud of Identity**

EXTENSION OF REMARKS

## HON. JACK WESTLAND

OF WASHINGTON

IN THE HOUSE OF REPRESENTATIVES Monday, June 8, 1959

Mr. WESTLAND, Mr. Speaker, the Everett (Wash.) Daily Herald on May 23, 1959, paid special tribute to one of the city's largest industries, the Simpson Paper Co.

By publishing this tribute, the newspaper again has proven a point that I have presented a number of times before this body. The point is that Everett is an entity in itself, is capable of standing on its own industries and is not a part of Seattle. As much as we admire our large neighbor which shares Puget Sound, we do not believe Everett and Snohomish County should be included as part of the Seattle Standard Metropolitan Area because of an administrative order of the Bureau, of the Budget.

The Simpson Paper Co., through its predecessor the Everett Pulp & Timber Co., traces its history to 1892 when Everett was a village. The original mill and the village have grown to maturity together.

I have known the people of Simpson all my life. These people include workers, clerks, and management personnel. All have contributed to the development of Everett and its environs through their association with the company. The Daily Herald carried many stories and articles about the efforts of these people and their company in the 48 pages of this special tribute edition.

The following editorial which I want to insert in the Record sums up these stories and points out the reason why Everett is the pulp and paper capital of the world. The people of Everett are proud to be identified by this designation and do not want to lose it by becoming part of Seattle.

SIMPSON GROWS IN EVERETT—A TRIBUTE TO PIONEER PLANT

"Simpson Grows in Everett." And therefore a tribute to the Simpson Paper Co. is also a tribute to a community on the move. The Simpson Paper Co., successor to the Everett Pulp & Paper Co., is as much a part of Everett as the seagull on its important waterfront. To one who has resided here half a century or more the big plant at Lowell is accepted and acceptance is great if one's

acceptance continues to be based on the part the company plays within the commu-

Simpson Paper Co. today is a factor in giving Everett its designation of pulp and paper capital of the world. Yesterday it had been known as an integral part of our economy. Today it is a participant in a cooperative journey to an ever-growing industrial status for the community.

The Herald's tribute this evening to the

The Herald's tribute this evening to the Simpson Paper Co. contains more than a tribute to a splendid payroll It is a tribute to the pioneer spirit that started it all \* \* a tribute to faith and confidence in a town-site that always held promise \* \* and a tribute to people individually and collectively.

Once upon a time this community predicated its future on the lumber industry. Out along the banks of the Snohomish River there was built a plant to make paper. The pioneer little dreamed that some day the ranking industry of timber gradually would give way to the manufacture of pulp and paper and that our stands of trees would be known as yielders of crops from which a multitude of products would come forth to supplement finished lumber.

The Herald salutes—the community salutes—the Simpson Paper Co., an institution which verily did grow up with the little village on the banks of the Snohomish, on the shores of Port Gardner Bay and now a city ever extending its boundaries as it extends its horizons.

## Effects of Inflation on Assets and Income of Retired People

EXTENSION OF REMARKS

## HON. FRANK T. BOW

OF OHIO

IN THE HOUSE OF REPRESENTATIVES
Thursday, June 4, 1959

Mr. BOW. Mr. Speaker, concern about the effects of inflation on the assets and income of retired people is one of the most frequent subjects of comment on my annual questionnaire. Under leave to extend my remarks, I include a message from a Wooster, Ohio, constituent:

I am getting "fed up" with the idea that capitalism must be bolstered up with subsidies in order to work.

It is immoral to take off Peter to pay Paul-We, in the 65-year-age class, never enjoyed any subsidies—if we couldn't make a profit at one thing we changed to another and in that way we kept supply and demand working automatically at all times. We had depressions but that was before we found out that the dollar was not unchangeable and that it was the Government's duty to see that it is used to and for the benefit of the people who work as well as those who depend on clipping coupons, interest, and et cetera.

We worked all our lives trying to keep off relief and out of jail. Now, being too old to work, we see prices and Government debts, taxes going so high that what we thought was ample to tide us over is hardly enough to see us through a slight illness.

If capitalism cannot work without interferring with supply and demand, then ditch capitalism because it is not worth saving-

When you start out to keep one class of people at the expense of another, like subsidies, you have added to the demoralization of capitalism, and free enterprise. What does free enterprise mean if you subsidize me so I keep on producing more surpluses?

#### Washington Report

EXTENSION OF REMARKS

#### HON. BRUCE ALGER

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES
Wednesday, May 27, 1959

Mr. ALGER. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following newsletter of June 6, 1959:

WASHINGTON REPORT

(By Congressman BRUCE ALGER)

The Defense appropriation bill of 1960 provided \$38,800 million, that is, \$38.8 billion (\$1 billion is a stack of tightly packed thousand dollar bills 666 feet high) for the year's military needs. A 44-page bill, 80-page report, and 6 volumes of hearings document and explain the needs although much information was deleted for security reasons. Here's a digest:

The common enemy of freedom-loving People is the Communist Russian totalitarian dictatorship. They are determined to win control of the earth. They can do this through three methods: (1) Subversion; (2) limited warfare; (3) total worldwide nuclear war. Russian leaders are gearing Russia for all three. They have certain ad-Vantages: (1) Greater manpower; (2) control over more natural resources; (3) increasing scientific and technical advancement; (4) totalitarian control and harnessing of all their people toward the accomplishment of specified goals. Our problem is to prevent the domination and subjugation of those who want freedom, including the United States. Further, we must do this: (1) Without straitjacketing ourselves, but as free people, and (2) in warfare, letting the enemy select the time and place of attack; we will not strike the first blow. Therefore, militarily, economically, and constitu-tionally preserving individual freedom from government domination, we tailor our de-Iense to these needs. We cannot squander human lives as they can and do. Economically, we must fashion a burden we can carry for the long haul, wherever possible, avoiding the peaks and valleys involving hasty or crash programs.

Here's the dilemma—we know a good offense is the best defense, yet we will not offensively strike the first blow. So to resolve this militarily our Nation has conceived and perpetuates a staggering powerful retaliatory capability, a defensive offense or offensive defense. It's an offense to be used after being attacked. As such, it is a war deterrent, we hold. On Russia's respect for this powerpacked force rests the world's uneasy peace, the present cold war. In manpower, we must rely on quality, not quantity, and multiply our strength through increased firepower and better weapons. Our allies add to our numbers.

The gravest threats are in three areas—missiles, airpower, and submarines, and our defense is geared to meet these threats. First, a balanced missile attack force, comprised of the Titan, Atlas, Thor, and Jupiter (ballistic is self-contained, not air breathing) intercontinental ballistic missiles (ICBM), can be fired from fixed bases (thus Yulnerable to destructive attack by enemy). These are supplemented by our atomic bombers, B-47, B-52, and B-58 from air-

bases all over the world. Secondly, our mobile striking force comprised of missiles such as Minuteman (fired from barge or flatcar), the Polaris (fired from submarine), and our Air Force air-to-surface missiles to be launched from bombers serving as mobile launching platforms. There are more than 60 missiles to provide defenses against attack of many types—surface-to-air, air-to-air, air-to-surface, underwater-to-surface, air-to-underwater.

Some continuing problems. (1) Offense abilities have outrun defense capabilities. We have no sure protection yet against missile attack, nor against submarine attack on our country (though hunter-killer fleets and missiles are being developed); (2) we may have neglected our limited warfare capability by concentrating on our all-out nuclear weapons; (3) Should we maintain an airborne alert? (4) Are we disposing properly of mountains of surplus material annually (at 8 cents on the dollar)? (5) Is the Russian submarine threat overemphasized in view of their lack of submarine bases? (6) Are we selecting the right weapons, in view of the time lag between research and production (example-Regulus II, in being, was canceled, replaced by Polaris, not yet ready). Obviously, no one can benefit from nuclear war, but we are dealing with people of fanatical dedication to conquering the world. We must be prepared. This defense bill is designed to get maximum protection for the amount expended. We are strong, but we must not be complacent.

The Water Pollution Control Act to increase Federal grants for construction of sewage disposal plants brought to us the tired old arguments again that the Federal Government can do for us locally. Additional Federal help was asked despite these facts—(1) Only 25 percent of the projects involved water pollution abatement; (2) Federal Government has jurisdiction over interstate waters and can demand that the States handle (without Federal money) disposition of sewage; (3) It costs more to send our money to Washington in order to get it back.

Definitions: Socialism—You have two cows and give one to your neighbor. Communism—The government takes both and gives you some milk. Facism—The government takes both and shoots you. New Dealism—The government buys both, shoots one, milks the other, and throws the milk away. Capitalism—You have two cows; you sell one and buy a bull.

Public Works Appropriations, 1960

SPEECH

OF

#### HON. DANIEL J. FLOOD

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Friday, June 5, 1959

The House in Committee of the Whole House on the State of the Union had under consideration the bill (H.R. 7509) making appropriations for civil functions administered by the Department of the Army, certain agencies of the Department of the Interior, and the Tennessee Valley Authority, for the fiscal year ending June 30, 1960, and for other purposes.

Mr. FLOOD. Mr. Chairman, I move to strike out the last word.

Mr. Chairman, I again wish to bring to the attention of the committee that the amendment offered by the gentleman from Pennsylvania [Mr. Fulton] as it is now presented in the form of an

amendment to the amendment by the gentleman from Pennsylvania [Mr. Fenton] is entirely acceptable to us, to me and to our friends. I would be very grateful that this amendment be embellished by the hyacinths with which we were so recently concerned.

#### Be Wary of Federal School Aid

EXTENSION OF REMARKS

#### HON. THOMAS M. PELLY

OF WASHINGTON

IN THE HOUSE OF REPRESENTATIVES
Wednesday, May 27, 1959

Mr. PELLY. Mr. Speaker, I have urged that Congress be wary of general Federal school assistance. I have felt independence in education is threatened by programs to reduce State responsibility for financing education.

Here are two editorials which support my contention. Under unanimous consent I include these, the first of which is from the May 28, 1959, Tacoma News Tribune; the second is from the May 28, 1959, Bainbridge Review.

FEDERAL AID TO SCHOOLS

The attack on the principle of Federal aid to local education made recently by Representative Thomas M. Pelly in Congress was logical and well founded. Perhaps it may induce the advocates of Federal school support to give it a second thought.

The Congressman from the First Washington District was moved to action by receipt of several letters from Seattle school children, evidently composed at the behest of their teachers. He made two main points in answering them: First, that Federal aid can mean Federal control of our schools; and second, that Federal aid from its nature is bound to increase school costs.

He argued that our forefathers left education to the individual States through fear that a President, a dictator, or a King such as George III of England might I day gain control of our schools and ordain what should be taught. He recalled that Hitler, Mussolini, and the Japanese militarists did just that, and he might have added that the Red rulers are doing it right now.

He predicted that if Federal aid once starts it will be expanded until the Central Government selects textbooks and paves the way for regimentation of all schoolchildren into one pattern of thought.

On the subject of increased costs he maintained in his answering letters, as published in the Congressional Record, that after all, the money for Seattle schools derives from Seattle taxpayers, regardless of who spends it. He declared that commonsense confirms that school money raised locally will go further if spent by State and local officials. He observed that if school money is sent back to the city of Washington a considerable portion of it will be lost in the shuffle before it gets back to the State of Washington, where it originated.

Mr. PELLY says he stands firm on constitutional grounds. He notes that the U.S. Constitution gives the Federal Government no authority to finance education, but that the Washington constitution imposes upon the State the duty of affording an education to every child.

#### "FEDERAL" SCHOOL AID

We are pleased, but not surprised, to see Congressman Tom Pelly out in the open as an opponent to an expanded and all-inclusive program of Federal financial aid for school. This is not to be confused with Federal reimbursement for financial stress caused a local school district by a Federal installation. We're talking about a nationwide program of largess doled out to school in every State from Washington, D.C.

We agree with Mr. PELLY that this would be a highly dangerous thing for it would center the control of one of our last great freedoms—freedom of education—in the tentacles of the Federal octopus.

We also think the proposition is a highly stupid one from the taxpayer's standpoint. Who, in heaven's name, is the "Federal" Government but we and thee? Money doesn't grow on the Japanese cherry trees lining the Mall in Washington, D.C. It comes from us. Why send it to Washington, D.C., there to be siphoned off for "supervision" and then doled back?. Why not spend it all right here at home?

#### Karl Marx, R.I.P.

EXTENSION OF REMARKS OF

## HON. ALBERT H. BOSCH

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Thursday, May 7, 1959

Mr. BOSCH. Mr. Speaker, why is it that whenever one advocates "what is good for the goose is good for the gander" he is immediately classified as antilabor, if he believes that any labor legislation should include provisions to eliminate some of the lurid examples brought forth in the McClellan hearings in the other body. Why is it that because equal treatment is sought for both management and labor the cry is "you can only take into consideration those things which are good for labor?" If you do otherwise, you are then only interested in big business without regard to the rights of the little man.

I was pleased indeed to note that the President of the United States has pointedly refuted the unwarranted charges that the White House (the administration which also includes the Republican

Party ) is antilabor.

Under leave to extend my remarks I include an editorial on this subject which appeared in the New York Daily News of June 8, 1959:

#### KARL MARX-R.I.P.

At his latest news conference, President Eisenhower was drawn into a brief discussion of capital-labor relations in the United States, and made what we thought were some

very well-taken points.

Asked about charges by the likes of Jimmy Hoffa that the White House these days is antilabor, the President said that just isn't so. Necessarily, he pointed out, he is more interested in the welfare of tens of millions of working people than in that of a few thousand captains of industry and business. He wouldn't be worthy of his high office if it were the other way around.

A demagog—a rabble-rouser—would have

stopped at this point in the discussion. But the President, being anything but a dema-gog, went on from there to voice what we think should be a part of all Americans' eco-

nomic thinking.

He is sorry, said General Eisenhower, to see some of us infected with Karl Marx's oldtime notion that there must be endless warfare between employers and workers, because the two groups have nothing in common.

This may have been true to some degree in the early years of the industrial revolution in Europe, when Marx and Friedrich Engels outlined the philosophy of communism.

There is next to no truth in the notion today, even in industrial Western Europe; and there is less truth in it in the United States.

#### THE KEY WORD: COOPERATION

The fact is, as the President pointed out, that all of us have a variety of stakes in the American system, and a vital interest in pulling together to make that system work better for all of us all of the time.

U.S. workers can and do buy stocks in industries and business concerns, take out life insurance, put their savings into banks or building and loan associations, buy homes, etc., etc.

The continued operation of all these things depends mainly on the cooperation of all of us to keep them sound and profitable.

This doesn't mean that workers shouldn't ever strike, or that employers should give in to every demand voiced by unions. It does mean that workers and employers must cooperate most of the time if ours is to go on being the most productive economic system in the history of the world.

Let's let Karl Marx rest in peace as the Reds' exclusive idol-a clay-footed idol to which they are more than welcome.

#### Search for Reality

EXTENSION OF REMARKS

OF

## HON. HAMER H. BUDGE

OF IDAHO

IN THE HOUSE OF REPRESENTATIVES Thursday, May 28, 1959

Mr. BUDGE. Mr. Speaker, under leave to extend my remarks, there follows an article appearing in the Gooding Leader, published at Gooding, Idaho. The article appeared on June 4, 1959. and was written by the Honorable James P. Gossettt, probate judge of Gooding County. It occurs to me that it is certainly most appropriately titled "Search for Reality":

SEARCH FOR REALITY: TWIN FALLS CITIZENS AGAINST FEDERAL SCHOOL AID-COST OF BU-REAUCRATIC ADMINISTRATION EXCESSIVE

#### (By James P. Gossett)

If ever a group of people deserved a 21-gun salute for all-to-seldom-seen. American independence and "hoss sense," it is the group of Twin Falls citizens who blew a loud raspberry at Federal aid to public schools 10 days or so ago. If just one group-just one equally outspoken groupin each State in the Union were to take a determined stand on the issue we would have a running start at demolishing the absurd, but very dangerous, idea of operating our schools on Federal money.

In 1955 Senator HARRY F. BYRD, of Virginia. chairman of the Senate Finance Committee. warned in omnious words of the consequences of this type of misuse of the Federal money. In an address made May 4, 1955, before the U.S. Chamber of Commerce in Washington, D.C., Senator Byrn said:

"Nothing is more true than the rule that power follows the purse. When the Federal Government makes a grant, it directs exactly the manner in which the funds are expended, even though the States partially contribute to the project. Time and time again I have seen the iron hand of the Federal bureaucracy with grants compel the States to do things they did not want to

There are the words of a man who grew up with the New Deal. In fact, Senator BYRD took his oath of office as a Senator on the same day that the late President Roosevelt took his oath of office for his first term as President—on March 4, 1933. From that time Senator Bysp has watched our Government grow from a servant of the people into a colossal, virtually omnipotent boss that now, in one or more vital ways, dominates the life of every man, woman, and child in the land. And he has fought the growth of this bureaucratic giant every step of the

At the discussion at Twin Falls in which Federal aid to schools was informally, but overwhelmingly rejected, the matter of matching funds arose—of course. "Matching funds" and "grants in aid" are two of the most seductive phrases used to put a false face on Federal subsidies. But they are even more deceitful than false faces. Just what happens when you match funds? You are tempted to spend money you never intended to spend in the first place simply because. by spending it, you will get a Federal hand-

But what is this Federal handout? It is nothing more or less than your own money taken away in Federal taxes, coming back; but coming back to you less the excessive cost of bureaucratic administration—somewhere between 30 and 40 percent. So-you spend 5,000 you didn't intend to spend to get 5,000 of your own money back, and for the 5,000 you get back as matching funds you will have paid 7,000 (or thereabouts) in taxes. Five thousand for you, two thousand tribute to the octobus.

Surely you wouldn't pay freight on an automobile from Magic Valley to Washington, D.C., and back when you are buying from a Magic Valley dealer. That is exactly what you are doing with matching funds, but with the added disadvantage that from then on, with matching funds, the Federal Govern-ment will have a hand on the steering wheel.

Did it every occur to you to ask why it should be necessary (as some insist) for the Federal Government to help pay for your schools? And what is happening when it does contribute? Let's look at some things Senator Byrn, the top expert on Government finance, had to say before the National Taxpayers Conference in Washington on March 17, this year. "In the process of centralizing power, the

Federal Government is usurping State and local revenue sources. At the same time it is encouraging greater spending at all levels" (matching funds for example—James P. Gossett.)" And through expanding paternalism, great segments of business, agriculture, and taxpaying individuals are being brainwashed with Federal subsidy. States have been pushed to a point where they are having difficulties paying their bills. Highway programs are examples. Localities also are running out of funds and sources. They will be in Washington this week asking for Federal payments in lieu of taxes on federally owned real estate.'

Senator Byrn points out that the Federal Government owns more than 455 million acres of land in the United States, which amounts to nearly one-quarter of the land within our national confines. That, of course, is real estate on which no State of

local government can collect taxes.
Did you notice how closely "guidance"
was tied to "maching funds" in the heated
discussion at Twin Falls? Why was such emphasis placed on guidance in connection with Federal aid to schools? We better start asking such questions as "How much guidance?" and "Guidance in what direction?" and "Guidance for what purposes?" Twin Falls Attorney Edward L. Benoît slammed that "guidance" business squarely on the nose with his part in the discussion.

Guided minds, like guided missiles, can be

directed at a variety of targets.

Guidance within strict limitations, and for severely limited purposes, and for specific, recognizable needs is acceptable—even describe. But we should never lose sight of the oft repeated truism—"Give us the child, and we'll make the man in our image."

We must remember that the ponderous American bureaucracy is already breaching effective restraint of the Congress. We must recognize the self-evident fact that vast bureaucracies, by their very nature, seek always to expand their powers and to perpetuate themselves. That is what Communism is in Russia—an enormous, complex bureaucracy with a son of a ———, well, with a dictator at the top.

As Senator Byan said: Power follows the

As Senator Byan said: Power follows the purse. And as the wise Lord Acton observed early in the last century: Power corrupts; absolute power corrupts absolutely.

The American Way of Life

EXTENSION OF REMARKS

## HON, KATHARINE ST. GEORGE

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES Monday, June 8, 1959

Mrs. ST. GEORGE. Mr. Speaker, the following article by Mr. George Sokolsky appeared in the Washington Post and Times Herald this morning, June 8, 1959.

It is perhaps good for us as Representatives in Congress to realize that we are not living up to our trust as representatives of the people of the United States if we spend our time trying to get votes for ourselves, rather than in upholding the dignity and power of the Congress.

It matters very little if we are reelected or not. But it matters very much if through our actions the Congress loses the respect of the people and therefore loses its sole purpose and usefulness.

The quotes from Mr. James Hoffa are Dicturesque and salty. He has no

doubt as to his power.

Let us turn to the Constitution and assert the power of the Congress without fear or favor. These are times when only courage of the highest order can save us.

The Post article follows:

THE AMERICAN WAY OF LIFE (By George E. Sokolsky)

The United States is a republican form of government, the laws for it being made by two Houses of Congress in which sit representatives of the people duly elected. This form of government is being challenged by the formidable James Hoffa, leader of the Teamsters. He makes his own laws. He decides how the country is to be controlled. He does so in his own words, which leave nothing to the imagination. Take this from a prolonged interview which appeared in Life magazine;

"He (Hoffa) established what he regards as the cardinal Teamsters rule; 'We don't arbitrate grievances,' he proclaims. 'We strike the bastards instead.' And once a strike is started, Hoffa literally strangles his victim by degrees. 'First,' he says, 'we close down this guy's outfit where the trouble is. Then, if he won't settle, we close him down (i.e., prevent him from doing business) in the surrounding States. Then if he still won't settle, we close him down across the whole goddamn country.'

(Begging pardon for the language, which is

Hoffa's, not mine.)

In a word, controlling transportation, he will strike the entire United States, if it suits his purpose. Is this man to be our Mussolini or Hitler or are we to have representative government in accordance with the Constitution?

As one reads this extensive interview with Hoffa, it is not possible to avoid fearing for the welfare of the country. This man respects nothing. He will do anything and says so. Describing his bribery of John Cye Cheasty, a lawyer hired to purloin data from the McClellan committee, Hoffa said:

"This was a war, and Cheasty was a goddamned double agent. Cheasty even admitted in sworn testimony that I hired him first. So the committee was really hiring

my lawyer."

Brought up on this bribery charge, Hoffa was acquitted by a jury which included eight Negroes and during the trial, Joe Louis sauntered into the courtroom and overtly fraternized with Hoffa. Nobody was going to convict Joe Louis' friend in that court. It may have been clever but it was also foul.

This is what Hoffa thinks of Congress and the Constitution: "\* \* If Congress is stupid enough to pass a bill banning secondary boycotts we'll fix it so all our contracts expire on the same day."

In a word, he denies the right of Congress to legislate for the United States. He, Hoffa is the law and whoever challenges him had better look out. He will devise methods to avert the law and no employers of labor will dare to oppose him.

The real danger is not Hoffa, who is a small guy with a big head. The danger is that the Congress of the United States bows to such creatures. More and more, the American people are not electing the most able and competent persons in their States to either House of Congress. They are electing men who talk big but who are tightly controlled by those who contribute to their campaign funds. Less often does one see a noble figure in either the House of Representatives or the Senate. Competent men are unwilling to run for office; more and more men run for congressional representation for the income it brings.

When Hoffa shows his contempt for Congress, he does it as a master for those who serve him, and he has neither the background nor training to be moved by any cause nobler than his will. He may mature into a leader of higher moral caliber than the parochialism of his own union, but that will take more time than this country can afford.

The McClellan committee has served the country well to expose Hoffa to the American people. He is contemptous of that committee, but this country has seen punks rise to be big shots before and has found ways to limit their exercise of power. Dave Beck, who was Hoffa's superior in the Teamsters Union, has discovered that no matter how handicapped and delayed, the law somehow does catch up with those who regard themselves as above the law whether they be racketeers, gangsters, industrialists, or labor leaders. In the end, even those in Hoffa's union will support the law.

## Eugene V. Alessandroni

EXTENSION OF REMARKS

#### HON. JOHN H. DENT

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, May 20, 1959

Mr. DENT. Mr. Speaker, in the City of Brotherly Love, Philadelphia, Pa., there is a good and honorable American, Eugene V. Alessandroni, president judge of the courts of common pleas.

Judge Alessandroni, besides being an outstanding jurist, has been for many years the grand venerable of the Order

of Sons of Italy in America.

During all of his years in public and in private life the judge has been known as a nonprejudicial, openminded, and sympathetic person.

No citizen has a better record of public service. He is famous for his unflinching Americanism and all it stands for. [From the Times, May 16, 1959]

CHANCELLOR ALESSANDRONI WINS OUTSTAND-ING PRIZE

Walter E. Alessandroni, chancellor of the Philadelphia Bar Association, today was named Philadelphia's outstanding Italian-American of the year.

He was selected as winner of the first annual award of the Geater Delaware Valley Lodge of Order Sons of Italy in America. Presentation will be made June 7 at Palumbo's by Venerable Arnold Orsatti at, a banquet scheduled to begin at 8 p.m.

Alessandroni comes from a family of lawyers. His father, Joseph, Sr., and brother, Joseph, Jr., are members of the bar. His uncle is Judge Eugene V. Alessandroni, grand venerable of the Order Sens of Italy in America. Another uncle, John Alessandroni is a lawyer.

He is a graduate of Villanova University and the University of Pennsylvania Law School. He is executive director of the Philadelphia Housing Authority. Formerly, he was secretary to two Philadelphia mayors, Robert Lamberton and Bernard Samuel.

He is married and has two children. He lives in the Overbrook section of Philadelphia.

It is therefore refreshing to see a man of such caliber take the time to put his finger on actions that are tainted with the bad faith of bigotry and prejudice.

I submit for the RECORD, pertinent remarks by the Honorable Judge Eugene V. Alessandroni in Philadelphia on May 16, 1959:

[From the Times, May 16, 1959]

"RESENT TV SLURS" SAYS ALESSANDRONI

President Judge Eugene V. Alessandroni, grand venerable of order Sons of Italy in America, today took exception to TV's interpretation of gangsterism in the United States.

"The television industry has slurred entire groups of Americans," said the Philadelphia jurist, "and we of the Sons of Italy deeply resent it.

"Of recent months, television actors have been given accents that identify them as being of this or that nationality, although persons being long-time Americans.

"This happened in the case of Al Capone in the recent production, "The Untouchables.' The character who played Capone

spoke with what was supposed to be an Italian accent, although the original grew up in Brooklyn.

"Of course, this is only a small part of my objection. I object strenuously to the impression given in this story that the underworld of that day was composed exclusively of Italian-Americans. Whether this was intended or not, this is the way the television public saw it.

"In the noise of all the terrible killings, I may have missed it, if it was shown at all, but did this television play establish that Al Capone could never have existed without crooked politicians and crooked policemen?

"I remember when Al Capone came to Philadelphia back in those days. He was promptly arrested, held for court, tried and sent to prison. He served his term and wasted no time getting out of Philadelphia.

"If there had been honest men in the honest jobs in Chicago, there never would have been an Al Capone."

Judge Alessandroni told the Sons of Italy membership that "plays like this are put on

television to make money.

"If we let them know they will make no money from us, that we will not buy their products unless we receive fair treatment from them, I believe the television shows of the future will be honestly written and honestly presented."

## Now Russia Takes Over Olympics From Brundage

EXTENSION OF REMARKS

#### HON. FRANK J. BECKER

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES Wednesday, May 6, 1959

Mr. BECKER. Mr. Speaker, I regard this article from Dan Parker's column in the New York Daily Mirror as worthwhile reading:

NOW RUSSIA TAKES OVER OLYMPICS FROM BRUNDAGE

(By Dan Parker)

If the Soviet Union has captured the International Olympic Committee and made it another medium for its propaganda as the expulsion of Nationalist China from membership at the behest of the Russians strongly indicates, it is time for the amateur sports groups of all free world nations to consider pulling a Gromyko on the Bear that acts like a Boor.

Since it has been proved time and again that we can't get along with them, let's show them we can get along without them, in sports, at least. "Them," of course, refers to the Soviet ruling class, not the Russian people who, in the field of sport, bear no resemblance, except outwardly, to the arrogant, ruthless gang that has kept the world unhappily on edge for so long with its bombbrandishing tactics.

Sports has no more room for politics than for dishonesty. But, in whatever field the Soviet Union is performing, the propaganda motif is paramount. The expulsion of Nationalist China is typical of what to expect from the Reds if we continue to go along with them, weakly catering to their demands in the sophomorish belief that, somehow or other, meeting them on the field of sports, will bring about a friendly understanding and a peaceful world. Avery Brundage, our representative on the International Olympic Committee and its chairman, should live so long.

Avery's characteristic attempts to brush off the Russians' coup as something the rest of us, including the State Department, aren't capable of understanding, is itself beyond comprehension by many American sports followers, like most of his statements on the subject of Russian amateurism. such a thing as being blinded by idealism. Purity not leavened with commonsense can become stupidity when one is dealing with sharpies. Brundage's Americanism can't be challenged but his naive belief that sportsmanship motivates Russia's representatives on his International Committee and that their subsidized athletes are amateurs makes us look silly in the eyes of the world. If we've grown so weak that the Russians can dominate us in the sports councils to which we invited them, let's get out before they kick us out ignominiously, too. They can have their Olympics and we can have ours and good riddance to them.

#### Poison in Your Water-No. 106

EXTENSION OF REMARKS OF

## HON. JOHN D. DINGELL

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Monday, June 8, 1959

Mr. DINGELL. Mr. Speaker, pursuant to permission granted. I am inserting into the Appendix of the Con-GRESSIONAL RECORD an article appearing in the Palmyra (N.Y.) Courier of April 16, 1959, entitled "Local Physicians Recommend Modern Sewage Disposal":

LOCAL PHYSICIANS RECOMMEND MODERN SEWAGE DISPOSAL

Three local physicians have expressed their opinions on the desirability of early construction of a modern sewage disposal system for Palmyra.

Dr. William Braell stated:

"I have been requested to express my views in regard to the proposed sanitary sewer system for Palmyra. Most people will agree, I think, that a safe, efficient and trouble-free system for disposing of our sewage waste is a crying need in our community now. As Palmyra grows, this need will become more pressing and even more obvious than at present. To me the advantages so far outweigh the objections that there seems little reason even to debate the subject. Both as a physician and as a private citizen I am wholeheartedly in favor of installing such a

"Naturally, as a physician, I am more interested in the health advantages than the The credit esthetic value of a sewer system. for the declining death rate and the greater longevity in our country is due as much or more to the work of the sanitary engineers as to medical progress. The elimination of the appalling epidemics of typhoid, dysentery, and cholera is more a credit to those who built systems to provide sanitary drinking water and sewage disposal for the home than to medical progress in curing these diseases. It is far better, far easier and far safer to prevent disease than to cure disease once it strikes.

'Have you ever asked yourself where our waste goes? True, it drains into a septic tank or cesspool and finally leaches into the soil, but this is not where it stays. Eventually this water, contaminated with the viruses and bacteria from thousands of toilets, finds its way into the brooks and creeks which form the natural drainage of the landscape. Some of this water even finds its way back into our own homes—or has your cellar never been flooded?

"Our children play in these waterways.

Yet here are fertile breeding grounds for

mosquitoes and sources of contamination for flies once the fish are killed by the poisonous wastes. It seems a pity to try to protect our little ones from polio, etc. with inoculations and then to leave cesspool drainage, contaminated ponds and the like where flies and insects can pick up diseases

for transmission to other people.
"All the above seems to me so obvious that it hardly bears repetition, and I think very few people would attempt to dispute these facts. The one objection which continually recurs is that of cost. The initial cost of a sanitary sewer system will be at least partially offset by the increase in property value and by the permanent elimination of installation of septic tanks and cesspools as well as of the recurrent expense and nuisance of their repair, cleaning and servicing. Consider, too, that regardless of what such a system costs today, it will cost even more next year and still more the year after that. In another 10 years the cost of installation for the same system may well be double what it is today. I think that a sewage system for Palmyra is inevitable. If we do not install one voluntarily now, we may be compelled to do so later on when the market is even less favorable.

"Unfortunately, today, as in the past, we can't get something for nothing. I believe we must consider the cost of a sewer system in the same fashion as we consider expenses for food, clothing, and shelter, and the funds to maintain our schools, police and fire departments. These are expenses for necessities, not for luxuries. Other communities smaller and poorer than our own have built theirs. Why cant' we?"

The following article prepared by Dr. George M. Avery, expresses several good reasons for positive action by Palmyra in obtaining adequate sewage disposal:

#### "PALMYRA'S GREATEST DEFICIT

"The term 'excreta' is collective and is applied to both human feces and urine. These discharges have a direct relationship to health for the following reasons:

"(a) Several different types of infective agents leave the body by this means, from which they may be carried to other persons by the agencies of contact, contamination of water supplies with excreta, and by the contamination of house flies with excreta.

"(b) In addition, lack of care in the collection and removal of these discharges will give rise to collections of decomposing organic matter about habitations, which are exceedingly offensive to the senses. In other words, it then constitutes a nuisance.

"The necessity for these methods has arisen from the extreme congestion of urban's population which characterizes the present era. Urban sewer systems were originally devised for the removal of storm water and ground water, not for the removal of excreta. Thus not until 1815 was fecal matter permitted in the sewers of London, in 1833 in Boston, and in 1880 in Water closets as we know them date from the report of the English Health of Town's Commission in 1844 and were not connected with sewers until 1847.

"While difficult to prove, the odor pervading the atmosphere of a warm summer's night in Palmyra, is highly suggestive of the inadequacy of waste disposal in this community.'

Dr. James D. Bramer expressed his views on the advantages of a modern disposal system as follows:

"As health officer of the village of Palmyra, I wish to comment on the excellent informative article which Edward Dickinson so conscientiously presented to us in last week's edition of this paper. It is certainly a revelation that the opportunity to correct our present unhygienic, unsanitary makeshift sewage system is now at hand. I hope everyone will foresee the advantages that a modern, up-to-date sewage system will offer Palmyra. Until the installation of the system is a reality, we cannot truly call our village of Palmyra progressive, and if not done now this village will revert backward another 20 years."

## Address by Hon. Frank Coffin at Bates College Commencement Exercises

EXTENSION OF REMARKS

#### HON. LEE METCALF

OF MONTANA

IN THE HOUSE OF REPRESENTATIVES

Monday, June 8, 1959

Mr. METCALF. Mr. Speaker, in 1940 one of the summa cum laude graduates of Bates College was Frank Coffin. Last Sunday, the same Frank M. Coffin, our good friend and colleague who so ably represents the second district of Maine, returned to his alma mater and delivered the address at the commencement exercises.

In this speech, Mr. Coffin took a long look at the era ahead for the class of 1959, and presented not only to those graduates but to all of us a challenge to meet the needs of citizenship in the next decades and a reminder that progress does not just happen because of some predetermined law of nature, it is the hard work of individuals.

I commend the following thoughtful remarks to my colleagues:

LOOKING FORWARD

(An essay dedicated to the class of 1959)

In 1887 Edward Bellamy wrote a minor classic "Looking Backward." In the form of a novel describing life in the year 2000, it was at heart a work of social criticism aimed at looking backward to the injustices and waste of the 19th century industrial revolution.

For Bellamy, looking forward to the year 2000 was an ingenious way both of describing how he thought society ought to be organized and of criticizing the times in which he lived.

For you to be looking forward to the year 2000 is not an exercise in philosophy, in literature, or in social criticism. It is a mandate of common sense. At that magic bimillenial year your class will have reached the average age of 60. You will be at the peak of your powers, responsibilities, and influence. For 40 years you will have had more and more to say about what kind of families, communities, States, Nation, and world would exist in 2000 A.D.

That historic New Year's Eve could be an occasion for justified rejoicing over progress in the arts of peace; it could be an occasion for melancholy regrets over missed opportunities; and it could merely signal another orbit of the sun by the earth, noticed but little by the vestigial remains of life on a blighted planet.

Those of us destined to live and serve in these mid-century decades envy you. All I can do is to wish hopefully that, as an interested octogenarian, I can share in your rejoicing. I would like to think that shortly after midnight on January 1, 2000, I could turn off my TV by remote control, sip a dram of vintage 1959 champagne, say a heartfelt "well done," and get back to my desk to write my final speech for the June Primary election.

THE MYTH OF AUTOMATIC PROGRESS

Although I would have you look forward over the next four decades, I do not propose to waste your time in speculating what life will be like. Edward Bellamy showed that prophetic intuition is not a reliable indicator. His world of 2,000 had long been run on a giant credit card cooperative basis, where money was known, where all citizens served in the industrial army according to their skills, where communities were served by one giant supermarket and one communal dining house. Indeed, Bellamy's vision was something akin to that of Lewiston merchant Bradford Peck, set forth in his book entitled "The World a Department Store." These were really not so much utopian as myopian. Variety is still the spice of life.

If the intuition of reflective man is no sure guide to the future, what about the tools of economic analysis and statistical projections? Cannot they outline the face of the future, particularly the future of the next 40 years? An object lesson in the fallibility of prophecy is a heavy tome, of prophecy is a heavy "America's Needs and Resources," published in 1947 by the 20th Century Fund. Its goals were modest; Merely to predict our growth in resources and needs as far as 1960, a 13year period. Equipped with trained economists, statisticians, census figures, trends, and charts, it predicted that by 1960 our population would reach 155 million and our gross national product would be \$202 billion. Actually, our population is already 175 million and will be 180 million by 1960. while our gross national product will soon pass the \$500 billion mark.

When we ask why it is that our shafts fall so wide of the mark, our answer is found in the very last, humble sentence of this great statistical volume. As the authors lay down their charts, adding machines, and slide rules, they say, "In the last analysis, it is people who make progress."

In short, there is nothing automatic about progress. It is people who are responsible for progress. What this Nation will become in the next 40 years is not in the books. A small part of it is in this place, now. It is in you and your contemporaries throughout the land.

Perhaps the most dangerous myth that faces us is this myth of automatic progress, the comfortable conviction that destiny is on our side, that a government of the people, by the people, and for the people cannot perish from this earth.

There are three reasons why this myth might be acceptable to your college genera-tion. The first is simply that our history has been one of almost continued success. the Athenian democracy went into an eclipse after about the same length of time as we have been a Nation, but that example seems so remote and unreal. The second is that your generation has not known the Great Depression or the Second World War, when automatic progress and victory were by no means taken for granted. Finally, you entering the adult stage at a period when the American people have been yielding to their sense of weariness of conflict, crisis, discipline, and sacrifice. You have come of age in a period characterized by an almost frenetic pursuit of happiness. This has happened to us with almost cylical regularity.

As we entered this century, we had two decades of ferment, the years of Teddy Roosevelt and Woodrow Wilson; these were succeeded by a decade of repose after World War I; then came two decades of convulsive action to combat depression, to fight a great war and a small one; finally, a decade of release from the colled spring of public crisis, a decade of concentration on one's job, and home, and family. For you the decade was one of immersion in your high school and

college experiences. You cannot be justly blamed for thinking that domestic repose and tranquillity is the permanent posture of our national life.

#### THE EDGE OF AN ERA

The greatest danger facing you is to assume that our country will grow, act, and be as it should, without effort on our part beyond tending to our own affairs. The greatest opportunity facing you is to sense that you are on the edge of a new era, an era that may not see the swing of a pendulum between action and repose, an era of continuous challenge to citizenship.

It will be an era which will demand citizenship in depth from all our citizens, and particularly those who have had the benefits of exposure to a college education. By "citizenship in depth" I mean that concern for the public weal must no longer be an outer garment which one puts on for PTA meetings, political elections, United Fund campaigns, but that it must enter even into the fabric of private life, the choice and content of one's career, one's values and goals.

THE NATION'S NEED FOR A NEW CITIZENSHIP

What we need most of all in these next 40 years is a new dedication to citizenship based on a realistic recognition of the material, intellectual, and spiritual needs of this Nation.

If once we recognize these basic needs, what is required of us will be more clear.

We should recognize that by the year 2000, we in the United States shall be perhaps 300 million in a world of 6 billion.

We should recognize that by the year 2000 we shall be ever more dependent on other nations, many of them governed by dark or yellow skinned peoples, for critical natural resources.

We should recognize that the year 2000 will see many other nations competing with us in the markets of the world for capital and consumers' goods. Our ability to compete and prosper will depend on the perceptive forecasting of markets, increasing our productivity, and engaging in commercial enterprise with the utmost vigor and resourcefulness. We shall never again have the world's markets to ourselves as we did after World War II. The ages of political, economic, and psychological colonialism will be relics of the past.

We should recognize that we cannot, in such a world, afford a schoolroom shortage, a lack of effective teachers, and a waste of trained and educated manpower, because of our unwillingness to provide education calibrated to the character and ability of our young people.

We should recognize that we cannot afford to waste or jeopardize any natural resource, whether it be timber, soil, water, food, or space for outdoor recreation.

We should recognize that we cannot afford, either at home or abroad, to allow people needlessly to be sick, diseased, or to die prematurely.

We should recognize, finally, that we cannot afford to have less than our best men and women in public office nor less than our best efforts put into deciding who shall serve us and to what ends.

THE REQUIREMENTS OF CITIZENSHIP IN DEPTH

Perhaps it is unrealistic to think that the new citizen can gear his life to the demands which will be made on this Nation in the years to come.

I do not think so. I think that the satisfactions of citizenship in depth far outweigh the sacrifices.

Before stating what these are, let me hark back to the kernel of truth which Edward Bellamy saw in his book 72 years ago. He pointed out that our Nation, in moments of crisis, when it was a question of dying for it, depended on other motives than

higher wages and the accumulation of wealth. It depended on honor, and the hope of men's gratitude, patriotism, and the inspiration of duty. And it was never let down. Is this, then, a unrealistic hope, that men and women will respond to their highest motives through decades of crisis when peace, progress, and justice lie in the balance?

If it is an unrealistic hope, then such colleges as Bates have existed in vain and the liberal arts values are structures of straw. Being of a third generation Bates family, you will forgive me for assuming that this is not so.

The new citizen will be characterized, not by a definition, but by a commitment. At some point he or she will say this: "These are times of greatness. The largest of issues are being decided. I want to play my part." In revolutionary times this is the spirit that made a man drop his hoe and grab his musket off the mantle. In complex times such as ours it is difficult to distinguish the hoe from the musket. Each one of you must make that decision himself. The important thing is that the decision be made.

The decision is made when a young man or a young woman sees his or her career against the background of the life and needs of the times. A trade, a business, or a profession becomes then not merely a means of making a living, but the best way in which one can serve the vast and complex society of man.

This kind of decision can be dismissed as hopelessly idealistic—except that it has been made by countless citizens in depth within my personal acquaintance.

There are doctors in Maine who practice profitably and well, who also devote many hours a week to bringing better medical care to our rural communities, to pioneering in problems faced by the aged, to the kind of work that cannot be measured in currency or time.

There is the talented lawyer devoting his energies to this Nation's intelligence efforts at far less compensation than he could earn in private practice. There is the able lawyer in private practice who devotes half of his time to the defense of liberties and rights, where the possibility of injustice exists, to the individual, or in legislation aimed at chipping away the Bill of Rights, the constitutional powers of the Supreme Court, or the Federal system itself.

A young scientists, content by nature and training with a job challenging his own skills and judgment, gropes to better the organization of this Nation's scientific effort and step uncomfortably into the political arena—at some personal risk—to prove his point.

There are businessmen who have made a citizenship commitment at home or overseas, venturing capital, ideas, and orders to test new human relationships and new markets so that private enterprise may take root in alien soil.

The teacher, the administrator, the agricultural expert, the public health officer, had to make a commitment to citizenship on the grand design before he took his family to some uncomfortable far-off post.

The Madison Avenue man, whom we are apt to look upon as one whose profits are measured in the quick turnover of ideas, made a commitment when he took the time to create word and picture images which would sympathetically portray American life to other peoples.

There are politicians I know who do not content themselves with safe positions on controversial questions. They have taken most seriously the function of the educator, appealing not to the lower common denominator among us, but raising our sights to a better understanding of national and international needs.

THE SATISFACTION OF THE NEW CITIZENSHIP

If commitments of this nature were made by an increasing number of the class of 1959 and succeeding classes, the pace of the United States would be significantly changed. The face of history itself would be altered.

The making of such commitments would imply that security and wealth had become less than your primary goals in life. With minimum security becoming more routine and wealth more rarely achieved, neither status will be the hallmark of success it once was. It would become quite irrelevant whether you had the latest model of car each year, a swimming pool, your dreamhouse, or a country-club membership. You might not be able to retire as early as others, but the last thing you would want to do would be to retire. Our most important measuring device would no longer be the comfort index.

Your satisfactions would be those of service, creativeness, and craftsmanship. Your service would be not only to your fellow citizens but to all members of the world family, not only to those living in this century but those who will follow. When I talk about the satisfactions of service, I am not talking about feelings or expressions of gratitude by others. The currency of gratitude is fluctuating and uncertain. The satisfaction lies rather in the feeling that one's life is spent in a large cause, larger perhaps than self, family, nation, and generation.

The satisfaction of creativeness comes when one puts together bits and pieces of the past within the framework of his own intuition and experience and comes up with something new, a new way of making, a new way of doing, a new way of using or making available to those in need, a new way of saying what needs to be said.

Even when flashes of creative inspiration are denied us, we all have the constant opportunity to be craftsmen. The craftsman has a sensitivity about his objective, the materials at hand, and how to use them most skillfully to gain the objective. To be a craftsman is to approach one's job and one's life with the consistent attitude of doing one's best.

The credo of craftsmen has nowhere been better expressed than by the contemporary dean of judicial craftsmen, Judge Learned Hand: "Whether it be in building a house, or in planning a dinner, or in drawing a will, or in establishing a business, or in excavating an ancient city, or in rearing a family, or in writing a play, or in observing an epidemic, or in splitting an atom, or in learning the nature of space, or even in divining the structure of this giddy universe, in all chosen jobs the craftsman must be at work, and the craftsman gets his hire as he goes."

These, then, are the rewards of citizenship in depth: Service, creativeness, and crafts-manship.

## IS IT ASKING TOO MUCH?

It is one thing to chart the outlines of a more deeply rooted commitment for citizenship. It is quite another thing to predict that such a new citizenship on a large scale is probable or even possible.

One thing, however, we can predict. We can look forward to continued prosperity and progress in a world where free nations are in the ascendancy only if the public well being is foremost in the minds of citizens. Not foremost because of requirements imposed from without, but foremost because of concern generated from within.

A new era of citizenship, new levels of civic responsibility, new values and goals of living—these are much to ask.

But, after all, a millenium comes only every 1,000 years. How few there are chosen to usher one of them in. May I be the first to wish you a happy new millennium.

## The American Veterans Committee Platform on International Affairs, 1959

EXTENSION OF REMARKS

#### HON. HENRY S. REUSS

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

Tuesday, June 2, 1959

Mr. REUSS. Mr. Speaker, the American Veterans Committee held its 1959 convention May 15-17, at Sackett Lake. Monticello, N.Y. I wish to congratulate Mr. Mickey Levine, of New York, upon his election as national chairman of AVC.

In keeping with its objectives of achieving a more democratic and prosperous America and a more stable world, the American Veterans Committee formulated and adopted forward-looking platforms in the fields of international affairs, national affairs, and veterans' and Armed Forces affairs.

As a member of the national advisory council of AVC, it is my pleasure and privilege to submit for the RECORD the international affairs platform of the American Veterans-Committee adopted at the 1959 convention:

INTERNATIONAL AFFAIRS PLATFORM OF THE AMERICAN VETERANS' COMMITTEE, ADOPTED IN CONVENTION MAY 15-17, 1959

1. The American Veterans' Committee has as its central concern a more stable world. But a stable world is not an unchanging world. The first requirement for American diplomacy is that it identify itself sympathetically with those changes that can lead to greater freedom from want and from fear-

2. We believe that our Nation's security requires continuous collaboration between the United States and other countries for the preservation of peace, the improvement of living standards, and the enjoyment of personal liberties. At the same time, just as the welfare of the American veteran depends upon the health of the whole American community, so does the welfare of the American community depend upon the strength and solidarity of all nations that are or aspire to be free.

Moreover, the standing of the United States abroad will in great measure be determined by what we do within our country. Specifically, the military capacity to resist aggression, whether nuclear or conventional, wherever and in whatever form aggression may occur, is the indispensable foundation of a successful foreign policy.

Such a foreign policy also demands that we produce and develop those goods, services, and new ideas which will satisfy essential domestic needs and the greater needs of less-privileged peoples. The present rate of U.S. economic growth is inadequate to meet these needs.

And, finally, no foreign policy will be persuasive for the other peoples of the world if Americans continue to permit racial and religious discrimination in political, economic, and social activities in our own country.

3. For some years past the foreign policy of the United States has been limited to "holding the line" against aggression. From the adoption of the United Nations Charter to the end of the Korean conflict the United States led the world in combating the economic conditions that lead to war. More recently U.S. foreign policy has been very largely one of reaction to Communist initia-

tives rather than affirmative action of our own. The result has been that during periods of relative calm we have done little or nothing to solve basic problems and have been forced to face them at times of crisis when solutions were difficult, if not

impossible.
4. Too often our foreign policy has not been sufficiently attuned to world realities and our Government has been unwilling or unable to anticipate things to come. Often Americans have been preoccupied with the menace of communism to the exclusion of all else, and our leaders have shown neither the imagination nor the daring to risk new approaches to peaceful settlements. The assumption of our foreign policy has been that if the status quo vis-a-vis the Communist world can only be preserved long enough, the Communist world will collapse under the weight of its own injustices and inconsistencies. The history of recent years demonstrates the futility and danger of that assumption.

5. The continued presence of unemployment and the misunderstanding of the econòmic necessity for high taxes, the weakening of our competitive advantage in world markets, the failure of the Government to move on domestic social and economic reforms, the preeminence of nuclear armaments in thinking about national security and the unreasoning acceptance of fallacious notions of racial supremacy, may give rise to a new withdrawal from world responsi-bility by the United States. But the isolationism to which they may give rise can only harm the United States. For isolationism has become an impossible doctrine in every sense-economically, politically, and technologically.

6. Yet, how ever interdependent the world has become through technology, it remains sharply divided in a variety of other ways. On one level, it is split among the Com-munists, the anti-Communists, and those who are neither. We are obliged to recognize the differing demands that each of these worlds makes upon U.S. foreign policy and to recognize at the same time the di-Vergent interests within each world.

There is first of all the Communist challenge. It requires that the military defenses of the non-Communist world be made progressively stronger and more flexible. We hope, however, that the leaders of all nations are aware that in this nuclear missile age the avoidance of war between major Powers has become an essential. The controlled reduction of all armaments and the abolition of atomic weapons must continue to be a central objective of U.S. policy—a disarmament which is reliably policed and enforced. Meanwhile, we cannot in safety discount the influence of Sino-Soviet military power and the threat of blackmail implicit in that power.

8. At the same time, greater emphasis should be given by the United States to diplomatic initiatives, which demonstrates our Nation's unflagging interest in achieving a more peaceful, free, and prosperous world. Our governments should, for example, press forward with a program through which all peoples may benefit from the peaceful uses of atomic energy. We believe, further, that the Sino-Soviet challenge at this point is a challenge to the Western World's capacity to associate itself constructively with the struggle of nations, in Africa, Asia, Latin America, and the Middle East to raise their living standards and to achieve a democratic

society.

9. We welcome the interchange of persons between the United States and Communist states and hope that the present exchange program will be considerably broadened. also recognize that high-level discussions between leaders of the western great powers and those of the Soviet Union may be of value in clarifying their respective positions and diminishing international tensions over areas which are their special concern. But we point out that they do not have either the right or power to determine by themselves how the rest of the world shall be managed. It is essential that our Government form its foreign policies in concert with all It is essential that our Government our friends so that at all times there shall be the widest possible consensus on how best to deal with threats to peace and freedom.

III

10. This brings us to America's relations with its allies. We believe our Government should think and act on the realistic basis of cooperation between consenting partners. This requires a sharing of decision-making between the United States and friendly governments on problems which directly affect their interests. And this applies not only to Western Europe but to Latin America and elsewhere. If division and discord among non-Communist nations is a prime Sino-Soviet objective, and we believe it is, the closing of ranks and the building of confidence among non-Communist nations should be a prime objective of U.S. policy. The American Veterans Committee supports measures which promote the unity of the non-Communist world through political consultation, the lowering of trade barriers and in certain instances the pooling of ideas and resources for mutual benefits and the active fostering of the European Common Market, the free trade area, and the budding Latin American Common Market.

11. Then there are our country's relations with those nations described as neutralist or uncommitted. We believe that the United States has much to learn from as well as give to the peoples of Asia, the Middle East, Latin America and Africa, and that underdeveloped areas can be helped to progress along their own lines of development. diplomacy which succeeds with these many races and histories must be sensitive to local traditions, aspirations and material needs. Foreign economic assistance, technical cooperation and long-term loans repayable at low interest rates all on a scale far beyond that presently in effect—are required from the United States in order to remove dangerous inequalities of opportunity, as well as to counter enterprising Sino-Soviet trade operations in these areas. Wherever feasible U.S. economic assistance should be channelled

through the United Nations.

12. Nor should we expect in exchange for such assistance that less developed nations will approve of U.S. foreign policies or that they will spurn whatever assistance may be offered them by the Communist world. Our government cannot command cooperation; it can only encourage it by respectful, generous and continuing interest in the rapid development of those countries. velopment should have high priority in our national thinking. For we know that if present trends continue, despite assistance presently being given, the gap between the industrialized nations of the West and the under developed regions will become wider, not narrower. And the Communist world, pointing to the rapid technological advances of the Soviet Union and Communist China as examples, will do all it can to convince the underdeveloped nations that progress demands the kind of collective organization championed by communism. The alternative path to progress, one consistent with free association and humane values, must be made to work.

13. The American Veterans Committee supports the peaceful settlement of international disputes and a strengthened United Nations. But the peace for which we work, like the disarmament we seek, will not come from capitulation to aggressive threats; it will come from courageous, intensive effort to harmonize the positive purposes of the United States with the needs of the world at large.

14. Finally, the prime task of nations in this second half of the Twentieth Century is to find a method of banning war. Both the United States and the U.S.S.R., regardless of which may have the preponderance of power, are now capable of destroying each other as well as scarring all humanity on this planet for all time to come. All nations must find the means somehow of surmounting the barriers of ideology, mistrust and past errors on both sides so that the prophecy will be realized: Neither shall man know war any more."

## An Anniversary Tribute to Hon. Robert F. Wagner, Sr.

EXTENSION OF REMARKS

## HON. LEONARD FARBSTEIN

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES Monday, June 8, 1959

Mr. FARBSTEIN. Mr. Speaker, many of our colleagues in both the House and the Senate may recall that today would have been the birthday of one of New York's most beloved Senators, the late Robert F. Wagner. Senator Wagner was the father of New Yorks' most respected present mayor, the Honorable Robert F. Wagner, Jr., who has just reason to be proud of his father. Were the late Senator alive today, I am certain he would be just as proud of his son who appears to be following the excellent example set for him.

Under leave to extend my remarks, I wish to include an editorial which will appear today in the East Side News, a local publication circulated throughout the 19th Congressional District of New

AN ANNIVERSARY TRIBUTE TO HON. ROBERT F. WAGNER, SR., MEMBER OF U.S. SENATE, 1877 то 1953

## (By Abraham Schlacht)

The Nation pauses on Monday to honor the memory of the birth of a great American, the late U.S. Senator Robert F. Wagner. It does so, because of his many contribu-tions to the Nation's growth and because his life affords a constant inspiration to the people of our land.

Born of God-fearing parents, this intrepid son of New York, a German immigrant and product of the East Side, through his sheer will and strength of intellect coupled with his high concept of honor and humility, has written his name and fame across the fleshy tablets of our hearts

His life with all its varying vicissitudes is a reminder that only in America a humble beginning is no deterrent to one's success. Indeed, many of our great men and women spent their youth under such circumstances.

His life is a great unfolding of the growth of a man achieved through self-discipline and self-teaching. His was a personality that comes all too rarely in the life or our His was one devoid of brusqueness, affectation or arrogance, but who possessed such qualities as graciousness, kindness, and sympathetic understanding of other people's problems.

In all the things he did, the sacrifices he , made, in his devotion to every trust to him by our State, we find the exalted example

to which all public servants may go for in-

struction and guidance.

Let us turn back the pages of history and behold the record of this American whom we pause to remember. We see a man who came to our shores, an immigrant lad who worked his way in the face of many obstacles, financial and otherwise, through City College and the New York Law School. We see him rise step by step from assemblyman, State senator, Supreme Court Justice, member of the Appellate Division to U.S. Senator, the highest elective honor which our people can bestow upon a foreign-born citizen.

To his everlasting credit he initiated the National Emergency Relief Act and the Un-employment Relief Act which later became the basis for the Social Security Act, as well as the railroad pension law and the National Labor Relations Act. He introduced and developed the widows pension law and the minimum wage and hour bill for women and children. He was hailed as labor's great emancipator, and was decorated by Pope Leo XIII for his humane services to the oppressed and underprivileged.

Wagner loved America, its in-Senator stitutions, its ideals and traditions.

And loving her, he served her unselfishly. To America, he owed all. To America, he gave all.

He took his successes in stride and with modesty. He took his failures and disappointments serenely, and philosophically. He looked upon life as an arena in which to enhance our American way of life.

He met every major issue fearlessly throughout his long and turbulent public career. And when he felt that he had won his many legislative battles and skirmishes. he retired, and then returned his warrior's helmet and shield without blemish.

Yes, his place in history is secure. legislative achievements, his fidelity to our Nation's best interests, his simplicity and gentleness of character will ever be enshrined in our hearts as a great American and a great statesman.

#### A Switch

EXTENSION OF REMARKS

## HON. E. Y. BERRY

OF SOUTH DAKOTA

IN THE HOUSE OF REPRESENTATIVES Monday, June 8, 1959

Mr. BERRY. Mr. Speaker, I have asked consent to insert in the RECORD a telegram I have today received from the president and secretary of the South Da-kota Stockgrowers Association, which met in its annual meeting last week.

The reason I have asked to insert this telegram in the RECORD is because it is a complete switch from the ordinary messages coming to a Member of Congress. This telegram asks that the appropriation for one of the very important programs to the stockgrowers of South Dakota and the Nation be reduced. Until more groups and associations assume that attitude, the national debt limit, which the President was forced to ask Congress to increase again today, will climb steadily higher year by year, and as it goes up, the value of the American dollar will go down correspondingly.

The telegram to which I refer reads as follows:

Be it resolved, That the South Dakota Stockgrowers Association request the conference committee of the Senate and the House on the agriculture appropriation bill to reduce the funds made available for the brucellosis eradication program from the \$17½ million requested by the Senate to not exceed the \$15 million as originally passed by the House.

Passed unanimously as a special order of business by the general assembly of the South Dakota Stockgrowers Association on June 4, 1959, at Rapid City, S. Dak

SOUTH DAKOTA STOCKGROWERS ASSOCIATION, LOUIS BECKWITH. JACK MCCTILOH

#### Bitter Root To Be the Guinea Pig Again

EXTENSION OF REMARKS OF

## HON. LEE METCALF

OF MONTANA

IN THE HOUSE OF REPRESENTATIVES Monday, June 8, 1959

Mr. METCALF. Mr. Speaker, it is unfortunate that programs which are set up for the good of the entire country can end up doing more harm than good. But this is what has sometimes happened in the programs to control the harmful pests of our Nation's forests.

The programs have removed the harmful pests but, at the same time, they have removed many desirable animals. In fact, sometimes they have destroyed more than they have saved. As an example of the excesses that occur. I would like to include an editorial from the Hamilton, Mont., newspaper, the Western News, entitled "Bitter Root To Be the Guinea Pig Again."

BITTER ROOT TO BE THE GUINEA PIG AGAIN

Knowledge that the Forest Service is again about to tamper with the balance of nature and endanger another part of the Bitter Root fisheries cannot fail to cause consternation among Ravalli County people.

In 1955 the Forest Service engaged in a

spraying project which wrecked the greater portion of the upper East Fork for trout fishing. It had been one of the outstanding trout streams of this area. While fish are again beginning to reappear there in numbers the marvelous fishing of yesteryear is now but a memory.

The Forest Service announcement that

particular care will be exercised by the fivboys in spreading the poison from the clouds is good news, but whether such care, even if diligently practiced, will prove practical with good spraying practices is another matter.

The Forest Service this year plans to spray poison from the clouds on other streams than the one it ruined in 1955. In another section of this newspaper the reader will find an article in which the areas to be sprayed are delineated. Some of them are also fine trout fishing streams. If they are poisoned so that the fish and aquatic life therein is also poisoned, considerable loss will be felt in this valley.

The project is the dream of some entomologists of the Forest Service into whose hands has been dumped a quantity of Federal coin which they must expend in spray-ing. There are some Montanans who entertain much doubt as to whether it is wise for their regions to be used as guinea pigs in the experimentation by these folks bent upon proving their nostrums.

The theory is that unless the heavens are loaded with poison which descends upon the earth beneath, that beetles will destroy great values in spruce and perhaps other timber. There still is to be proved that the spruce will be saved by this wholesale aerial polson-ing. But while engaged in proving it these experimenters with life itself are going to slaughter fish, birds, bees, and unnumbered species of insects, some good and some bad.

Even if the poison can in some way be dropped from the sky so that it will not hit streams and lakes there remains doubt of the efficacy of the spraying and also doubt as to whether it might not do more harm than good-even if the fish are not included

in the calculation.

It seems to me that it would have been far better to have taken a chance on Nature clearing up the trouble caused by the bettels, gamble upon the timber loss, than to risk our great recreational potential of the Bitter Root Valley. The money expended, although considerable, is not going to do the Bitter Root much good. Most of it will go for purchases of gasoline and poison and services beyond the Bitter Root horizon. Those who clip the profits will have their task done and will have decamped before the summer is gone. Bitter Roots will remain at home to harvest the whirl-

Of even more concern to us ought to be the fact that we are treated as simple pawns in this spray-merchandising game. Outsiders determine the fate of our locality and we have not a word to say about it. about home rule, grassroots control, State's rights; we have none of it. We are simply going to take what the authorities deal out for us. There seems to be no recourse. Some bureaucrat decides what is correct and proper and laces the corset upon mankind and pulls the strings tight. It would seem that the decent thing to do after the 1955 experience would have been to have a public hearing on so controversial a matter. I am not so sure the smart boys in the laboratory. reading their textbooks and trying out their poisons in their test vials, necessarily know

Before the medicine is proved let the ex-periments be localized and their efficacy demonstrated beyond doubt. It would be better not to be the guinea pig. For my money I would prefer to spray the entomologists and keep the fish. Meantime I hope that since we are going to get the does, without even being asked if we want it, that the flyboys can hit their targets and will keep the poison out of the lakes and creeks as promised. If they don't I'm not sure we should not locate and old rail and use it the next time any Forest entomologist comes into the Bitter Root.

Resolution for Establishment of a Food Stamp Plan by City of Detroit

EXTENSION OF REMARKS

## HON. JOHN D. DINGELL

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES Monday, June 8, 1959

Mr. DINGELL. Mr. Speaker, pursuant to permission granted I am inserting into the Appendix of the RECORD & resolution adopted by the Common Council of the City of Detroit on June 2. 1959. The subject of the resolution is 3 matter of great interest to me; in fact, I have introduced H.R. 5191 which provides for the establishment of a food stamp plan for the distribution of surplus food commodities to the needy in the United States.

The resolution follows:

Whereas the city of Detroit, since January 1955, has been engaged in distributing surplus food commodities to needy citizens, including not only families receiving public assistance but other needy individuals; and

Whereas in the month of April 1959 the city distributed 490 tons of surplus foods to 46,530 families, representing 164,419 persons;

Whereas it is reported that approximately 12½ percent of the labor force of the Detroit area is still unemployed, evidencing the continuing acute need among our citizens; and

Whereas this common council has adopted resolutions urging the expansion of the distribution of foods to needy persons and urging the reactivation of the so-called food stamp plan, similar to the plan in effect in the years 1939-1943, which would eliminate the present complicated, cumbersome and costly plan of distribution: therefore, be it

Resolved, That this common council urges the adoption of a program which would provide for (1) the transfer of this activity from the Department of Agriculture to the Department of Health, Education and Welfare; (2) the expansion of food distribution to the needy, and (3) the distribution of surplus food commodities through the normal channels of business through the medium of a food-stamp or coupon plan; and be it further

Resolved, That copies of this resolution be sent to members of the Agricultural Committees of the U.S. Senate and the House of Representatives, and the Members of the Michigan delegation to Congress,

## Henry Ford Museum and Greenfield Village

EXTENSION OF REMARKS

## HON. JOHN LESINSKI

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES
Wednesday, May 20, 1959

Mr. LESINSKI. Mr. Speaker, this fall will mark the 30th anniversary of the founding of the Henry Ford Museum and Greenfield Village by Henry Ford in Dearborn. One of the outstanding tourist attractions in my district, the museum and village contain originals and reproductions of historical significance. The following article from the May 20, 1959, issue of the Dearborn Press gives an excellent description of the exhibits you would see if you were to visit the museum and village:

MUSEUM, VILLAGE FOUNDED BY FORD 30 YEARS
AGO

Thirty years ago this fall, the late automotive pioneer, Henry Ford, founded Henry Ford Museum and Greenfield Village. He was busy at the time putting the world on wheels, an achievement to always make his name remembered.

But while making industrial history, he also was starting to preserve it—to save a peaceful, tranquil America that was being changed by Ford and his model T.

Since then, the generous slice of three centuries of yesteryear preserved by Ford has grown in historical importance until today it is one of the Nation's top treasures of

Americana and also an outstanding tourist attraction. Nearly a million visitors annually are drawn to Dearborn by the museum and village.

So, while Ford changed the face of America with his Model T, he also saved for all time the America that was replaced, and there is little doubt that for this, future generations also will remember him.

Located on Oakwood between Rotunda Drive and Michigan, Greenfield Village covers 200 acres and the adjacent museum an additional 14. The museum entrance, a replica of Independence Hall, has been a Dearborn landmark for three decades.

Ford had the original in Philadelphia copied, even to include what appeared architectural errors. Flanking Independence Hall are reproductions of Congress Hall and the Old City Hall in Philadelphia. These and connecting areas stretching across the entire museum front afford more than 100,000 square feet of space which house the decorative arts collections.

Beyond spans the main exhibition hall, with a street of 22 early American shops—agricultural, power, communications, and

transportation displays.

Inside the main entrance is the cornerstone, a glass-covered slab of cement dedicated on September 27, 1928, by Thomas Alva Edison. The great inventor, a lifelong friend of Ford, inscribed his name, the date, left his footprints, and thrust the spade of horticulturist Luther Burbank into the wet cement, symbolizing the union of agriculture and industry.

Ford used this unique cornerstone for a centerpiece and the museum now extends in three directions.

Ford expressed his aims for the village and museum:

"When we are through, we shall have reproduced American life as lived; and that, I think, is the best way of preserving at least a part of our history and tradition."

a part of our history and tradition."

In the museum's decorative arts galleries, the visitor sees chronologically the whole development of American furniture and decorations from the Pilgrim century to the 20th, period by period and style by style.

In the street of shops, the first such major installation in an American museum, visitors see how crafts, industries, and trades of the late 18th and 19th centuries were practiced. These include candles, drugs, guns and locks, millinery, violins, carpentry, pewier, tailoring, and barbering.

Since agriculture is the basic, most important, and one of the earliest activities of mankind, the exhibits in the main exhibition hall start with the development of agricultural implements, from the crudest plows to harvesters and steam tractors. The agricultural section also includes more than a score of late 19th century portable steam engines.

Into the power section, Henry Ford funneled nearly every conceivable type of steam, early gas, and oil engines. The grandfather of all steam engines, an English 1750 atmospheric pumping engine designed by Thomas Newcomen, towers over its more familiar descendants. Many pieces of this engine are original and were carefully disassembled, piece by piece, numbered, brought to Dearborn, and reassembled.

The latest and also the largest engine, a gas-steam combination powerplant of 6,000 horsepower with a 7-foot stroke, weighs 1,-500,000 pounds and was used until 1928 in Ford's Highland Park Plant, where the model T was made.

In all, nearly 100 engines trace the development of power production from the Newcomen and James Watt engines up to the present day. Most are in running condition.

The museum has the most comprehensive electrical exhibit to be found anywhere. It portrays the history of generators, motors, electric lighting, telephone, telegraph, radio,

and even the early beginnings of television in the 1930's.

The transportation section comprises the largest portion of the main exhibition hall. Here are more than a hundred horse-drawn vehicles, rows of bicycles, automobiles, airplanes, and locomotives.

Nearly 175 steam, electric, and gasolinedriven vehicles trace the history of the automobile. The earliest is an 1863 Roper steam buggy; the latest, cars of the thirties and early forties.

The aviation section includes early gliders, World War I trainers, the multi-engined monoplanes that carried Rear Adm. Richard E. Byrd to the North and South Poles, the German monoplane that made the first westward Atlantic crossing, an autogiro and Vought-Sikorsky helicopter of 1941.

On parallel railroad tracks stand 12 fullsize steam locomotives, ranging from a replica of George Stephenson's 1829 English Rocket through the 1831 DeWitt Clinton and Civil War types to a 600-ton Allegheny of 1941, one of the largest steam locomotives ever made.

For a ride through Greenfield Village, the outdoor counterpart to the museum, we can climb aboard a horse-drawn carriage.

This peaceful community of yesterday, with its 100 17th, 18th, and 19th century homes and workshops, was named for the township of Greenfield near Dearborn where Mrs. Henry Ford was born and raised.

Foremost among the buildings dramatizing the life and times of Henry Ford is a simple farm homestead where he was born on July 30, 1863. Nearby is a small brick shed, known as 58 Bagley Avenue. It stood at the rear of one of Ford's early homes in Detroit and it was here, in 1896, that he built his first automobile, or as he called it a quadricycle.

Other buildings associated with Ford include the grade schools he attended, now utilized in the village school system which runs from kindergarten through the sixth grade; the Magili and Grimm jewelry stores where as a youth he earned small sums for repairing watches; and the Edison Illuminating Co. where he worked for 8 years as an engineer.

The memory of Ford's good friend, Edison, is kept alive in the Menlo Park, N.J., laboratory where Edison worked for a decade starting in 1876. On the second floor of the laboratory Edison developed some of his most important inventions, including the incandescent electric lamp and the phonograph.

The other buildings in this group, all enclosed by a white picket fence, are an office and library; carpenter work shed; a carbon shed, where kerosene lamps were kept burning to accumulate lampblack for his electric lamp experiments; a wooden shed for glass-blowing; and machine shop.

Nearby is the Sarah Jordan boarding house, where some of Edison's bachelor assistants lived. It became the first private home in the world to be lighted by the Edison electrical system. Beside it is Edison's Florida laboratory, built in 1884 at Fort Meyers, his last workshop and winter head-quarters for 40 years.

Other buildings in the village associated with Edison are Smith's Creek depot, where young Edison was ejected from a Grand Trunk train after a chemical he was using dropped and set fire to a baggage car; the homestead of his grandparents, from Vienna, Ontario, where his parents were married; and a building used at West Orange, N.J., his place of research following the decade at Menlo Park.

In the Greenfield Village craft shops, skilled artisans carry on trades long since passed from the American scene.

The Loranger gristmill, for example, operates just as it did in the 1830's, at Monroe, Mich., and turns out a superior brand of

whole wheat flour, cornmeal, and buckwheat flour using the old buhrstone method.

Textile methods of 200 years ago may be seen in the Plymouth carding mill from Plymouth, Mich., near Dearborn.

The first powered silk mill in America, from Mansfield, Conn., still operates today nearly as it did in 1810.

Glassblowing, almost a lost art today, is practiced in the Sandwich glass plant, restored with portions of an 1825 plant from Cape Cod, Mass.

In the tintype studio, the visitor may have a tintype portrait taken, just like his grand-parents, using all the old-time props—head rests, posing chairs, and even a derby hat.

At the 19th century blacksmith shop, sparks fly and the anvil's ring is heard for some distance away. The fire in the forge keeps glowing red by air forced from the bellows pumped by the smithy with one hand. Once an American community landmark, the stone building stands in the shade of a spreading chestnut tree as did the one made famous by poet Henry Wadsworth Longfellow.

In the pottery shop, a craftsman fashions bowls, vases, and other clay utensils, depending for the most part upon the skill of his hands as he turns the object on a potter's wheel,

The oldest craft shop in the village is the two-man Kingston Cooper shop, moved here from Kingston, N.H., where it was erected in 1785. Using the schnitzelbank, or shaving horse, and other hand tools, the cooper built watertight hogsheads for commerce, barrels for shipping fruits or vegetables, buckets for maple sap and wooden pails for every home.

The Village Green is flanked by public buildings, just as in communities a century ago. At the head is the Martha-Mary Chapel, named for the mothers of Henry and Mrs. Ford, of colonial-classic architecture. the steeple is a bell cast by the son of Paul

Other buildings surrounding the green are the Clinton Inn, first overnight stagecoach stop on the Detroit-Chicago route; Waterford General Store, still stocked with just about everything in family needs as in 1854; the Logan County Courthouse, from Lincoln, Ill., where Abraham Lincoln as a young lawyer tried cases: a school and a town hall.

Lincolniana in the Logan Courthouse includes the chair he sat in the night of April 1865, when he was assassinated in a Washington theater.

A picturesque covered bridge, among the last in the United States, was named for Joshua Ackley, a farmer, and once stood over a branch of Wheeling Creek in southwest Pennsylvania. It was built in 1832.

Just over the covered bridge, before the carriage enters the residential section, is the stately Susquehanna House.

For three centuries, the Susquehanna House stood on a high bluff overlooking the junction of the Patuxent River and Chesapeake Bay, about 90 miles south of Baltimore. Erected in 1652, its first owner was ChrisCharles II.

Oldest American home in the village is the Plympton House, built by Thomas Plymton in the mid-17th century at Sudbury, Mass. Small in size, measuring about 16 by 30 feet, the home is typical of the colonial period. One room served as a combined living room, bedroom, and kitchen, with extra sleeping room upstairs.

A Cape Cod windmill stands majestically Built in the late 17th century, it is nearby. generally believed to be the oldest still existing in the United States. Octagon-shaped and shingled, with stone foundation, its giant wood sails measured 54 feet across.

Further along, the large, gray Secretary House was built in Exeter, N.H., in the mid-18th century by a wealthy sea captain. Its name came from its next owner, Joseph Pearson, first secretary of State of New Hampshire.

The next home was built in 1822 in New Haven, Conn., for Noah Webster, the lexicographer. The large, yellow, multiroomed home contains a sound-proof study upstairs where Webster finished his monumental dictionary.

A red farmhouse from Lancaster, Mass.,

was the birthplace on March 7, 1849, of Luther Burbank.

Reminiscent of folk song composer Stephen Collins Foster, a white frame cottage stands on a high bank with the rear of the house overlooking a lagoon. The house was built about 1830 in Lawrenceville, Pa., on land once owned by the father of the composer. The home contains many Foster family heirlooms.

Below the Foster Memorial, the colorful. whistle-tooting Suwannee helps recapture the early American steamboat scene. Patafter a sternwheeler that once terned cruised the Suwannee River of Foster's song, the boat now carries visitors around a circular lagoon and is one of the village's most popular summertime attractions.

A simple, one-room log cabin that once stood in Washington County, Pa., was the birthplace Sept. 23, 1800, of William Holmes McGuffey of school textbook fame. Ford used and admired the McGuffey readers.

#### CONGRESSIONAL DIRECTORY

The Public Printer, under the direction of the Joint Committee on Printing, may print for sale, at a price sufficient to reimburse the expenses of such printing, the current Congressional Directory. No sale shall be made on credit (U. S. Code, title 44, sec. 150, p. 1939).

#### CHANGE OF RESIDENCE

Senators, Representatives, and Delegates who have changed their residences will please give information thereof to the Government Printing Office, that their addresses may be correctly given in the RECORD.

topher Rousby, collector of customs for King LAWS RELATIVE TO THE PRINTING OF DOCUMENTS

Either House may order the printing of a document not already provided for by law. but only when the same shall be accompanied by an estimate from the Public Printer as to the probable cost thereof. Any executive department; bureau, board, or independent office of the Government submitting reports or documents in response to inquiries from Congress shall submit therewith an estimate of the probable cost of printing the usual number. Nothing in this section re-lating to estimates shall apply to reports or documents not exceeding 50 pages (U. S. Code, title 44, sec. 140, p. 1938).

Resolutions for printing extra copies, when presented to either House, shall be referred immediately to the Committee on House Administration of the House of Representatives or the Committee on Rules and Administration of the Senate, who, in making their report, shall give the probable cost of the proposed printing upon the estimate of the Public Printer, and no extra copies shall be printed before such committee has reported (U. S. Code, title 44, sec. 133, p. 1937).

#### GOVERNMENT PUBLICATIONS FOR SALE

Additional copies of Government publications are offered for sale to the public by the Superintendent of Documents, Government Printing Office, Washington 25, D. C., at cost thereof as determined by the Public Printer, plus 50 percent: Provided, That a discount of not to exceed 25 percent may be allowed to authorized bookdealers and quantity purchasers, but such printing shall not interfere with the prompt execution of work for the Government. The Superintendent of Documents shall prescribe the terms and conditions under which he may authorize the resale of Government publications by bookdealers, and he may designate any Government officer his agent for the sale of Government publications under such regulations as shall be agreed upon by the Superintendent of Documents and the head of the respective department or establishment of the Government (U. S. Code, title 44, sec. 72a, Supp. 2).

#### RECORD OFFICE AT THE CAPITOL

An office for the Congressional Record is located in Statuary Hall, House wing, where Mr. Raymond F. Noyes is in attendance during the sessions of Congress to receive orders for subscriptions to the Record at \$1.50 month, and where single copies may also be purchased. Orders are also accepted for the printing of speeches in pamphlet form.

#### PRINTING OF CONGRESSIONAL RECORD EXTRACTS

It shall be lawful for the Public Printer to print and deliver upon the order of any Senator, Representative, or Delegate, extracts from the Congressional Record, the person ordering the same paying the cost thereof (U. S. Code, title 44, sec. 185, p. 1942).

# Appendix

## The Spirit of Resistance Behind the Iron Curtain Is Very Much Alive

EXTENSION OF REMARKS

## HON, LYNDON B. JOHNSON

OF TEXAS

IN THE SENATE OF THE UNITED STATES

Tuesday, June 9, 1959

Mr. JOHNSON of Texas. Mr. President, 4 months ago, on February 16, I had the privilege of making on the Senate floor a statement on the occasion of commemoration of Lithuanian independence. In the statement, I referred to the continuous struggle of the Lithuanian people against their enslavement by the Soviets, in violation of international agreements and human decency.

It gives me a great deal of pleasure today to extend my remarks of February 16 by the inclusion of new evidence confirming the existence of unrelenting opposition to the present regime in Soviet Lithuania.

Mr. President, I ask unanimous consent to have printed in the Appendix of the Record an article prepared for publication by Dr. Albert N. Tarulis, juornalist and author, a member of the staff of the Library of Congress, and formerly a professor at Carnegie Institute of Technology, Pittsburgh, Pa.

Dr. Tarulis, quotes official statements in the Communist-controlled newspapers and furnishes the proof that the Soviet puppets in Lithuania are facing effective resistance on the part of the most active element—the writers, particularly those who grew up under the present regime.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

THE SPIRIT OF RESISTANCE BEHIND THE IRON CURTAIN IS VERY MUCH ALIVE

Boris Pasternak has been vociferously denounced by the Soviet Lithuanian writers for his Nobel-prize novel, "Dr. Zhivago." This has also been true of the whole of the Soviet Union where everything is directed from the central point—the Kremlin.

The 3d Congress of Soviet-Lithuanian Writers, held in Vilnius, the capital, recently, furnished a convincing proof, however, that their sympathies lay with Pasternak and the ferment had been going on there long before the excitement created by Pasternak. A perusal of the mouthpiece of the Soviet-Lithuanian Writers' Union, Literatura ir Menas, tells the whole truth.

In his long statement before the Congress, President of the Writers' Union A. Venclova was unable to conceal that the wave of revisionism had swept Lithuania. It had arrived, he said, from Poland, by way of the revisionist press and radio, and produced, several untoward reactions.

Revisionist writers began insisting on their unrestricted right to depict the life as they saw it. And what they saw was only the

dark side of it, as dark as Dr. Zhivago's life. They refused to be mere varnishers of the presence and follow the party's line without criticism.

In their attempts to get around strict censorship, the writers left no door untried. If the party-controlled literary journal, such as Literatura ir Means or Pergale, rejected the manuscript, they went to the state publishing house and sometimes had more luck. As a result of these efforts, there appeared in print several short stories, critical essays, and books that caused the Communist masters' wrath and bitter denunciations at the Concress.

Those who could not break through the censorship obstacles chose to avoid the so-called socialist realism and began writing about love, the beauty of nature, and other such romantic subjects. "Art for Art's Sake" became their motto. The forbidden trends of decadency, pure esthetism, formalism, and symbolism received currency again. Sympathies for modernism became apparent. Marxist ideology was forgotten or renounced outright.

Other revisionist writers took another step and started openly glorifying the heroic past of the Lithuanian Nation and presenting in favorable light the life during the brief independence period. The class struggle was shelved, giving way to the literary treatment of the so-called bourgeois-nationalist ideals. Some writers went as far as to vilify and deprecate all written in the spirit of Socialist realism by those obedient to the party. This ought to be no surprise in view of

This ought to be no surprise in view of the fact, mentioned during the congress, that only 30 percent of Soviet-Lithuanian writers are Communists. The overwhelming majority are either indifferent or opposed to communism, waiting only for an opening to smuggle in their antiparty ideas. The congress furnished the proof they were highly successful.

highly successful.

Antiparty bourgeois-nationalist tendencies found support among the professors of Lithuanian literature at the University of Vilnius. They refused to grant recognition to writers seeking party's advice on what and how to write and extolled pre-Soviet writers as true nationalists and Lithuanians. Russian and Soviet influence upon them was disclaimed. Purists insisted on cleansing the language infested with Russian barbarisms and party phraseology. The opposition to all Russian was actually so manifest at the congress that the presidium dared not to bring up the need of imitating the big brother.

The results of this concerted action came repeatedly into open during the congress. The writers who were called on the carpet refused to admit their wrongdoings. Moreover, they found new supporters, who took the floor to defend them.

The revolt was brought into evidence by the refusal to reelect former chairman of the writers' union, Stalinist A. Venclova. His place was taken by a younger writer who had proved in the past that he is an independent thinker.

The Soviets had never been able to conquer the minds of the Lithuanian people.

The Third Congress of Soviet-Lithuanian Writers has brought forth a proof even to those who had stubbornly refused to believe in it.

The wave of intellectual freedom is already pounding the Kremlin's gates. The just-

ended congress of Soviet writers' union ousted its First Secretary Aleksei A. Surkov, a foe of liberalism in thinking, a partyliner, and a man who led the campaign against Boris Pasternak. The latter's lifelong friend, Konstantin A. Fedin, was elected in Surkov's place.

These are unmistakable signs that the spirit of resistance behind the Iron Curtain is very much alive.

#### End the Controversy-II

EXTENSION OF REMARKS

## HON. J. GLENN BEALL

OF MARYLAND

IN THE SENATE OF THE UNITED STATES

Tuesday, June 9, 1959

Mr. BEALL. Mr. President, on June 27, 1958, I inserted in the Record an address delivered by Walter L. Fowler entitled "End the Controversy." This address concerned the relationship between the District of Columbia and the Federal Government.

On June 5, 1959, Mr. Fowler delivered another address on this subject entitled "End the Controversy—II."

I ask unanimous consent that this address, delivered before the bankers convention in Hot Springs, Va., be printed in the Appendix of the Record.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

END THE CONTROVERSY—II
(By Walter L. Fowler)

Senator J. Glenn Beall of Maryland, on June 27, 1958, inserted in the Congressional Record (p. A-5854) a speech which I made at Georgetown University on June 18, 1958, entitled "End the Controversy." The controversy referred to began with the creation of the seat of Government at Washington and has centered around the sums of money to be appropriated by the Federal Government as its share of the expenses of the city. In view of the critical financial crisis now confronting this Federal City, I offer for those who are willing to give serious though to this subject, "End the Controversy—II."

It would be impossible to estimate the time, labor and thought put into this subject over the years. In addition to volumes of debate in the Congress, many congressional and departmental investigations of our fiscal relationship have been made. The end of all investigations has been continued debate and controversy. Our friends in the Senate and House are no longer interested in the same old arguments and, in their apparent frustration, seek something new. Examine, if you will, Mr. RABAUT'S report from the Committee on Appropriations in explanation of the bill making appropriations for the District of Columbia for the fiscal year ending June 30, 1960. Instead of the \$32 million requested, the committee recommended \$25 million as the Federal payment which was 25 percent above the amount appropriated for 1959. This committee knew our needs and it was friendly to the District of Columbia. It had a problem that I, as budget officer, appreciate. It had to justify its action for the increase. On page 3 of the House report, we see how an attempt was made to do so. The committee applied a very interesting formula. An estimate was made of the amount that would be payable as taxes if the Federal, foreign governments, and miscellaneous properties were taxable, with an increase of 9 percent resulting from the reassessment program.

The Commissioners, after noting their appreciation for the increase, assert that this is not the proper basis for limiting the amount of the Federal payment and argue that if the Federal Government were taxable as a private business, it would probably pay total taxes of about \$56.2 million.

I made reference to formulas in the speech of June 18, 1958, and in a statement before the Senate Subcommittee on Appropriations in 1954. Senator Overton's formula, Senator O'MAHONEY'S formula, and others were discussed.

In my opinion, as of this date formulas of the types suggested are not the answer, and will never be satisfactory.

It is interesting to reflect upon the Commissioners' statement that they consider the Federal Government as its major "industry." Some have wondered why large industry did not center in this city in the days when plenty of farmland was available. I recall working for a short period of time in the great steel plant on the now Bolling Field site in 1914. This was large industry. The steel plant was producing shells for the great European nations. In that same year, Senator Gallinger (whose name was associated with our city hospital) told the world: "We discourage all efforts to establish manufacturing establishments here. Many such attempts have been withdrawn upon representations that some of us have very urgently made." In the same year, Congressman Borland, most interested in District affairs, said: "It is entirely unlikely that Congress could tolerate manufacturing districts here, with the massing of industrial population, the danger of strikes, boycotts, lockouts, etc."

The purpose always has been to maintain this as a governmental city—the center of the Nation's artistic, literary and scientific life. The Federal Government, therefore, is

our major industry.
In the 1959 "State of the Nation's Capital," the Commissioners recommended that the Congress adopt a policy in these words:

"That it is hereby declared to be the policy of the Congress, in exercising its exclusive legislative authority over the District of Columbia, to provide financial support, over and above that which can be derived from taxing District residents and businesses at rates comparable to those of surrounding communities, to the extent necessary to make the District a modern, attractive, and efficient community that meets the requirements to be the Capital of the United States."

If the Congress does not want to adopt this as policy, then let it be adopted as a formula. I have long since come to the conclusion that it is the only sound formula.

Some of our learned friends are prone to shy away from "new ideas" on this subject. We hasten to say that the idea is as old as the city and that this perfect formula was first recommended 84 years ago.

On July 19, 1913, two newly appointed civilian Commissioners took their oath of office-Oliver Peck Newman and Frederick Lincoln Siddons. Mr. Newman was elected president of the Board and remained as its president until October 9, 1917. Commissioner Siddons served about a year and a half. He was appointed to the Supreme Court of the District of Columbia and there served for many years as one of our outstanding judges.

In January of 1915 a young man by name Louis Brownlow took his oath of office as a Commissioner.

When Commissioner Newman departed, Commissioner Brownlow became president of the Board and served in that capacity from October 9, 1917 to September 17, 1920. It was in October 1917 that I entered the District service.

In 1915 the then Commissioners were dealing with a budget amounting to \$10 million. on a 50-50 basis; \$5 million from the taxpayers and \$5 million from the Federal Govern-That's the way it had been from the beginning of the Organic Act of 11, 1878 which provided for a 50-50 ratio in defraying the expenses of the District government and that's the way it continued until 1921.

The controversy had reached new heights irritation and vexation in the year of 1915 and Congress found it necessary to appoint a joint select committee to investigate the District-Federal relationship. That committee, in my opinion, conducted one of the most revealing, interesting and historical investigations ever to be held on this subject. The following statesmen conducted the investigation:

Senators: William E. Chilton, West Virginia; Willard Saulsbury, Delaware; John D. Works, California. Representatives: Henry T. Rainey, Illinois (later Speaker of the House); Warren Gard, Ohio; Henry Allen Cooper, Wisconsin.

This was a most distinguished group, all able men enjoying the confidence and respect of their coworkers

Never in the history of this city did there ever appear a more brilliant array of wit-They were not pygmies on stilts who paraded as giants, but giants in intellect well fortified with historical facts and figures and capable of presenting them in a most forceful and persuasive manner.

Some knew the city in Lincoln's day. Some knew the men who composed the Levy Court and the Board of Public Works. Some knew the creators of the Territorial government and the men who created our present municipal structure in 1878.

There were two opposing forces.

One group was led by Henry Brown Floyd Macfarland who had been President of the Board of Commissioners for 10 years. His chief counsel and principal speaker was Col. A. S. Worthington, one of Washington's most noted lawyers, then well over 70 years of

The other group was led by the two civilian Commissioners of the District of Columbia, Oliver P. Newman and Louis Brownlow. Their principal supporters were Justice Siddons who served as a Commissioner of the District of Columbia for some 18 months; and Senator Joseph Blackburn, father and sponsor of the Organic Act of 1878.

The issue was: Shall the half and half principle be repealed?

Now for the big surprise. It was the Commissioners of the District of Columbia who were opposing the 50-50 division of

I quote a few sentences from the long argument of Commissioner Brownlow:

"I do not believe it is possible so to divide those functions of the District government as to say: This service shall be paid for wholly by the National Government; that service shall be paid for solely by the taxpayers of the District and the other services shall be paid partly by the Federal Government and partly by the District government.

"I do not believe it is possible to arrive at an equitable proportion by the process of

treating the holdings of the Federal Government as private property and exacting from the Federal Treasury a contribution which would equal the amount of taxes levied upon the Federal property as if it were in private ownership. Neither do I believe that an equitable proportion can be stated in terms of percentages.

"Under the plan that I propose, the plan that was proposed 40 years ago by Senator Merrill, there would be no contribution of the Federal Government to the expenses of the District of Columbia, but all these expenses would be borne by the Federal Treasury, and the only contribution would be the contribution of the local taxpayers toward meeting the Federal expenses.

"If we could get away from this half-and-half idea, get away from the notion that there is a division of interest in the District of Columbia, get rid of this arbitrary rule, we would have Congress consider the needs of the National Capital as it considers the need of any other national enterprise, and there would not enter into the congressional mind at any time the suggestion that perhaps the Federal legislature was granting an unjustifiable subsidy to a favored municipality."

Justice Siddons, in part, said in reference to the 50-50 principle:

"My own conclusions based upon observation of its operation over a considerable period of years with a brief official connection with the administration of District affairs as a Commissioner for some 18 months, is that the repeal of the 50-50 plan is eminently to be desired in the interests both of the people of the District of Columbia and the great legislature which enacts our laws. It has been forever the cause of irritation and vexation. tI has seemed to me that it will never be possible to frame legislation that will really be permanent in its character which proceeds upon the theory of a partnership between the local taxpayers on the one side and the Federal Government on the other. I find no warrant for such conception in the act of 1878 which established the socalled 50-50 principle."

Senator Joseph Blackburn (father and sponsor of the act of 1878 when he was chairman of the House District Committee) served for over 30 years in the House and Senate. He appeared and gave testimony to the point that conditions in 1915 were different from conditions in 1878 and that he was against the 50-50 principle.

The defense of the 50-50 principle was mostly founded on the fear that if it were abolished Congress would not do its duty toward the District.

This great debate started on October 20 and ended November 16, 1915.

The committee rendered a unanimous

report. One of its members, however, Senator John

D. Works, prepared a 20-page report of his additional views which give a very interesting picture of conditions existing here in 1915. In part, he said as follows: "Nothing can be more further from the

truth (that there is two distinct governmental organizations in the District responsible for the District's administration).

"The District is the Capital of the Nation. Congress is by the Constitution given complete and exclusive jurisdiction and control over it. Being exclusive, this power cannot lawfully be delegated to another municipal organization or body. In fact, none of the jurisdiction or power has been delegated to the District of Columbia.

"It is a nominal municipal corporation only, without officers, without authority, and without any function whatever to perform as such. The so-called District officers are appointed by and are in fact the officers of the National Government. It can make no laws

but is governed wholly by laws enacted by Congress. Its treasury has no existence in fact. It has no money and no power to collect any. Its nominal officers, who are in fact officers of the National Govrenment, are only instruments of the Government for the levying and collection of taxes from property owners within the District. It cannot make appropriations or pay any of its expenses. The money collected as taxes, from property owners is not paid into the treasury of the District, because it has none, but into the National Treasury. It is not paid out by the District, but by the Treasurer of the United States upon the order of Congress.

"The title to some of the property in the District is held in its name, but the property belongs to the Government and is held by the District as a mere naked trustee with-

out power or control over it.
"In short, the nominal municipal corporation of the District of Columbia is a mere shell, without any authority, power, or responsibility, and without any of the attributes or functions of a municipal govern-It is worse than that. It is a delusion and a snare.

"It has led the people of the District to believe that they have a local government that is some shield and protection to them as against the power of Congress, and at the same time has led some Members of Congress and people outside of the District to believe that the National Government can divide the responsibility of maintaining, building up, and beautifying its own Capital with such a local government. The situa-tion is wholly misleading and hurtful.

"The District of Columbia never has been liable for any proportion of the expenses of the District and never can be, properly.

"Its nominal officers, who are in fact officers of the Government have collected taxes from private individuals within the District and paid them into the National Treasury without any responsibility or liability of any kind on the part of the District as a municipal power or entity. Obviously, therefore, the real and only possible question is not what the proportion of the expenses of the District shall be paid by the District of Columbia, but what proportion of such expenses to be paid by the National Government shall be raised by taxation of the privately owned property in the District."

The full committee reported, in part, as

"We find after a most careful consideration of all the evidence and circumstances as shown to exist at this time that there is no reason for any arbitrary rule of proportionate contribution for the expenses of the District of Columbia by the residents thereof and by the people of the United States who reside outside the District of Columbia; that the correct rule should be that the responsibility in taxation of the residents of the District of Columbia be as fixed and certain as the responsibility of the residents of other American cities comparable with the city of Washington, that with the payment of such taxes as may be equitably and properly assessed against privately owned taxable property, the financial responsibility of the residents of the District should be concluded; that the present assessment valuation of privately owned real estate in Washington is fair and reasonable; that the sum of money collected as such taxes be paid into the Treasury of the United States there to be incorporated into a trust fund for the benefit of the District of Columbia, and the revenues thus collected be expended in the District of Columbia, and for no other purpose; that the United States pay from its moneys all the balance of whatever sum is deemed necessary to appropriate for the proper municipal ex-penses of the District of Columbia after consideration of the reports and estimates of the Commissioners of the District of Columbia

and the needs of said District; and as a conclusion, which should be of the greatest weight, we urge upon Congress that its appropriations for the expenses of the District of Columbia should always be in such sum as will not only continue the city of Washington and the District of Columbia in every respect as the splendid and beautiful central residence of this great Nation, but also cause it to become and be forever maintained as a model for all the cities of the

What more could the Congress seek? It had a most distinguished joint committee and a thorough investigation. It had a unanimous opinion. Why not eliminate this irritation, this endless controversy?

The Commissioners should give the greatest city council on earth their best thinking as to the needs of the city without reference to funds. The Congress, which is exclusively responsible to all the people, can determine each year, if necessary, the fairness of our taxes and then appropriate for the kind of a city it wants.

Anything other than this is pure fiction.

## Prospects for Expansion of Pulp Industryin Pacific Northwest

EXTENSION OF REMARKS OF

## HON. RICHARD L. NEUBERGER

OF OREGON

IN THE SENATE OF THE UNITED STATES Tuesday, June 9, 1959

Mr. NEUBERGER. Mr. President, many of us from the Pacific Northwest look forward to the establishment in our region of a great pulp and paper industry to utilize scrub-timber species which are not presently being tapped.

For example, great blocs of timber on the Klamath Indian Reservation are presently for sale, on a sustained-yield basis. It is our hope that a pulp industry can thus be established which will stabilize sawmill and lumber production.

An example of what a thriving pulp industry can mean to an area was presented in the New York Sunday Times of June 7, 1959, in an article describing the expansion in northern British Columbia, in Canada, of activities of the Columbia Cellulose Co. near the seacoast community of Prince Rupert. I myself have visited this operation personally with Mrs. Neuberger. We have seen it bring prosperity to an area a thousand miles north of Portland, Oreg. We recommend it as an example to our own State of Oregon and to the neighboring State of Washington.

I ask unanimous consent, Mr. President, that the article from the New York Times of June 7, by John J. Abele, entitled "New Roads Spur Timber Project," be printed in the Appendix of the

There being no objection, the article was ordered to be printed in the RECORD, as follows:

NEW ROADS SPUR TIMBER PROJECT-4.5 MIL-LION PROGRAM GIVES ACCESS TO RESOURCES OF UPPER BRITISH COLUMBIA

#### (By John J. Abele)

Tall timber is where one finds it. If it happens to be in far northern British Columbia, 600 miles north of Vancouver, it takes

a bit of doing to convert the timber into useful products.

That has been the experience of the Columbia Cellulose Co., Ltd., which recently began a log drive down the Nass River, one of Canada's longest rivers.

The company's logging crews sent rafts of spruce, hemlock, and balsam, each carrying about 1 million board-feet of timber, on the way to the company's pulp mill on Watson Island, near Prince Rupert, 100 miles away. There they will be converted to pulp, which will be converted later into synthetic fibers and plastics.

The start of the log drive represented a major achievement for Columbia Cellulose, an affiliate of the Celanese Corp. of America. It has been carrying out an extensive \$4,500,-000 road-building program over the last 2 years to gain access to the vast timber resources of upper British Columbia.

Columbia Cellulose has a perpetual forest management license for 750,000 acres of timberland in the area, a tract about the size of Rhode Island. The timber is being cut on a sustained yield basis; that is, growth of new timber equals or exceeds the amount harvested. The long-range nature of the proposition is indicated by the fact that the growing cycle for the trees there is 80 to 100

#### ROADBUILDING BENEFITS

Aside from assuring the Prince Rupert mill of regular supplies of pulpwood, the roadbuilding program has had a number of side effects. These range from the prospect of a land route to lower Alaska to more stable lives for members of the company's logging crews. It also has provided access to civilization for the few settlers of the region, who formerly fished or farmed in near isolation.

The road program also has extended the working season in the vicinity, since it permits access to areas that can be worked only in certain seasons. Some sections are too swampy in summer but can be worked in winter when they freeze. Others are snowbound in winter but can be worked in summer. According to T. M. Beaupre, president of Canadian Cellulose, crews can now operate the year around, with practically no loss of work because of weather conditions.

The Prince Rupert mill turns out about 400 tons of high-grade pulp a day. It is shipped to the Edmonton, Alberta, plant of the Canadian Chemical Co., Ltd., another Celanese affiliate, and to Celanese plants in this country. Part of the production is sold to other processors and to export markets.

Columbia Cellulose entered the region about 12 years ago. Logging operations began 2 years later in preparation for the opening of the pulp mill. At first, timber harvests were confined to coastal areas. Then the crews moved up the valley of the Skeena River to Terrace, about 100 miles from the coast, with the timber being shipped back to Prince Rupert by rail.

In time, however, the company found it necessary to begin cutting on the larger tracts to the north. The road-building program began in earnest with a road from race to the Nass River, 80 miles away, which had to be good enough for trucks, cranes and other heavy-duty logging equipment. It is one of the best in the territory.

So far, Columbia Cellulose has built about 125 miles of main roads and branches and about 200 miles of access roads to timber stands. Much of the roadway passes through rugged beds of centuries-old lava flows, which had to be chopped away and the rocks used for fill for road embank-The main road reached Aiyansh, an Indian village on the Nass, last fall and logging operations began in order to have timber ready for the start of the 6-month driving season in May.

From Aiyansh, the road will be extended south 20 miles to tidewater. Then it will push northward up the valley of the Nass River. Unlike the more shallow-banked Skeena, the Nass affords good floating conditions for logs. It takes the rafts about 3 days to reach Prince Rupert, where they are sorted, cataloged and stockpiled.

Mr. Beaupre says the company has no idea of how many miles of roads it will have to build to exploit fully the area. "Our license is in perpetuity and we'll be building roads in perpetuity," he comments.

#### ROADS A BOON

The logging roads have been a boon to the Indians and farmers who live in the area. They formerly had to make arduous overland or water journeys to reach Prince Rupert. Now, in newly acquired cars, they make the trip in a few hours.

The northward march of civilization also is having a profound effect on the character of logging camps. In the old days many loggers spent the winter in Vancouver and other coastal towns, drinking up their summer wages. Now, most of the loggers are settled family men who go home for dinner each night. Instead of rough bunk houses, they live in neatly tended homes, whose diaper-be-decked wash lines are symbols of the new domesticity.

The company welcomes and encourages the family-type logger. He is assurance of a steady labor supply and also spares the company the difficult and costly job of recruiting out-of-town loggers and transport-

ing them to the cutting sites.

## Action of Polish-American Congress of Eastern Massachusetts

EXTENSION OF REMARKS

## HON. WILLIAM LANGER'

OF NORTH DAKOTA

IN THE SENATE OF THE UNITED STATES

Tuesday, June 9, 1959

Mr. LANGER. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD, a document indicating recent action taken by the Polish-American Congress of Eastern Massachusetts.

There being no objection, the document was ordered to be printed in the RECORD, as follows:

#### CASE FOR POLAND

The Polish-American Congress of Eastern Massachusetts held a patriotic meeting in historic Faneull Hall in Boston, Mass., commemorating the adoption of the third of May Constitution of Poland. This bill of rights, proclaimed in 1791, was the first democratic constitution to be adopted by any European nation. A glowing tribute was paid to the authors of that constitution and to Poland. Realizing the present tragic national and political situation of Poland, the assemblage unanimously voted that:

Whereas the United States of America and the Western Powers agreed to come to the defense of free Poland in 1939; and

Whereas at no time was there a question that this aid was only against Germany; and

Whereas this did not exclude the defending of Poland against Russia; and

Whereas Stalin's cunning and treacherous maneuvering had confused the West so as to have the Western Powers thrust aside into oblivion the cause of free Poland; and

Whereas Poland was betrayed by her allies, who consented to cede to Russia half of Poland's territory and place the rest of that country under the occupation and domination of the Soviets; and

Whereas Poland lost more than 6 million people on the battlefields, in gas chambers, and forced labor camps and in the prisons in Germany and Russia Siberia:

We therefore call upon the United States of North America and the Western Powers to liberate Poland from foreign domination as solemnly promised in 1939; and

We further ask that our country and the Western Powers recognize the present boundary line between Poland and Germany as permanent, and the Oder-Neisse border as inviolate; and

We also demand the return of the territories taken by the Soviets in 1939 and which were ceded by the Yalta agreements.

We finally plead that inasmuch as the Western Powers are responsible for the presence of the Russian troops in Poland, that they request that the Soviet troops be withdrawn from Poland immediately.

Democratic Poland has faith in America. Poland places her hope in the leadership and statesmanship of the United States of Amer-

ica.

JOHN J. TWAROG,
President, P.A.C., City Councilor,
Salem, Mass.
Rt. Rev. Ladislaus A. Sikora,
Honorary President, P.A.C.
JOHN SIDERSKI, Secretary, P.A.C.

## Address Delivered by Mrs. Katie Louchheim, Vice Chairman, Democratic National Committee

EXTENSION OF REMARKS

## HON. HUBERT H. HUMPHREY

OF MINNESOTA

IN THE SENATE OF THE UNITED STATES

Tuesday, June 9, 1959

Mr. HUMPHREY. Mr. President, Mrs. Katie Louchheim, vice chairman of the Democratic National Committee, delivered a message to a luncheon sponsored by Colorado's Jane Jefferson Clubs on May 16, 1959, which summarized concisely why so many of us are Democrats—and proud to be Democrats.

I ask unanimous consent that the text of Mrs. Louchheim's address be printed in the Appendix of the RECORD.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

SPEECH BY MRS. KATIE LOUCHHEIM, WASHING-TON, D.C., VICE CHAIRMAN, DEMOCRATIC NA-TIONAL COMMITTEE, AT THE FOURTH ANNUAL SEMINAR LUNCHEON OF COLORADO FEDERATION OF JANE JEFFERSON CLUBS AND WESTERN STATES DEMOCRATIC CONFERENCE, COSMO-POLITAN HOTEL, DENVER, COLO.

Every time I attend a Democratic gathering like this one, I think how lucky we are. We have everything a political party could possibly ask for:

We have ideas on any subject you want to mention from the cold war to atomic testing, to water conservation, to urban redevelopment to space exploration.

We have outstanding leadership beginning with that priceless diamond jubilee veteran Harry S Truman, who is a matchiess blend of wisdom and fighting spirit. We have a courageous and farsighted national chairman, Paul Butler, and more presidential timber than we can hope to chop before July 1960.

We also have what it takes to win. We have what the Republicans lack—and even admit they lack—and that is organization. Democrats are thriving from Florida to Alaska and from Maine to Hawaii. But most certainly the meeting here this weekend focuses attention on a particularly robust and progressive portion of our party—the increasingly important Western States.

Here in the West you delivered the knockout punch to the Republicans last fall. I don't think they've found out yet what hit

them.

It is only in recent weeks that they have been creeping out of the rubble of defeat and have begun to make noises like the living.

BARRY GOLDWATER—who is just about the only Republican west of the Mississippi who wasn't buried—says this was no earthquake, it was part of a long term trend for farmers, white collar workers, main street businessmen and even college graduates to switch from the GOP to the Democrats.

Now trend is a nice safe-sounding word. It sounds like you could stop a trend or start one yourself. It sounds like a do-tryourself trend kit would be on every Republican's list for Santa Claus. But, then, I guess the sole Republican survivor has to say something.

Anyway, the Republicans have set out to change their image. They have set up a committee on program and progress. This is like that scene in Alice in Wonderland where the Queen of Hearts orders her servants to paint all the white roses red.

There are a few Republicans who want to change more than the image. Red paint isn't enough for them. They want to rebuild. With all the conflicting opinions among the Republicans, what they build will probably turn out to look very much like a totem pole.

Like the primitive tribes who first built totems, these poles are designed to frighten away something. In this instance, it's bound to be the voters.

I mention all this because the contrast between the parties is so striking. I also mention it because in 1959 the Republicans do not look like very formidable adversaries—but watch out.

We could wind up like the zookeeper who, after years of effort, managed to cross a tiger and a parrot. Asked what had come of such a combination, the zookeeper replied shakily, "I don't know, but when he talks we listen."

I don't know what the Republicans may be building or painting or crossbreeding but I doubt if any of us want to be forced to listen for another 4 years

listen for another 4 years.

Here in Colorado, I see no signs of relaxation. All the outposts seem to be manned—or more important "womanned."

For all my years on the job, I have been a greaat admirer of the Jane Jefferson Clubs of Colorado. Here in this State the women's clubs have, in the span of 57 years, accomplished what often is never achieved. The women of Colorado have made the Janes an essential part of the party organization.

We have an alert Democratic businessman in Washington who's in the moving business. His name is Smith. Every hour on the hour he advertises on radio and TV—"Don't make a move without calling Smith." Here in Colorado no one—that is no one who is anyone in politics—makes a move without calling the Janes.

The Janes have long since come out of the political kitchen—thanks to their leadership, they're sitting at the policy table. I've always feit that a large part of the Jane Jefferson Clubs' success came about because of the excellent leadership available to the individual clubs as well as statewide.

And I think something might be said for "followership" in the Jane Jefferson Clubs and among Democratic women in general. There is nothing sadder in any organization than to find you have too many chiefs and

too few Indians. Because you're all politicians, I don't have to tell you what happens then.

Followership is a talent in itself. Without it there can be no successful organization of any kind. Every successful organization finds ways to reward followership as well as leadership.

I believe we Democrats are getting to be experts at recognizing followership. The Western States Conference is one good example, and the Jane Jefferson Clubs are another. They are organizations in which everybody can share by contributing ideas, opinions, and political work of all kinds.

I'm proud to be here today as a speaker at the Janes' seminar, among so many distinguished speakers. In choosing a topic, I tried to select one worthy of the occasion. And I decided to talk about the two questions most often asked of a person in my position. They are: "Why are you a Democrat? and How are the women of the Democratic Party doing?" I think they are both important questions to answer.

I suspect every one of us has no less than a dozen reasons—many of them highly personal—for belonging to the Democratic Party. I'm going to limit myself to 10.

1. The first good reason for being a Demo-

 The first good reason for being a Democrat is that the Democratic Party always' stands for the humanitarian point of view.

When we are for unemployment compensation it is not because we think of this as a way of circulating money—it is because it will help people. When we are for public housing it is not because we see a way to get more building contracts let—it is because it will give more people a better place to live. When we want to build a dam, it is not because we want somebody to make money selling the power that can be generated on the site—it is because it will prevent floods and hardship, because it will prevent floods and hardship, because it will provide electricity to make life easier for all kinds of people in cities and on farms.

The humanitarian point of view is our rule of thumb, and it is likewise pretty sound economics. Happy and prosperous people create markets. Therefore, the first question a Democrat asks is: "Whom will it help?" The first question a Republican asks is: "What will it cost?" That's the main difference between the parties and if it were the only one it would still be enough to keep most of us firmly in the Democratic Party.

2. This preoccupation with people leads us to the second reason for being Democrats. Not long ago I had the happy privilege of attending a testimonial dinner for Paul Butler in his home town of South Bend, Ind. Among the airport greeters was an important local businessman. He was our escort on the journeys in and out of town. Walking into the hotel he dropped his chamber of commerce air and said, "You know, I'm on hand to meet Republicans as well as Democrats—I have to be, but the Republicans never warm up. Democrats are different—even strangers are like old friends. I always wonder why."

So I told him why. You and I know it is because Democrats like people, all kinds of people—big shots and little shots and inbetween shots.

3. A concern for people is bound to generate ideas—new ideas, bold ideas. In this respect the Democratic Party literally holds all the patents.

Competition from the Republicans is never going to be very keen judging by a definition of regular and modern Republicans that is currently making the rounds. In case you haven't heard it, a regular Republican, it is said, is a person who does not believe in doing anything for the first time. A modern Republican is a person who does believe in doing something for the first time—but not now

4. We hear a lot these days from the Republicans about fiscal responsibility. And here is my point four for being a Democrat.

The Republicans talk about a balanced budget, a sound dollar and a stable economic future as if they had a monopoly on these worthy objectives.

What concerns Democrats—and most ordinary Americans—is not whether these goals are good but how we achieve them. A designation of where the finish line of the race lies does not put you across it.

When Democrats tackle fiscal problems they do not delude themselves by anticipating revenues for a given period and then cutting back vital measures to fit. Rather we want to expand the economy, thereby increasing Federal revenues to a point where we can provide for the schools, airports, and other development needed and still keep the public accounts in equilibrium.

The Republican approach to these problems is what I have always called penny wise and people foolish.

5. The fifth reason for being a Democrat is that we can be proud of the kind of leadership we have had during the century and a half our party has been in existence.

It is possible to imagine a Jefferson, a Jackson or a Wilson being as much a part of our party today as any of us. In every generation there have been outstanding leaders and if anything we are getting richer in leadership.

Today Democratic leadership spans the better part of a century. In the Senate we have both the oldest and the youngest Senator with nearly 60 years between THEODORE FRANCIS GREEN and FRANK CHURCH. In both youth and age we have men of great ability. Tonight you will hear one of the most remarkable men of the century—Harry Truman, who combines the old and the young.

I understand that this year Colorado celebrates its 100th anniversary. I'll be willing to bet that when it celebrates its 200th, people will still be talking about the irrepressible man from Missouri.

Next summer in Los Angeles we will be faced with the very exacting job of choosing among a great wealth of leadership for just one presidential candidate. I doubt if we've ever in our history as a party had such an embarrassment of riches. It almost makes you sorry for the Republicans having to choose between just a well-known millionaire and a well-known Cocker Spaniel fancier.

6. Certainly somewhere among the reasons for being a Democrat is the fact that we are a national party. As of today there is only one State in the Union (New Hampshire) where we haven't a Democrat on the congressional delegation, and only four States where there isn't either a Democratic Senator or Governor in office. And we'll take care of these in 1960.

Just the other day I read a newspaper story saying that it is absolutely impossible for the Republicans to regain control of the Senate in 1960. The story went on to point out that there would be 22 Democratic seats up, but that 11 of them would not really be contested. That would leave 11 seats that might be contested but most of them were so strongly held there wouldn't be much more than an outside chance of taking any of them.

On the other hand, there will be 11 Republican seats up in 1960 and practically every one of them could conceivably go Democratic. This includes one in Colorado and you and I know how that will go. You read this sort of story every time there is an election. Because the Republican Party is not really a national party it always starts with a handicap.

Because the Democratic Party is a truly national party, it makes very little difference where you live or where you move, you can be sure your vote will count. These are the big reasons for being a Democrat but there are some minor ones.

7. For instance, among Democrats there is a will to win that can't be matched. The landslide last fall brought into office a good many Democrats who had been trying for a long time to get elected. There was one Ohio congressional candidate in particular who was making his fifth try for a House seat. He took his cows to county fairs because he was embarrassed to go just as a candidate. Of course, after all these years, the Republicans were pretty well acquainted with him and they began to refer to him as a man with "detestable fortitude."

Now he's in office, I suspect it may take some "detestable fortitude" on their part to get him out.

8. Another thing I enjoy about being a Democrat is being surrounded by people who have a sense of humor. We can always laugh at ourselves.

Will Rogers once said he didn't belong to any organized political party, he was a Democrat.

Not long ago I heard a seasoned Democratic politician remark, "Democrats always put up a good fight in an election and just as good ones between campaigns. When we run cut of Republican adversaries, we can usually make do by picking on each other."

And finally, I quote a promiment Member of the Senate who likes to say: "There are two times to be generous in politics—when we win and when we're beaten. In one case there's nothing more to gain and in the other there is nothing more to lose."

As long as we can laugh at ourselves we will be protected from indulging in any outrageous political excesses.

9. Opportunity is never lacking in the Democratic Party. It is this wealth of opportunity that is particularly attractive to young people. Early this spring we set out to find the youngest woman in State legislatures. Connecticut immediately responded with a representative 25 and a senator 28. In no time at all the State of Washington countered with a representative 22. We're not about to close the books.

Not only is the Democratic Party the party of opportunity for young people, it is the party of opportunity for women. And this I would list as my 10th and final reason for being a Democrat.

Democrats have done very well in recognizing women. Women had a voice in the party before they had the vote. We have equal representation on the national committee (but Republican women don't), and we have equal representation on key convention committees.

Democrats have sent more women to the Congress than Republicans. Our score is 37 and theirs is 29. Outside of New England, the Democratic Party puts more women in State legislatures. Last fall we had 18 women running for statewide office on the Democratic tickets and we elected all but 3. The Republicans couldn't match that.

A number of our Democratic Governors have women in their cabinets and in other key posts in many States. Democratic women seem to have no trouble getting on county and city tickets. In fact, we can't keep track of all the officeholders at that level.

These are the 10 reasons why I'm a Democrat. I think they're all good reasons. The final reason brings me to the second question I'm so often asked.

That question deals with our political progress. Just how far, the inquiry goes, have women really progressed? Have they achieved political equality?

My answer is, Yes, we are gaining ground. The distance to equality is always shrinking.

Since both men and women are interested in closing the gap, over the years I have collected some "do's and don'ts" from both sides. For what they are worth, I pass them alone.

The advice men give women goes like this:

1. When in politics, do as the politicians do. Don't expect men to operate by one set of rules while you operate by another.

2. Don't nurse a grudge: never forget a favor—a simple, earthy, political version of

the Golden Rule.

3. Don't underestimate your own abilities. Don't wait to be asked. Getting into politics is like catching a husband—it's all in the illusion of who is pursuing whom.

The advice women give to men goes like

this:

1. Don't lump women. We're people. Some are leaders; others are not. Some want to go to the top; most want no more than to see their candidate win. Yet all women want to make a better world but every one of them has a different way of going about it.

Quit talking about our hats and concentrate on what's immediately under them.You'll discover brains have no sex.

3. Remember in this complex world, we'd like to bear our share of the responsibility.

Working with Democratic women's groups is a pretty fascinating business. You continually witness the political evolution of more and more women from the Parent-Teachers Association to the platform; from the garden club to the gavel holder. They are often reluctant to begin but once they do, they have boundless enthusiasm. It's global, it's even universal,

There's nothing they won't tackle. But it is hardly necessary to say this here. Who else has a better example of women at the summit of political achievement and durability than the Jane Jefferson Clubs?

All I need to say is congratulations, Janes.

Keep up the good work.

#### Grave Threat to Textile Industry

EXTENSION OF REMARKS

## HON. HERMAN E. TALMADGE

OF GEORGIA

IN THE SENATE OF THE UNITED STATES

Tuesday, June 9, 1959

Mr. TALMADGE. Mr. President, the trade and foreign aid policies of the United States with respect to the subsidized exportation of raw cotton and the indiscriminate importation of finished textile goods are jeopardizing the continued existence of the American textile industry and threatening the jobs of the country's 1,919,200 textile workers.

Under present procedures foreign countries can buy surplus American cotton with borrowed American dollars 20 percent cheaper than it sells in this country and, taking advantage of wage rates which in many instances are onetenth or less of the American legal minimum and of virtually nonexistent tariff barriers, undersell comparable American textile products on the American markets. This situation will be materially worsened on August 31 when the export subsidy on cotton will be increased to 8 cents per pound.

A special subcommittee of the Senate Committee on Interstate and Foreign Commerce recently made an exhaustive study of the problem and, in an excellent report, recommended a 10-point program of help and relief for the textile industry. It is my earnest hope that Congress will take affirmative action on these proposals before the close of this 1st session of the 86th Congress.

The grave threat posed to the American textile industry has been graphically described in a recent statement by Hon. J. Craig Smith, president of Avondale Mills. I also treated on it in my weekly column of May 20.

I ask unanimous consent that Mr. Smith's statement and my column of May 20 be printed in the Appedix of the RECORD.

There being no objection, the statements were ordered to be printed in the RECORD, as follows:

AUGUST 31, 1959, WILL BE A CRUCIAL DATE FOR OUR INDUSTRY

(By J. Craig Smith, president, Avondale Mills, Sylacauga, Ala.)

On August 31, 1959, the export subsidy on American cotton will be increased to 8 cents per pound. The American cotton mill then will be in a completely unbearable situation unless at the same time there are definite limits placed on how much of this cotton can come back into the United States in the form of yarn, cloth, and garments.

Up to now, the principal reason our foreign competitors have been able to sell in this market is because of their very much lower wage rates. The products which have come in were those which had a high percent of labor in their total cost, such as fine combed goods and garments. With an 8cent cotton subsidy, the foreign mill will be able to ship heavy goods such as sheeting and denim into the United States based solely on the saving they will have in their cotton cost.

Anyone who feels that I may be overstating this situation need only look at the published figures of American textile companies, including Avendale. Our cotton cost is 50 percent of our selling price, on the average. This would be somewhat higher in our coarse yarn mills and somewhat lower in a mill like Birmingham. An 8-cent subsidy on cotton is equal to 25 percent of the cotton cost. With cotton being 50 percent of the selling price and with the foreigner having a 25-percent advantage in the cost of his cotton, it doesn't take a mathematical expert to figure that the foreigner can have a 121/2-percent lower selling price than the domestic mill. The advantage he has in respect to his lower wage rates is an additional advantage. The tariffs, which are based on the value in the exporting country, have been watered down to a point where they are hardly worth talking about. What little tariff is left doesn't come anywhere close to offsetting the wage advantage, so the cotton subsidy will be a net advantage to the foreign mill.

This subsidy to the foreign mill is being paid for by the American taxpayer, including those of us who look to the textile industry for our livelihood. To permit goods made from this subsidized cotton to come back into this country and take our markets is so completely unfair and unreasonable that we have difficulty getting our fellow citizens to believe that the situation exists. Surely on August 31, when the subsidy is to be substantially increased, limitations will be placed on how much can come back in. this is not done, it will not only wreck our industry but in the long run will defeat the purpose of the cotton subsidy, which is to reduce the surplus of raw cotton in the United States. Obviously, no reduction in raw cotton surplus will take place if the subsidized cotton exports are permitted to displace bales of cotton which would otherwise be used in American mills.

HERMAN TALMADGE REPORTS FROM WASH-INGTON

No other industry in the history of the world ever has been forced to compete for its existence under handicaps like those imposed on the American textile industry by this country's trade and foreign aid policies.

As the result of those policies, the industry's overseas competitors have the staggering advantages of being able to get their capital from the U.S. Treasury in the form of foreign aid grants and loans, to buy American surplus cotton with borrowed American dollars 20 percent cheaper than it sells in this country, to sell their finished products back to the American Government through so-called three-way deals under the foreign aid program, to learn American trade secrets and production know-how merely by asking, and, because American tariffs and quotas have been reduced so drastically, to undersell comparable American products on the American markets.

Those advantages are compounded by the facts that wage scales in many of the competing countries, particularly in the Far East, are one-tenth or less of the American legal minimum and that there are no bars in those countries to the imposition of working conditions which would be illegal

here in the United States.

It is small wonder in the light of those facts that the American textile industry has lost markets equivalent to 10 percent of the national production and that, since 1947, 717 textile mills have closed their doors and 345,000 textile jobs have been discontinued. It is a tribute to the vitality of the industry that its losses have been contained within those bounds.

From the things which have been done to the industry in the name of global goodness, it is no exaggeration to conclude that it is the actual, if not officially expressed, policy of the Government of the United States that the American textile industry is expendable and should be forced to help finance its own liquidation.

Fortunately, this plight has received recognition in a study recently completed by a Special Subcommittee of the Senate Committee on Interstate and Foreign Commerce which, in its report, recommended a 10-point program of help and relief for the textile industry. Essentially, its recommendations entail more stringent import quotas, faster relief action under the Trade Agreements Acts, a better tax break particularly as regards depreciation and elimination of the two-price system on American cotton.

It is my resolute conviction that the American textile industry, as well as all other domestic industries, has a right not only to expect but also to demand that both Congress and the executive branch by statute and policy give it and the jobs of its workers effective protection from unfair foreign competition. For the sake of the one out of every three Georgians employed by the textile industry, it is my hope that Congress will act to give it relief and protection at this session.

## Commentary by Walter W. Heller on the Fortune Tax Series

EXTENSION OF REMARKS

## HON. EUGENE J. McCARTHY

OF MINNESOTA

IN THE SENATE OF THE UNITED STATES

Tuesday, June 9, 1959

Mr. McCARTHY. Mr. President, I ask unanimous consent to have printed

in the Appendix of the RECORD a commentary on the Fortune tax series by Walter W. Heller of the department of economics, University of Minnesota.

There being no objection, the commentary was ordered to be printed in the

RECORD, as follows:

COMMENTARY ON FORTUNE TAX SERIES 1
(By Walter W. Heller, department of economics, University of Minnesota)

On problem after problem, the Fortune tax series peels off the layers of nonsense and confusion that have been wrapped around the great tax issues of our times. One need not agree with all of Fortune's analysis and recommendations to be grateful for this contribution. My comments here focus on (1) Fortune's tax erosion control program; and (2) a proposed Federal income tax credit to undergird State-local taxing efforts.

#### EROSION CONTROL

Fortune makes a courageous and convincing case for eliminating most special tax privileges and sharing the resulting revenue bounty with taxpayers-at-large. (Yet, the June Reader's Digest, by selective condensation—for example, by alloting 2 paragraphs to Fortune's 5 on the "pleasant one-half of tax reform" and 2 also to Fortune's 32 on the "tough-half"—manages to make the series' first article sound like just another broadside against high tax rates.)

The logic of restoring the tax base and cutting rates is inescapable. It makes good economic sense: The economy will deliver more goods and grow more rapidly if investment and manpower can follow the straight and natural path of least economic resistance instead of today's tortuous and unnatural

path of least tax resistance.

It makes good administrative sense: costs of compliance and enforcement will shrink.

It makes good equity sense: Fortune's program would strike a telling blow for equal treatment of equals in both income and estate taxation (though, contrary to Fortune's prescriptions, some of the revenue gain should be shared with low-bracket tax-payers since (a) they will be hit by many of the base-restoring provisions; (b) their total tax burdens, relative to income, have apparently been growing faster in recent years than those of the higher income groups; and (c) their support is needed to give the pro-

gram a chance for adoption).

But does it make good political sense? The pain attached to Fortune's tax reform program is so great that it requires nothing less than making political water run uphill. It requires, first, that the White House dramatize the general public interest in a restored, lower-rate income tax and lead the battle against the powerful coalition of sheltered special interests. It requires, second, that the Congress (a) reject the "most-favored-taxpayer principle." which a concession to one group tends to be extended to all similar groups, and (b) reverse the trend toward converting its taxing committees into second-structure appropriations committees, to which special-interest groups come for hidden subsidies under the tax laws when they cannot (or would rather not) get open subsidies from the budget authorities. It requires, third, that some way be found to mobilize the hitherto diffused interest, and amplify the hitherto muted voice of the taxpayer at large, perhaps by a prestige-packed National Tax Commission cutting across both party and economic lines.

Fortune has done a yeoman job of defining and defending the public interest in tax

reform. But one of democracy's abiding problems still remains as a challenge to Fortune's talents: how to make the political payoff for vigorously pursuing the general interest greater than the payoff for giving in to special interests.

#### A FEDERAL INCOME TAX CREDIT

In highlighting our much-neglected \$46 billion State-local revenue system, Fortune advocates that all States adopt both sales and personal income taxes.

Unlike the income tax, the sales tax does not run athwart the constitutional barrier of State uniformity clauses and the economic barrier of interstate competition for industry and wealth. Rather, inequity is the cross it bears. But the traditional (and in my opinion, justified) opposition to sales taxes will diminish (a) as economic growth puts poverty in the limited perspective to which Galbraith's affluent society has somewhat prematurely relegated it, and (b) as the States learn to build personal credits into the sales tax to temper its impact on low incomes and large families (e.g., a \$10 credit per person, paid or credited through the income tax mechanism, would exempt \$500 of purchases per capita under a 2-percent sales tax).

No such open road faces the State income tax movement. It bears the full brunt of taxpayer threats to seek haven in friendlier tax territory. This process of playing one State off against another tends to undermine the financial base of responsible self-government closest to home, striking hardest at the very tax which responds most readily to economic growth. (Netzer's figures show that for every 1 percent increase in the gross national product, State personal income tax revenues rise 1.7 percent, as against only 1 percent for the sales tax.)

Deductibility under the Federal income tax serves as a partial shock-absorber for State income taxes and, as Fortune argues, should be retained. But note that its protective impact is greater, the wealthier the State: The higher the brackets a State's taxpayers are in, the larger the percentage of the State income tax burden that is exported to the Federal Government.

To redress the balance and put a non-competitive floor under State individual income taxes, Congress should enact a Federal income tax credit. Like the existing Federal estate tax credit, it would allow individuals to pay part of their Federal tax with receipts evidencing payment of State taxes. The average ratio of State to Federal collections in the 31 income tax States is 8 percent (ranging from a low of 1.4 percent in Tennessee to a high of 28.7 percent in Oregon, in 1958). A credit averaging 8 percent would cost the Treasury just over \$3 billion annually.

To give a greater proportionate credit to the lower incomes and the poorer States calls for a negatively graduated credit; perhaps 15 or 20 percent on the first \$100 of tax, 10 percent on the next several hundred, and only 2 or 3 percent at the top. That at least a moderate interstate equalizing effect could be achieved is suggested by the following examples of variation in average tax liabilities on taxable 1956 Federal returns: California, \$659; Delaware, \$1,066; Kansas, \$416; Mississippi, \$295; New York, \$657.

The crediting device represents a paradoxical combination of freedom and coercion, Its basic purpose is to protect the power of the purse underlying State sovereignty and local independence. Moreover, Federal credits leave ample room for variations in State definitions of income, exemptions, and tax rates. Yet, the credit would virtually force 17 States, with over one-third of the Nation's population, to adopt at least minimum, credit-absorbing income taxes. It would also be understandable if Congress were to make

State acceptance of uniform rules for taxing interstate business income a condition of access to the credit privilege.

On balance, the Federal credit offers the States far more fiscal emancipation than tax bondage. Like Fortune's Spartan prescription for Federal tax reform, it makes good sense in economic, administrative, and equity terms. Whether it makes good political sense, only time will tell.

## Christian Science Monitor Supports Federal School Aid

EXTENSION OF REMARKS

## HON. RICHARD L. NEUBERGER

OF OREGON

IN THE SENATE OF THE UNITED STATES

Tuesday, June 9, 1959

Mr. NEUBERGER. Mr. President, one of the most thoughtful and informative newspapers in our Nation is the Christian Science Monitor. The Christian Science Monitor for June 5 has pointedly asked, in an editorial, "Where Is Federal School Aid?"

The editorial indorses the Murray-Metcalf bill, which also has the support of the National Education Association. The Monitor emphasizes that the Murray-Metcalf bill would help to bring reality to the recent recommendations of the Science Advisory Committee appointed by President Eisenhower.

I ask unanimous consent, Mr. President, that the editorial from the Christian Science Monitor be printed in the Appendix of the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

#### WHERE IS FEDERAL SCHOOL AID?

The President's Science Advisory Committee, as its name would suggest, is urging in its significant report what should be done to bring American schools up to the standards required by an age of science. How its recommendations bear upon some of the other tasks Americans have long assigned their schools—such as general education of those without the aptitude or interest for "intellectual" subjects—warrants separate discussion. But its admonition that the Nation must double its annual investment in education bears on any index of the Nation's present effort.

The index most readily related to national concern is the interest in Federal aid to education. Last session Congress enacted the National Defense Education Act comprising some excellent features, but did not complete the job of appropriating the funds authorized. Two months ago the House restored all of the \$50 million its Appropriations Committee cut from the authorization.

There are two school bills now receiving serious congressional consideration. One is the administration's bill to take care of the omission from the present act of Federal aid to classroom construction. It would do this by way of helping school districts float and retire construction bonds on a need-and-effort basis. The Federal commitment would be \$2½ billion over 25 years.

The other is the Mansfield-Metcalf bill, patterned after proposals of the National Education Association. This measure frankly rejects financial limitations and ap-

<sup>&</sup>lt;sup>1</sup>Commentary invited by Fortune magazine for publication in its July or August

proaches the issue on the assumption that the Nation surely can spend as much for education as for cigarettes and beverage alcohol. It would leave to each State whether to spend its allotment on buildings or teachers' salaries. It would begin distribution on a school-age population basis, then move to allotments related to a "national effort index," reaching a rate of some \$4 billion a year—indefinitely.

Congress, apparently, is looking with favor on a somewhat cutdown version of this bill. And if it would encourage local effort—as it seems designed to do—instead of discourage it, the bill sounds a note of determination that might strike the needed spark.

## Participation of the Individual Businessman in Politics

EXTENSION OF REMARKS

## HON, PAUL H. DOUGLAS

OF ILLINOIS

IN THE SENATE OF THE UNITED STATES

Monday, June 8, 1959

Mr. DOUGLAS. Mr. President, I ask unanimous consent to have printed in the Appendix of the Record an address entitled "The Participation of the Individual Businessman in Politics," delivered by Arnold H. Maremont, chairman of the board of the Allied Paper Corp. and president of Maremont Automotive Products, Chicago, Ill., before the American Management Association at its east coast general management conference on May 21, 1959.

Mr. Maremont is one of the ablest and most progressive-minded businessmen of the Middle West. He has made a great business and industrial success. He is also very much of a progressive in pelitics and economics. I believe that the major sections of this address which I ask to have printed will command the attention of a large number of people.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

PARTICIPATION OF THE INDIVIDUAL BUSINESS-MAN IN POLITICS

(An address made before the American Management Association at its east coast general management conference on May 21, 1959, by Arnold H. Maremont)

Mr. Chairman and members of the American Management Association, the Greeks had a word, a name for those who declined to take interest in the politics of their city. That word was "idiot."

In ancient Athens, the Scythian bowmen were sent through the streets to round up the citizens and compel them to participate in the political affairs of the city.

the political affairs of the city.

In Switzerland, fines are levied on those who inexcusably avoid exercising the franchise.

I can neither levy fines nor exercise compulsion, but I do hope to contribute something to the educational process here today.

As a businessman who has maintained an active interest in politics since 1933, but who has never run for public office or been appointed to one, I do want to suggest some facts.

The essential character of a citizen is to be free and equal; being free before the law,

he is not subject to others' whims; being equal he has a voice in his own destiny. This, as the great English student Lord Bryce said, carries a responsibility for political activity: "As he is to profit by the safety and prosperity the community provides, so he (the citizen) must seek its good and place his personal will at its disposal. Benefit and burden, power and responsibility, go together."

I favor the widest possible participation in politics; it is when politics becomes the province of the elite few that I fear for the

safety of our system.

My purpose today is to seek to convince you that this present campaign to inject business as such into politics is ill-conceived, extremely dangerous, a violation of our sound democratic system, and—even worse—perhaps illegal. It seems to me, from my reading of many editorials, speeches, articles and books, that these pressures are leading us not into clear light but into a murky, grey area which may produce a catastrophe rather than the creation of a congenial governmental climate for business. To say the very least, it hardly proceeds the American way, and ultimately, it will cast a Marxist shadow over all.

A corporation is not a political entity; it is a legal entity. It was never intended to be a political entity. It is wholly different from the human entity which is the foundation stone of our Declaration of Independence and Constitution. My reading these documents-particularly sections 8, 9, 10 of article I and all of the amendments-does not find the word corporation once used. Corporations were vested with personality by a twist given to the language of the 14th amendment by conservative majorities of the Supreme Court in their interpretation of the words had state deprive any person of life, liberty, or State deprive any person of law." The terpretation of the words "nor shall any Court, not the Constitution-Supreme makers, said that meant corporations, too.

Let us consider briefly the Marxist implications of business in politics. The materialistic ideology of communism uses economic determinism to interpret all that is significant in life. With this philosophic base, its political framework, designedly, is totalitarian—as it must be in order to direct, shape, and control economic forces. The corporation has a basic and justified economic interest in advancing prosperity, the general welfare of the country, and making profits. It is a large order for any organized activity.

Those who would project the corporation into politics, I submit, are playing directly into the hands of economic determinism. Once you get the modern corporation as such, hopelessly enmeshed in politics, you are well-traveled toward economic determinism and totalitarianism. Inevitably, as in Russia, this leads to totalitarianism, the destruction of free political heritage, prostitution of free citizenship and democratic principles. All of history testifies to this, For this reason, I regard the separation of business, as business, from politics to be as important to our political health as the separation of church from state.

Why do corporations want to engage in political activity?

The first is that the hope of keeping government out of business is illusory, and therefore it becomes necessary to influence government for business.

The second is the sometimes hysterically expressed need for a counterforce to the activities of labor in government.

The frenzied shouting over welfare statism, New Deal, Fair Deal, and other political slogans has drowned out even a whisper about the life-and-death decisions being resolved for all of us in Washington. I should like to raise here several questions which should be answered by those who would involve business institutions in politics.

Under the law it is well established that a corporation cannot do indirectly what it is forbidden to do directly. How then, being forbidden to contribute money to political campaigns, can a corporation legally permit its employees, on company time and paid by company funds, to act as poll watchers, votegetters, precinct captains, and such?

If business gets into politics, as business, how can it prevent the development of those very factions which Madison described in the great 10th Federalist paper—"a landed interest, a manufacturing interest, a moneyed interest, with many lesser interests"—and who would settle the policy contests when all of these interests began their inevitable struggles for supremacy in government?

If a business organization enters the political arena, who chooses the party which will be favored with its support? The directors, the shareholders, the chairman of the Board? Where does it find authority to use shareholders' money for such purposes?

Will not the employees who belong to different organizations, unions, or political parties develop a profound antagonism for the corporation's political activities? Seeing the officers use company funds and time for political action, will they not sharpen their own demands and opposition?

What will be the effect upon the customers of the corporation who again are of many political persuasions, and interests—who are property owners and renters, union members, the white-collar workers, protagonists or antagonists of a myriad of contesting causes and ideas?

Is it inevitable that our heritage of democratic politics be lost while we give lipservice to it and perfect our manufacture of the organizational man?

Mr. George Romney of American Motors recently commented on this problem in strong language:

"We have corporate executives and whitecollar employees who have become political eunuchs and who have substituted corporate citizenship and the hope of economic advancement for their priceless heritage of independent political action."

Andrew Hacker of Cornell University, in his paper on "Politics and the Corporation" says that the corporation has certainly not set out to weaken the foundation of democratic politics, but its growth as the characteristic institution of our time is having this consequence.

Shall we accept the corporation as our characteristic institution and shall we develop a mold which shapes a pallid, faceless human of our middle-class employees, substituting the impersonal corporate interest for the personal interest? I do not believe the problem is that desperate.

I do not believe labor and management are locked in a death struggle.

Management is charged with maintaining maximum earnings, that portion which comes from sales and which is left after all costs are paid out of dollars which the consumer—the third party in the triangle—has spent. We businessmen seem to be doing very well under the competitive pressures, and the fact-finding and regulatory bodies set up to protect consumer, investor, management. Labor is charged with getting the best deal it can on wages and working conditions. That is its job.

I have never heard responsible union leaders argue that labor ought to engage in politics for the purpose of clobbering business. I think that anyone who argues that business must get into politics in order to take a fall out of labor is doing a distinct disservice to himself, his corporation and his country.

Our democratic system protects the individual's right to exercise his franchise freely and secretly. The emphasis is on the human rather than the legal being. vote as humans—not as employer, employee, father, homeowner, renter, taxpayer, or what have you. Classify us as you will, code us, punch us into cards, write us into impulses in Univac—we will emerge as humans, en-joying and exercising our right to be different which is the great force of life as remarked by Michel de Crevecour nearly 200 years ago.

There is the story of Bertrand Russell, one of our most brilliant contemporary philosophers, who was in a plane crash. Nineteen of the 40 passengers were killed in Norway and Russell was one of those who swam through the icy waters to safety.

A reporter asked him: "As the plane was

sinking, and as you were in great doubt about whether you would live of not, did you think about mysticism and logic and philosophy in general?

"No," came the reply. "I thought the water was damned cold."

If you accept my premise that we are all around humans, then we are political humans seeking action through unity of ideals and spirit, not as businessmen, workers, scientists, or as categorized interests. Our responsibility, then, as persons who want to be useful members of society, is to recognize first that politics is power, second that as citizens who can direct that power to the development of the good society, we have a responsibility to help. Power is exercised responsibly through a political party—not through mobs or debating societies.

We must participate as active, responsible, articulate individual citizens. It is not for us to judge from Olympian heights, nor to stand on the sidelines of the human parade shouting "watch those damned radicals go

by," To quote Lord Bryce once more.
"Absorbed in business or pleasure, we think
"Absorbed in business or pleasure, we think too little of what our membership in a free nation means for the happiness of our poorer fellow citizens. The eloquent voice of a patriotic reformer sometimes breaks our slumber. But the daily round of business and pleasure soon again fills the mind, and public duty fades into the background of life."

. Are we willing to engage in politics, rain or shine? Are we going to be an anvil or a hammer, as Goethe once asked?

An Illinois businessman with some experience in politics recently said, quite correctly.

It seemed to me:

"I wonder how many of those who are teaching corporations the facts of political life are now urging their student executives to get up off their hindsides of a nice fall evening and journey down to the candidates' meetings right in their backyard. Politics begins with one's own candidates, at home. If the corporation executives won't patronize their own political meetings, if they fail to set an example for less fortunate citizens, their overall program for political prominence is doomed to failure."

We pride ourselves that we value the individual as a human. We speak endlessly in such words as "freedom," "free enterprise," "free societies." \* \* Yet, withal, we Americans generally maintain a negative attitude toward politics.

Only in America could a great national publication issue regularly through 4 years of a Civil War and never once mention that titanic conflict. Yet this is exactly what happened in the case of a women's magazine between 1860 and 1865.

Nor, apparently, have we changed much in some fundamental particulars. A recent Harvard Business School Club study states

that "there exists a frightening lack of interest in the business community for its participation in the Government service" and when business does take an interest "more and more qualified business men are

serving constantly shorter periods."

The late Justice Arthur C. Vanderbilt of New Jersey once observed that "the antipathy to politics is reflected in the home, the church, and the school. In a recent national poll, it was reported that 69 percent of our people did not want their children to enter politics and almost 50 percent thought that no man could be in politics and remain honest." This is about as sad a commentary as one could imagine.

We must recognize that the political party is the only valid means of giving organization, direction, drive and expression to the public power. We must get away from the idea that when we have voted we have done the whole duty of man. We must cease thinking of politics as a dirty word and recognize it for what it is: that supreme art for harmonizing conflicting interests and views into one cooperative and sound body capable of self-preservation through unselfish actions.

Traditionally, you must remember that politics, like big league baseball, is played by experts. You were permitted to participate by rooting for your side, but not by helping to select the players. All of this has been changed. The primary system does enable you to help pick the players. be effective, you have got to poin a party. the party that most nearly represents views and supports your kind of candidates. The business of voting for the man once every 4 years and forgetting about party policies between times is utterly foolish. To make the party what it ought to be, to give it the broad representation it must have to express common ideals, you have got to be an active member of it. You have got to work to get your views adopted. I know of no one who can influence a political party by remaining aloof from it.

It is most important to be individually active as a partisan, fighting for your views I believe that such organizations as the League of Women Voters, to name just one, which concentrates only upon understand-ing the issues, without a strong accent on active party membership, have either out-lived their political usefulness, or are missing the boat so far as real political effect is concerned. Women have a great part in politics, and should have greater part. But the "standoffish" role in politics is absolutely the wrong approach. If the party to which you are inclined is not precisely what you would like it to be, you are not going to make it any better by withdrawing into your den to study the issues when you oughht to be out fighting for what you be-

lieve the party needs most.

Long ago the French philosopher Jean Jacques Rousseau declared, "As soon as public service ceases to be the chief business of the citizens and they would rather serve with their money than with their persons, the state is not far from its fall. As soon as any man says of the affairs of the state— 'What does it matter to me?'—the state may be given up for lost."

You ought individually to be politically active. This is not a right; it is your duty. You ought to join and work in a political party as a whole person-not as the mouthpiece of your corporation. If the corporate view, as such, needs expression, there is advertising space to be purchased for that

Second, in joining a political party, you should not be giving up your independence of thought. Men who join political parties for purely economic motives, to represent the ends of business, actually are helping to

crystallize the party as a big business party, which in the end will result in its isolation and destruction as an organization.

I believe that one of our speakers here today, Mr. THRUSTON B. MORTON, the Republican National Chairman, told the exact truth in a recent speech before the U.S. Chamber of Commerce when he said that if the business label were ever pinned on his party, it would threaten the party's existence; that to achieve maximum effectiveness in politics, businessmen must act "primarily as American citizens, rather than as spokesmen for or representatives of just one seg-ment of our total economy." As he said, "It would be disastrous for the Nation and the party itself if any single economic, racial, or religious group were to win un-challenged control of the Republican Party." I would extend that to any party.

Political membership does not mean political subservience. I do not advocate subordination of personal ideas or principles to a leader. If we are to be effective party members, we cannot be mutes: we must be heard in party councils. Here we can talk over things in common, and here we can learn that, "I am not as good as you arebut you are as good as I am.'

Disraeli, the youth laughed at and ridiculed in his first speech in the House of Commons, uttered what should be the motto for all of us: "I will sit down now, but the time shall come when you will hear me."

Having decided to become politically active, you must choose your party as an individual who wears no man's or corporation's collar. It is your choice. Next, your job is to seek out and work with a likeminded group in your township or precinct, and the word "group" is important. You need to know who is your precinct or township committeeman, how he is chosen, who is his superior. It may be that you do not like the regular party organization, its candidates or its programs. It may have no room for amateurs like yourself. \* \* \*

There is a way for you to become active, if you are not welcomed in the regular party organization.

You can join political clubs of either party, many of which have provided new blood, new energy, and new ideas outside of the regular organizations. Here you will find that the controls are in the membership, at the grassroots, not in some remote hotel room or

rooms.

Enlightened and strong professionals will not reject you or your group for long; they will make peace quickly because they recognize that your bit of help adds to the insur-ance of victory, and that a selective exclusiveness in party affairs makes for straightout contests for party control. Indeed, the Democratic Party in May 1957 adopted a formal rule recognizing neighborhood po-litical clubs and directing the national committee to "encourage and assist groups of party members in the organization of Democratic clubs-and to issue certificates of recognition to any such Democratic club so

existing." You must be prepared to spend time, energy, and money on political work. This means the menial jobs as well as the more attractive job of brain-trusting the strategy. A great truth in politics is that virtue always triumphs in a political campaign if it has a good campaign fund and a hard-working organization. Given the issues and hard work, with at least enough money for mimeographing and postage, and your small club can accomplish wonders.

formed-or heretofore organized and now

Such inplant political activities as Aroject General Corp. sponsored in September 1958, represent the best of such efforts. This completely bipartisan effort was directed at securing voter registration and encouraging financial contributions to both parties. But there is a danger in this. It introduces the loser-winner relationship into employer-employee, or superior-subordinate relations.

A superintendent or worker is no more or less valuable an employee for not desiring to participate in political activity. He may wish to enjoy politics the way some men enjoy marriage-by remaining bachelors. If he thinks that his political attitudes may complicate his job relations, he may feel that nonparticipation is a cheap price to pay for advancement, tenure, pleasant working conditions. Recently a young man engaged in a fund-raising campaign told me, "My boss has been active in this over many When he asked me to take it on, it was sort of our company's turn. I couldn't refuse." This is definitely not the way to undertake political responsibility. The only worthwhile political action springs from individual conviction and independence of spirit.

Through political action today we are going to decide whether we are destroyed by H-bombs or our children are to be destroyed by atomic dust raining upon them.

Whether our schools and our civil rights problems will be intelligently settled or produce violent internal convulsions.

Whether foreign aid shall be used in helping to create a world in which we can live and interchange ideas and goods with freemen.

In brief, whether, as a Nation, we survive or die shortly.

We can influence our destiny only through the wisest political action—not as corporations—not as business—but as the individual human entity.

## Invocation Delivered by the Most Reverend Phillip M. Hannan, D.D.

EXTENSION OF REMARKS

## HON. J. GLENN BEALL

OF MARYLAND

IN THE SENATE OF THE UNITED STATES

Tuesday, June 9, 1959

Mr. BEALL. Mr. President, on Friday, June 5, I attended a dinner for the American Rheumatism Association and heard a most inspiring invocation.

I ask unanimous consent that this invocation delivered by the Most Reverend Phillip M. Hannan, D.D., be printed in the Appendix of the RECORD.

There being no objection, the invocation was ordered to be printed in the RECORD, as follows:

INVOCATION GIVEN BY THE MOST REVEREND PHILLIP M. HANNAN, D.D., AT DINNER FOR THE AMERICAN RHEUMATISM ASSOCIATION, MAYPLOWER HOTEL, JUNE 5, 1959

O God, teach us in our care of the sick that love is the fulfillment of the law, enabling us to meet the test by the beloved disciple, "How can he who does not love his brother whom he sees, love God whom he does not see?" Help us to treat each person as a brother and heir of God, seeing God's image in our sick and afflicted neighbors. May our hands be His hands, may our hearts be His heart, and my His spirit be imparted through us to all whom we serve in His name. Amen,

## Faith and Learning

EXTENSION OF REMARKS

## HON. EUGENE J. KEOGH

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES
Tuesday, June 9, 1959

Mr. KEOGH. Mr. Speaker, under leave to extend my remarks in the Record, I include the following address by Hon. James A. Farley, chairman of the board of the Coca-Cola Export Corp., delivered at the graduation exercises at Marymount School, Marymount College, New York City, on June 2, 1959:

Address by Hon. James A. Farley, Chairman of the Board, the Coca-Cola Export Corp., at the Graduation Exercises, Marymount School, Marymount College, New York City, June 2, 1959

#### FAITH AND LEARNING

Reverend mothers, your excellency, reverend fathers, distinguished guests, the faculty of Marymount School, the class of 1959, ladies and gentlemen, when I was invited to participate in these graduating exercises I gladly accepted. Marymount School has always been very dear to me and my family, and also very close in that we were neighbors for a number of years. moved to New York from Rockland County, over 30 years ago, we made our home at 3 East 84th Street just across the way. Both my daughters were Marymount pupils and my son's little girl is now attending Marymount—in the Farley tradition. We have many happy memories of our friendship and association with the Foundress of the Order of the Sacred Heart of Mary-the great and saintly lady, Mother Butler, loved and revered by all who are in any way familiar with Marymount. I recall vividly my last visit with her when in Rome with my daughters in the summer of 1939.

And since I have been a neighbor of Marymount I hope we shall be friends for all the disparity in our ages. At least I hope that you look upon me as a friend for these minutes I speak.

My schooling began at the age of 5 in the Grassy Point Grammar School—on the West Shore of the Hudson River—and I went through 7 grades there, transferring to the Stony Point Grammar School. Upon graduation from the Stony Point High School I completed a year's course at the Packard Commercial School in New York City.

It has always been my regret that unlike you I could not plan to go on to college. Since my formal education ended I have acquired 20 honorary degrees from various colleges. Each of these has made me happy as having accomplished something in the school of life, but I would gladly exchange them all for one earned in college. Not that I have any regrets, but I wish I could look back on the pleasures and the companionship of learning of college days.

That pleasure is before most of you. In your joyous expectation you are apt to forget what you have been privileged to experience. Let me tell you that the training you have already had has fashioned your life far more than you now realize. And as the years go on you will turn back more and more fondly in memory to this place. At the moment, I fancy you are more triumphant over successful accomplishment than regretful, although you must bear this place affection and gratitude.

Not long ago, a young lady I have known

since childhood was graduated with highest honors from a western university. Among her honors were Phi Beta Kappa and Phi Kappa Phi. She was editor of her school annual. She was acclaimed as the outstanding girl in the college. When she was asked to what factors she attributed her success she said it was to the years in a convent school, where she was given a firm grounding in learning and faith.

Integrity is the most sublime possession we can make for ourselves. It comes from learning and faith. I do not come here to teach you faith. That has already been done by minds more able than my own. Nor do I come here to instruct you as an educator. As you all know, I used to be in politics. Now I am in business. Both professions are concerned with integrity. The politician gives his word and the businessman gives his product. Both should be, and usually are, backed by integrity. If the politician fails to keep his word he courts not only defeat but disgrace. If the businessman fails to keep up his product he courts failure and bankruptcy.

All occupations have their codes of ethics. The foundations of these codes were implanted in you here. One may stray from the standards of any profession and meet with some success, just as one may smile and still be a villain. Aimost inevitably there is a day of reckoning, if nowhere else in the loss of peace of mind.

As you go on with life's responsibilities you will find that the honorable way you have learned here is not only the right way but the best way.

All that I am or hope to be—and time is running its inexorable course for me—I owe to the faith and learning implanted in me in my youth and to the power of prayer. Prayer has seen the world through dark days, days as dark as those we are now going through, if not darker, just as it has helped individuals over rough stretches in the way of life. Let me take you back 172 years to a meeting of the group of patriots in Philadelphia who were seeking to revise the Federal system of government. The meetings opened on May 14. 1787.

You remember the history of that situation, I am sure. The war with Britain had been won but the situation in America was near anarchy. The confederation was falling apart. Powerful forces were at work to keep the States apart. Geographical distances and poor communications made it difficult for people of one State to know a great deal about another. Northern States wanted to protect their industries; the South having no industries welcomed foreign goods free of tariffs. States levied tariffs against one another. The American people were strongly opposed to central government; because they were so jealous of the liberties we hold dear they hesitated to bestow any power on any government, local, State or Federal.

Many persons predicted that the thirteen States would never be joined in union. There were many expressions of gloom, although race, religion, language, tradition and common culture all cried out for union. Furthermore, beyond the thirteen States was a western empire begging for development. Wise minds brought about the Constitutional Convention in Philadelphia with George Washington, the victorious general and popular hero, in the presiding chair. But only six States were represented the opening day. Work went slowly. Difficulties appeared to be insurmountable. Nothing was done in May and little was accomplished in June.

Finally, on June 28, 1787—172 years ago the most venerable man in the convention arose, a truly great American, perhaps the greatest American of them all, Benjamin Franklin. This patriot, philosopher and scientist was in his eightles. Listen to his words:

"Mr. President, the small progress we have made after 4 or 5 weeks close attendance and continual reasonings with each otherour different sentiments on almost every question, several of the last producing as many noes as ayes is, me thinks, a melancholy proof of the imperfection of human understanding. We indeed seem to feel our own want of political wisdom, since we have been running about in search of it. We have gone back to ancient history for models of government, and examined the different forms of those republics which having been formed with the seeds of their own dissolution now no longer exist. And we have viewed modern states around Europe, but find none of their constitutions suitable to our circumstances.

"In this situation this assembly groping as it were in the dark to find political truth and scarcely able to distinguish it when presented to us, how had it happened, Sir. that we have not hitherto once thought of humbly applying to the Father of lights to illuminate our understandings? In the beginning of the contest with Great Britain, When we were sensible of danger, we had daily prayer in this room for the divine protection. Our prayers, Sir, were heard and they were graciously answered. All of us who were engaged in the struggle must have observed frequent instances of a supertending providence in our favor. To that kind of providence we owe this happy opportunity of consulting in peace on the means of establishing our future national felicity. And have we now forgotten that powerful. Friend, or do we imagine that we no longer need His assistance? I have lived, Sir, a long time and the longer I live the more convincing proofs I see of this truth—that God governs in the affairs of men. And if a sparrow cannot fall to the ground without His notice is it probable that an empire can arise without His aid? We have been assured, Sir, in the sacred writings that except the Lord build the House they labor in vain that build it. I firmly believe this; and I also believe that without His concurring aid we shall succeed in this political building no better than the builders of Babel. We shall be divided in our little Babel. We shall be divided in our little partial local interests; our projects will be confounded, and we ourselves shall become a reproach and a bye word down to future ages. And what is worse, mankind may hereafter from this unfortunate instance despair of establishing governments by human wisdom and leave it to chance, war and conquest.

"I therefore beg to move—that henceforth prayers imploring the assistance of heaven, and its blessings upon our deliberations, be held in this assembly every morning before we proceed to business, and that one or more of the clergy of this city be requested to

Officiate in that service."

This was the beginning of real work on the Constitution, this prayer of Franklin's, because his speech was of itself a prayer. How well these men worked under divine guidance we all know. They built the greatest Republic the world has known. The draft of the Constitution was completed in September 1787. When the labors of the convention were finished and members were signing the great document Franklin chanced to look upon the back of Washington's chair on which a sun had been painted. Franklin seized upon this sun to make a Drophecy.

"Painters," he said, "have found it difficult to distinguish in their art a rising sun from a setting sun. I have often in the course of this session and the vicissitudes of my hopes and fears as to its issue have looked

at that sun behind the President without being able to tell whether it was rising or setting; but now, at length, I have the happiness to know that it is a rising and not a setting sun."

We know that the sun is still rising. We know that its light still shines brighter than ever in a darkened world. We know that light was enkindled by faith and learning. Much of the world is still dark. However, in the darkest corner of the darkest night in the deepest hell of totalitarianism, we know that the light of the faith of our Founding Fathers still shines. There can be no darkness where a single candle is lit. We have two great candles with which to light the world today—the faith in liberty that is America and the faith in our Lord.

Some of the world is indeed in darkness. Nations have sinned and individuals have sinned. They have forgotten prayer. They have, in fact, forgotten God. False idols have been erected. False prophets have been honored. Man has deserted liberty and justice and human dignity. Man has listened to the promises of power-hungry men. Man has exchanged freedom for slavery on sly promises of security. Confusion has been piled on confusion. Fear is piled upon fear. Each new conquest of science over matter has seemed to increase fear rather than bring, security. Yet, we must never forget that all things are not without cause. Everything in life has meaning. Everything in man's life is related to all that has gone before and all that is to come.

These are trying times. This has been an age of splendid achievement. Man began seeking divinity in himself. Everything was explained in the laboratory. For a time man sought faith in evolution, then in science and then in progress. Men held that man came out of slime and nothing more. Men held that science had all the answers. Men held that everything had to be changed in order to be better. Now men are holding that faith must be put in evolution. They would have us make a god of the state and have us give all of ourselves and all of our souls to the state.

How pathetic and how credulous are these earnest faiths in evolution and progress and science and in the state. Man has found himself with less time for himself and less time for God. Many years ago Louis the Fourteenth proclaimed himself the state and men have come to laugh at him. In our time one who proclaimed himself the state died by his own hand in a bomb shelter in Berlin. Another was hung by the heels in Milan. Still another, more dangerous than either of the two who went before, died a little over 6 years ago in Moscow and is rapidly being forgotten. Yesterday his word might have shaken the world. Today this spectacular destroyer of faith and learning is at last face to face with the truth of faith.

How silly is the proclamation of Hitler, Mussolini, and Stalin that each of us is part of the state and nothing more. Faith and learning in our day is growing, though it may not seem so. Two great wars in this century have not darkened faith. Nor has the atomic age. Man has loosed a force that has placed him on the abyss of chaos, but faith and learning can still give him the serenity of soul that would keep him from destroying the world by fire. The no less explosive danger of communism with its chain reaction of materialism, frightening as it may be, cannot prevail against faith and learning.

But we must remember, too, that Communists are not the revolutionaries. They are the believers of brutal power which goes back to the days of man's darkness, when the earth knew not faith and had no learning. Then man knew only tyranny. The materialists of communism would turn back the clock to those days. We who believe in liberty, freedom, and the dignity of man are

the revolutionaries. Historically, the philosophy of faith and learning is newer than the darkness of communism.

Revelation and teaching-faith and learning-have turned the path of mankind from downward path of brutish darkness to sunlit paths of belief and civilization. All of you will go from here seeking more education. You will become a growing part of the light, a growing part of faith. Each generation likes to think that it is living on the edge of disaster, that the precious fire of faith and reason would go out if each generation did not cherish it in its breast. This is so, of course. However, no generation has put out that fire by sulcide, and I am confident no generation will. There have been orgies of mass murder and destruction before. We can hope that they will never come again, even though we know that we are living in a state of almost perpetual war and almost perpetual fear.

I never have taken a gloomy view of the future. Now, when the future is closer to me as I near the time of the great answer, I cannot take a gloomy attitude toward the outcome of these critical and perilous years. I do not have the slightest shadow of doubt that your generation will see the end of the whole sordid corruption and repulsive fallacy of the police state. True, I confess my generation has not done too well by yours. We have given you the aftermath of terrible wars, we have saddled you with heavy debts and the headaches of tangled thoughts and false beliefs. Yet I am sure you will find it in your hearts not only to forgive us, but to be merciful and to say that we contributed to the solution you will find.

Furthermore, I am confident that you will find the answer in faith, faith which is growing in our time. Faith is on the march. It has triumphed over the false beliefs and false dogmas of the ages of evolution, machines, and tyranny. False beliefs die, but faith endures forever. All the arrogance of totalitarians and the rantings of the scoffers and the intellectual posterings of men intoxicated with their own minds have not darkened faith. The faith of our fathers goes hand in hand with learning. The terrors of our time have not dimmed faith. Faith is growing. It has gained strength by the very rationalism which would challenge and destruth.

It seems to me a good thing that man should have gone through the trials of the past. In the return of the mind from evolution and materialism we can be sure there will be no straying in the future. That is what I mean when I say faith is growing. Tortuous doubts are being resolved. In your time man will learn not to doubt himself and his God again.

Meantime, nothing you graduates can possibly do will enrich yourselves more or hasten the triumph of faith or make a better contribution to your country or to your fellow men than to proclaim and demonstrate the faith and learning you have gathered here throughout your lives. Let each of you be living candles to bring such light to the darkened world.

#### Conditions Among Farmworkers

EXTENSION OF REMARKS

## HON. JOHN W. McCORMACK

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Tuesday, June 9, 1959

Mr. McCORMACK. Mr. Speaker, in my insertion, I include a statement on

the problem of farmworkers which was transmitted last Saturday to Secretary of Labor James P. Mitchell, with a copy to Attorney General William P. Rogers. Twenty-one Members of the House signed the statement and 13 Members of the Senate.

It describes conditions among farm-workers as "one of the most serious economic and human problems in our Nation." The statement deplores the "intensive pressure" campaign being conducted on Members of Congress to induce them to help prevent Secretary Mitchell from issuing "moderate" reform regulations for improvement of conditions of farmworkers and to block public hearings planned by the Secretary at which all parties concerned will be invited to give their views on the proposed regulations.

While the statement describes the new regulations as "more moderate than are called for by the evidence of the tragic conditions of the great majority of farm laborers and their families," it commends the Secretary, nevertheless, for proposing these slight improvements.

Mr. Speaker, I also include in my statement a terrible story about farm-workers from today's Washington Post. Under a three-column headline, "Sixteen Farmworkers Die in Blazing Bus," this Associated Press story from Phoenix, Ariz., describes the tragic burning to death of these workers in "a makeshift bus, with canvas sides and top and no windows" and only one rear exit, when it crashed into a tree and exploded in flames. The Associated Press ticker said 23 other farmworkers were injured in the crash, some of them seriously.

This gruesome story is, indeed, a sad exclamation point to the need set forth in the Congressmen's and Senators' statement-a need for treatment of these farmworkers as human beings, with at least some degree of decency and human dignity. It is long past time for our Government to eliminate the disgraceful transportation, living, and educational conditions characterizing employment of these workers and their families by the large-scale, corporate growers of our Nation. These conditions provide the most effective propaganda possible for the Communists and defame our form of society:

[From the Washington Post and Times Herald, June 9, 1959]

SIXTEEN FARMWORKERS DIE IN BLAZING BUS PHOENIX, ARIZ., JUNE 8.—Sixteen Mexican farm laborers were burned to death today when a heavily loaded makeshift bus smashed into a tree and exploded in flames. Thirty-two others were injured, three critically.

Those killed had been asleep on the floor or were trapped near the front of the bus—a converted truck with canvas sides and top and no windows. Witnesses said the bus exploded like a clap of thunder.

Flames immediately engulfed the vehicle as the laborers fought to reach safety through a single rear door partly blocked by suitcases and a water barrel.

The driver, Nato Manuel Gloria, Jr., told the highway patrol he dozed at the wheel. Gloria, injured slightly, said he had planned to stop at a service station just 100 yards ahead and turn the driving over to his assistant.

One of the seriously injured said the men in the front of the bus "fought like animals" to get out.

PUBLIC HEARINGS ON FARMWORKERS

Secretary of Labor James P. Mitchell has proposed new regulations of employment on larger farms for consideration. Mr. Mitchell has also announced public hearings in Washington and other places during the summer at which all interested parties will be given an opportunity to state their views. We commend the Secretary of Labor for having taken these steps to deal with one of the most serious economic and human problems in our Nation.

Unfortunately, the moderate regulations which the Secretary has proposed have met with strong resistance from some of the groups involved. Intensive pressure is being applied to have the regulations withdrawn and even to prevent the holding of the public hearings. Spokesmen for the big farm operators have initiated a letter, telegram and telephone campaign to persuade Senators and Congressmen to oppose the regulations and the public hearings. A call-to-action has been sent out by Mr. William H. Tolbert, legislative chairman of the National Farm Labor Users Conference, who stated to members of the organization: "It seems the regulations indicate their own course of action that you should take. That is, do anything you can, anywhere, to stop them and to prevent the issuance of them and the holding of the public hearings."

We believe it necessary, under these circumstances, to review the facts and to indicate the purpose and the need for the new regulations and the public hearings.

The fundamental issue is the responsibility of our government to protect the basic rights of a long neglected group of citizens. We think Secretary of Labor Mitchell is correct in pointing out the contrast between the conditions of agricultural workers and the standards achieved by a majority of workers in other kinds of employment. He has expressed the opinion that the conscience of the American people will not much longer permit so large a body of workers as those in agriculture—between one and a half and 2 million workers—to remain at such low levels of pay and to live under such bad housing, health, educational, transportation and other conditions.

We believe the issue also involves the direction that agriculture is taking in this country. The proposed regulations of the Secretary of Labor are directed at large scale commercial farms which comprise less than 5 percent of the farms of the Nation and which largely rely on interstate and foreign recruitment of labor. The regulations will not apply to the typical family farm, and the hired man of the family type farm is not included in the program. This proposal is included in the program. This proposal is crucial in the competition between the family type farmers and the large-scale, corporate growers. Evidence seems to us substantial that family farmers type are losing out in this competition party because the big operators are exploiting agricultural workers in their wages and other working and living conditions.

It is likewise pertinent to note that upward of half a million Mexican and other foreign workers are imported annually as migrant farmworkers while millions of our domestic workers are unemployed. The generally low wages and working conditions of the imported workers tends to depress the standards of the domestic workers.

The sorry plight of our country's agricultural workers and the meager living standards of millions of our small farmers are problems demanding solution for the economic and social welfare of our Nation. The increased purchasing power of this large segment of our population would obviously

be an important stimulus to the Nation's economy. With their families these agricultural workers combine with the small farmers to number in the neighborhood of 20 million people.

We believe the Secretary of Labor acted within the authority delegated by Congress in promulgating the new regulations. Directives similar to this have been in force for several years. Further, the Department of Labor officials have proceeded properly under the Administrative Procedures Act in this matter. The Department has sent out copies of the proposed regulations to the concerned parties and solicited their views and recommendations. Officials of the Department of Labor are holding conferences with various governmental and semigovernmental groups in States where farm labor is most extensively used. At these public hearings all interested parties will be given an opportunity to testify. We think this procedure is in the best tradition of the American democratic way of achieving a fair de-cision. We regret the campaign now being carried on to prevent this democratic

We commend the National Advisory Committee on Farm Labor, composed of religious, educational and civic leaders, for once again directing public attention to the conditions of farm laborers. That Committee includes such prominent citizens as the former President of the University of North Carolina, ex-Senator Frank P. Graham, Archbishop Robert E. Lucey, Mrs. Franklin D. Roosevelt, and President Clark Kerr of the University of California. The recent public hearings, conducted by the Committee here in the Nation's Capital, supplied ample evidence for the need of new regulations of the employment of farm laborers.

The new regulations are, in our judgment, more moderate than are called for by the evidence of the tragic conditions of the great majority of farm laborers and their families. Nevertheless, we feel the proposed regulations of the Secretary of Labor are steps in the right direction and that they merit the support of thoughtful citizens everywhere, including members of Congress.

We strongly urge a renewed concern for the working and living conditions of domestic farm labor, particularly of the migrant workers. We think that the announced public hearings of this summer are an essential step to an understanding of this problem and a prelude to long overdue action.

Signed by the following Senators: John A. Carroll, of Colorado; Joseph S. Clark, of Pennsylvania; Thomas J. Dodd, of Connecticut; Paul H. Douglas, of Illinois; Vance Hartke, of Indiana; Hubert H. Humphrey, of Minnesota; Eugene J. McCarthy, of Minnesota; Pat McNamara of Michigan; Wayne Morse, of Oregon; James E. Murray, of Montana; Richard L. Neuberger, of Oregon; William Proxmire, of Wisconsin; Harrison A. Williams, Jr., of New Jersey; Stephen M. Young, of Ohio.

Signed by the following Representatives: . THOMAS L. ASHLEY, of Ohio; CLEVELAND M. Bailey, of West Virginia; John A. Blatnik, of Minnesota; RICHARD BOLLING, of Missouri; CHESTER BOWLES, of Connecticut; EMANUEL CELLER, of New York; MERWIN COAD, of Iowa; FRANK M. COFFIN, of Maine; JEFFERY COHE-LAN, of California; JOHN D. DINGELL, of Michigan; Daniel J. Floop, of Pennsylvania; EDITH GREEN, of Oregon; BYRON L. JOHNSON, of Colorado; John W. McCormack, of Massachusetts; LEE METCALF, of Montana; CLEM MILLER, of California; JAMES G. O'HARA, of Michigan; CHARLES O. PORTER, of Oregon; Byron G. Rogers, of Colorado; JAMES ROOSEVELT, of California; FRANK THOMPSON, Jr., of New Jersey; ROY W. WIER, of Minnesota.

## Accounting Law Nullified

EXTENSION OF REMARKS

## HON. FRANK J. LAUSCHE

IN THE SENATE OF THE UNITED STATES Tuesday, June 9, 1959

Mr. LAUSCHE. Mr. President, I am greatly disturbed over the fact that legislation enacted by the 85th Congress dealing with an important budgeting reform recommended by the Hoover Commission, providing that Congress may have an opportunity for an annual review of huge unexpended appropriation balances, is not being put into effect.

I am pleased to observe that the Senate Appropriations Committee sought to make this accrued expenditure review effective, but I am sorry to learn that so far the other body has chosen to differ with the Senate, which, in effect, nullifies the accounting law enacted by the 85th Congress.

Mr. President, this subject is dealt with in an editorial which appeared in the June 5 edition of the Washington Evening Star, and I ask unanimous consent to have the editorial printed in the Appendix of the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

[From the Evening Star, Washington, D.C., June 5, 1959]

#### ACCOUNTING LAW NULLIFIED

The House Appropriations Committee is achieving by indirection what it failed last year to accomplish by direct attack—the blocking of an important budgeting reform recommended by the Hoover Commission. This reform was aimed at the piling up of huge unexpended appropriation balances Without control or review by Congress. Congress approved the money-saving proposal last August after much debate, with Senator KENNEDY, of Massachusetts, leading the fight for adoption.

The law, strongly advocated by President Eisenhower and the Budget Bureau, was intended to place Government appropriation requests on an "accrued expenditure" basis a system used by private industry to keep tab on funds carried over from one year to the next. This meant that the agencies would be required to report annually on unexpended funds and to justify further fund re-quests. Under the old system, enormous surpluses often accumulated while changed conditions sometimes tended to eliminate the need for such large sums. The Congress remainded uninformed as to the situation.

This year, for the first time, the President recommended application of the accrued-accounting system to certain appropriations in the Treasury-Post Office bill—among in the Treasury-Post Office bill among others. The House Appropriations Committee aptee deleted this provision and the House approved the deletion in passing the appropriation measure. But the Senate reinstated the accounting-reform provision. The House conferees, however, insisted on elimination of the amendment and, in the end, they prevailed. So there will be no accrual accounting in either department during the next fiscal year.

Meanwhile, the House Appropriations Committee has also stricken an accrual-accounting clause from the independent offices ap-Propriation bill. This measure is pending before the Senate Appropriations Committee. We hope that the accounting reform proviso will be restored to this bill and that the Senate, in the interest of businesslike governmental economy, will succeed in keep-ing it there. For the will of Congress as expressed in approving the budget-reform law will be thwarted completely if the deletion tactics adopted by the House committee are allowed to have free sway.

#### Adoption of Foreign Children

EXTENSION OF REMARKS

## HON. WILLIAM LANGER

OF NORTH DAKOTA

IN THE SENATE OF THE UNITED STATES Tuesday, June 9, 1959

Mr. LANGER. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a letter I have received from a constituent about the adoption of a foreign child.

There being no objection, the letter was ordered to be printed in the RECORD, as follows:

PORTLAND DRUG STORE, Portland, N. Dak., May 12, 1959. Hon. Senator WILLIAM LANGER,

Senate Office Building,

Washington, D.C.

DEAR SENATOR LANGER: In April of 1957 my wife and I wrote to you about adopting a foreign child. Our dreams came true a year ago the 30th of this month. We received a Korean-American child, age 4 months. She is the most wonderful thing that has ever happened to us, she is a little doll as you can see by the enclosed snaps.

We are now writing to you to ask you that you support the orphan bill which is due to run out this June 30. We know that there are a lot of controversies about it, sometimes caused by people who do not know what they are talking about. We received our "Mary" by proxy adoption and we'll always thank God that we were able to receive her. tried to adopt a child for 4 years through Lutheran Welfare at Fargo and also talked to Children's Village about it but always to no avail. I imagine that we probably have a selfish motive for writing to you for support of this bill on adoption but; I am sure you will agree Senator Langer, that a child should not be brought up as the only child, and we would like to have some brothers or sisters for her.

I have read in magazines about how terrible the parents of some of these adopted children are. Well, that is not entirely true as I have plenty of customers come into my drugstore that if I did not give them medicine for their children the children would not have it, and God gave them that child. Sometimes I think some wise publicity man digs up a lot of things that are not always true, maybe half truths, and those are deadlier than lies.

Mr. Harry Holt of Creswell, Oreg., has done a tremendous amount of work on the Korean orphans. We have a picnic each year of the folks who have adopted Korean children; last year it was at Oak Grove Park in Fargo. There were about 10 children there last year, this year it will probably be in Bismarck. Senator Langer, if you could attend one of those picnics and see the children and us proud parents, you would stand on the Sen-ate floor and talk until the whole Congress was made to realize what a fine thing it is. We were married in 1950 and although we've had a fine married life it just came into bloom after we received Mary.

These children adopted by proxy are taken good care of I am sure. We have seen the others around here and know. We have asked for another child and hope we receive it soon. Sometimes with an only child they probably get a little spoiled, but then they say that children are given by God to spoil when they're young.

We certainly hope and pray that you will support this bill; it means so much to us. If you're home this summer and up around the Portland-Mayville area you should stop in and see us and you will be able to see for yourself then that these children will grow up to be a credit to God and country.

We pray that Mrs. Langer is getting along better, also that your health is good. Greetings and best wishes to both of you.

Sincerely, Mr. and Mrs. P. N. Haakenson.

## Labor and the Kennedy Bill

EXTENSION OF REMARKS

## HON. JOHN F. KENNEDY

OF MASSACHUSETTS

IN THE SENATE OF THE UNITED STATES Tuesday, June 9, 1959

Mr. KENNEDY. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial published in the New York Times of June 7, 1959.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

[From the New York Times, June 7, 1959] LABOR AND THE KENNEDY BILL

To condemn the Senate-approved Kennedy labor reform bill as a whole or to fight for the removal of objectionable provisions, has been one of the toughest decisions AFL-CIO has yet had to make. President Meany's recent testimony before the House Committee on Education and Labor is impressive and welcome proof of a far less than totally belligerent position.

He affirmed the federation's approval of Federal curbs on improper practices, such as have been revealed by the McClellan committee, but strongly opposed any provisions of law that would hamstring what he considered essential and desirable union activities. He cited the federation's general support of the original Kennedy-Ervin bill (S. 505), which required public reporting and disclosure of the financial operations of unions and their officers, gave guarantees of democratic procedures in union elections. and put limitations on the trusteeship of locals. These are still in the amended version of the bill (S. 1555) now in the hands of the House committee.

But Mr. Meany argued that its new title I—the so-called "bill of rights"—not only would undermine other parts of the bill but would bedevil legitimate union operations through provisions which are either too general, or too detailed and inflexible, for effective administration-often with side effects that would defeat their announced objectives. "S. 1555," he said, "taken as a whole \* \* \* is a genuine 'bill of rights' of union members' without title I.

The federation's bill of critical particulars is formidable enough, but not so formidable as to warrant a blanket opposition to the entire Kennedy measure now. The items are also sufficiently explicit to be dealt with, where warranted, by further amendments in the bill or in the drafting of a new one in committee. At least they deserve the com-mittee's careful consideration in meeting the overwhelming public demand for an effective labor union reform law this year.

Officers and Employees of the Railroad Retirement Board Are To Be Commended for the Efficient Administering at a Minimum Cost of the Railroad Retirement and Railroad Unemployment Insurance Acts

EXTENSION OF REMARKS

## HON. JAMES E. VAN ZANDT

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES
Tuesday, June 9, 1959

Mr. VAN ZANDT. Mr. Speaker, as many of you know, my congressional district on a percentage basis has the largest active and retired railroad population in the Nation. The economic security of these people is safeguarded in large measure by the Railroad Retirement and Unemployment Insurance Acts. Therefore, in serving this large railroad population I have found it necessary during my congressional career in seeking information and asistance to call upon the Railroad Retirement Board, which, as you know, administers these acts.

As a result of my frequent contacts with the officials and staff members of the Railroad Retirement Board and in visits to its headquarters in Chicago, I have been deeply impressed not only with the way the information requested was readily made available to me but also with the strong sense of interest and responsibility they take in administering the provisions of both the Railroad Retirement and Railroad Unemployment Acts.

As you know, the Board is composed of three members appointed by the President, by and with the consent of the Senate—one upon the recommendation of representatives of employees, one upon the recommendation of representatives of carriers, and one, the Chairman, without recommendation by either employees or carriers.

The headquarters of the board is located in Chicago, Ill. There are seven regional offices and about 100 field offices in localities accessible to large numbers of railroad workers. The organization of the board is so designed as to integrate the administration of the two laws without duplicating facilities or operations.

The scope of the board's operations has increased steadily, highmarked here and there by the effects of important amendments, and to a lesser yet significant extent, by economic conditions, particularly in the railroad industry. The operations carried on by the board comprise the second largest governmental system of social insurance in the United States and the only Federal system designed to serve the employees of a single industry.

Mr. Speaker, it is of interest to observe that in 1958 the board paid out more than a billion dollars in retirement, survivor, unemployment and sickness benefits. Of the amount paid out in 1958, benefit payments under the Railroad Retirement Act came to \$745 million, with \$571 million going to 526,000 retired employees and their wives and \$174 million being paid to 296,000 survivors of deceased employees. At the end of 1958, some 725,000 persons were receiving monthly retirement or survivor benefits.

Under the Railroad Unemployment Insurance Act, benefit payments in 1958 totaled over \$280 million, with \$228 million in unemployment benefits being paid to 350,000 employees and about \$52 million going to 155,000 who were sick.

Despite the expanding workload and the complexities introduced into its operations over the years through legislation, the Board has maintained maximum efficiency and economy in its operations. At the present time, the number on its payroll is about 2,400.

The ratio of administrative expenses to benefit payments has been steadily decreasing through the years and has now reached a very low point. In 1957-58, under the railroad retirement system, it cost slightly more than 1 cent to pay \$1 in benefits.

Under the unemployment insurance system during the same period, administrative costs came to about 4 cents periodilar in benefits; the cost here including those for operating a free placement service for unemployed railroad workers.

I think it is quite evident that the Railroad Retirement Board has achieved a high degree of efficiency and economy in its operations. Notwithstanding the progress it has made, the Board is not content to rest on its past achievements. In fact, the Board is constantly reviewing all of its activities for the purpose of operating at the lowest possible cost.

For example, we are getting an excellent demonstration of the efficient manner in which the Board has consistently performed by the way in which it is now handling the recent amendments to the acts. The bill was signed by the President on May 19, 1959, and the increases under the Railroad Retirement Act became effective on June 1, 1959. meant that the increases were actually due and payable for the month of June to the approximately 743,000 persons on the Board's retirement and survivor benefit rolls. Virtually all of these increases will be reflected in the checks, prepared by Board personnel in Chicago, dated and mailed for July 1 delivery.

Under the amendments to the Railroad Unemployment Insurance Act, approximately 450,000 employees are due to get retroactive benefits for unemployment and sickness in 1958-59 and the last half of 1957-58. This, in itself, is a gigantic job; the Board has already set up the machinery with which to expedite the handling of these retroactive payments. As a matter of fact, some 3,000 current beneficiaries are already receiving checks at the higher rates set by the amendments.

The efforts which the Board is making to administer its programs efficiently and economically and to render the maximum possible service to the millions of people in the railroad industry and their families are certainly appreciated, and it is my great pleasure to pay this well-deserved tribute to the members

and employees of the board for their record of achievement.

Mr. Speaker, in concluding this tribute to the Railroad Retirement Board and its competent staff, I wish to commend particularly the officials and employees who during my congressional career have rendered at all times the finest assistance possible when called upon for information and service.

This group includes Mr. Frank Mc-Kenna, chief executive officer of the Railroad Retirement Board, and Mr. Robert H. LaMotte, director of retirement claims, both in the Chicago office; Mr. J. E. Walsh, Washington liaison officer; Mr. Patrick F. Murphy, regional director of the Cleveland, Ohio, regional office; and Mr. Charles F. Spearing, district manager of the Altoona, Pa., district office.

#### Inflation and the Debt

EXTENSION OF REMARKS

## HON. LAURENCE CURTIS

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Tuesday, June 9, 1959

Mr. CURTIS of Massachusetts. Mr. Speaker, in extension of my remarks I include an excellent editorial from the Boston Sunday Herald of June 7, 1959, entitled "Inflation and the Debt," which pleads for fiscal responsibility:

INFLATION AND THE DEBT

President Eisenhower recently called the cost of servicing the national debt (now \$8.1 billion a year) almost unconscionable. Most taxpayers agree.

But the cost will be a lot higher before it is lower.

The Treasury will soon ask Congress to raise the interest ceiling on long-term Government bonds. The 4.25 percent top set by Congress in 1917 is no longer workable. The Treasury is simply unable to float 5-year bonds in the present market. And it is overloaded with short-term debt. It will have to pay higher rates.

The cheap money people insist that higher rates would be inflationary. But this puts the cart before the horse. Inflation is what has driven interest rates up. Outstanding Government bonds are now selling to yield 4.3 percent and up. New bonds can't be floated for less, no matter what Congress says.

The way to prevent high debt costs is to curb inflation and restore faith in the stability of the dollar. And this can't be done by pegging interest rates at an unrealistic level. Indeed, if Congress refuses to raise the interest ceiling, the Federal Reserve may be forced to bolster the Government bond market again, and one of our most effective controls over inflation will be lost.

Congress should give up the search for easy solutions and follow the President's lead. It should lift the interect ceiling (and the debt ceiling, too) so that the Government can borrow in the open market. But it should also hold the line on spending so that the budget can be balanced in 1960 and a beginning made on reducing the debt.

There is no other way out. Inflation is making debt service costly. And the debt is feeling the inflation. They must be handled together.

## The Common Plight

EXTENSION OF REMARKS

## HON. E. Y. BERRY

OF SOUTH CAROLINA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, June 9, 1959

Mr. BERRY. Mr. Speaker, I have asked unanimous consent to insert in the Congressional Record a portion of an editorial appearing in the April 21 issue of the Sturgis (S. Dak.) Tribune which I feel merits the thought of Mem-

bers of Congress generally.

The editorial is, in part, as follows:

THE COMMON PLIGHT

During recent weeks we have been privileged to attend county-wide meetings of both the Farmers Union and the Farm Bureau. Both sessions were most interesting and informative. They also reflected the opposite approaches to the farm problem of the State's two largest farm organizations.

It is not surprising that Congress has thus far been unable to come up with a satisfactory farm program when the farmers themselves disagree so strongly on what is best for agriculture, and on what Government's role should be in it. Undoubtedly, Congress would be more inclined to go along with farm proposals that had the united backing of the farmers. But the Farm Bureau, the largest farm organization in the Nation, and the Farmers Union, second largest nationwide but the largest in South Dakota, are promoting diametrically opposite farm objectives.

#### POLITICAL ACTION

The Farmers Union, as was pointed out at the recent meeting at Elm Springs, believes that farm prices are made in Washington and that legislation is the answer to the farmer's problems. "The Farmers Union is committed to a program of political action," one spokesman said at the Elm Springs meeting, because we feel it is necessary if we are to obtain our objectives.

"We'd better play politics and play it hard if we're ever going to get a sound farm program again," commented the Grain Terminal Association spokesman at the Farmers Union meeting. He also made it plain that he meant partisan politics. A plea was made at the meeting for greater support of affiliate cooperatives so the Farmers Union would have more money for its educational fund. It was explained this fund is used to tell the "farmer's side of the story" to urban citizens and to obtain favorable farm legislation.

The Farm Bureau, on the other hand, made it plain at its earlier Elk Creek meeting that it believes there is already too much Government in agriculture. It advocates a free market and less Government control for the farmer. It also favors a flexible system of price supports guided by supply and demand rather than high rigid supports.

"The Farm Bureau is not a political organization," stated the Meade County Farm Bureau president at the Elk Creek meeting. "However, we should see to it that candidates represent our way of thinking before we vote for them, regardless of political party."

#### VARIED METHODS

Thus, both farm organizations recognize the importance of supporting candidates who are sympathetic to their objectives. Both want "economic justice for the farmer," but their methods of obtaining it are vastly

different—one wants more Government; the other wants less.

It is highly unlikely that these two farm organizations can provide a united farm program front because of these basic differences. Consequently, it is difficult for Congress to decide what is best for the farmer and the country as a whole. No matter which direction farm legislation takes, the congressional Representatives—and the administration—lose support among a sizable bloc of farmers.

Perhaps it is unreasonable to expect the farmers to present a unified stand on farm programs. There are possibly more free-thinkers among farmers than any other single segment of the population, and they cherish their right to disagree. But farmers comprise about 11 percent of the entire U.S. population and a unified minority is much more effective than a divided one.

There is little doubt that the farmer is caught in an unhealthy cost-price squeeze. His costs have been rising while prices have either stabilized or gone down.

Inflation has hurt the city dwellers, too, but generally wages have gone up there. It is true, however, that the cost of living has managed to more than eat up the increased wages. Thus, the urban residents share a common plight with their rural neighbors.

It is our guess that Congress can do more to help the farmer and city dweller alike by combating the ills that cause inflation than anything else short of keeping the peace. It is our observation that inflation is bred in Congress, and that is where it should be eliminated.

We believe the American people will present a united front if Congress will tackle that objective. And make no mistake about it, it will require the cooperation of the public if Congress is to make any progress in eliminating this economic evil. Congress is sensitive to the demands of the people, and the citizenry should cry out so loudly against inflationary measures that there is no mistaking the will of the people.

Even the voice in the wilderness is some-

#### The Food-for-Peace Bill

EXTENSION OF REMARKS

## HON. HUBERT H. HUMPHREY

OF MINNESOTA

IN THE SENATE OF THE UNITED STATES

Tuesday, June 9, 1959

Mr. HUMPHREY. Mr. President, I ask unanimous consent that a fine newsletter prepared by Representative George McGovern, of South Dakota, be printed in the Appendix of the Record. This newsletter gives a very succinct and concise analysis of the provisions of the bill, as well as the purposes for which it was introduced.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

#### WASHINGTON REPORT

(By Congressman George McGovern)

MAY 25, 1959.

DEAR FRIENDS: Although the American people are understandably concerned about the mounting level of farm surpluses, we ought not to lose sight of the potential value of our food abundance. Throughout history, those nations blessed with plentiful food re-

sources have flourished; conversely, nations suffering from food shortages have languished.

#### OUR DAILY BREAD

"Give us this day our daily bread" is still the prayer of human beings in the far corners of the earth. For most Americans, it is the prayer of gratitude for ample food. But for more than a billion human beings it is the cry of hunger—the feeble plea of the old man begging on the streets of Cairo, the child whimpering for milk in Bombay, the weary African mother trying to convert a few scraps into an evening meal for her family.

For several years, I have been advocating a more imaginative use of our farm abundance. It has seemed to me that piling up vast quantities of food in a world of misery and hunger is morally wrong, economically wasteful, and politically dangerous. Morally, we are losing sight of the Great Teacher's admonition to feed the hungry and clothe the naked. Economically, we are paying hundreds of millions of dolairs a year in storage costs for commodities that are already beginning to deteriorate. Politically, we are creating an unfavorable image of Uncle Sam abroad when we wring our hands over our surplus food problem in full view of the world's hungry inhabitants.

#### FOOD AND FOREIGN RELATIONS

I wonder if we fully realize the power of food in our relations with other countries. Is it posible that many of the underdeveloped nations now receiving expensive military shipments from the United States would be more impressed and better strengthened by less costly shipments of food?

Personally, I become more convinced each day that our most powerful material asset in building a world of peace and freedom is our food abundance. It seems probable to me that the remarkable productivity of the American farmer, if properly used, can be a more decisive factor in the struggle between freedom and communism than the sputnik. The hungry multitudes of Asia, Africa, and the Middle East are far more interested in bread, medical care, and schools than in any number of jets and sputniks. Does anyone wonder what the crafty Khrushchev would do if he had America's surplus food to use in his international operations?

#### BREAD VERSUS GUNS

In a few days, Congress will be considering the President's request of \$3.9 billion for next year's foreign assistance program. Of the \$3.9 billion the President has requested, \$2.6 billion is for military aid, including defense support and the contingency fund; \$1.3 billion is requested for economic and technical assistance

Many of us in the Congress are becoming more concerned each month with the heavy emphasis of the foreign aid program on the side of military hardware. A sizeable amount of such aid is going to undemocratic governments that rule over people suffering from poverty, hunger, and disease. It seems such people would not make very good fighters for freedom.

After pouring millions of dollars in military equipment into Iraq to bolster this country against communism, we saw our military aid used by Iraqi military leaders to destroy the local government and then engineer a working alliance with the Rus-

American military supplies, poured into Pakistan, have so frightened her neighbors that Afghanistan has made a deal with Russia for arms and India has taken a hundred million dollars out of her economic development program and placed it in orders for military equipment with the British and French.

In still other instances, guns and tanks sent by the United States of America have been used by unpopular dictators, not to fight communism, but to resist local reform movements demanded by the people.

For these reasons, I am going to support amendments that will cut several hundred million dollars from our military shipments to underdeveloped nations. At the same time, I will continue to push legislation that I have introduced calling for an expanded use of our farm surpluses overseas as well as in the United States.

#### FOOD FOR PEACE ACT, 1959

On April 20, I introduced a comprehensive bill known as the Food for Peace Act of 1959, containing the following provisions:

1. The sale of surplus farm commodities for foreign currencies to the extent of \$2 billion a year for the next 5 years.

2. Outright grants of food surpluses to countries experiencing famine or chronic

hunger.

3. Continued encouragement to church groups and other voluntary private agen-cies that wish to distribute surplus commodities overseas on a direct people-topeople basis. This section of the bill also includes grants of surplus farm stocks to public and private agencies for use in the United States in the school lunch program, nonprofit summer children's camps, charitable institutions including hospitals, and needy citizens.

4. Agreements with friendly countries to establish foundations to promote education, health, research and other projects from foreign currencies accruing to the United States through the sale of farm surpluses. We could literally convert surplus farm commodities into education and health.

5. A Peace Food Administration under the President to direct the various operations

provided for in the legislation.

Under Public Law 480, we are already moving surpluses to other countries. Included in that program is a truly fine section that permits the churches and other private institutions to distribute surplus commodities overseas. The church world service groups have done a magnificent job with this most valuable program. In my view, this particular activity is the finest single example of the kind of people-topeople relationships that the world desperately needs.

"Food for Peace" is more than a slogan, It offers a partial solution to our agricultural problem and will at the same time relieve much of the suffering of a world that looks to America for leadership in this

crucial hour. Your friend and Representative in Con-

GEORGE MCGOVERN.

Participation by State of Oregon in Atlantic Congress Meeting in London Under Auspices of North Atlantic Treaty Organization

EXTENSION OF REMARKS

## HON. RICHARD L. NEUBERGER

OF OREGON

IN THE SENATE OF THE UNITED STATES Tuesday, June 9, 1959

Mr. NEUBERGER. Mr. President, the North Atlantic Treaty Organization, which has shielded Western Europe from aggressive communism, represents one of the great and thrilling projects of our time.

This week in London, the Atlantic Congress has been meeting under the

auspices of NATO to help add prestige and strength to this alliance of 15 free nations.

We in Oregon are proud that our State has two delegates at the NATO Conference. Both are outstanding women in the life of the State. One is Mrs. EDITH S. GREEN, able Member of Congress from the Third Oregon District, who is known throughout the country for her sponsorship of legislation dealing with juvenile delinquency, libraries, and similar matters. The other is my wife, Maurine Brown Neuberger, a three-term member of our State legislature, with many interests in such realms as retarded children, physical education, modern dance, and improved nutrition.

Furthermore, another delegate to the Atlantic Congress is Palmer Hoyt, editor of the Denver Post of Denver, Colo., but formerly a native of Pendleton, Oreg., and a former publisher of the Oregonian

in Portland.

It is splendid that this participation in the great NATO meeting threads throughout the whole country-to the Rocky Mountains, to the Pacific seaboard, and to all other regions as symbolized by America's 130 delegates.

Mr. President, in the June 15, 1959. issue of U.S. News & World Report, Mr. David Lawrence has contributed an excellent editorial entitled "The Miracle of NATO," and I ask unanimous consent that Mr. Lawrence's article be printed in the Appendix of the RECORD along with my remarks.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

> THE MIRACLE OF NATO (By David Lawrence)

LONDON.-It is not just a political alliance known, because of its initials, as NATO.

It is not merely a military bloc, though one of its objects is the common defense

of its 15 member countries.

Its name—the North Atlantic Treaty Organization-covers not only the military objective but something far more important to the world. For here is an association of free nations, knit together by common interests, and yet not one of them is yielding its soveregnty or limiting the freedom of its own people.

The Atlantic Congress, which has been meeting here under the auspices of NATO. is an assembly of delegates from the various countries which are members. They gathered ostensibly to celebrate the 10th anniversary of NATO itself, but in reality to explore ways and means of promoting further benefits that can accrue when free peoples get together to discuss all kinds of problems affecting their daily lives.

But, it might be asked, Wasn't this the original purpose of the League of Nations and of its successor, the United Nations? In a broad sense this was the theme of the founders of both those organizations. The open hostility of the Communist governments to the free nations made it necessary a decade ago for the countries threatened with attack to unite in a system of collective defense, which contingency was itself provided for in the Charter of the United

NATO has been an unexpected success. Whether it is the realization of the common danger or whether it is an awareness of the necessity for international cooperation even when war is not imminent, the fact remains that 15 countries, large and small, have bound themselves together without surrendering their sovereignty.

This is a time in the world, moreover, when nationalism has lost none of its fervor. Colony after colony has broken away from the mother country to assert its independence. Never before have there been so many autonomous entities as are inscribed now on the world map.

There are, at the same time, those who would curtail, if not wipe out, the last vestiges of sovereignty in a "one world" concept. There are others who argue for a union of major states in a governmental sense, and still others who, in their eagerness to remove trade barriers, would break down boundary lines and bring about actual mergers of governments. Something of this sort has developed in the Middle East in the United Arab Republic, and there are advocates of a United States of Europe who look ahead to a combination of states patterned after our own country.

But nationalism is deeply ingrained. Patriotism is an essential to national life. Tradition is dear to free peoples. So we see today a striking contradiction-at the very time when smaller nations are striving for independence, many other nations are finding a basis for more and more international co-

operation.

Undoubtedly a merged military force tends to bring about a merger of other elements in the field of government, but the success of NATO emphasizes that it isn't at all necessary to yield any sovereignty or to subordinate one government to another or to create a supergovernment to which all the For NATO components parts pay homage. is an example of togetherness that need not be formal but which progresses because a common purpose actuates all the member countries

Disputes there are between them from time to time on what might be termed local matters. These will doubtless arise in the future as they have in the past but, as long as the family spirit of today prevails, there is less and less chance of serious friction between the NATO countries.

Conferences of delegates such as have gathered here afford an opportunity for an exchange of ideas and a mingling of prominent individuals in all walks of life from every one of the member countries. Progress cannot always be recorded in a tangible sense because in international intercourse the intangibles play an even greater

An exchange of goods and services, for instance, by lowering tariff and quota barriers has come to be recognized inside Europe as essential to a prosperous economy for all countries. The fight against poverty and low standards of living is now coming to be understood as one that cannot be left wholly to the doctrine of the survival of the fittest. There must be cooperation between peoples on the economic as well as on the military and the political fronts.

NATO is a miracle primarily because it is a symbol of good feeling, of brotherhood among nations, and of successful collaboration through a sharing of skills and knowledge so that free nations may continue to live in independence, preserving all the advantages of autonomy but gaining also all the advantages that come from pooling their individual resources for the common good.

#### The Case for Fair Trade

EXTENSION OF REMARKS

#### HON. GORDON H. SCHERER

OF OHIO

IN THE HOUSE OF REPRESENTATIVES Tuesday, June 9, 1959

Mr. SCHERER. Mr. Speaker, Mr. Ed Wimmer, the capable and dynamic vice president and public relations director of the National Federation of Independent Business, is perhaps the principal leader in the fight for reasonable fair trade legislation at the Federal level. Mr. Wimmer is a Cincinnatian and, I am happy to say, a constituent of mine.

Mr. Wimmer has called to my attention the lead editorial in the June 4 edition of the Cincinnati Enquirer entitled "The Case for Fair Trade." This is an excellent and well-reasoned editorial. In view of the fact that the Congress is presently considering such legislation, I feel that every Member should have the opportunity to read and study the contents of this editorial. The editorial follows:

[From the Cincinnati Enquirer, June 4, 1959]

THE CASE FOR FAIR TRADE

Few subjects in our modern economic life have been discussed as vehemently—and with less real comprehension of the underlying principle—as fair trade.

The popular concept is that fair trade laws are enacted to keep people from getting bargains, or to prevent healthful competition, or to make the public pay more for manufactured goods than they are worth.

To see what fair trade really means, and how it operates, let's suppose you organize a company. You're going to manufacture electric irons—good electric irons, the best that can be made. You pay for research, to obtain the latest features in your product. You buy expensive machinery, hire skilled craftsmen, organize a merchandising and advertising campaign to create a popular demand for your irons.

Your electric iron is not cheap, but you are convinced that the public will pay a fair

price for a really good iron.

First, though, you must sell them to appliance dealers throughout the country—unless you intend to operate thousands of retail stores yourself, which would be uneconomical if not impossible.

The thing that the appliance dealer wants to know is—can he sell them, or will be get

stuck with them?

In your case, it being a good iron and properly promoted, he can be convinced of its salability. But he might be stuck with them in another way. Suppose, after he's purchased a good inventory and sold some to his best customers, a discount house or the like around the corner starts selling them "at wholesale"?

His best customers will accuse the dealer of having gypped them. And if the retailer tries to meet the wholesale price, he is soon out of business. After all, he is renting his store, paying his help and keeping going on the usual traditional spread between whole-

sale and retail prices.

This doesn't have to happen too often, or too long, before you and your good iron manufacturing company are caught in a deadly vise. Once your product has gone the round of the discount houses and the special sales, how many retailers are going to stock up on your iron? And when you lose the promotion and merchandising support of the ethical retailers, even the discount houses and special sellers will lose interest in you. Or they'll demand special price concessions that would make it impossible for you to continue manufacturing a good iron.

Fair trade, in essence, requires all dealers in your product to observe the suggested price. It is a protection for the independent retailer as well as the manufacturer of trade-

name wares.

It does not end competition. Nonfairtraded products are subject to any price manipulation. And there always is the compelling factor of rivalry between manufacturers in the various fields.

What is so heinous about permitting a man—you, in the electric iron business—to suggest a retail price that will be adequate to keep you and your retailers in business?

The issue is being threshed out in Congress and the State Legislatures. The public, we think, would do well to look at the broad principle involved. The bargains available when fair trade breaks down may be very illusory.

Alabama: Men and Commerce

EXTENSION OF REMARKS

## HON. FRANK W. BOYKIN

OF ALABAMA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, June 9, 1959

Mr. BOYKIN. Mr. Speaker, under leave to extend my remarks in the REC-ORD, I include an article by a great magazine which is published in my beloved State of Alabama. The name of this magazine is "Hearth and State" and it serves our senior citizens. I wish we had a way of showing the picture on the cover of this beautiful blue and white magazine, as it shows a picture of a great and good man, Charles Meri-wether, State finance director of the State of Alabama. Then follows an article entitled "Meriwether: Man With a Mission." I don't think they said nearly enough; however, what they did say about my friend, Charlie Meriwether, and about our great Governor, Gov. John Patterson, of Alabama, is very good. What a great job these men are doing.

Then, I see in the Mobile Press Register, one of the oldest papers in this Nation, issue of Sunday, June 7, 1959, in headlines that cover five columns, that Mobile tops southeastern ports in foreign shipping. I am also including that article in the Record, along with this article about Charlie Meriwether, one of the cabinet members in Gov. John Patterson's great cabinet there in the Jeff Davis Capitol and our Capitol at Montgomery, Ala.

· Well, they have another great cabinet member there, the Honorable Earl Mc-Gowin, and I wouldn't be surprised some day if we did not see this same man as Governor of Alabama. He and his three famous brothers have been such outstanding successes in their businesses. They have one of the largest lumber businesses in this country, and they have have not only had it themselves, but their father before them, as well as their uncle, had it. It is a great familythese McGowins; and Governor Patterson selected Charles Meriwether as State finance director, and he also selected the Honorable Earl McGowin as director of the great State docks at Mobile, where our taxpayers have spent about \$50 million-with not 1 nickel's worth of Federal funds going into these docks; and how thankful and how proud we are of them, and how proud I am of the Mobile Register for giving it so much publicity, saying that Mobile,

Ala., tops the southeastern ports in foreign shipping. How I wish everybody could know more about Alabama and its people.

Well, we are getting to know them, and our congressional delegation—the great Senator Lister Hill and Senator John Sparkman and all of our Representatives—are doing such a good job. I see that they honored Senator Lister Hill yesterday at Atlantic City for the great work that he is doing in health—not only for Alabama and the South, but for the entire United States. It is most gratifying to have one of our boys noticed a little up in that Yankee country.

Then, I had with me last night the great Thomas Wesley Martin, chairman of the board of the Alabama Power Co., along with the president of the Alabama Power Co., Mr. Walter Bouldin, and when we read in the paper about the great honor that had been conferred on our outstanding senior Senator from Alabama, way up in Atlantic City, there on the Atlantic Ocean, Mr. Martin said: "I did not know all about this great operation that is told about in this article-that Senator Hnl's father, Dr. Hill of Montgomery, Ala., was the first man that operated successfully on a human heart." Well, he was, and I have talked to LISTER and his wonderful wife and all of his family about it many times. Mr. Martin, this great humanitarian who has done so much for all mankind, said: Frank, I believe LISTER's father, Dr. Hill, should go in the Hall of Fame." Well, I think it is a good thought and we are going to work on it this very day.

So many good things are coming today. I flew down to Richmond, Va., yesterday in a special plane. We made it there from Washington in 25 minutes. I had a talk with those fabulous Reynolds folks, and we are going to have one of the greatest plants—metal plants—that the great Reynolds boys have on earth, right at Lister Hill, Ala.

So, truly, we are coming into our own; and Mr. Speaker, as Tom Martin said one night when he was introducing Dr. Charles Kettering, about 3 days before Dr. Kettering went to his reward-"Surely, this part of the 20th century belongs to the South and the Southwest. That is true, and you, Mr. Speaker, and our great leader, JOHN McCORMACK, and so many of my colleagues here in this great body have helped and are helping us so much. I wish we could see and talk to every one of them that are helping, but I am sure they know that our people in the great State of Alabama appreciate everything that they have done and are doing to help us.

This great CLARENCE CANNON, chairman of the Appropriations Committee, gave us \$8 million for the Jackson lock and dam last week in the public works appropriation bill. A little farther up the Tombigbee River he gave Congressman Armistead Seldon's district \$150,000. Well, our own George Andrews is on this great committee, helping, pulling, and praying—just like both of our Senators and our entire congressional dele-

gation have done, are doing, and will continue to do, and that is to work for the development of our great undeveloped country, where we have so many undeveloped resources—human resources as well as natural resources. Truly, this part of the 20th century does belong to the South.

[From the Mobile Press Register, June 7, 1959]

MOBILE TOPS SOUTHEASTERN PORTS IN FOREIGN SHIPPING—\$3,200,000 GAIN MADE IN EX-PORTS AS OTHER HARBORS DROP \$85,100,000

Mobile made the best foreign trade showing of any port in the southeastern United States during the first quarter of 1959, according to Bureau of Census reports released yesterday by Merrill C. Lofton, Commerce Department field manager at Atlanta, Ga.

While total exports through the six customs districts in the Southeast were \$85.1 million below the first quarter of 1958, Mobile had a \$3.2 million export gain.

And Mobile contributed \$7.7 million of a \$67.5 million increase in imports, handled through the six customs districts.

With Mobile reporting the only export gain, substantial drops in exports were recorded for the New Orleans, Florida, Georgia, South Carolina, and North Carolina districts.

All the districts gained in imports, with the exception of Georgia, which dropped about \$1 million.

According to an Associated Press dispatch from Atlanta, exports showed a rather general pattern all over the country of being below last year but a 16 percent decline in exports from the southeastern ports was 10 percent greater than the national drop.

On the other hand, a 22 percent rise in imports in the Southeast was 8 percent more than an import gain registered for all the Nation's ports.

MERIWETHER: MAN WITH A MISSION

How does the Patterson administration hope to raise the money needed to pay the senior citizens of Alabama the \$75 they need and justly deserve?

and justly deserve?

As Gov. John Patterson has said time and time again, "by cutting out waste in government spending and allowing the taxpayer a dollar's worth of service for a dollar's worth of taxes."

The keyman in helping Patterson with this important job is the State finance director, Charles M. Meriwether.

Already, at the beginning of an administration pledged to cut out waste in government spending, records show Meriwether has saved the State thousands upon thousands of dollars by making sure the State purchases the best merchandise, at the best and cheapest prices, and all on competitive bids.

Meriwether is up early and on the job at the State capitol 5 days a week. And leaving the Capitol he usually is seen carrying a well-filled briefcase with work to be finished at home.

Around Capitol Hill, the personable Meriwether is known as a man who means business. When he moves, he moves fast.

But the former public relations man and recordbreaking salesman is also known as a man with a good sense of humor, who smiles and speaks to everyone.

In addition to keeping tab on the purse strings of the State's money, Meriwether also is active in civic affairs. He is State chairman of the Alabama Chapter of the National Multiple Scierosis Society.

He became interested in helping the thousands of Alabamians who are victims of multiple scierosis because a long-time friend of his has the disease.

Meriwether is married and has three children, Leslie Ann, 19; Beverly, 18; and Charles, Jr., 15. He is a member of the Methodist Church. He says he once played golf but doesn't have time now. He neither smokes nor drinks. In his spare time he likes to putter about the yard.

He is on record as saying the Patterson administration is working long and hard to get Alabama's senior citizens the \$75 a mouth they so justly deserve.

### Afghanistan

EXTENSION OF REMARKS

## HON. ADAM C. POWELL

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES
Tuesday, June 9, 1959

Mr. POWELL. Mr. Speaker, I wish to salute the people of Afghanistan, His Majesty Almutawakel-AlAllah Mohammed Zaher Shah, and His Excellency M. H. Maiwandiwal, the country's

lency M. H. Maiwandiwal, the country's Ambassador to the United States, for having secured their complete political independence some 40 years ago and for today occupying a rightful and dignified place among the world's free nations.

Though presently the country lags behind many others in the various fields of human endeavor, that has not always been the case. For in bygone days history-reveals there were periods when Afghanistan enjoyed an advanced civilization which spread into the adjacent areas. It was here that the Aryans for the first time took to sedentary life and framed a rudimentary form of democratic government. The Afghans com-plain that foreign invasions directed against their independence and violations of their territorial integrity by hordes of warriors of various nationalities with accompanying wars have left the country and its people considerably lagging in the march of the 20th-century civilization.

Afghanistan, about the size of Texas and a landlocked mountainous country of some 12 million, is bordered by China, Iran, the Soviet Union, and Pakistan, is the crossroads between Asia, the Middle East, and the Indian subcontinent, and is one of the most popular countries of that section of the world.

Since World War II Afghanistan has maintained consistently friendly relations with Persia, India, China, Soviet Russia as well as with the United States. During this period Afghanistan has received from the United States \$117,294,000 in grants, loans, and assistance.

Prime Minister Daud in a radio report to the nation stated in 1956:

The main objectives before us as a sovereign and peace-loving nation are to raise the standard of living of the people and to insure their material and spiritual well-being, for the achievement of which we must fight ignorance, disease, and poverty.

Moreover, he added:

Relations between Afghanistan and other states have continued on a basis of neutrality, and by maintaining this traditional policy, efforts have been made to strengthen and develop friendly relations with the peoples and nations of the world.

The Afghan foreign policy is expressive of the collective spirit of its people. They are warmhearted, 'honest, trusting, generous, and tolerant people and mind their own business so long as they are not interfered with, I am told. Slowly becoming aware of the limitations of their life in comparison to the more advanced nations of the world, they wholeheartedly support plans and projects designed to bring them and their country more prosperity and a higher standard of life. For which reason the Afghans are highly appreciative of the technical aid and assistance extended by the big powers. Yet their desire for continued independence without interference from anyone, their love of freedom and self-respect dictated their current neutrality in an otherwise cold war

Their tradition of hospitality is well known and it is reported that a total stranger to any Afghan home would be warmly received and would be offered the best food and if there were only one sleeping room it would be his for the visit.

For Americans to be identified with such a proud people and for Afghans to accept our offers of friendship is mutually rewarding and though our entry there might have been competitively motivated, we are enriched as they by the relationship. For since time immemorial Afghanistan has not only been a marketplace for the exchange of ideas and cultural values, but it has been a birthplace for new ideas and values, a land whose history may contain some important lessons for the man who would be a scholar of history or a citizen of the world.

In the words of Afghan Minister for Foreign Affairs, Sardar Mohammed Naim, before the United Nations in 1955:

The establishment of feasible and verifiable confidence among nations will help reduce tension, and that in turn will clear the way for disarmament \* \*. Nuclear energy instead of being thought of as the angry demon of destruction bent on the annihilation of the human race, will become the powerful angel dedicated to the well-being of mankind.

Again civilization may find a new vitality in a land that nurtured our Western culture.

## The New Battle for Conservation

EXTENSION OF REMARKS

## HON. ROBERT W. LEVERING

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Tuesday, June 9, 1959

Mr. LEVERING. Mr. Speaker, under leave to extend my remarks in the Congressional Record, I am inserting a most thoughtful editorial about conservation from the Columbus (Ohio) Dispatch for June 6, 1959.

This editorial recounts some of the history of the conservation movement in this country and it underscores the need for a new battle for conservation to pre-

vent the spoilation of our forests, lakes, and other natural resources. I commend it to the attention of my colleagues, and to the public, for I feel, as do the editors of this newspaper that this is a vital subject deserving of great thought and attention on the part of the people.

The editorial follows:

[From the Columbus (Ohio) Dispatch, June 6, 1959]

CONSERVATION

Early in the administration of Theodore Rooseveit, the President with the purpose in mind of breaking the strangle-hold of a small minority on the sources of wealth which should be open to the honest endeavors of all the people—under the guidance of Gifford Pinchot—embraced the Policy of conservation.

The established theory in regard to natural resources was that the general prosperity of the country could best be advanced by the development of these resources through private capital, and upon this theory land was either given away or sold

for a trifle.

Under this policy, over wide areas, the timber lands had been stripped bare with reckless waste; the control of the Nation's water power had to a dangerous extent passed into private hands, and the public grazing lands and the wealth in minerals and oil in the public domain were bringing enormous dividends to a few, but no returns whatsoever to the people as a whole to whom these natural resources belonged.

Under Roosevelt's administration the area of the national forests was increased from 43 to 194 million acres, the water power resources of those areas were put under Government control to prevent speculation and monopoly, and cattle raisers grazing their herds on the reserves were forced to pay for

What they got.

No policy of Roosevelt's administration excited deeper public interest or sharper opposition than his efforts in behalf of conservation. His official acts and the influence of his speeches and messages led to the adoption by both citizens and Government of a new theory regarding natural resources. It is that the Government, acting for the

It is that the Government, acting for the people who are the real owners of public Property, shall permanently retain fee in Public lands, leaving their products to be developed by private capital under leases which are limited in their duration and which give the Government complete power to regulate the industrial operations of the leases.

Unfortunately, although legislation enacted during the Roosevelt administration did much to promote conservation, the Nation's natural resources are still threatened to-

All over the country powerful interests, representing themselves as the majority, are closing in, bent on despoiling and obliterating every last vestige of original America. While national parks preserve less than 1 percent of our land in primeval condition, glant dams are proposed for four of them, and lumbermen demand the finest forests in the fifth.

National forests provide less than I percent of the Nation's cattle-feed requirements, yet embattled stockmen are asking for the forests as their private preserve. Miners and sheepmen want the national monuments. State Parks are succumbing to commercial interests. Marshes are drained, lakes emptied, and predators exterminated so that wildlife suffers from unbalance.

Each year thousands of acres of timber are indiscriminately hacked and burned, the range is depleted, soil exhausted, erosion accelerated, streams polluted, and air contaminated.

Years ago Americans who valued this original America, became alarmed at the rapidity with which it was disappearing. They started a movement for the preservation of natural resources, both economic and scenic, which has ever since been known as conservation.

The time is now at hand again for a similar battle to be waged. Thoughtful Americans must begin thinking, talking, reading, and spreading the importance of conservation.

Representative Charles O. Porter, of Oregon, Leads Fight To Improve Government Employees' Security Program

EXTENSION OF REMARKS

## HON. RICHARD L. NEUBERGER

OF OREGON

IN THE SENATE OF THE UNITED STATES

Tuesday, June 9, 1959

Mr. NEUBERGER. Mr. President, one of the outstanding young liberals in the House of Representatives is Representative Charles O. Porter, of the Fourth Oregon District. Mr. Porter has been waging a strong fight against extending the Government employee security program to jobs which are in a nonsensitive area.

In his efforts Mr. Porter has had the implied endorsement of the Chairman of the Civil Service Commission, the Honorable Roger Jones, who has cast doubt in testimony on the need for such legislation. When asked by Representative Porter, Mr. Jones said he didn't know whether the Government is faced with any emergency program, and that any undesirable employee can be discharged under existing legislation.

The well-known local columnist on Federal personnel matters, Joseph Young of the Washington Evening Star, has written an article, published in his paper of June 4, 1959, describing the effective and brilliant work of Representative Porter in this field. Mr. Young adds—

The Oregonian certainly has become one of the committee's most valued members.

This refers to the House Post Office and Civil Service Committee.

Mr. President, I ask unanimous consent to have printed in the Appendix of the Record Mr. Joseph Young's column of June 4 from the Washington Evening Star.

There being no objection, the column was ordered to be printed in the RECORD, as follows:

JONES DEALS BLOW TO SECURITY BILL

(By Joseph Young)

The bill to extend the Government's loyalty security program to nonsensitive jobs has suffered a considerable setback.

During House Civil Service Committee hearings yesterday on the measure, no less an administration spokesman than Civil Service Commission Chairman Roger Jones disclosed that he was not aware the Government is faced with any emergency problem because of the Supreme Court decision several years ago limiting the security program to sensitive tobs only

to sensitive jobs only.

The question as to whether an emergency existed was asked by Representative Porter. Democrat, of Oregon, who has led the fight against the Murray-Rees bill to extend the loyalty security program to nonsensitive jobs. Mr. Porter contends that such a law is not needed, and that if nonsensitive jobs are brought under the loyalty security program, employees should be given the right to full appeals and hearings, together with the right to know the charges against them and the right to confront their accusers.

Otherwise, Mr. PORTER feels, countless injustices could result against employees in the guise of security, such as the loss of their jobs and the failure to find other ones because of being condemned as security risks,

In response to Mr. Porter's question, Mr. Jones said he didn't know whether the Government is faced with any emergency problem. He said he couldn't say "Yes" and he couldn't say "No." But the fact that Mr. Jones could not definitely say that an emergency existed was selzed on by Mr. Porter and other committee members who feel that no new law is necessary to prove they are on the right track.

The bill's sponsors have contended the Government is faced with a critical situation because the Federal service is honeycombed with Communists in nonsensitive jobs who could play havoc with national security.

#### NO COMMUNISTS

But Mr. Jones declared that he did not think any of the 109 persons who were restored to their Government jobs as a result of the Supreme Court decision (the employees were all in nonsensitive jobs) were Communists,

If they were, they could have been fired under other laws which permit firing of Government workers who are Communists, regardless of whether they are in sensitive or nonsensitive jobs, Mr. Jones said.

The CSC chief pointed out that any undesirable employee on the Federal payroll can be fired under the Lloyd-LaFollette Act. Also, a 1950 law provides for the firing of any Communist in Government.

Mr. Jones did say that the Supreme Court decision posed some problems for the Government, but he did not have time to elaborate on what they were and will return for further questioning next week.

further questioning next week.

While Mr. Jones shied away from expressing a definite opinion on the Murray-Rees bill, observers at the hearing felt that he had grave reservations about extending a general loyalty-security program to all Federal workers.

Representatives FOLEY, Democrat of Maryland, and Corbett, Republican, of Pennsylvania, also expressed misgivings about extending the loyalty-security program to nonsensitive jobs.

It was stressed that such character defects as immorality, drunkenness, indebtedness, unsavory associations, etc., could be lumped under the term "security risk." when the character defect had nothing to do with the actual security of the United States.

Yet an employee so fired as a "security risk" would probably be ruined for life as far as getting another job is concerned, it was pointed out.

It was also stated that these employees can now be fired easily enough under regular civil service suitability regulations.

Incidentally, Mr. PORTER has done a brilliant job during the hearings in his examination of witnesses. The Oregonian certainly has become one of the committee's most valued members.

## Poison in Your Water-No. 107

EXTENSION OF REMARKS

#### HON. JOHN D. DINGELL

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES Tuesday, June 9, 1959

Mr. DINGELL. Mr. Speaker, pursuant to permission granted I am inserting into the Appendix of the Congres-SIONAL RECORD an article appearing in the Rockaway Beach (N.Y.) Wave of April 30, 1959, entitled "Reminiscing."

#### REMINISCING

Several generations ago there were many oystermen and clam diggers at the beach, who may now be classed as forgotten men. There was a time when Rockaway oysters grown in Jamaica Bay were considered among the best and were in great demand. The largest grower in the bay was Harmen Schmeelk, whose beds were in the bay between the beach and Grassy Point, Broad Channel.

G. Wilbur Doughty, of Inwood, was a large grower of oysters in the east end of the bay, and the Lundy brothers were the third largest growers in the lower bay.

But as sections near or on Jamaica Bay began to be built up and sewers were constructed emptying into the bay, there seemed to be an increase in the number of typhoid fever cases. The State and city boards of health made an inspection and took oysters from all parts of the bay and had them tested.

It was found that the pollution of the waters of the bay by the emptying of raw sewage was the cause of typhoid fever, and the State and city boards of health hibited the planting of oysters in the bay.

#### CLAMMERS STOPPED

Under this law, digging clams is also pro-hibited. Unlike the oysterman, the clam digger, without a doubt, was one of the most abused individuals known. Very frequently, the punsters took a fling at him and he was often referred to by vaudeville actors, while the general public looked down upon him as an easygoing, shiftless nondescript, whose sole object in life was to do peculiar things and digging clams when occasion required.

But this was all untrue. The clam digger possessed more than the average intelligence, ready to speak on any subject without hesitancy, and kept in touch with the outside world pretty well. As a character, he was honest, sympathetic, and kind, and he was a toiler. He found time to study the tides and to calculate on the season's catch of shellfish.

I have often spoken to some of these clam diggers and they all said they did not mind what people called them. They took the attitude of farmers and persons living in the country who did not find any offense at being called "hayseeders."

#### BATHING PROHIBITED

Putting the lid on oystering and clamming in Jamaica Bay also included bath-ing and swimming, but there are still many persons who violate the health law. Almost any day you can see scores of men, women and children taking a swim in any part of the bay. Some day when the weather is warm, just take a ride in the subway and you will notice a large number of people in the water at Howard Beach.

There seems to be as many people enjoying a swim now as there were years ago, and the health department nor the police dulging in their favorite sport.

#### FISHING HAS SUFFERED

Pollution of the bay also has tended to make fishing less popular. Old fishermen will tell you that fishing in the bay is not what it used to be. They tell you that weakfish, bass, blackfish, and other species were plentiful anywhere in the bay. other cause for the reduced number of fish in the bay, they say, is that the numerous now keep churning up the powerboats water. Before powerboats became popular sailboats glided noiselessly over the surface and did not disturb the fish.

While some good catches of flounders, porgies and the like are still being made, the gamier fish such as the weaks and bass are not as numerous.

## Bankers' Role in Higher Education Loan Plan Is Successful

EXTENSION OF REMARKS OF

## HON. ABRAHAM J. MULTER

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Tuesday, June 9, 1959

Mr. MULTER. Mr. Speaker, I commend to the attention of our colleagues the following article by George H. Seal, president of the Massachusetts Higher Education Assistance Corp. These bankers are to be congratulated for their worthy endeavor.

Mr. Seal's article appeared, in the American Banker of May 15, 1959:

MASSACHUSETTS BANKERS PROUD OF ROLE IN HIGHER EDUCATION LOAN PLAN SUCCESS

(By George H. Seal, president, Massachusetts Higher Education Assistance Corp.)

Throughout the United States, the commercial banks of Massachusetts are being given well-deserved credit for their part in devising and implementing "HELP" the unique Higher Education Loan Plan inaugurated in this State 2 years ago.

HELP is a creation of the Massachusetts Higher Education Assistance Corp., organized in 1956 under a special act of the legislature, for the purpose of making bank loans available to college students on more favorable terms than had ever before been feasible. It was born of the cooperative endeavor of a self-constituted group of bankers, educators, and business leaders. They recognized the need in this highly industrialized area for an increasing flow of capable graduates in higher education.

#### TWO MILLION DOLLARS LOANED TO 4,000

In its first 2 years, HELP has made available commercial bank loans to more than 4.000 students, to a total in excess of \$2 million. Applicants are required to be domiciled in Massachusetts and to have completed the first year of their program of higher education at an approved institution. Loans are limited to \$500 in any one year, and a total of \$1,500 in 3 years.

The borrowers sign notes due and payable 6 months after graduation, at which time the banks renew the loans for 3 years, and set up a schedule of 36 equal monthly payments. Currently HELP loans are being made at 41/2 percent, of which one-half of 1 percent is paid by the banks to the corporation as each loan transaction is completed. Approval of a HELP loan by the corporation carries with

do not appear to prevent them from in- it its guarantee to the lending bank of 80 , percent of the principal amount.

#### MAINE, NEW YORK FOLLOW

The outstanding success of this "Massachusetts plan," as it is called elsewhere, has already resulted in two other States, Maine and New York, establishing identical or similar loan plans. Also, enabling legislation is now pending in several other States, including Rhode Island, Connecticut, New Jersey. Pennsylvania, and Illinois.

What we have here is striking evidence of the great change that is taking place with respect to the use of loans to finance in part the cost of a college education. Writing in the May issue of IBM's Think magazine. Devereaux C. Josephs, who was chairman of the President's Committee on Education Be-

yond the High School, says:
"It is not inconceivable that a few years from now the typical collegian will display. as inevitably as the street signs and pennants on his wall, a promissory note to indicate his membership in the most ubiquitous fraternity of all—Iota Omicron Upsilon. And to the sonorous Latin motto of his alma mater may be added the more familiar American slogan 'Go Now; Pay Later'."

#### AT TUFTS UNIVERSITY

President Nils Y. Wessell, of Tufts University, tells us:

"At Tufts University we believe that sub-stantially increased lending programs for college students will have to supply one of the important answers to the question of adequate income for our private colleges and universities. Only through such expanded programs can charges made to students be increased to permit in turn adequate compensation for college faculties."

The keystone of HELP's structure is the corporation's guarantee to the banksof 80 percent of the principal of each loan it approves. It is this assumption of four-fifths of the credit risk that warrants the banks in making HELP on such favorable terms.

#### ONLY THREE DELINQUENTS

The corporation has been exposed to the hazard of delinquents since December 1957, when some of the first borrowers were due to sign renewal notes. However, only three loans have been declared delinquent, and one of these borrowers is now making monthly payments. Equally reassuring is the fact that some 204 borrowers have repaid their HELP loans in full, on or before their due dates, to a total of more than \$76,000.

The guarantee device plays another important part in our program, of especial appeal to contributors to our capital fund. the terms of our agreement with the banks, each \$1,000 added to our capital fund makes 12,500 bank dollars immediately available for loans to students. I know of no more effective means of expanding the usefulness of contributed funds,

To maintain its capital fund in proportion to the rising total loans, the corporation seeks tax-exempt contributions from business corporations, foundations, and individuals. Our goal for the fund in 1959 is \$250,000, and our ultimate goal is to bring it up to \$500,000 by the end of 1961. That amount will not only provide for guarantee of loans of more than \$6 million, but will also yield an investment return approximating our modest administrative expenses, and make HELP entirely self-supporting.

#### ONE HUNDRED AND THIRTY BANKS PARTICIPATE

Another feature of HELP that has contributed much to its success is the fact that its operation is chiefly in the hands of the 130 commercial banks participating in the program. Their skilled and experienced loan officers sustain the entire burden of interviewing applicants, obtaining essential information, and appraising them as character Ernesto De La Fé and the Trial of Fidel and credit risks

The banks also serve as the collection agencies for HELP loans, a service that will become more important as time goes on. It is their responsibility to secure the signing of renewal notes when the original HELP loans come due, 6 months after graduation.

In case a borrower withdraws from his college course prior to graduation, the bank must establish contact with him and arrange for repayment of his loan. This is usually on a basis of monthly payments, starting immediately. In relation to these procedures the policy of referring all applicants to their hometown banks is most helpful.

In its report on the Massachusetts plan, the College Life Insurance Co. of America said: "For any one bank the cost of these services is relatively small. But if the guarantee fund (MHEAC) assumed all these services the total cost of loans of these sizes and at these interest rates would be prohibitive."

#### ENTHUSE AFTER 2 YEARS

Our educational institutions are enthusiastic about their 2 years' experience with HELP in action. For example, Very Rev. Michael P. Walsh, S.J., president of Boston College, writes: "It is obvious from the fact that over 13 percent of your borrowers have been from Boston College that the HELP program has been of tremendous assistance to our students": and, "I want to express my own deep appreciation and gratitude for all that you have done and are doing to assist our students with their most difficult problem, financing their college education.

Most significant is the further comment of President Wessell, of Tufts University. "The HELP program." he states, "represents the response of private enterprise in the interest of the general welfare. In a time when the great temptation too often is to turn to the Government for assistance, the success of the HELP program is particularly encouraging and noteworthy. In this respect it serves as an extremely important lesson to our students who are to be both the taxpavers and the community leaders of the future.

#### AVOIDS PEDERAL INTERFERENCE

In Maine, Dr. Charles F. Phillips, president of Bates College, was chiefly responsible for the establishment of a student loan program identical with HELP. Dr. Phillips said re-cently, in warning of the danger of Federal control of higher education, that "if citizens of other States will establish private loan Plans, as Massachusetts and Maine have done, We can then urge the Federal Government to give up its current loan program.

Speaking for the commercial bankers of Massachusetts, Hildreth Auer, president of the Malden Trust Co., and president of the Massachusetts Bankers Association, assures me that the members are much pleased with HELP. They are convinced, he says, that their participation in the program has strengthened their community relations. One bank reports that a former HELP borrower has now become one of its customers for other purposes.

#### COMMENT BY CAPPERS

Elmer C. Cappers, president of the Norfolk County Trust Co., first president of our cor-Poration, and president of the Massachusetts Bankers Association when the corporation Was established, twice toured the State seeking first the support of the bankers for the enabling legislation, and then enlisting their Participation.

"As a result of their sincere and effective cooperation," says Mr. Cappers, "thousands of college students have been able to walk into their local commercial banks and obtain loans which formerly were not available. It is becoming more and more obvious that the program was an excellent answer to a great need."

## Castro

EXTENSION OF REMARKS

## HON, GORDON H. SCHERER

OF OHIO

IN THE HOUSE OF REPRESENTATIVES Tuesday, June 9, 1959

Mr. SCHERER. Mr. Speaker, although our attention is no longer focused so intensely as it was for a while on Cuba, we cannot afford not to at least keep ourselves informed as to what is happening on our doorstep. In the June issue of National Review I was somewhat shocked to read an article by John Leonard entitled "Ernesto de la Fé and the Trial of Fidel Castro." It is my feeling that every Member of Congress should read this account. A former cabinet minister and widely respected Latin American newspaperman, Ernesto de la Fé, who fought against both Batista and communism, faces death in Cuba by a Castro firing squad:

ERNESTO DE LA FÉ AND THE TRIAL OF FIDEL CASTRO

#### (By John Leonard)

I went to Havana with the specific intention of interviewing Ernesto de la Fé, premier inmate of Fidel Castro's La Cabaña prison; and the general intention of learning something of the anti-Communist cause in Cuba. I went with the verbal assurance of the Cuban Embassy in Washington that there would be no difficulty in obtaining an interview with De la Fé, in that there was "complete freedom of the press in Cuba," and that the provisional government was anxious to cooperate with me, and had nothing to hide.

(I did not see De la Fé, assurances notwithstanding. I was shunted from office to office, entwined in redtape of application office, entwined in rectape of application, forms and letters of explanation, accused of representing a "reactionary, anti-Castro magazine." and asked to remain in my hotel room. I did have ample opportunity to talk with a number of Cuban journalists, businessmen, lawyers, members of the government, university students, and ordinary Most of them were eager to talk citizens. to me, although most of them requested that their names be withheld. It is from their testimony that this story has been pieced together, and it will be their good will and concern that rescues Cuba—if it can be rescued-from the tide of Communist infiltration.)

#### I. THE MAN

On a winter night in 1948 the embryonic revolutionary. Fidel Castro, fled through the streets of Havana from gangsters on the payroll of a local racketeer named Rolando Masferrer. In desperation Castro sought and received refuge in the home of a Cuban journalist in Nicanor del Campo Marianao. The next evening that same journalist was shot at while bringing Castro's sister to see him in hiding. Does the new Prime Min-ister remember the journalist who risked his life to help him 11 years ago? His name was Ernesto de la Fé.

Ernesto de la Fé is a short, dark, balding man in his late forties; one of five brothers; married, with two children; a journalist acknowledged throughout Latin America to be honest and compassionate; and incorruptibly anti-Communist.

This week Ernesto de la Fé enters his sixth month in Havana's La Cabaña prison-a dilapidated fortress at the ocean end of the

seawall, recently converted by Fidel Castro's provisional government into a political prison which holds 1,000 unarraigued, untried prisoners incommunicado, most of whom sleep by necessity at night on the prison floor. De la Fé has not been formally accused of any crime. He has not seen his lawyer, his wife, his brothers, or any of his friends since his arrest on January 4, 1959, 3 days after Batista fled into exile. He does not know that his wife gave birth to a daughter 2 months ago. Letters and tele-grams to him at La Cabaña are either diverted or destroyed

#### Political mistakes

Ernesto de la Fé is singularly important in La Cabaña because of the esteem in which his colleagues hold him, all over Latin America because of the rancor of his enemies and because of the circumstances surrounding his arrest and imprisonment, Fidel Castro's press secretary has character-ized him as "a Fascist, a traitor, and a skunk"; Castro himself has called him the "Goebbels of Cuba." And then he has been saluted by Mexico City's El Universal as a "courageous journalist persecuted for the truth of what he says." His plight has elicited hundreds of protests from newspapermen all over the hemisphere. Last week in Havana most Cuban journalists were predicting he would be shot.

Ernesto de la Fé has made political mistakes. He welcomed Fulgencio Batista's coup d'etat of March 10, 1952. Along with others, including members of the U.S. Embassy in Havana, he believed that Batista would improve upon the impotent, corrupt, and disintegrating regime of Carlos Prio. Shortly after Batista's bloodless revolution, de la Fé was appointed Minister of Information.

He served in the Batista cabinet for 2 years, identified primarily for the creation of El Movimiento de Integración Democrática Americana, an agency designed to combat Communist infiltration in the government; and his support of a new law protecting the interests of Cuban journalists. The law is still on the statute books-even though Castro's government rules by decree. These two acts comprise the substance of de la Fé's official political career. He was never charged with an act of terrorism, of brutality, or corruption.

In September of 1954, de la Fé resigned from the Batista cabinet with a violent denunciation of government corruption and cruelty. He charged Batista with a plan for election-rigging the following November, with vote buying, illegal tax rebates, and broken promises to the Cuban people. In an article published in Bohemia magazine, a nationally distributed monthly, he lambasted Batista for a secret deal with Cuba's Communists, a mutual nonaggression agreement which permitted known Communists leaders to operate within the law-so long as they did not obstruct the Batista government.

For 2 years Ernesto de la Fé campaigned in the public press for government reform. His exposés of Batista atrocities and his reports on Communist infiltration of the Sierra Maestra revolutionary army provided the best and most exciting journalism of an otherwise arid period in Cuban newspaper history. In January 1956, he wrote and published an article accusing Batista of a plot to murder . his political opponents, among them Carlos Prio (busy supplying arms and advice to Castro), Dr. Pelayo Cuervo Navarro, and Dr. Rafael Garcia Barcenas. Two days after publication of the article, Pelayo Cuervo was found mysteriously dead. Carloads of armed men circled the house of de la Fé's mother, where he often stayed, and for several days and nights cruised about the neighborhood waiting for him to apepar. He went into hiding until administrative wrath subsided.

In the February 15, 1956, issue of Bohemia, de la Fé told the story of those days of hiding, and of the armed men dispatched to intimidate him. That was the end of his journalistic career in Cuba. Batista forbade Bohemia ever to publish him again, and ordered every other Cuban newspaper and magazine to blacklist him. To enforce that order he commissioned Rolando Masferrer, the same Havana heavy of the Anastasia style who had chased Castro in 1948, to make regular rounds of the newspaper offices to drive the point home. From the winter of 1956 until Batista's defeat by the revolutionary army, Ernesto de la Fé could find no publisher in his native Cuba. His articles continued to appear, however, in other countries, notably in El Universal, the staid but vigorous Mexico City daily.

He did more than write. An active member of Cuba's National Association of Journalists, he protested bitterly when it nominated Batista as its honorary member No. 1. He devoted his energies to the Confederación Inter-Americana de Defensa del Continente (Inter-American Federation for the Defense of the Continent) -an organization of Latin American journalists and labor leaders united to fight Communist infiltration and influence in their respective countries. He was elected secretary-general of the organization in 1957.

He headed the Cuban delegation to the Third Congress Against Soviet Intervention, April 10-14, 1957, in Lima. He served as a symbol "to Latin America of intelligent, effective anticommunism and incorruptible dedication to truth," to use the words of Jorge Prieto Laurens, Mexican journalist and vice president of the Federation for the Defense of the Continent.

This is the abckground of the man arrested and dragged into prison by a revolutionary movement which proclaims freedom of press and individual, and which triumphed in Cuba largely by convincing the people that it had as its aim the restoration of the dignity and human rights Batista had degraded, dismissed and abused. Why? Three separate Cuban journalists, all pleading that their names be withheld, told me in Havana last week: "Because de la Fé is an anti-Communist."

Ernesto de la Fé was arrested prior to Castro's triumphal entry into Havana, Three men (Captains Fidel Domenech, Moisés Pérez, and Luis Fajardo Escalona-all members of the Cuban Communist Party) broke into de la Fé's office, ransacked his files, and destroyed everything they did not confiscate. They then burned his office, which served as Cuban headquarters for the Federation for the Defense of the Continent and the OIPAC (Inter-American Organization of Anti-Communist Journalists), to the ground, and marched off with their prisoner. They took with them data on Communist activities in Latin America, membership lists of local Communist organizations both overt and covert and general information reports and financial estimates dealing with the Communist movement.

#### Che Guevara

Why was the office ransacked and de-coryed? The three Communist soldiers storyed? acted under direct orders of Ernesto Che Guevara-Commandante in Castro's army, presently in charge of La Cabaña prison and Revolutionary Director of Personnel, and one of Latin America's key Communists. Guervara controls a third of the Cuban army, commands the loyalty of two Havana daily newspapers, operates a Cuban Com-inform and three Marxist schools, and is in charge of military trials and executions. He is the only important figure in Castro's government conceded to be a Communist by Jules DuBois, Chicago Tribune Latin American correspondent and author of the recent bestselling whitewash of the revolution. Guevara left his native Argentina to bolster

the Communist-dominated Arbenz regime in Guatemala, and was expelled in 1955 after Castillo Armas' successful revolution. From Guatemala he went to Mexico to handle the public relations of the Institute of Russo-Mexican Culture. He is the principal liaison between the Cuban Communist Party, its agents in the Castro government and labor unions, and the Soviet international Comintern. He is a professional revolutionary agent, a veteran of Communist activities in Panama, the Dominican Republic, Venezuela, and a host of other South American nations. It is he who ordered Ernesto de la Fé arrested, who presides over La Cabaña where de la Fé is imprisoned; and who will officiate at de la Fé's trial.

Spokesmen for the Castro government told me that the predicted charges against de la Fé are two: first (treason) that he had been a minister in Batista's cabinet-sufficient, they said, to assure his execution; second, he had plotted to assassinate Prime Minister Castro-after he had been thrown into La Cabaña.

The second charge can be dismissed as ludicrous. A man cut off from the outside world, under tacit sentence of death, unable to see even his own lawyer or wife, let alone interview political assassins, is scarcely in a position to engineer an assassination at-tempt. As for the first charge, it ignores de la Fé's public reputation of Batista, his courageous campaign against the dictator, and the persecution he suffered as a result of that campaign over a period of two years. Has everyone who was ever a minister under Batista been given such treatment? Some ex-ministers were permitted to fiee into exile. Some were sentenced to ritual penances, and quietly released. And some, e.g., Raul Lorenzo (former Minister of Commerce) and Miguel Suárez Fernández (former Minister without portfolio), walk the streets of Havana today as free men. What is it about de la Fé? He is being punished, everyone in Havana seems to agree exclusively for his anti-Communist activities.

#### II. THE DEFENSE

Ernesto de la Fé's defense will be conducted by a lawyer who is also a member of Castro's government, working for the Ministry of the Interior. He accepted the case only cause he is a personal friend of the defendant, and will conduct it on strictly professional grounds. The Communist issue will not figure in the trial. He refused to let me use his name, or to discuss the question in the anti-Communist context. He has been informed that he will be permitted to see de la Fé, for the first time, twenty-four hours before the trial. The date of the trial, often postponed, has been set for this week. Despite Fidel Castro's edict ordering civil trials for civilian prisoners, de la Fé will receive a military trial under the unsympathetic auspices of Che Guevara.

Neither lawyer nor client has been told what witnesses will be called for the prosecution, nor will there be a confrontation between witnesses and the accused. The reluctance on the part of de la Fé's friends and fellow journalists to speak out in his behalf is understandable; for those who have done so have been dealt with severely. On January 6, two days after de la Fé's arrest, Raúl Granja, a Cuban journalist who had worked actively for the revolution, protested to the new government the treatment of his friend. Granja, who had just returned from an American junket to gather arms and materiel for Castro, was promptly clapped into jail—and kept there for 41 days before his friends in the government succeeded in prying him out. Even then, he lost his job and has not been able to find work since. He is nonetheless willing to talk to anyone in Havana interested in the de la Fé case, and works constantly in behalf of his friend.

The journalists

Ramiro de la Fé, Ernesto's brother, is also journalist, and also out of a job (along with, it should be added 50 percent of the Cuban labor force). He is the most active and outspoken of Ernesto's defenders. He was the only man I met in Havana who had the courage to tell me: "Use my name whenever you want, as often as you like. I can-not stand by with my arms folded." He is, he told me, determined to "fight the Western war, the war against communism. It is the really important war."

Also in de la Fé's camp, with very limited influence, are a great many Cuban journalists, many of them newspapermen whom he helped while serving as Minister of Information. They are ready to tell anyone, off the record, of de la Fé's victimization. They will not be quoted, and they will not write the story for their own newspapers. "Cassaid one, "says there is freedom of the press. But he adds that he reserves the right to answer his critics 'with the people.' That can mean anything from boycotting to mob violence. That we can not risk." popular humor magazine Zigzag recently ampooned the revolutionary government. That is your right, Castro commented, but it is also the right of the people to let you know how they feel about ridiculing so sacred a thing as their revolution. people caught on, and imposed a boycott that almost bankrupted the magazine, which promptly made amends. It is now san-guinely satisfied with things as they are.

These newsmen also failed Ernesto de la Fé when he most needed them-when they had the opportunity to reflect, in their ac tions, some small measure of the courage of their colleague. They voted, instead, to expel him from the National Association of Journalists—the same sycophantic organization that had named Batista its member No. 'Perhaps," wrote Ernesto de la Fé in the last communication he succeeded in passing out of La Cabaña, on learning of their repudiation of him, "they are mistaken in thinking they will please Fidel. Julius Caesar never forgave that eunuch, Potinus \* \* \* for beheading General Pompey. . . The brave

do not like cowardly acts.

Journalists outside Cuba, on the other hand, have been outspoken. Newspapers throughout Latin America have taken up his cause. Telegrams of protest have flooded the offices of the Prime Minister and the government. Enrique Castro provisional Sarias, a Mexican newspaper columnist, has issued a "Call to Free Men": "I send a call to all truly democratic consciences from the Rio Grande to the cold lands of the North to stop this injustice, to raise their voices and ask—nay, demand—the freedom of this courageous anti-Communist fighter.' Jorge Prieto Laurens has written letters to newspapers and interested individuals all over the hemisphere on de la Fé's behalf. Every communication received by the Cuban Government requesting information on de la Fé is answered as in the letter reproduced on page 112 from Dr. Juan Orta, director general of the Premier's staff, to Mr. Marvin Liebman. The rhetoric is distinctly Communist: Ernesto is a Fascist, a traitor, an informer, and a counter-revolutionary; and anyone who undertakes to defend him is suspect.

#### III. THE MEANING

Ernesto de la Fé is entitled to be the object of the humanitarian impulses of the free world for the simple reason that he is a human being who made his mistake, worked mightily to overcome it, squared off bravely to the greatest danger of our time, and now has been ruthlessly victimized. But his fate is something more than personal, and there is little his friends can do about it, much as they would like to withdraw him from the limelight. The trial of Ernesto de la Fé is also the trial of Fidel Castro. The treatment of de la Fé will throw considerable light, more light indeed than any other specific decision, on how fares Castro's struggle against the Communists for preeminence in Cuban affairs.

That Castro is ringed by Communists is a dogged fact, documented fully by Stuart Novins in his celebrated CBS telecast, by the special New York Times report, by U.S. & World Report, by the Senate Internal Security Subcommittee, even by Cuban newspapermen themselves, however circumspect their language. It is a fact visible to anyone who has an eye for political reality. But it is not yet established, by any means, that Castro, should he will to do it, could not rise above the Communists, cast them out, and survive. It is not established that Castro himself is a Communist, or (that he is prepared to subordinate his mystical evangelism to the hard and devious demands of the Communist Party line. Two Weeks ago Castro's 26 of July Party delivered a resonant drubbing to the Communists in a number of labor union elections. In the past 10 days, Revolución, Castro's official revolutionary newspaper, went after Blas Roca and the Communist Party, accusing them of making divisive attacks on national unity, of profiteering from a Cuba in distress. Last week Castro decreed that civilian political prisoners will be tried by civil courts instead of military courts-martial, a move that diminishes the authority over the trials of the bloodthirsty Che Guevara. It has been Weeks since the last execution in Cuba. In Spite of Castro's lunatic economic measures of the past weeks—e.g., expropriation of sugar plantations at just the moment when his survival depends on the seduction of foreign capital—he shows signs of slowing down, of tempering. He has dismissed the feasibility of Cuban neutrality in a war between East and West. He has discovered that the serious problem of governing a nation are more difficult, more tedious, less theatrical, than the frenzied bloodletting and demagogic blitzkriegs which characterized his government during the first months.

Castro does not view himself as an agent of the Communist revolutionary ideal, and his people do not see him in that light. is their embodiment; the embodiment of a depressed Cuba of mutilated little streets and starving dogs and fat women leaning from windows, listening to strange music of pimps and shoeshine boys and taxicab drivers and barroom Bacardi perennials. Throughout the bazaar streets of Havana the banners, blouses, and bric-a-brac of his revolution are on display. In him the people have vested their romantic hopes-that a man with a machinegun and a knapsack full of ideals can wrest them from poverty

and degradation.

So long as Cuba is embodied in a single person, that person is indispensable to the Communists as the instrument of their policy. A showdown will have to come. It will not come over economics-Socialist Castro and the Communists move in concert in ecohomic policy. Their politics diverge where other things are concerned, principally foreign policy. It is in foreign policy, in education and religion, that the clash could come; and in the treatment of anti-Communist newspapermen.

Whence the crucial road of Ernesto de la Fé. Fidel Castro cannot succeed in persuading himself that de la Fé has a residual debt to pay for his sometime alliance with Batista; not after so spectacular a record of penitence. It will be clear, no matter how successfully the Communists ring the court with their special bombast, that de la Pé is the first clear test of the degree of Castro's reliance on the Communists. Let him set the man free, and he has taken a large step forward toward independence of them. Should he free de la Fé, he would also perform a symbolic act not easily lost upon the Latin American consciousness.

Address by Gen. Maxwell D. Taylor, Chief of Staff, U.S. Army, at the Commencement Exercises of The Citadel, Charleston, S.C., Saturday, June 6, 1959

> EXTENSION OF REMARKS OF

#### HON. L. MENDEL RIVERS

OF SOUTH CAROLINA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, June 9, 1959

Mr. RIVERS of South Carolina. Mr. Speaker, under leave to extend my remarks in the Appendix of the RECORD, I include herewith a speech made by Gen. Maxwell D. Taylor, Chief of Staff of the U.S. Army at the commencement exercises of The Citadel, Charleston, S.C., on June 6, 1959:

PUBLIC SERVICE AND NATIONAL SECURITY

At the outset, I would like to express my gratitude to General Clark and the board of visitors of The Citadel for the honor which they have conferred upon me today. All remarks to the contrary notwithstanding. I am well aware that this is an honor paid to the Chief of Staff of the Army as an institution, rather than to an individual. At the same time, I receive it with subdued feelings here in the presence of the graduating class who have earned their degrees after 4 years of hard work. I share the emotions of a war-time general who, after having served safely in the rear area assignments. receives a decoration in the presence of true battle veterans.

I was most happy to receive the invitation to speak at these commencement exercises today as it affords me an opportunity to return to this distinguished college. last time I spoke to the Corps of Cadets of The Citadel was some 31/2 years ago, when the class of 1959 occupied the low estate of plebes. Is it not hard to believe that the members of today's graduating class were ever thus? So now, I am privileged to be present at the close of the full cycle of their academic lives and at the beginning of a new phase when they go forth as graduates of this famous institution.

It was with this point in mind that I should like to develop for a few moments some of the thoughts which occur to me about public service, its inevitability in the future, and its relationship to our national security. I believe that this topic is fully in consonance with the stated purpose of The Citadel: "To prepare men for civil pursuits by giving them a sound education reinforced by the best features of military training." and also with the fact that The Citadel "expects of every son \* \* \* the public spirit and unselfishness of an enlightened citizen."

In view of the nature of The Citadel as a military institution, I am confident that the appearance of an Army officer in uniform before this graduating class does not carry the ominous connotation which it might convey elsewhere-namely, that an training center is awaiting you graduates as you step off the campus. You have wisely anticipated the need to prepare yourselves for military service as Regular or Reserve officers of the Army and the Air Force. However, it is quite true that my presence here as a representative of the Department of Defense is a reminder of the fact that matters of national security will always exercise a profound influence upon your lives. This is a hard fact of the bipolar world in which we live today. Whether we like it or not, national security is a matter of prime importance impinging in many ways upon your generation of young Americans. It is inevitable that you will be called upon to perform public service contributing directly or indirectly to that security.

The most serious problem confronting the United States today is how to remain secure in the face of the Communist-bloc threat, without at the same time destroying ourselves and our way of life through the weight of our military preparations. The basic objective of our national security policy is the preservation of the security of the United States and its fundamental values and institutions. In furtherance of this basic objective, our Government seeks by all means acceptable to the American people, ways of altering the international Communist movement to the end that it will no longer con-

stitute a threat to our way of life.

Experience since World War II has impressed us with the need for an integrated national strategy blending all of our national assets in a proportion best suited to the changing nature of the threat. We recognize that an adequate response to Communist expansion is by no means exclusively military. We must learn to use our political, economic, and ideological assets as well. In recognition of this need for integrated strategy, we have developed a philosophy of security based upon the deterrence of war. have often had occasion to say that the justification for the existence of the armed services today is not the requirement to win wars, but to prevent wars from occurring. All of our military preparations find their justification in their contribution to this deterrence.

What are the factors which contribute to the development of deterrent strength? would say that we seek a combination of force, military and moral, which will produce recognition of the fact that any action of an aggressor against the interests of the United States and its allies will bring unacceptably disastrous results. The credibility of the probable reaction of the United States is an important part of this deterrent posture.

Insofar as our military deterrent strength is concerned, it finds its expression in the triservice defense team of our Armed Forces. and especially in those categories of ready operational forces to which all the services contribute in deterrence of the entire spectrum of possible war situations.

However, as I have mentioned, military strength is but a single element in the deter rence of war. Military power has value only insofar as it reinforces the other elements of our national posture and strategy. Otherwise, it is a sterile asset, a useless and costly appendage to paraphernalia of Government. Theodore Rooseveit recommended that we "walk softly and carry a big stick." The big stick, represented by our military forces, is indeed important but it is useless to its purpose unless carried in a strong steady hand which in turn is guided by a clear mind and a stout heart. National military strength must be accompanied by other evi dences of national stamina, such as a strong economy, a unity of purpose, and an evident determination to use all of our assets to attain our national objectives.

In short, if our deterrent strength is to carry conviction, it must be clear that our leaders are resolute, that our public is well informed, and that our Nation is strong in things of the spirit as well as in material weapons. Neither technological nor numerical superiority is the sole key to the preven-tion of war. We must present to a potential aggressor the evidence not only of our tangible military strength, but also of our stability of purpose in using these tools in the

pursuit of our national ends.

In whatever walk of life you may go-civil or military—each of you gentlemen of the graduating class will find a role to play in contributing to the security of our country. This is a form of public service difficult to avoid even if one so desired. Clemenceau has often been quoted as saying that "war is too serious a business to be left to the soldiers." I agree to that statement but would add that neither the waging of war nor the prevention of war is a monopoly of either the soldier or the civilian. Both call for a collaborative effort in which all classes of our citizens must engage. In this enterprise there is a place for men of all experiences, talents, and educational backgrounds. There is a place for the artisan, the businessman, the scholar, and the scientist. There is the need for technically trained men, and there is a need for men trained in the liberal as well as military tradition which you have known as The Citadel.

It may appear that the military services often seem to stress the scientific and technological aspects of national defense. true that the scientists and the technically trained graduates of our advanced schools have come to play a tremendously important part in developing the weapon systems which are so necessary if we are to maintain our superiority in this vital field. However, this concern for technology in nowise derogates the need for men reared in the liberal arts and social sciences to provide the wise leadership which must guide the use of the terrible weapons which we

possess today.

- Certainly, most of our troubles today are related to our difficulty in utilizing wisely the products of our technological advances. We seem to understand atoms in the society of the molecule much better than people in our own human society. The weaknesses of war-deterrent posture lie more in the fields of ideology and politics than in matters of strictly military nature. There is an ever present need for broad guidance of our national strategy by men who are capable of understanding people, hostile and friendly alike. This is a task which cannot be solved by the slide rule—it requires other skills and disciplines as well.

To discharge our responsibilities of world leadership, we would do well to learn all that we can about the Communist world. We Americans often decline to read about, to study, or to take cognizance of problems which are distasteful to us. We sometimes seem to feel that we can eliminate an adversary by refusing to acknowledge his existence. I hope that we are learning more mature ways and recognize that if he is to be neutralized, the adversary must be closely studied—his history, customs, lan-guage, dogma, and mode of thought. Henry Adams has said that the task of education is to teach one to react to the forces about him. A liberal education will encourage an understanding of the international forces which bear upon our security and will establish an abiding interest in their study and analysis.

Thus it is that graduation can bring no vacation from intellectual labors. Notwithstanding your hard-won diplomas, you are only beginning. The knowledge and habits of thought recognized by your degrees are but basic tools, which if allowed to rust through disuse—or to become dull by the lack of frequent resharpening-will be of little value in, shaping the career which your country has the right to expect of you. I have often had occasion to remind young

officers entering the Army that a basic part of their personal equipment should be an easy chair and an appropriate reading lamp for the continued study necessary for a future leader in the modern army. Like physical fitness, you can never afford to put aside the habits of mental fitness and intellectual growth which you have acquired

here as cadets.

Not only must our future leaders understand our international opponents, but they must understand our international friends as well. I am constantly impressed with the requirement placed upon the Army to live abroad and to adapt itself to foreign ways. Over 40 percent of our Army today lives overseas in some 72 countries. The provision of adequately trained officers to fill the key positions in these foreign assignments creates serious personnel problems for us. There is an endless need for men with a knowledge of languages, and with an understanding of foreign history and culture to serve as the representatives of our country abroad.

By and large, we Americans do not adapt ourselves readily to the conditions of life abroad. We tend to insulate ourselves from contacts with the indigenous peoples and live in colonies which are, in fact, little Americas. Formerly, this defect was little more than a handicap in the conduct of commerce and trade. Today, it is a serious problem, for our success and survival in this competitive world are dependent upon the character of our relations with the other nations of the free world. Sir Alfred Zimmer defined the problem for us when he said: "International understanding is not an acquisition of the same order as French, or constitutional history, or the laws of physics, or what we used to call Euclid. It is not a school or college subject. It is not something to be learned in class, but rather a quality of mind and spirit like happiness, or serenity, or poise. Perhaps it can best be defined in the quality of mind and spirit which enables its possessor to feel at home in the world." It is important that this country develop a wealth of men capable of understanding friend and foe alike, and in-terpreting the objectives of America with confidence and conviction-men who feel at home in the world.

This matter of conviction in our aims plays an important part in developing a national posture which will preserve the peace. We must believe in our cause if we are to convince our neighbors of our seriousness of purpose. To feel real conviction, the first requirement is to understand the issues. These issues are clear, unmistakable, and of vital importance. The choices between communism and freedom are so clear cut that there can be no room for compromise. There is no place in our scheme of things for the moral fencesitter who would wait a little longer before reaching a judgment. True fervor and devotion to our cause cannot be pretense or sham. Lack of sincerity is too easily detected to permit of any equivocation. We must believe, deeply, in our cause if we are to carry conviction to the world that we are willing to stake our all on the defense of our principles.

Today, the requirement for national unity. stemming from the Communist threat, tends to bring a new concept to public service. Just as we are attempting to merge diplomacy, economics, and ideology with military considerations to form a unified national strategy, similarly, the distinction between the public man and the private man, between th soldier and the civilian, between the official and the taxpayer, tends to merge into a single pattern. I make this point because as Citadel men graduate today it may seem that they have a choice between public life and private life. I don't think that choice really exists any more. Many of this graduating class will serve their country in uniform, as have so many of The Citadel's sons of the past. But those who do not will have ample opportunity to do work of equal importance in an era which requires dedicated men to serve our Nation in many fields of endeavor.

Disciplined through the military traditions of The Citadel and sustained by the elements of a liberal education acquired here, you gentlemen of the graduating class are well prepared to contribute to that able and resolute leadership which is an indispensable ingredient to our national war-deterrent posture. You have not been called to live in any easy time in the world's history. blunt facts are that, if we are not headed for another great war, at a minimum we face an indefinite period of tension, permitting of no relaxation of our vigilance. This is a somewhat bleak prospect, perhaps, but we would do well to recognize it and make provision for the long pull. If we looked into the books of the Soviet leaders where they list our national assets and liabilities, I am sure that we would find that they count heavily upon American unwillingness to bear for long the discomforts and hardships which are the price of world leadership. It will be the task of your generation to con-found the expectations of an enemy who counts upon the rapid dissolution of our good intentions. Any inventory of our physical assets will show that they are ample to maintain our world position and to prevent war. They will be ultimately ample, however, only if they are employed by bold leaders, sustained by courage and resolution. These are the qualities of mind and character which I look with confidence to the graduates of today to supply in the years to

Now, in closing, as Chief of Staff, I would like to take this opportunity to extend a hearty welcome to the distinguished military students of this class who have indicated their desire to accept Regular commissions in the Army or Air Force. As I approach the close of over 41 years in uniform, I would say to you that in entering the military life you are undertaking a career offering challenging and serious responsibilities. While the burdens may be heavy, the rewards are great—not so much in material gains as in the inner satisfaction derived from service to country in company with some of the finest people in the world. These are indeed rich rewards which few other professions afford in equal measure.

To each member of this graduating class I. wish you all a long career of useful service in your chosen fields, a career enriched and illuminated by the ethics and precepts acquired here at The Citadel.

State-Aided Loans for College Students

EXTENSION OF REMARKS

## HON. ABRAHAM J. MULTER

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES Tuesday, June 9, 1959

Mr. MULTER. Mr. Speaker, on February 5, 1959, I introduced my bill, H.R. 4220, to provide for a college scholarship program. New York State is already engaged in an educational loan program and I commend to the attention of our colleagues the following editorial which appeared in the New York Herald Tribune of May 30, 1959, outlining the success of this endeavor:

STATE-AIDED LOANS FOR COLLEGE STUDENTS

The New York Higher Education Assistance Corp., set up last year by the State legislature to guarantee low-interest loans by banks to needy college students, has just reported on its first year of activity. More than 200 commercial banks participated, and 5.493 students got loans totaling \$2.903,934. With the cost of higher education rapidly

With the cost of higher education rapidly rising, few families can any longer afford its full burden. Scholarship funds will clearly not be sufficient, by themselves, to take up the slack. Nor should they have to be. Higher education is one of the surest investments a student can make, and he should be ready to finance that investment himself,

at least in part, by borrowing.

As new student loan funds are established, one thing that worries some educators is the administrative burden they place on the college, which may have to administer 20 or more such funds, each separately and on its own terms. A means of centrally coordinating such programs may eventually be necessary. But meanwhile, the important thing is that qualified students not be kept out of college for lack of present means. Toward this goal, New York's H.E.A.C.—open to all qualified residents of the State—seems to be making a fine, and much needed, start.

#### Shameful Decision

EXTENSION OF REMARKS

## HON. HAROLD C. OSTERTAG

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES Tuesday, June 9, 1959

Mr. OSTERTAG. Mr. Speaker, the action of the International Olympic Committee in refusing Nationalist China the right to participate in the coming Olympics is a shocking and shameful decision. It violates all the traditional principles of sportsmanship and fair play which are part and parcel of the Olympics. The Olympic Committee has acquiesced to the political blackmail of international communism.

We in the House of Representatives have made clear our great displeasure at this action by refusing the use of appropriated funds for the Olympics if any free nation is denied the right of participation. I am hopeful that this will be helpful in causing the Olympic Committee to reassess its deplorable decision and to restore the Olympic games to the same high plane they have always enjoyed.

Under leave to extend my remarks I wish to insert into the Record the following editorial from the Buffalo Evening News, dated June 2, 1959, presenting the opinion of this outstanding newspaper on this matter:

[From the Buffalo Evening News, June 2,

#### SHAMEFUL DECISION

The International Olympic Committee, the governing body of the Olympic games, has done something the United Nations for years has resolutely refused to do—displaced the Free China of Chiang Kai-shek in favor of the Red China of Mao Tse-tung. It has expelled Nationalist China from the committee, thus closing the door to Nationalist participation and preparing the way for Peiping's subsidized athletes to compete in their place.

It was a shameful and craven act on the part of the committee and Avery Brundage, the American chairman. It has been roundly condemned by the State Department, as wholly inconsistent with its (the Olympics) nonpolitical tradition."

Red China stalked out of the Melbourne Olympic games in 1956 because Nationalist athletes were in competition. It later walked out from the International Committee because Nationalist China remained a member. Russia threatened to withdraw and the committee caved in.

"Nationalist China no longer represents sports in the entire country of China," Chairman Brundage explained feebly. But the muscled representatives from Red China do represent the Communist conspiracy—they are its agents even when running a measured mile or leaping over a bamboo pole.

And Mr. Brundage knows it.

This may well be the biggest triumph the Communists will achieve in the next Olympic games—no matter how big a point-score their athletes run up on the unofficial record in Rome in 1960. This is an authentic, uncontested victory— uncontested unless United States and other members of the commission reassert themselves and reverse the judgment. It was a fixed decision, fixed by the Reds in Moscow and Peiping. And it could mean the discrediting and eventual dissolution of the Olympics themselves.

## Two Wrong Answers

EXTENSION OF REMARKS

## HON. ALEXANDER PIRNIE

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES
Tuesday, June 9, 1959

Mr. PIRNIE. Mr. Speaker, under leave to extend my remarks, I wish to include the following editorial which appeared in the May 29, 1959, edition of the Washington Daily News.

#### TWO WRONG ANSWERS

Two bills purporting to deal with this country's mountainous wheat surplus are before Congress. One already has been approved by the Senate. The other, written by the House Agriculture Committee, is scheduled for House floor debate next week.

Both are bad bills. They move in exactly the wrong direction for an answer.

For one thing, they are stopgaps designed to apply for 2 years only. Their authors hope to get through the 1960 presidential election without upsetting either farmers or general taxpayers too much. The bills provide political answers to an economic problem.

More importantly, both proposals are based on the fallacious idea that farmers can be bribed into producing less. They offer higher price supports in return for reduced acreage planted to wheat.

Any so-called solution to the wheat problem which works on this principle is foredoomed to failure. As long as the Government guarantees an artificially high wheat price, farmers are going to find ways to produce more wheat than the market can absorb. If their acreage is cut back, they will simply pour on the fertilizer and grow more wheat per acre.

The only real solution to the surplus problem is to get the Government out of the wheat business. That goes for corn, cotton, tobacco, and all the other subsidized farm products. These constitute about a fourth of American agriculture. The other threefourths—unsubsidized and unregulated—are

producing for a free market instead of Government bins, and are doing relatively well.

Admittedly, free marketing of the surplus crops cannot be restored all at once after 25 years of Government meddling. But the time to move in that direction is now—not 2 years from now.

## No Rocking Chair for This 88-Year-Old Newspaperman

EXTENSION OF REMARKS

### HON. LESTER R. JOHNSON

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

Monday, May 25, 1959

Mr. JOHNSON of Wisconsin. Mr. Speaker, for the past 19 years, Bert (Bag) Gipple, former newspaper published and local historian, has been a member of the Trempealeau County board in my home destrict in Wisconsin. The fact that "Bag," as he is affectionately known by his many friends, is 88 years old does not prevent him from serving on the board's finance committee or writing a weekly column for his hometown newspaper, which he started back in 1897. His continued interest in community activities proves that old age is a state of mind. Under leave to extend my remarks, I would like to include in the RECORD a story which appeared in the Eau Claire (Wis.) Leader about 88-years-young Bert Gipple:

FORMER PUBLISHER AND HISTORIAN—"BAG"
GIPPLE CONTINUES ON TREMPEALEAU
BOARD

WHITEHALL.—Bert (Bag) Gipple, 88, former newspaper publisher and historian, was the oldest man sitting as a member of the Trempealeau County Board of Supervisors in recent session. He was reelected without opposition to serve as supervisor from the first ward in Galesville at the spring election.

Gipple was born at La Crosse December 16, 1870, in the administration of U. S. Grant as President.

At 16 he was sent to Galesville to enroll in the Galesville University, which had been established there. Bert's father wanted him to be a doctor. This did not appeal to him; his ambition was to become a traveling salesman for a wholesale grocery.

He quit the premedic course in 4 months and clerked in a store and worked on farms.

In 1889 the Gipple family moved to Galesville and "Bag," as he is known to friends and acquaintances, took a position as shipping clerk in a wholesale grocery at La Crosse. That concern merged with another wholesale house and he returned to Galesville.

In July of 1893, at 22, he married 19-year-old Emma J. Sagen, who died in 1952.

In the fall of 1890, "Bag" started with his first newspaper, the Galesville Independent. He also worked on newspapers at La Crosse, Mondovi, Prairie du Chien and Cumberland, before returning to Galesville and launching the Republican in 1897.

He sold the paper in 1941 after being 45 years at the helm.

In 1940 when Galesville took city form of government he was elected supervisor from the first ward and has annually from that time been reelected, and is now serving his 18th year on the Trempealeau County board.

For 9 years, until he asked to be relieved, he was chairman of the county board's committee on schools and printing.

When the county floated a \$1½ million bond issue for highways back in 1948, Gipple served on the special highway committee to map the routes of new highway construction on the State trunk system in the county.

During the past 4 years he has been a member of the county board's finance committee and was reappointed to this committee at the reorganization session recently.

In his 70 years at Galesville he has held various positions, including several terms on the village board. He still writes a weekly column for the Galesville Republican, and other matter, including the 25 and 50 years ago column.

Well versed in the history of Galesville and Trempealeau County, he receives many letters a year asking for information about people and places, and he obliges them with his research.

The past winter Gipple underwent major surgery at a La Crosse hospital and was in the hospital for many days, but was in his usual good health at the county board session.

## Using the Mails for Obscene Matter

SPEECH

## HON, KATHARINE ST. GEORGE

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Monday, June 8, 1959

Mrs. ST. GEORGE. Mr. Speaker, I also want to add my comments to the very splendid statement that the gentle-woman from Pennsylvania has made and also for the very fine leadership that she has given this subcommittee on which I have the honor to serve. This is something that many of us have had in our minds for years, but the gentlewoman fortunately has come at a time when the people are aroused and when her leadership can really bear fruit. A lot of people have hidden behind the disguise of freedom of the press. This, Mr. Speaker, is, of course, utterly and completely absurd.

Freedom is not license. Freedom is not something to promote vice here in this country or anywhere else in the world. I know that the gentlewoman will agree with me that no one should be permitted to go into a crowded hall and scream "Fire." That would be exactly the same as to say that anyone has the right to use the mails to send pornographic literature, pictures, and other material, to young people under the age of 21 or even 18. I know the gentlewoman has seriously considered the impact of all this in causing juvenile delinquency, something that every woman and every mother in the country must abhor.

Mr. Speaker, I am indeed happy that one of the distinguished women in this Congress is taking the leadership in this campaign. I sincerely hope and I also believe that all Members of Congress are going to sustain her hand in this matter, that they will follow her leadership, and that in a short time we will have the necessary legislation to continue the work that has been so well begun.

(Mrs. ST. GEORGE asked and was given permission to revise and extend her remarks.)

## Presentation of Purple Heart to Richard A. Brennan

EXTENSION OF REMARKS

## HON. EDNA F. KELLY

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES
Thursday, June 4, 1959

Mrs. KELLY. Mr. Speaker, it is a privilege to insert in the Congressional Record a few remarks concerning a man who has been honored by the community in which he lives for his many contributions to the welfare of that community. It is more than a privilege to insert in the Record an account of this presentation to him of the Purple Heart of the United States of America.

Richard A. Brennan, to whom it pleases me greatly to hand a belated medal of the Military Order of the Purple Heart of the United States of America, is a man of national and international experience in banking affairs. It has become old fashioned to cite the legendary Horatio Alger in speaking of today's successful men of affairs; still here is a case of the messenger boy who became president of the successor company to the many-million-dollar corporation on which he had started as office boy 23 years earlier. That was the Mortgage Corp. of New York which he reorganized from the assets of the old Bond & Mortgage Guaranty Co., largest institution of its kind in the country.

As to Mr. Brennan's biographical record, he was born January 2, 1897, in Manhattan, the third of four brothers whose parents died while they were quite young. They were raised by an aunt in New York City. He attended New York City public schools and evening high schools, and took a course with the American Institute of Banking. He went into the Army in December 1917, was wounded at St. Mihiel in October 2, 1918. Hospitalization in various hospitals in France followed, affer which he was returned convalescent to Fort Dix Hospital 6 weeks before the armistice. He was discharged from Fort Dix Hospital in March 1919 but still carries shell fragments.

Returning to banking, he in turn became a State bank examiner in 1925. many of his assignments being in Europe. He was made special deputy superintendent of banks in 1929 and from that post he was drafted by the State insurance department as deputy superintendent to handle the \$3 billion liquidation and rehabilitation of all mortgage guarantee companies in the State after the bank holiday. He has been president of the Brevoort Savings Bank of Brooklyn since 1938. Under his guidance the total deposits of that now 67-year-old institution have been more than trebled and the number of depositors increased

For several years he has been active in civic affairs in the Bedford-Stuyvesant area of Brooklyn which is in my congressional district. In particular, as I happen to know, he has headed various fund-raising campaigns. All of these activities add up to outstanding achieve-

ments in the cause of social justice. They include: the largest church loan ever made to Negroes; racial equality in handling mortgage applications; the first bank to adopt integrated employment; the organization of Teens-in-Industry, a concept designed to alleviate youth problems; and foundation of a four-team Little League of youthful baseball enthusiasts.

He is a trustee of the National Foundation for Infantile Paralysis and the Georgia Warm Springs Foundation; a director of the Bay Ridge Day Nursery; treasurer of the Urban League of New York; trustee of Mercy Hospital in Rockville Center; and a member of the fundraising committee of Brooklyn Catholic Charities.

In 1956 his career was signalized by two cherished honors—the Archbishop Thomas E. Molloy Award for Interracial Justice and the William M. Moss Brotherhood of Concord Baptist Church of Christ Award for his outstanding contribution toward better human relations and understanding between all people.

And so I am glad to add this long overdue recognition of the sacrifice he made for his country, to the list of honors he has won since.

#### Louisiana Bills Show Fire Ant Foibles

EXTENSION OF REMARKS

## HON. JOHN D. DINGELL

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES
Tuesday, June 9, 1959

Mr. DINGELL. Mr. Speaker, remarks appearing in the Outdoor News Bulletin of June 5, 1959, which is published biweekly by the Wildlife Management Institute, show reasons for enactment of H.R. 5813, which our colleague, the Honorable Lee Metcalf, introduced to provide for adequate research into the effect of insecticides on wildlife. The remarks to which I refer follow:

LOUISIANA BILLS SHOW FIRE ANT FOIBLES

Separate proposals before the Louisiana State Legislature show that confusion and the imported fire ant eradication campaign continue to go hand in hand, according to the Wildlife Management Institute.

The first bill would authorize the filing of suits against the State for damages alleged to have been caused by the gross negligence of the officers, agents, or employees of the Department of Agriculture and Immigration in the use of fire ant poison in the fire ant destruction program.

The second would appropriate \$156,053 for Louisiana's share of the joint Federal-State eradication effort for the coming year. Oddly, Pelican Staters are being asked to finance the poisoning campaign and to pay damages to persons whose sugarcane plantings are being destroyed by cane borers. The borers have increased because the fire ant treatments have killed off the natural predators of the destructive insects.

Information compiled by fish and game departments in Southeastern States and by the Bureau of Sport Fisheries and Wildlife shows that birds, other wildlife, fish, domestic livestock and poultry have died following aerial application of poisons to eliminate imported fire ants. The losses are largely discounted by the U.S. Department of Agri-

culture, which contends that the kills are temporary and of secondary importance to the need for ridding the South of fire ants.

The two bills before the Louisiana Legislature emphasize the confusion that accompanies the fire ant eradication effort. Conservationists sought to clarify the issue when they asked the House Appropriations Committee to restrict USDA's request for \$2.4 million for continuation of the controversial program to on-the-ground spraying of infested areas. Most kills of wildlife have followed aerial applications of the poisons in granular form over large tracts.

USDA got the money with no strings at-ched. The House committee added to the confusion when it directed USDA to make sure that only granular poison is used in aerial application of the insecticides,

## A Forward Step in Our Immigration Policy

EXTENSION OF REMARKS OF

## HON, ABRAHAM J. MULTER

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES Tuesday, June 9, 1959

Mr. MULTER. Mr. Speaker, our distinguished colleague from Pennsylvania, the Honorable Francis E. Walter, is to be commended upon the introduction of House Joint Resolution 397 which would permit the Attorney General, upon the recommendation of the Secretary of State, to admit refugees on parole in this country without setting a numerical ceiling or termination date.

In this connection, I am pleased to direct the attention of our colleagues to the following news-release and resolution of the United Hias Service, dated May 29, 1959:

A FORWARD STEP IN OUR IMMIGRATION POLICY

NEW YORK .- United Hias Service, the worldwide Jewish migration agency, nounced it has joined with the Protestant, Catholic, and other voluntary agency groups in supporting the World Refugee Year which July 1, 1959, in accordance with a resolution of the United Nations General Assembly.

The agency's executive committee, meeting in its world headquarters, 425 Lafayette Street, passed a resolution lauding U.S. governmental officials for assuming the leadership in a concerted campaign to step up aid to millions of refugees throughout the

world.

The resolution was passed as a result of firsthand reports on the White House Conference for the World Refugee Year made to United Hias Executive Committee by Carlos L. Israels, president; Murray I. Gurfein, chairman of the executive committee; and James P. Rice, executive director. Other board members of the agency who attended the White House Conference were Edward M. M. Warburg, chairman of the joint distribution committee; Moses A. Leavitt, executive vice president of the joint distribution committee; and Walter H. Bieringer, chair-man of the Massachusetts State Refugee Committee.

United Hias, in its resolution, expressed the hope that the United States, as part of its contribution to the World Refugee Year, Would revise its basic immigration laws along the lines of recent proposals of the adminis-

tration and of Senators and Congressmen of both major political parties.

The group also heard a report on the various addresses delivered at the White House Conference, including that of Representative FRANCIS E. WALTER, in which he announced his introduction in the House of Representatives of a resolution permitting the Attorney General, upon the recommendation of the Secretary of State, to admit refugees on parole in this country without setting a numerical ceiling or termination date. was noted that Representative Walter's resolution is similar to proposals made by Senators Javits and Kennedy and Attorney General Rogers.

#### RESOLUTION

Whereas the General Assembly of the United Nations with the full support of the U.S. delegation has designated a Refugee Year to begin on July 1, 1959; and

Whereas the White House Conference called by President Eisenhower unanimously expressed its support of World Refugee Year; and

Whereas the U.S. Committee for Refugees was designated by the members of the White House Conference to enlist public support for all possible measures to aid refugees during the World Refugee Years,

United Hias Service hereby offers its full support, through all of its resources, board, its staff, and its vast membership in cooperation with the U.S. Committee for Refugees to carry out the objectives of the World Refugee Year. In addition it expresses the firm hope that the United States as part of its contribution to the World Refugee Year will not only adopt special measures for the admission of refugees to this country, but also will revise our basic immigration laws along the lines of recent proposals of the administration and of Senators and Congressmen of both major political parties.

#### Labor-Management Reform Legislation

EXTENSION OF REMARKS OF

## HON. ALVIN M. BENTLEY

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES Tuesday, June 9, 1959

Mr. BENTLEY. Mr. Speaker, I imagine that there is no more controversial or emotional issue now being discussed throuhgout the country than the question of labor legislation at the present time. Speaking personally, I am sure that I have received more corspondence on this issue than any other single important matter now pending before the Congress

With the idea of presenting my own views on this subject, I desire to include, under leave to extend and revise my remarks, a copy of my testimony before the subcommittee on Labor Management Reform Legislation of the Committee on Education and Labor which I presented on June 4, 1959. I am also including herewith the text of two newspaper articles, from the Saginaw News of June 4 and one from the Detroit Free Press of June 5, in comment on my testimony and the question and answer period which followed:

STATEMENT OF CONGRESSMAN ALVIN M. BENT-LEY BEFORE THE SUBCOMMITTEE ON LABORT MANAGEMENT REFORM LEGISLATION OF THE COMMITTEE ON EDUCATION AND LABOR, JUNE 4, 1959

It is a pleasure to appear before this subcommittee.

I feel we have reached a point in this country when it is of necessity that we take positive steps to protect the welfare of the American worker and also to curb the present abuses in labor-management relations.

I feel the subcommittee should be interested in the results of my annual question-naire I sent to my district. Of over 9,300 answers to the question, "Do you believe organized labor is becomming too powerful? over 81 percent, made up of all occupations, felt that it was. What makes this figure even more representative of true feeling is the fact that a further breakdown shows 76 percent of the workers themselves felt organized labor was becoming too powerful.

I have introduced H.R. 1103, which would

guarantee the democratic control of unions by the rank and file membership thereof. My bill goes further than most other legislation in this field in that 15 percent of the membership of the union is given the right to petition the National Labor Relations Board to supervise the union's regular and special elections. The right to supervise would not have to be based on fraud, but would be provided at the request of the required percentage as a matter of right.

I strongly feel that the best way to clean

up the corruption and mismanagement which has been revealed during the hearings held by the Senate Labor Rackets Commit-tee, and to prevent other unions from falling under the influence of racketeers and gang-sters, is to insure that the members elect their officers in an honest election. I have faith in the judgment of the individual members of almost all unions. If we can insure their right to exercise that judgment. most of the problems that exist in this field will be taken care of as a matter of course.

My bill would give 30 percent of the union membership the right to demand a referendum to revise or repeal any section of the union's constitution, bylaws, or other regulations. This referendum would thus able a majority of the membership, if they so desired, to veto decisions by the union's officers pertaining to dues, initiation fees, salaries of officers and employees, gifts, grants, loans, donations, or investments. Under this heading would come the use of union funds for political purposes, a subject that has become a matter of much con-troversy in union affairs. My bill also covers national and local elections as well as strike votes, recall elections, and referendums. Nonsupervised elections are required to be by secret ballot and if not, a new election can be held which will be supervised. Employers are also given the right to petition for court supervision on strike votes.

Another section of my bill provides that all duly mominated candidates for union offices shall be given a reasonable opportunity to present their views to the membership by the use of union-sponsored publications. A candidate would have little possi-bility of defeating an incumbent unless he has an opportunity to use the same means of publicity available to the incumbent. Candidates must have this opportunity to criticize the officeholder and to present their programs.

The bill also provides that any person who tries to prevent a union member from exercising the rights provided in the bill will be subject to a \$10,000 fine or 5 years in prison or both. The National Labor Relations or both. The National Labor Relations Board is also given the authority to keep secret the names of the petitioners for supervised union election. Supervision of

some elections may also be transferred to State agencies which are willing to assume the duty. I feel the workingman is entitled to the protection of H.R. 1103.

Another labor reform bill I have introduced is H.R. 6455, which provides for the establishment of a temporary Commission to investigate the economic power of labor unions. This Commission would have the authority to preyent a union from becoming so big that it would have a detrimental

effect on the Nation's economy.

This Federal Labor Commission would study and investigate the present organization and methods of operation of national and international labor unions, with particular reference to the existence and growth of monopolistic tendencies and practices, industrywide bargaining, and inequities in the balance of power between employers and unions. The Commission would determine what changes in Federal law and policy affecting labor organizations and collective bargaining are needed to insure that the balance of power between employers and unions is kept.

The growth of giant unions and the expansion of their activities into diverse areas of commerce presents a danger to our free political and economic institutions. Something must be done to limit the power grabs of men such as Hoffa. Means must be devised to prevent expansion of unions into unrelated occupations and industries. This Labor Commission would have the responsibility of limiting union expansion to the same industry or craft or occupation.

This Commission would be made up of 12 members as follows: 4 appointed by the President of the United States, 2 from the executive branch of the Government and 2 from private life; 4 appointed by the President of the Senate, 2 from the Senate and 2 from private life; 4 appointed by the Speaker of the House of Representatives, 2 from the House of Representtaives and 2 from private life. This Commission would be temporary in nature and would submit its final report to Congress not later than June 30, 1961, at which date the Commission would cease to exist.

As a further step in labor reform legislation, I am at present preparing legislation to establish a permanent Federal Labor Commission which would be similar to the Federal Trade Commission. The Federal Trade Commission was created to stop violations of the Sherman and Clayton Acts in their incipiency. A Labor Commission could serve a similar function in the labor field prevent labor violations in their incipiency. For example, the Federal Labor Commission would be able to hear private parties seeking an injunction against a secondary boycott or blackmail picketing.

This Labor Commission would hear complaints from the public as well as those parties to a union contract that the union management, or both, are engaging in practices which restrain trade or impede competition. This Labor Commission would not be required to wait for an adversary proceeding as the National Labor Relations

Board is.

The Federal Labor Commission could investigate these charges, make findings of fact and conclusions of law, and subject to appeal, issue cease and desist orders. Commission would be made up of five members, each appointed by the President, with the consent of the Senate, and they would serve for a 7-year term."

I have received much correspondence in regard to the overall labor problem. In the past few weeks it has been centered on the recently passed Kennedy-Ervin bill. Comments from my constituents on this bill have ranged from "The Kennedy-Ervin labor bill is another step to repeal the Taft-Hartley Act and to offer our employees to the union,

to "It is labor reform legislation that will not reform."

Some views of constituents as to what they feel should be done are as follows: "Labor legislation should have such end results that labor leaders will have the same rights and privileges as we other citizens, and no more"; Congress has a very definite responsibility to enact remedial legislation which will protect and preserve the rights of the citizens of this Nation against abuse and exploitation by unscrupulous and, in many instances, crooked and criminal labor bosses. Proper legislation will benefit honest, sincere labor leaders and unions"; "reform legislation must strike a blow at the enslavement and persecution of the rank-and-file union men and penalize the corrupt leaders who grow fat on their misery and yet legally escape punishment for their crimes."

The Kennedy-Ervin bill does not contain any provisions to curb two vicious practices of mobster union leaders, secondary boycotts, and blackmail picketing. I am sure this subcommittee has heard voluminous testimony concerning these two subjects already, but I can see no reason why the American public should be forced to continue to put up with

these practices.

The third party coercion brought about under secondary boycotts must be stopped. The area of industrial disputes should be restricted to the parties immediately concerned and public policy should attempt to limit participation in labor disputes to the primary parties. The existing legal structure materially fails to accomplish the job which the public interest demands. Blackmail picketing of a nature which forces workers to join or employers to accept a union which they unquestionably do not want is outrageous. I certainly hope the House will see fit to adopt amendments which will cover these two points.

(From the Saginaw (Mich.) News, June 4, 1959]

LABOR REFORMS URGED BY BENTLEY-HITS SECONDARY BOYCOTTS, ORGANIZATIONAL PICK-

WASHINGTON.—Representative BENTLEY, of Owosso, today called secondary boycotts and organizational picketing "vicious practices of mobster union leaders."

In testimony prepared for in appearance before Joint House Labor Subcommittees, the Michigan Republican pleaded for curbs on these two union weapons.

"I can see no reason why the American public should be forced to continue to put up with these practices," BENTLEY said.

He termed top-down organizational picketing (commonly described as blackmail picketing) "outrageous".

BENTLEY testified in support of two labor reform bills he has introduced.

One would strike at union corruption by seeking to insure honest union elections and by giving members the means of overturning actions of union executive boards.

The other would set up a temporary Federal Labor Commission empowered to investigate union power and growth.

Discussing his investigative measure, Bentley said:

"The growth of giant unions and the expansion of their activities into diverse areas of commerce represents a danger to our free political and economic institutions. Something must be done to limit the power grabs of men such as (Teamsters President James R.) Hoffa.

"Means must be devised to prevent expansion of unions into unrelated occupations industries. This labor Commission would have the responsibility of limiting union expansion to the same industry or craft or occupation."

Bentley's proposed labor Commission would report its findings to Congress by June 30, 1961, and then be dissolved.

The Michigan Republican now is preparing a bill which would set up a permanent Federal labor commission empowered to issue cease and desist orders in connection with labor-management practices restraining trade or impeding competition.

BENTLEY'S union elections reform bill would give 15 percent of a union's members the right to ask and receive National Labor Relations Board supervision of a union election.

The measure would give 30 percent of the members the right to demand a referendum on revising or repealing any section of the union's constitution and bylaws, or actions taken by the executive board on dues, initiation fees, officers or employees' salaries, use of union dues for political purposes, gifts, grants, loans, donations, or investments.

[From the Detroit Free Press, June 5, 1959] UNIONS TOO STRONG?-BENTLEY'S POLL OF STATE LABOR STIRS A RUMPUS

#### (By James M. Haswell)

WASHINGTON.-Michigan questionnairesshowing that substantial majorities of union members think that organized labor is too powerful—drew sharp interest Thursday from members of the House subcommittee drafting antiracketeering legislation.

Representative ALVIN M. BENTLEY, Republican, of Owosso, said 76 percent of the union members who replied to his questionnaire

expressed this view.

BENTLEY told the committee he got 9,300 replies, about a 30 percent response, from the Eighth Congressional District.

Representative ELMER J. HOLLAND, Democrat, of Pennsylvania, a member of Local 1272 of the United Steelworkers of America, was skeptical.

"There are 65,000 steelworkers in my district," he said, "and I have had only 12 letters favoring the Kennedy-Ervin bill. The climate in union meetings I have attended is not as you describe."

Representative ROBERT GRIFFIN, Republican, of Traverse City, said he circulated questionnaires in the Ninth Michigan District and got replies similar to BENTLEY'S.

Representative Charles E. Chamberlain, Republican, of East Lansing, had the same experience in the Sixth District, GRIFFIN said.

BENTLEY urged the subcommittee to con-

sider his two labor bills.

One is designed to promote rank-and-file control of union affairs. It would enable members to call in the National Labor Relations Board to supervise elections and hold referendums on the actions of local officers.

This would permit strike votes, recall elections, and referendums on spending union money in politics.

BENTLEY also would authorize employers to ask courts to supervise strike votes.

He also would set up a temporary commission to survey the economic power of labor unions as a step toward establishing a Federal policy on monopoly practices, irdustrywide bargaining, and giantism.

"Something must be done to limit the power grabs of men such as James R. Hoffa, Teamster Union president," BENTLEY said.

He told the committee he will introduce later a bill to create a Federal Labor Commission which would supervise union activitles affecting business. It would operate in the manner of the Federal Trade Commission, BENTLEY said.

The Kennedy-Ervin bill is "a step in the right direction," BENTLEY said.

Nose-counting on the Education and Labor Committee leads some members to predict a young Democratic revolt on the committee. With Republicans offering to vote out any bill, first and second-term Democrats who favor the original Kennedy bill could prevail over senior Democrats.

Most of the older Democratic members are holding out for a strict bill, or want none at all.

Following his committee testimony against the Senate-passed bill Wednesday, AFI-CIO President George Meany circulated a letter to Senator John F. Kennedy, Democrat, of Massachusetts, Thursday, emphasizing that the AFI-CIO does not oppose the original Kennedy-Ervin bill as reported out by the Senate Labor Committee. It does oppose the amended bill the Senate passed.

This letter was greeted as offering an out for prolabor Democrats from industrial areas who don't want to offend the AFL-CIO management, but at the same time say they can't go home without voting for some kind of antiracketeering measure.

Harold J. Gibbons, No. 2 man to Hoffa in the Teamsters, said Thursday the big truck union is prepared to accept some type of labor control legislation.

Gibbons said, however, that the Kennedy-Ervin bill has union-busting, punitive and repressive features and any such legislation would be unacceptable.

Gibbons, the union's executive vice president, substituted for Hoffa in the meeting with newsmen. Gibbons said Hoffa was busy in a conference.

Gibbons was asked what the Teamsters might favor. He said that for one thing the union endorses complete financial accounting of union funds to the Government.

## Senator Johnson's Tribute to Three Maryland Congressmen

EXTENSION OF REMARKS

## HON. VICTOR L. ANFUSO

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES Tuesday, June 9, 1959

Mr. ANFUSO. Mr. Speaker, the distinguished majority leader of the Senate, the Honorable Lyndon B. Johnson, has just paid a most deserving and excellent tribute to three of our colleagues from this House, who are Democratic Representatives from Baltimore, Md. They are the Honorable George H. Fallon, dean of the Maryland delegation; the Honorable Edward A. Garmatz; and the Honorable Samuel N. Friedel.

This tribute was paid them at a testimonial dinner in their honor at the Lord Baltimore Hotel in Baltimore, Sunday evening, June 7, 1959. I had the distinct pleasure and privilege to attend this dinner and to participate in the tribute to our colleagues, who have distinguished themselves in their public service to the people of Maryland and to the Nation as a whole.

I was particularly impressed by Senator Johnson's address in which he also discussed the role of the Democratic Party in Congress and in providing leadership to the Nation. Senator Johnson himself is setting a fine example of distinguished leadership and in building up a constructive record of achievements by the 86th Congress which we can proudly present to the people in due time.

In my book Senator Johnson is an able leader and a great humanitarian. He is a man who loves peace, but at the same time he is a firm believer in adequate military preparedness and in maintaining the proper defense posture for our country. As such, he is one leader upon whom the free world can depend for its future security and peace in troubled times.

In his thinking for social and humanitarian legislation, Senator Johnson belongs not only to Texas but to the entire country. He is a man who has a wide reputation for fostering unity. He is equally known for opposing divisive issues or perpetuating conflicts which can only weaken us and cause irreparable damage to the Nation.

Mr. Speaker, under leave to extend my remarks, I wish to insert into the RECORD the address by Senator Johnson, which is as follows:

Address by Senate Democratic Leader Lyndon B. Johnson Testimonial Dinner, Lord Baltimore Hotel, Baltimore, Md., June 7, 1959

#### A RESPONSIBLE RECORD

Mr. Chairman, honored guests, friends, fellow Americans, we are here tonight for one of the most important ceremonies in America

We have gathered to pay tribute to three public servants—three men who have devoted their talents to serving their country.

It so happens that those three men are Democrats and I am a Democrat. All four of us bear that label proudly.

But I do not consider this a partisan meeting. It is a gathering of the citizens of one of our greatest cities to tell the three men who represent that city that they are appreciated and their work has not been in vain.

There is a special significance in holding this meeting in Maryland. This is a State which has a tradition of public service—a history of men of achievement and statesmanship.

#### TWO GREAT SENATORS

I have served in Congress with two of your greatest Senators. One was Millard E. Tydings. The other was Herbert O'Conor.

In Millard Tydings, Maryland produced one of the truly fearless men I have known. His shoulders were always back, his back was always straight, and his chin was always up.

And he always walked into battle for the principles he believed were right with the same courage that he walked into enemy fire during war.

In Herbert O'Conor, Maryland produced a Senator who had few equals. He was quiet. He was modest. And he was effective in advancing the interests of the people in whom he believed and who believed in him.

And Herbert O'Conor can walk onto the floor of the Senate today and receive the same respect and deference that he did back in the days when he had a vote and the right to make a speech.

These qualities are characteristic of Maryland Democrats.

#### THE ART OF UNITING

You have a Governor—J. Millard Tawes—who has mastered the art of uniting men to resolve issues. This is because he follows the rule of doing what is right—not just what is expedient.

You have a dynamic and energetic new mayor—Harold Grady—who brings together people from all walks of life—simply because he is trying to advance the interests of his city.

And you have a former mayor—Thomas D'Alesandro—who has served in the legislative branch of three levels of government and won friends in all three.

I want to thank your senior Senator, John Butler, for the courtesy he has extended me by his presence here this evening.

I also want to express my appreciation to Congressman Tom Johnson, Congressman Dan Brewster, and my dear friend, Congressman Victor Anguso. Congressman Anguso is one of the finest men in Washington. He is a very inspiring member of the House Aeronautical and Space Committee.

I see that former Solicitor General Perlman is in the audience. As all of you know, he was named to this important position by my good friend, and fellow Texan, the Honorable Tom Clark.

In this audience, there are many more leaders of your State. Your distinguished new comptroller, Louis Goldstein, your president of the Maryland Senate, George Della, and your new president of your city council, Philip Goodman, are also here tonight.

I have been advised that your junior Senator, GLENN BEALL, was at the airport to meet me. Unfortunately, I was late and he had another engagement.

To all of you, I am very appreciative for the opportunity to be here with you tonight. I have begun by mentioning these men be-

cause I wanted to place the three we honor tonight against their proper background.

It is a simple thing to honor ordinary men in a land where everyone else is mediocre. In the land of the blind, the one-eyed man is king.

But in the State of Tydings, O'Conor, Tawes, Grady, and D'Alesandro, men who are selected for honor must be extraordinary. And that is what you have done tonight. Baltimore has three beloved sons: George

Baltimore has three beloved sons: George H. Fallon, Samuel N. Friedel, Edward A. Garmatz.

#### FIFTY-SIX YEARS OF SERVICE

Between them, they represent 56 years of public service. I would like to recite the record tonight—not because it is unknown to you but because I would like to place it in writing for all to read who care to know the facts.

GEORGE H. FALLON, dean of the Maryland delegation and the "Mr. Roads" of Congress.

GEORGE FALLON can be proud of many things. Probably he himself would list first his wife, his daughter, and his two grandchildren—Johnnie and Stevie.

The citizens of Baltimore would probably add to the list the channel for Baltimore Harbor, the Chesapeake and Delaware Canal, and the harbor pollution bill.

His colleagues in Congress would add to the list the Federal Aid Highway Act. Because of George Fallon, the time is not too far distant when people will be able to travel from coast to coast—not only in comfort but in safety without a stoplight or a traffic sign.

Samuel N. Friedel, the only man who has ever represented the Seventh Congressional District.

SAM FRIEDEL is a man who has fought the good fight for John Doe, citizen. He has tried to equalize the tax burden; to improve the social security system; to liberalize the Railroad Retirement Act.

He is a prudent man—a careful man—who realizes that a nation can advance without spending itself wild. And day after day, his work becomes more effective and his voice stronger in the Halls of Congress.

EDWARD A. GARMATZ, who is as much a part of your city as Baltimore Harbor itself.

This is a man who has never forgotten the people who trusted him so much that they sent him to Congress to transact their business. He has stood consistently for those he represents—so much so that he is known, and will always be known, as labor's friend.

And I am proud to call him my friend.

I have not reviewed these records tonight merely to pay tribute to three loyal, hardworking Americans. I have called the roll because I believe your Congressmen illustrate a point that is important to our people.

It is that there is something more to politics other than being elected. The real objective is not to win public office but to serve the public after the election is over.

#### CHOICE OF THE PEOPLE

There is a legitimate place for partisanship in the life of our Nation. The American

people must have a choice.

Partisans have not only a right but an obligation to present their views to the people vigorously and forcefully. But after the peo-ple have spoken, there is another obligation which falls upon the shoulders of those who seek office.

It is to accept the verdict of the voters gracefully-and then to go ahead and try to make our Government work. After all, it is our Government as Americans no matter which party runs it-Republican or Democratic.

Like me, the three men we honor tonight have been in both the majortly and the minority. I do not believe that any of us have ever rejoiced over the failure of a President or a Congress because the President or the Congress belonged to an opposing political party.

As a Democrat, I believe the Democratic Party is best qualified to run our country. I did not adopt my political allegiances lightly or simply out of habit.

#### A PARTY OF VISION

The Democratic Party, to my way of thinking, is a party of broad vision and progressive outlook. It brings together the people of the North, the South, the East, and the West for effective action to solve the Nation's problems.

But when the voters, in their wisdom, select a Republican President, I want that President to succeed in making our Nation strong. And when he does succeed, he will have my cooperation every step of the way.

Again speaking as a Democrat, I am very proud of the fact that three successive Democratic Congresses have gone more than half way to cooperate with a Republican Presi-

There may have been a temptation to snipe and harass; to tear down and obstruct. But it was a temptation which was sternly set aside.

When the President advanced proposals with which we agreed, we accepted them.

#### CONSTRUCTIVE ALTERNATIVE

When the President advanced proposals with which we disagreed, we either modified them or presented constructive alternatives.

Men like Fallon, Friedel, and GARMATZ were determined to make their Government work. And it has worked despite the division between a Republican President and a Democratic Congress.

The Democratic Congress has not attempted to sabotage the Republican President-and then chortled gleefully over the results.

There are two theories of politics in this country.

One is that the way to win elections is to run against something-to prove that the

opposition is motivated by bad faith. The other theory is that the way to win elections is to run on a record of construc-

tive achievement. And the second theory is the one that has been followed by your Congressmen and their colleagues in the Democratic Congress.

The first theory is one which Democrats have left to others-and I am sorry to say that it is being practiced.

#### A DANGEROUS THEORY

It is a dangerous theory, because it leads those who embrace it to take a further step. It is that unless they control an institution of government, they will not let that institution work.

We are going to have a practical test of the two theories of politics before very long. The record of this Congress, as of the pre-

vious two Congresses, will be constructive. It will be a record of highways, of houses, of health legislation, of steps to protect our working men and women, of moves to strengthen the freedoms and the rights of our people, of care for the needs of our farmers, of prudence in the Nation's fiscal affairs, of attention to the economic needs of our people, of efforts to strengthen our country's position in foreign affairs.

And those who seek to run against this record had better offer the voters something besides partisan slogans shouted hastily into a microphone on a Tuesday morning.

#### SABOTAGE OF GOVERNMENT

The American people do not take kindly to sabotage of their Government.

I came here tonight with a feeling of deep pride. I came because I wanted to help in honoring three men who believe that a public office is an opportunity for public service, and who have translated their beliefs into

And when the final record is written. Baltimore will be able to take great pride in the contributions of its three able men—Fallon, FRIEDEL, and GARMATZ.

## Curbing Oil Pipeline Rebates

EXTENSION OF REMARKS OF

## HON. EMANUEL CELLER

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Monday, May 25, 1959

Mr. CELLER. Mr. Speaker, on June 9 I introduced a bill to amend the Elkins Act in order to prohibit expressly rebates to oil pipeline shipper-owners through the payment of dividends.

This bill will implement one of the recommendations contained in the Antitrust Subcommittee's Consent Decree Report on oil pipelines. In its investigation of oil pipeline operations under the terms of the 1941 consent decree, the Antitrust Subcommittee found that in 1955 and in 1956 some of the defendant pipeline companies had paid to their shipper-owners dividends equal to 20 percent to 47 percent of the pipelines' total revenues from common carrier transportation services. Since the overwhelming majority of an oil pipeline's revenues come from tariffs that the shipper-owner pays, it is clear that the dividends rebate to the shipper-owner his payments to the pipeline. The shipperowner gets an additional advantage over his competitors because part of the tariffs paid by outsiders to the pipeline also is transferred to the shipper-owner.

In its report the subcommittee found that:

Ownership of oil pipelines in 1958 continues to afford their major integrated owners substantial advantages over the other segments of the petroleum industry. In order to correct this condition, the committee recommends that Congress consider legislation that would amend the Elkins Act so as to prohibit expressly any payment of dividends by oil pipelines to the shipper-owners that are derived from transportation charges paid by the shipper-owner, or by competitors of the shipper-owner,

It is clear that the Elkins Act always has prohibited payment of dividends when such payment became a device to discriminate among shippers by returning to a favored shipper part of his transportation charges. The purpose of my bill is to have Congress at this time reaffirm the purposes of the Elkins Act and to declare expressly that dividends paid by an oil pipeline to its principal shipper from the money paid by that shipper for transportation services constitutes a rebate.

The purpose of my bill is to assure that oil pipelines operate as common carriers in fact as well as in law, rather than as private carriers for the benefit of their shipper-owners. It attempts to remedy present discriminations against outside users of oil pipelines by curtailing dividend payments to shipper-owners in lieu of divorcing oil pipelines from the ownership and control of the major integrated oil companies.

The remedy contained in my bill is less severe than divorcement of oil pipelines, which ultimately may prove to be necessary. My bill assures that the refineries owned by the major oil companies will continue to have access to necessary supply without the intervention of outside ownership. Unlike the situation which might occur if there were divorcement, continuity in management and operations will not be jeopardized and the ability of the pipelines to borrow money needed for expansion and development will not be impaired.

The objective of this bill solely is to assure that, in accordance with the intent of Congress as manifested in the Hepburn Act of 1906, oil pipelines be available for the benefit of the entire petroleum industry rather than for the private benefit of their shipper-owners. Continued discrimination by the shipper-owners against outside users of oil pipelines, who are competitors of the shipper-owners, must be stopped.

#### Poison in Your Water-No. 109

EXTENSION OF REMARKS OF

## HON. JOHN D. DINGELL

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES Tuesday, June 9, 1959

Mr. DINGELL. Mr. Speaker, pursuant to permission granted, I am inserting into the Appendix of the RECORD an article appearing in the Conway (Ark.) Log Cabin Democrat of April 30, 1959. entitled "Raw Sewage Flows on Surface in Area Adjoining Conway":

SEVERE HEALTH MENACE-RAW SEWACE FLOWS ON SURFACE IN AREA ADJOINING CONWAY

Sewage-disposal facilities in the College Oaks addition at the southeast edge of Conway are inadequate and raw sewage has been found flowing over the surface of the ground at various locations, the Arkansas State Board of Health reported to Mayor Edgar B. Parker in a letter received yesterday.

An inspection of the area was made last week by R. N. Sanders, district engineer from the State health department's office, and C. Homer Jones, district sanitarian stationed at Conway.

"Sewage-disposal facilities in this area, College Oaks, generally were found to be inadequate," G. T. Kellogg, chief sanitary engineer, wrote Mayor Parker.

Mr. Kellogg's letter continued:

"Surfacing of sewage in this area is a definite public health hazard. Such a condition can at any given time become the source of a serious epidemic of disease. Due to the fact that epidemics have no regard for geographical boundaries, a threat to the health of citizens of Conway, as well as people living in the College Oaks area, very definitely exists.

"An additional health hazard to the owners of private water supplies in this area exists in that most lots are insufficient in size in order to safely locate a water well with respect to a septic-tank installation.

"The reason for the general failure of septic-tank installations in this area are (1) poor soil conditions and (2) the prevalence of small lots.

"This office feels that the solution to the health problem in this area is public sewage. We also would like to emphasize that this same solution, public sewage, applies to other congested areas adjoining the corporate limits of Conway."

A copy of the letter went to Dr. Charles A. Archer, Faulkner County public health officer.

Mayor Parker said he asked for an inspection of the College Oaks area after he received numerous complaints about raw sewage flowing on the surface of the ground in sections of the area. He accompanied Mr. Sanders on the inspection trip.

"While not desiring to alarm anyone," Mayor Parker said, "a serious health problem definitely exists. Because these areas are outside our city limits, the city is somewhat handicapped in handling a situation like this. However, no stone will be left unturned toward carrying out the suggestion of the State board of health for public sewage. As pointed out in Mr. Kellogg's letter, we realize, too, that similar conditions exist in several other outlying areas."

#### More on Educational Television

EXTENSION OF REMARKS

## HON. HARRIS B. McDOWELL, JR.

OF DELAWARE

IN THE HOUSE OF REPRESENTATIVES Tuesday, June 9, 1959

Mr. McDOWELL. Mr. Speaker, on many occasions during this Congress I have indicated support of educational television. I am in favor of the establishment of ETV channels for I know that the development of this media is the realistic and economical, and a major means of meeting the increasing need for additional educational facilities in the United States. My position in this whole subject was described in detail in the Congressional Record of February 9, 1959, page 1981, and March 18, 1959, page A2363, and in testimony supporting my bill, H.R. 4284—companion to the Magnuson bill, S. 12—before the Subcommittee on Commerce and Power

of the House Interstate and Foreign Commerce Committee.

Within my own constituency there is a concerted effort to create an educational TV channel and it is my sincere hope that this effort will succeed. However, those working for the allocation of channel 12 in Wilmington, Del., to educational purposes have a long hard road ahead of them. The FCC has declined to decide the allocation of the channel on the broad question of ETV or commercial TV, but has chosen to decide the future of channel 12 on the basis of each specific application and the particular technical operating plan the application describes.

So, this Government's position concerning the future of channel 12 and the wider subject of educational television remains a matter of doubt and perplexity. This is a problem of nationwide scope, of Federal import, and someone in this vast organization known as the U.S. Government must define the Government's position on this matter.

It is becoming more and more evident that the "someone" who must define the Federal position on educational television is the Congress, for we must never let it be said that the Congress, when presented with a major means by which to offer education to a knowledge-hungry population, shunned the development and encouragement of that means.

Recent happenings indicate that this Congress is recognizing its responsibility in this area. In a voice vote, the Senate passed, by a great majority, Senator Magnuson's educational television bill. Last week the Subcommittee on Commerce and Power of the House Interstate and Foreign Commerce Committee met and voted to defer action on bills relating to educational television until a field study has been made of the entire subject. This study is to be conducted following the adjournment of the present session of the 86th Congress.

I sincerely hope that this study may isolate the major factors in the ETV controversy, for if it does, and if it gets down to the roots of this matter, this Government can do no other than give the greatest possible support to educational television.

As a small contribution to the work of clarifying some of the fundamental problems with which this matter is fraught, I would like to bring to the attention of my colleagues a letter from a Delaware proponent of ETV, Mrs. Jay O. Newlon, who vividly describes the prejudice and lack of understanding which is delaying the progress of educational television. Secondly, I have an article from the Wilmington Morning News of June 5, 1959, dealing with the work and aspirations of some of those who support educational television.

I include these items at this point in my remarks:

WILMINGTON, DEL., April 8, 1959. FEDERAL COMMUNICATIONS COMMISSION, Washington, D.C.

DEAR SIR: Are we Delawareans going to be deprived of educational television because the petty provincialism of "Delaware's station for Delaware" has been almost all that the general public has heard? Details of a

few conversations accompany this letter as examples to show that political pressure, ignorance and fear have motivated those in high places to fail to come to the support of educational television when they actually wish that we could have it.

As parents, my husband and I wish our children to have every educational opportunity possible. "TV and Our School Crisis," the new book by Mr. Charles A. Siepmann, should be required reading for those that think educational television costs money. For adult education, community uplift and betterment, educational television is poten-

tially a great force for good.

The Delaware Educational Television Committee is apparently made up of busy educators and intellectuals who have sacrificed to give time to trying to get people acquainted with the opportunity we now have. tunately they started seeking support from heads of organizations not realizing that prominent people feel they have to be politicians. The general public has had little opportunity to evaluate or even understand just what educational television is or what it can do. Of course it has been difficult for information concerning it to get around due to an uncooperative press and the distrust, fear, and ignorance that even prevented most of our school officials from allowing the fact sheets to be distributed through the schools.

It seems to me that television channels should be regarded in the same light as our natural resources and protected and used in the way which will be most valuable to the people. We in the United States regard the right and opportunity to be educated as vital to our democracy—you might call it a birthright. In the years to come every time Delaware people read of exciting new progress in educational television if we had lost this opportunity we would think of the local talent shows and old movies on channel 12, and we'd feel cheated. Here would be a mess of pottage received and a birthright lost.

Genuine concern for the welfare and progress of the people of this area would dictate saving this channel for education. Cooperation and sharing with those people interested in giving worthwhile educational programs would bless both them and us.

Sincerely,

Martha Newlon Mrs. Jay O. Newlon.

P.S.—Details of a few conversations typical of great numbers follow:

I called a prominent person to inquire as to whether, since the new proposals eliminated financial obligation on Delaware's part, he would not now be coming out publicly for channel 12's being made an educational station. He said that he would not. I asked him if there were an objection other than financial that I didn't know

I asked him if there were an objection other than financial that I didn't know about. I couldn't imagine an educator not preferring a genuine educational channel to the crumbs of public service time that would be doled out by a commercial operator (and those perhaps given with an eye to personal advantage). I couldn't understand Mr. X's answer.

I asked, "Have the Philadelphia educators who would be in charge been giving poor or unsound programs for the last few years over their ultra high frequency station? Are they indoctrinating children in some way that would be objectionable to us in Delaware?" I wanted to know what was wrong with them that we couldn't cooperate with them and get the benefit of their programs.

Mr. X said quite warmly that he resented any effort to put him in the position of criticizing the Philadelphia educators in any way.

I explained that I was not a reporter and not trying to embarrass him—that I was only a humble housewife with 6 children and would like to see anything that improves education or any additional educa-tional opportunity provided for them, as well as for the 6 million people of this area.

He asked where I got that figure and

after explaining I went on to tell him that it appeared to me that we, the people of Delaware, were behaving worse than the well known dog in the manger. In our case when we ourselves cannot make use of this wonderful medium for worthwhile purposes we would deny its use to someone else who was equipped to do so. To top it off they would be providing the educational programing which we ourselves could use beneficially. But instead of cooperating with them we prefer to throw this opportunity away on cheap commercial programing which would be for the most part stultifying-certainly in no sense improving the intellectual standards of our people.

Mr. X then told me how enthusiastic he had been concerning educational television and was frank in showing how hands were tled (the details would identify him, unfortunately). He said that if those to whom he was responsible would only come out for this cooperative arrangement with Philadelphia, he would be glad to do so. If I understood the conversation correctly, he must already have had rather a hard time with the political head and the body which conthe purse strings and felt obliged to avoid any further conflict. Naturally he needs their cooperation in order to do a good job in the position that he is in. I can certainly sympathize with him and realize it would be extremely difficult for him to announce publicly support for educational television

One public figure who might very well have inside information agreed with me that educational television would be in the public interest but told me that it was too late to do anything about it now. Since he thought it was all set up for Mr. Rollins he thought the only good that could be done was to show him that people wanted television time for schools. (Opportunities for schools to show off are no substitute for genuine educational television, and may indeed harm the progress of academics in leading school personnel to concentrate on getting students ready for performances. Off times given by commercial operators to public interest programs cannot be counted on as they are shifted when that time can be sold and they are not adequate to provide real courses)

A minister told me that he felt the mafority of the gentlemen of his calling recognized that educational television would be valuable and certainly superior to what we could expect otherwise, but since it is a touch subject here and leading politicians and businessmen in their congregations might be offended should they speak out for it they, in most cases, were just trying to pretend that there was nothing going on—and not taking any side at all. Many did feel they

needed more exact information.

Another minister told me that he had seen no evidence that the educational programs would be anything worth receiving. When I asked him if he thought on this basis that we should throw the station to what we knew was not worth having rather than take the recommendation of recognized educators who state that the programs will be of high caliber as they have been on the ultra-highfrequency channel, he stated that he felt he would get a better break himself with a small local channel. He did not realize that time is scheduled for religious programs also with educational channels.

[From the Wilmington Morning News, June 5, 1959]

EDUCATIONAL TV PLANNERS MEET

Educational television in this area would benefit from Delaware's cultural resources, Alexander Greenfeld, this city, told a joint meeting of program committee members from this State, Pennsylvania, and New Jersey yesterday.

Mr. Greenfeld, president of the Delaware

Educational Television Association, dressed educators and other experts in that field, at a luncheon at the YMCA.

The session here was the first of several planning conferences. Mr. Greenfeld also emphasized that the three States have common interests and needs.

"A discussion by a panel in the Wilmington studio on the growing economy of New Castle County would help communities in the other States faced with the same problems," Mr. Greenfeld said. "Art, music, chemistry, religion, drama, and community service give the same benefits regardless of where they originate."

He urged the group to create the most attractive schedule possible, and noted that suggestions from several Delaware sources indicate that once the controversy over the competition for the now dark Channel 12 is ended, and should it be resolved in favor of education television, substantial financial contributions would be forthcoming.

Mr. Greenfeld said that should the Federal Communications Commission award the channel to Metropolitan (the name of the three-State educational television organization), the channel will remain a Delaware channel and there will be a duty on the operating licensee to serve the local needs and interests of the Delaware community.

Metropolitan is one of three groups with applications before the commission. others, both commercial, are Rollins Broadcasting-Telecasting, and an out-of-State combine headed by Richard Goodman,

#### Our Water Resources Problem

EXTENSION OF REMARKS OF

## HON. CLIFFORD DAVIS

OF TENNESSEE

IN THE HOUSE OF REPRESENTATIVES Tuesday, June 9, 1959

DAVIS of Tennessee. Mr. Speaker, under leave to extend my remarks in the RECORD, I am including a statement made before the Committee on Public Works in the House of Representatives on last May 12, by Brig. Gen. John L. Person, Assistant Chief of Engineers for Civil Works. It is one of the most comprehensive, and certainly one of the most thorough, treatments of the water resource problem I have ever read or heard. In the judgment of many of us the next decade may well show the emphasis on the conservation of water in our own country.

We have made great progress under the Corps of Engineers in controlling flood waters. Many areas in the country are today short of water, and an in-creased population and a greater industrial use for water, makes this natural resource more valuable than ever before. The statement by General Person is included herewith:

STATEMENT OF BRIG. GEN. JOHN L. PERSON. ASSISTANT CHIEF OF ENGINEERS FOR CIVIL Works, Before the Committee on Pub-LIC WORKS, HOUSE OF REPRESENTATIVES. MAY 12, 1959

Mr. Chairman and members of the committee, it is a pleasure, as it has always

been, to appear before your committee. This is an especially important occasion to me, since in view of my impending retirement it will probably be my last appearance before your full committee as a representatives of the Corps of Engineers. I have, therefore, given considerable thought to the statement which I am about to make.

I know that your purpose is to consider, and possibly report out, another omnibus river and harbor and flood control bill. Since enactment of the last legislation of this kind in July 1958, the Chief of Engineers has recommended a number of new projects or modifications of existing projects. These will be considered in detail and representatives of the Corps as well as interested local agencies will be called on to testify concerning them, if past procedures are followed.

I feel, therefore, that rather than discuss these new proposals at this time I can serve you best, and best serve the cause of water resources development, by reviewing the road we have traveled in development of the civil works program, and by presenting to the best of my ability and experience some of the more urgent problems that are developing in the water resources segment of the public works activity, and some thoughts on what may be done about them.

I have had the good fortune to be involved in the planning and construction of civil works improvements for the major part of my 30 years' service with the Army. span of my service, therefore, has covered the period of the greatest expansion of Federal activity in this field, since by far the greatest progress on a nationwide basis has taken place since 1936 when the first general flood control legislation was enacted by Congress

The roots of this activity, of course, go much deeper into the history of our country-to 1824 in fact, when the first river improvements were authorized by Congress and undertaken by the Corps. For almost a century thereafter, the Federal interest and activity in this field was limited largely to improvement of navigation on our rivers and harbors. During the next half century. however, we have witnessed a growing in-terest in water resources development and an ever increasing expansion of the Federal participation in this activity.

#### CIVIL WORKS ACCOMPLISHMENTS

This Federal activity in cooperation with States and local organizations has resulted in accomplishment of a major public works program which has produced large public benefits.

In the field of navigation we have over the years improved some 23,000 miles of waterways which includes some 10,000 miles of channels which provide depths of over 9 feet for modern barge transportation. fic on these waterways has increased over the past 30 years from 8 billion ton-miles in 1929 to 115 billion ton-miles in 1957. We have also improved some 500 harbors on the Atlantic, Gulf, and Pacific Coasts, on the Great Lakes, and in Alaska, and in the overseas territories.

In the field of flood control we have completed or placed in operation 151 flood control and multiple purpose reservoirs, and nearly 300 works for local flood protection. We estimate that these have prevented flood damages of over \$9 billion to date which is almost three times the cost of the flood control improvements. These works are effective in most of our major river basins and on many smaller rivers and streams. The degree of protection varies, however, and is far from complete in many areas.

The large multiple purpose projects, 32 in number, which have been constructed produce a variety of benefits. Over 6 million kilowatts of power have been installed. During 1958 these projects produced 27 billion kilowatt hours of power or about 20 percent of all the hydropower generated in the United States. The increasing importance of these multiple purpose and flood control reservoirs for water supply is shown by the fact that at 18 completed projects we have more than 1,200,000 acre-feet under contract for municipal and industrial water supply; and releases of water for irrigation totaled 1,600,000 acre-feet in 1958. These reservoirs, and others where conservation pools are provided, have developed into a major recreational resource. They make available about 3 million acres of water area at normal pool levels. In 1958 attendance at these projects totaled 95 million visitor days, which is more than double the attendance 5 years ago.

I have for distribution to you a statistical summary of these accomplishments which

you may find of interest.

are a number of salient factors which have contributed to and have been an essential part of this growth, and all of these have involved the deliberations and actions of this committee.

DEVELOPMENT OF WATER RESOURCES LAW

Of primary importance has been the gradual evolution of a great mass of Federal legislation dealing with water resources. The Federal activity in flood control was ex-tended beyond the Alluvial Valley of the Mississippi for the first time in 1893 when Congress established the California Debris Commission. The act of March 3, 1909, provided for inclusion of data on development and use of water power in reports to the Congress. The act of March 4, 1913, provided a legislative basis for reports to Congress on water projects and first required consideration of related water uses on a comprehensive basis. The act of March 1, 1917, authorized flood control construction in California and in the Alluvial Valley of the Mississippi and made River and Harbor laws applicable to flood control. The Act of June 5, 1920, required the Chief-of Engineers to recommend local cooperation for special benefits that would accrue from projects.

The River and Harbor Acts of 1925 and 1927 authorized the so-called "308 surveys," which were the first attempt to appraise the resources and problems of all the rivers of the United States. These were largely completed by the corps during the ensuing decade. These studies provided a basis for much work undertaken for relief of unemployment during the early 1930's, were a basis for the TVA plan of development, and for improvements authorized by subsequent flood control acts. The act of May 15, 1927, authorized the present major project for control of floods in the alluvial valley of the

Mississippi.

Perhaps the most significant piece of leg Islation, however, was the act of June 22, 1936, which established for the first time a national policy for Federal participation in flood control in a nationwide basis. That act has been amended and extended by cmnibus river and harbor legislation in 1938. 1941, 1944, 1946, 1950, 1954, and 1958. While all of these acts authorized specific projects they also included important general legislation which has expanded and clarified the Federal interest in almost every phase of Water resource development, including:

Provisions to preserve for future use the hydroelectric power potential of projects.

Recognition of rights and interests of

Coordination with other Federal agencies such as the Departments of Interior and Agriculture.

Recognition of major drainage as a part of flood control.

Provision of facilities for access and publice use, for recreation and conservation of fish and wildlife.

Provision for disposal of hydroelectric Power by the Secretary of Interior.

Provision for planning for municipal and industrial water supply and for its disposal. Recognition of recreational navigation.

Authority for accomplishment of flood fighting, emergency work, and small justified projects.

In addition there have been related acts which have clarified the Federal interest in such matters as control of beach erosion; protection against flooding by hurricanes in coastal areas; and increased recognition of fish and wildlife preservation as a project purpose.

We are often inclined to think of these laws in their narrower sense of providing a vehicle for authorization of specific projects. And we still use the terminology of flood control law or river and harbor law. The fact that these same acts provide the present broad basis for Federal participation in almost every phase of water resources de-velopment is seldom recognized. It would be much more accurate to characterize these acts as Federal water resources law. I believe they should be dignified by a greater

recognition of their real import.

This body of law has developed in a gradual and practical way to meet needs as they have arisen. One result of this procedure, and the broad program that has developed, has been stimulation of wide interest in water resources development. As a result this subject has been studied by numerous commissions and committees of the legislative and executive branch. These studies have led to legislative proposals, generally broad in scope. Some of these proposals have never reached the Congress, while some bills of this kind are now before the Con-gress for consideration. Many have merit, but most proposals of this kind cover so many aspects of the problem that they unavoidably attract strong opposition as well as support. It seems to me that the experience of this Committee over the years affords a valuable lesson—that development of water resources legislation is a matter of evolution, a step by step process, based on practical needs and experience.

MULTIPLE PURPOSE DEVELOPMENT AND PLAN-NING

Perhaps the most significant change that has grown out of this expanded Federal interest in water resources has been the shift in emphasis from single-purpose to multiple purpose development; and from planning for some particular project to comprehensive and coordinated river basin planning.

As our country have grown and developed during the past half century, and particularly during the past decade of almost explosive growth in population and industry, it has become apparent that our rivers must be developed to meet all present needs and to serve as fully as possible the needs of the

foreseeable future.

I think the Corps of Engineers has felt the impact of this change more than any other Federal agency. Thirty years ago, when the Congress authorized the corps to make a study-even such a broad study of many rivers as the 308 surveys-it was possible for us to proceed almost unilaterally. were so many obvious needs for navigation and flood control projects that selection and recommendation of individual worthwhile project was a relatively simple task.

Those days have gone forever. The rising interest in water resources development is now shared by many Federal agencies, by the States to an increasing degree, and by industry and organizations of private citizens. Many of these have broad interests while others tend to support some particular phase or interest, to the exclusion of all others. And the inherent conflicts in use of water have been intensified by increasing demands upon a limited supply.

The pattern of study, therefore, that has emerged is one of comprehensive river basin studies in which other Federal agencies, the States and private organizations all cooperate in their respective fields of interest. studies are now underway in the Delaware and Potomac River Basins; and our review of the plan for the Columbia River Basin, which will soon be submitted to the Congress was also made on that basis.

This is a sound development as it insures that the skills and information available to the agencies and States are brought to bear on solution of these complex water problems. It does, however, require patient and difficult coordination and efforts to resolve conflicting interests. It also involves consideration of many phases of river-basin development which are emerging as of major importance and as difficult problems. Thus comprehensive and multiple-purpose planning is not an easy task, but I believe we are making prog-

We have given much attention to the requirements of coordination. I appeared recently before your Subcommittee on Watershed Development and described the relationship between our flood-control program and the flood-prevention program being developed by the Department of Agriculture under Public Law 566. At that time I told you that we have a working task group com-posed of representatives of the SCS and corps who are attempting to resolve differences and achieve coordination and uniformity in conduct of these programs. In January of this year we were able to complete a memorandum of agreement covering, at least in part, the participation by the two agencies in urban flood protection.

Enactment of the Water Supply Act of 1958 in July of last year has led us to seek and reach an agreement with the Department of Health, Education, and Welfare. This will further implement our past close relations with the Public Health Service in the field of water supply investigations. We desire and have been promised their assistance in appraising needs for water supply and in evaluating it. This would be somewhat analogous to the manner in which the Federal Power Commission now assists us in estimating power needs and in evaluating hydro-

electric power.

In addition we are continuing our efforts in working with the Interagency Committee on Water Resources, and through informal interagency committees, to arrive at uniform and mutually acceptable procedures for project evaluation, cost allocation and sharing.

One of the most important and productive areas of coordination is that which involves the States. As you know the 1944 Flood Control Act specifically requires coordination with affected States in our planordination with allected states in our plan-ning. Experience has shown us that prog-ress is greatly facilitated when there is a strong State interest in conservation and use of its waters. In particular we have found that much can be accomplished when there are strong State organizations with which we can deal during the entire plan-ning and construction procedure. In addition many States, particularly those in the more humid parts of the country, are showing an increasing interest in clarifying their own water laws. We are trying to encourage more positive and effective State participation in Civil Works.

#### NEW WATER RESOURCES PROBLEMS

In addition to the problems of agency and State coordination we are confronted with many new problems of river de-These have received some velopment. consideration in the past, but largely as incidental to the matters in which there has been an accepted Federal interest. Now, however, such matters as regulation of flow for water supply and other purposes, abatement of pollution, preservation and enhancement of fish and wildlife, regulation . of flood plain use, and recreation are pressing for recognition as important problems and purposes of river basin development.

For many years we have recognized the need for regulation of the high flows of rivers—or control of floods. The economic drain upon our resources imposed by recurring flood losses was obvious. Somewhat less obvious 20 years ago was the need for regulation of rivers for all purposes. need, however, has now been plain made plain by the recent succession of drought years in the Southwest, by the crowding of industry to river banks in search of water and economic bulk transportation, and by the increasing pollution of our rivers. I predict that as time goes on the regulation and improvement of low water discharges of our rivers may become even more important than regulation of flood flows. This is merely a part of the multiple purpose concept under which we hold that our rivers must be developed for all purposes.

Conservation interests throughout the country have for many years been intensely interested in preservation of fish and wildlife values in connection with water resources development. In the past, however, their approach has been somewhat negative-largely opposition to river development, and at best an insistence that loss and damage be prevented. The new fish and wild-life coordination act provides a more positive approach which we welcome. It gives greater stature to fish and wildlife as a project purpose and recognizes the possibility of enhancement of benefits as well as mitigation of losses. We are extremely anxious to establish a working relationship under which the fish and wildlife resource can be evaluated and provided for as one of the real purposes of water resources projects. To this end conservationists and engineers must learn to talk the same language to

work out mutual problems.

It is becoming increasingly apparent that river valleys will be developed and used regardless of the flood hazard. The economic advantages of valley lands are so great that this growth seems inevitable. While we have made great progress in providing flood control works many of our river valleys are still subject to destructive floods, and the degree of protection varies widely. More-over it will probably not be possible, because of physical and economic limitations, to provide full flood protection. This leads to the inescapable conclusion that greater attention must be given by States, municipalities and industry, and by the Federal agencies concerned with development, to some form of regulation of flood plain use. I do not suggest an attempt to prevent any such use, but an intelligent appraisal of the hazards involved when these lands are used. We should be as much concerned with avoidance of creating a future flood hazard, as with means of correcting the damage after it occurs.

Another emerging problem or potentiality of river basin development that has been assuming increasing importance is recreation. When most of our flood control and multiple purpose reservoirs were authorized and built, little if any consideration was given to their recreational potential. Congress, however, in the Flood Control Act of 1944 was farsighted enough to give us rather broad authority to provide facilities for access and public use so that the potential of these projects for recreation and for fish and wildlife could be realized. As a result our records show that in 1958 the recreational use of projects under the jurisdiction of the Corps totaled about 95 million visitor-days. This real and tangilble value of water resource development can no longer be ignored

as a project purpose. It is becoming so important that we must consider and provide for recreational use in project planning.

These are important outstanding problems which confront those who are now engaged in water resources planning. I could name others, but I believe those I have mentioned are sufficient to raise the question as to how we can accomplish the complex coordinated planning that will be necessary if future needs are to be met.

#### WATER RESOURCE PLANNING

There have been numerous proposals over the years, and experiments, in carrying out water resources planning. These have run the gamut from single purpose studies by a single agency to the present coordinated studies with full interagency participation. There have been proposals for valley authorities such as the TVA. More recently the President's Water Resources Policy Commission recommended the establishment of an Executive Review Board and separate river basin commissions, which would coordinate and review the activities of the Federal and State agencies.

During the last session of Congress, two southeastern rivers and one for the State of Texas. These commissions are now recruiting staffs and building up organizations. The Corps of Engineers is represented on the commissions along with other Federal agencies. We are not yet sure just what the functions and activities of these new organizations will be, but we stand ready to provide all possible assistance. Presumably study commissions of this kind will report to the Congress through this Public Works Committee.

It is obvious therefore that there are a number of ways in which the Federal Government can participate with States and local organizations in water resources planning. We feel confident that regardless of the organizational arrangements that may ultimately evolve, the experience of the Corps of Engineers will be needed and you may be sure that we will cooperate as in the past with whatever organizational arrangements the Congress may establish.

In any event I feel very strongly that in our present and future planning for water resources development we must look forward to future needs, rather than to the past and present. In many river basins the more obviously needed projects have been built, or authorized by Congress for construction. But we know that the flood problem has not been solved and the future demands for water will increase. Our approach must therefore be a broad gage appraisal of how river basins and regions are likely to develop over the next 50 to 100 years and of the resources and developments that will be required to meet those needs. We can then proceed to develop the plans which are feasible to provide the water, power, and flood protection that will be required. Some elements of such plans may not be needed now and may not be justified for some years to come, but framework plans of this kind would enable us to proceed with the works needed under present conditions with assurance that what we do now will fit in with and not preclude the more compelte developments that will be essential in the years to

In closing. I should like to express my very real appreciation of the friendly and understanding attitude which you have always shown me. It has been a major factor in making my present assignment, which I am shortly to leave, one of the most interesting and satisfying jobs of my career.

## The Irresponsible Poisoners

EXTENSION OF REMARKS

## HON. LEE METCALF

OF MONTANA

IN THE HOUSE OF REPRESENTATIVES
Wednesday, May 27, 1959

Mr. METCALF. Mr. Speaker, the need for further research on the use of pesticides has become more evident day by day. These chemicals can be of great use to mankind and his natural resources if they are to be used on the basis of proper knowledge of their total effects. But, as yet, this knowledge is lacking. Thus, a bill, such as H.R. 5813, which I introduced on March 18, it is necessary to make the benefits of modern technology useful in controlling harmful plants and animals.

Without the money to carry on a program of testing to determine the effect on other plants and animals, the use of these poisons can be very dangerous. As documentation of the dangers involved when these chemicals are used without adequate knowledge, I would like to include an article by Robert L. Rudd, "The Irresponsible Poisoners," which appeared in the May 30, 1959, issue of the Nation:

## THE IRRESPONSIBLE POISONERS (By Robert L. Rudd)

From a few inches of soil, a few feet of air and a few hundred feet of the water's depths we take the food and fiber on which our survival depends. This thin, productive skin of the earth's surface, bountiful though it is, has not yielded its bounty without struggle. Traditionally, food production for man's use has been both inefficient and insufficient. Man competes here with a multitudinous complex of living forms, and throughout most of the world, even today, does not fare well in the competition. His crops, his domestic animals and his person are beset by a host of foraging, predaceous, parasitizing and disease-causing organisms. Only in those countries with well-developed agricultural technologies has the balance of competition been tipped in favor of man. In the United States particularly, the application of research and technology to foodraising has been so successful that we can and do produce far more than we actually

Relative success in controlling competing organisms is in large part due to chemicals which repel or inhibit a pest species or, through killing, reduce its numbers. The same methods of check and control are used in nature by other species of organisms. And the water and the land that produce our foods and fibers—and our pests—give us those animals for which we fish and hunt for pleasure, and that living complex whose presence we enjoy for its own sake. No living thing is unimportant and every living thing has its antagonist.

Our use of chemicals to control living things is not new. Rodents and predatory mammals have been controlled with poison for centuries; insects have been similarly controlled for at least a century. But within the last 50 years, chemical usage has changed from occasional and limited to persistent and widespread. As dramatic as any development in an era of startling technologi-

cal changes has been the discovery and application of pesticides. Within 20 years DDT was discovered, put to use, and followed by a host of other synthetic insecticides. Herbicides, dependent on totally new concepts, have been developed. The most toxic of all pesticides, Compound 1080, was discovered, tested and put to worldwide use a little over 15 years ago. But keeping pace with the increasing use of chemicals is a rising swell of doubt; do they, in the end, do more harm than good?

Many indications of biological disturbance resulting from the use of toxic chemicals in agriculture are known to scientists. Public knowledge of these effects is reflected in three controversies which occurred within the last

year.

A group of Long Island landowners, offended by unsought spraying of their lands for gypsy-moth control and concerned about wildlife damage, brought suit against the U.S. Department of Agriculture to force cessation of all such operations (see "The Pesticide That Came to Dinner," by David Cort, Apr. 12, 1958). The decision in what has come to be known as the "DDT trial" favored the Government agencies, but the issue plainly was much larger than could be settled in a single court action. In any case, the public airing of the facts resulted in much wider awareness of the hazards, both known and potential, of large-scale chemical control programs. The Government agencies involved Were made acutely aware of the hitherto largely silent opposition, and have now retrenched to consider modifications of their programs.

The opposition has not-been silent in the current program to eradicate the imported fire ant in the South. Several features mark this as somewhat different from earlier programs, although the insect species is widespread, there is clear doubt about its economic liability; the program is ambitious (some 20 million acres will be treated); the dosage (heptachlor at 2 pounds per acre) is several times that used in normal cropinsect control: in the diversified landscape of the rural South, aerial application makes it difficult to discriminate among the areas requiring treatment; whenever used, the effect of the treatment on free-living wildlife has been dramatically noticeable, often catastrophically so. The opposition has taken the form of debates, suits or threats of suits. No decision is in sight.

Livestock interests on western rangelands have been bothered for a century by the depredations of coyotes and wolves. Yet currently there is a revival of opposition to the chemical control of predatory mammals in the West. Some features of this opposition do not differ from a violent controversy on the same subject which erupted three decades ago: The emotional attitude toward wildlife in this country; serious challenges of the need for control, particularly on public lands; the use of flesh baits containing highly toxic chemicals. Much was learned from the earlier controversy; regulatory procedures were tightened.

But with the discovery and rapid acceptance of compound 1080—the most toxic chemical now used in control programs—the picture has again changed. The chemical is effective—too effective. It is stable on baits, in water, in soil and in animal tissue. It can kill easily its primary targets, coyotes and rodents; because of its stability, however, it can kill secondary targets almost as well. A dog—or coyote—which eats a rodent killed with "1080" is almost certainly going to die. Today the chief concern in the the large-scale campaigns against predatory mammals is this highly hazardous "1080." But there are other areas of inquiry. What is the actual extent of secondary poisoning? Are the extensive campaigns against predatory mam-

-mals economically justified? No one can answer these questions now. But they are legitimate questions which ultimately must be answered.

These examples of antipest campaigns given above are only three among many of lesser scope which have aroused controversy. Others are to be expected in the future, and these too will arouse controversy unless imaginative alternatives are developed. The likelihood of a quick reversal of field—the abandonment, that is, of chemical control programs—is small. Overcoming inertia and entrenched ideas will not be simple. The first step in arriving at an overall solution of the problem is to identify the major weaknesses in the present approach. I list four below:

The unrepresented: We look to the products of land and water for our survival. Beyond this, from the same land and waters, draw our recreational and aesthetic pleasures. Hunter, fisherman, photographer, vacationer, educator, naturalist, conserva-tionist, scientist—all deserve to be considered in the assessment of values derived from our productive lands. There are over 40 million fishing and hunting licenses annually sold in this country; millions of vacationers crowd our scenic areas every year. Millions more quietly appreciate our natural bounty. But in the conflict between immediate productive gain and the longrange total appreciation of the products of land, these interests do not fair well. State and Federal agencies charged with the protection of such interest have failed to discharge their function with sufficient vigor. These agencies have had wise and vigorous spokesmen in the past; they are not heard now.

Approved and recommended: This stamp

Approved and recommended: This stamp of officialdom given to a control chemical implies that all is well—no hazard exists in use. Only rarely does a grower, a control official or an administrator inquire further when he sees this mark of official sanction. But well he might. With increasing frequency, reliable reports of unexpected disturbances appear.

Ground-feeding birds, particularly robins, have seriously declined in several States where elm trees have been treated with DDT for Dutch elm-disease control. The birds die of poisoned earthworms eaten many months after the trees have been sprayed. Treatment for gnat larvae in a California lake—with low dosages of DDD—resulted in slow but inexorable accumulations of chemicals in the tissues of edible fishes many times larger than the legally allowed maximum for commercial foodstuffs.

Resistance to chemicals—the ability to withstand increasingly larger dosages—has now appeared in some 50 species of pest insects. These insects are important to man—codling moth, malarial mosquitoes, house flies, many species of citrus insects, to name a few. The list is rapidly lengthening. So also is the number of chemicals which induce resistance. Even the use of unstable nerve gases—the organophosphates, considered the solution to DDT-induced resistance—is producing resistant species.

Destruction of beneficial insects is the rule with current nonselective insecticides, and insect populations may no longer be held in check by natural enemies. The rise to pest status of spider mites—not subject to DDT—illustrates how elimination of one pest species sometimes merely results in substituting one problem for another.

This accounting could be expanded considerably. The important conclusion to draw is that hazards in the use of chemicals do exist even under the best of approved procedures. Shortsightedness, political expediency, simple apathy, and biological ignorance play too big a role in our pest-control programs:

The channelized thinker: The progressive narrowing of knowledge begins in our colleges and universities, where specialists are trained. And it is a specialist—not the crop, livestock or timber grower—who recommends this or that chemical for use in control programs. Etudents in economic entomology, for example, rarely study biology and resource management in the broad sense. Crop production is their only goal and interest. The forestry student is somewhat less restricted in perspective; the publichealth official is even less so. Too frequently, curriculums have been so narrow and specialized, that it should surprise no one that a graduating applied biologist has little awareness of the many interests affected by his specialty.

There are hopeful indications of a reversal in our educational policies regarding specialty education. Meanwhile, what is the fate of such a channelized thinker when he goes to work for industry or government? Restricted as he was before, he now becomes even more confined. Perhaps he will henceforth work on only a single commodity. In a distressingly short span of time, his closely circumscribed information and duties become a mental straitjacket. His only values stem from the narrow channel of his specialty. The mistakes of judgment in the controversial fire-ant control program in the South were a logical result of such thinking. So are the poison campaigns directed against predatory mammals in the West.

The production fetish: The recreational and esthetic values stemming from the plants and wildlife of our production areas mean very little to control specialists. The primary value is the production of food and fiber. This emphasis is necessary—up to a point. But we have long ago shown we know how to produce; we have long ago passed the threshold mark of concern for primary values. Overproduction has settled on us like a plague. Many economic and political inhibitory devices have been called into use to prevent complete chaos in crop production. Chemical use to increase production is continually stressed: and few stop to inquire "Why?" or "What do we lose in the process?" Too many of our production specialists cling to an antiquated idea that production increase is desirable and normal. Not only must there be an absolute increase, but there must also be an increase in the rate of increase. And should acreage be limited through a soil bank or other device, the remaining acreage must be made to produce more to compensate for the Chemical controls play a large role in this temporary compensation.

This is the production fetish. It is a false god to which is sacrificed a host of values important to us all. And on its surface, it is a self-defeating system. Beneath the surface shows plainly a time of reckoning.

West Virginia Is Getting Shortchanged---V

EXTENSION OF REMARKS

#### HON. KEN HECHLER

OF WEST VIRGINIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, June 9, 1959

Mr. HECHLER. Every day this week I have brought up the subject of the outrageous discrimination against my home State of West Virginia in the relative number of defense installations, military personnel, and civilian employees of the Department of Defense. I intend to keep right on talking until somebody does something to correct this discrimination.

On Saturday, May 30, the Charleston Daily Mail carried an editorial entitled "Billions for the Defense of the Nation, but Little of It Comes to West Virginia."

Under unanimous consent, I include this able editorial at this point in the RECORD:

BILLIONS FOR THE DEFENSE OF THE NATION, BUT LITTLE OF IT COMES TO WEST VIRGINIA

For some reason, West Virginia has never actively sought defense installations and their related industry. And seek them or not, it has been systematically bypassed in their location.

What a difference it makes in the subject of an interesting study by Representative Ken Hechler, of the Fourth District, in the comparison with neighboring Virginia, for example, in the distribution of the defense dollar. West Virginia comes off looking something like Outer Mongolia.

In all of West Virginia the Defense Department employs only 1,696 persons in its military and civilian establishments. In Virginia, with barely 50 percent more popula-

tion, the total runs to 160,848.

In terms of the payroll the spread is just as great. On the military side, West Virginia receives slightly more than \$2 million annually. The Virginia figure is \$288 million. On the civilian side the Defense Department employs 1,113 civilians in West Virginia at an annual payroll of \$5,822. The comparable figures in Virginia are 78,-813 employees and a payroll of \$418 million.

To some extent, of course, and due in the main to the geography, this is understandable. Virginia has the enormous Naval Operating Base at Norfolk because it has Chesa-

peake Bay in its front yard.

But this aside, the comparison is still striking. In their share of defense expenditures all of the surrounding States—Virginia, Pennsylvania, Kentucky, Maryland, and Ohio—enjoy substantially more in the apportionment of the \$43 billion defense budget.

Now there is no such thing as a State's fair share of the defense dollar. Supposing that defense funds are spent only in accordance with the strictest determination of military necessity, West Virginia may not be entitled to anything. But it is puzzling (Representative Hechler calls it a national scandal) that in the outpouring of hundreds of billions of dollars over the past 20 years almost none of it has come West Virginia's way. A great deal of it unquestionably came out of West Virginia's pocket.

#### Commuters Need Protection

EXTENSION OF REMARKS

#### HON. FLORENCE P. DWYER

OF NEW JERSEY

IN THE HOUSE OF REPRESENTATIVES Friday, June 5, 1959

Mrs. DWYER. Mr. Speaker, under leave to extend my remarks in the Record, I include the text of a statement which I made before the Surface Transportation Subcommittee of the Senate Committee on Interstate and Foreign Commerce in support of the bill, S. 1331, providing greater protection of the public interest in railroad passenger train

discontinuance cases before the Interstate Commerce Commission:

Mr. Chairman, I am grateful to the subcommittee for this opportunity to appear in support of legislation to make more effective the Interstate Commerce Commission's new authority over the discontinuance of railroad passenger and ferry service.

I especially appreciate the chairman's generosity and sense of fair play in scheduling hearings on the two bills, S. 1331 and S. 1450, which are so critically important to the largest metropolitan region in the world, as well as to other areas of the country dependent on adequate railroad commuter service.

It is typical, I understand, of the chairman's willingness to see both sides of the question, and of his record on this subcommittee of recognizing not only the needs but also the responsibilities of the Nation's railroads.

If the committee is willing—in the interest of expediting testimony—I shall not read my entire statement, but simply highlight what I consider are the most important points, since the committee has the full statement available before it for the record.

Before discussing the need for and merits of S. 1331—which was introduced by my good friend and distinguished predecessor in the House, Senator Case, and which I have the honor of sponsoring in the House—I should like to emphasize certain relevant characteristics about the New York metropolitan region that bear heavily on this bill.

This metropolitan region is the largest in the world. It embraces parts of three States and contains within its compact boundaries nearly 10 percent of the population of the United States and more than 40 percent of the Nation's railroad commuters. In this area, more than twice as many commuters—an estimated 208,000—depend on rail transportation than rely on automobiles, or did so, that is, until the current rash of discontinuances.

An adequate railroad passenger system is absolutely essential to the area, since our network of highways is already taxed to capacity and no practicable substitute for rails is available. For example, one reliable friend of mine has reported that he used to drive from Union County, N.J., to New York city in 20 minutes, whereas it now requires more than an hour, along the same route and at the same time of day.

It is virtually certain that these crowded

It is virtually certain that these crowded conditions will increase in the next few years. The Harvard University study of the New York metropolitan region, which was just reported this week, predicts a likely population growth for the region of 4.5 mllion above the present 16 million by 1975, with an additional 3 million by 1985. The study also concludes that the population boom and the growth of the suburbs will put strenuous demands on suburban commuting facilities.

In the light of these facts, therefore, I would suggest that now is the time to strengthen and expand commuter transportation facilities, rather than encourage their further shrinkage.

I do recognize, nevertheless, that commuter railroads, especially in the East, have been harassed by the long-term failure of much commutation service to pay its own way. Costs have rather consistently outrun revenues, and thereby have tended to place a burden on entire railroad systems. This, of course, was the basis of the action recommended last year by this committee and approved by the Congress' which authorized railroads to come to the Interstate Commerce Commission in order to discontinue unprofitable train and ferry service, both interstate and intrastate. In many other ways, too, the Transportation Act of 1958

aided the country's railroads at a time when they reflected the depths of our economic recession. That most of the railroads have displayed great powers of recovery during the first quarter of 1959—with average earnings about 428.8 percent higher than the same-period last year—is due not only to the general improvement in the economy but also to the far-sighted wisdom of the authors of the Transportation Act of 1958.

As the distinguished chairman of the subcommittee remarked earlier this year, the commuter problem is not a new one, and was not caused by the Transportation Act of 1958. As he observed at that time, the problem is a truly complex one. It is not solely a Federal responsibility, but requires that States and local communities also join in solving it. Fortunately, some at least of the many units of government involved are now accepting their responsibility. New York State, for example, has enacted a comprehensive program to help maintain needed railroad passenger service—a program including tax relief, help in obtaining rolling stock, and other advantages. Both New York and New Jersey have entered into a bistate transportation compact, which is now awaiting approval by the Congress. Other proposals are also under active consideration, including the possibility of local tax relief in New Jersey (a particularly burdensome problem for commuter railroads) and the practicability of enlisting Port of New York Authority participation in some form of regional commuter transit system.

As a practical matter, however, the Transportation Act of 1958 did complicate the commuter crisis—though at the same time it served to alert people that effective action could no longer be postponed. By adding a provision for Federal jurisdiction over discontinuance of trains and ferries, section 13a-of the Interstate Commerce Act, the Transportation Act in effect invited frustrated railroad managements to seek quicker, easier, and simpler discontinuance at the ICC than was often possible at State agencies. The response has been impressive.

As of June 3, the ICC has informed me, 39 notices have been filed under the 2 subsections of section 13a of the act, providing for the discontinuance of about 110 trains. Railroads have filed additional discontinuance petitions with various State agencies and have announced plans to discontinue still more trains. All of them may well end up as cases before the Commission under section 13a.

The results of this action in the New York-New Jersey region have already been drastic, Among others, the Putnam division and the West Shore division of the New York Central have discontinued passenger service. Much of the Lehigh Valley passenger service and all the Lackawanna electrified service either has gone or soon will disappear. In addition, the important suburban service of the Central of New Jersey and the Erie Railroads are gravely threatened.

Whether or not any or all of these discontinuance notices are justified, experience under the new section 13a makes it clear that the ICC cannot now give adequate consideration to the public need for the threatened commuter service under the limitations and restrictions of the act.

In its report to the House Commerce Committee on H.R. 5596—a bill I introduced which is identical to S. 1331—the Commission stated that "the time now provided is extremely short," It explained that the period within which it is required to rule on discontinuance cases makes it impracticable in some cases to complete the required Commission procedure.

In writing section 13a into the Interstate Commerce Act last year, Congress provided an entirely new method for handling train discontinuance cases. Formerly, all such cases were considered local in character and subject to the jurisdiction of State law or State agencies.

The objections underlying the proposed 8. 1331 concern chiefly the procedure governing discontinuance of interstate trains; in its essentials, the procedure now governing discontinuance of intrastate trains is similar to the procedure in the proposed bill—a procedure which seems to me protects the public interest to a greater degree than the procedure in interstate cases.

Briefly, section 13a(2) now provides that:
(1) Discontinuance authorization may be

granted only after a full hearing.

(2) No time limit is set within which the ICC must rule on petitions.

(3) The Commission must make positive findings that (a) public convenience and necessity permit of such discontinuance, and (b) without discontinuance, the continued service will constitute an unjust and undue burden on the interstate operations of the railroads or on interstate commerce.

Thus, the burden of proof is left where it belongs—on the petitioning carrier; the public interest is specifically protected; and the Commission is required to exercise its authority only after full consideration.

None of these vitally important conditions, however, are present in the procedure now governing discontinuance of interstate trains, On the contrary, section 13a(1) provides, among other things, that:

 No public hearings or any other consideration is required of the ICC in advance

of train discontinuances.

(2) Railroads may discontinue service on their own volition 30 days after notice to the ICC if the Commission does not institute an investigation within 20 days after notice has been filed; the Commission, therefore, is required to make a preliminary finding in less than 3 weeks after it receives notice if discontinuance is to be halted even temporarily.

(3) After the initial 30-day period, the Commission may order service continued for a period of only 4 months, whether or not it has completed its investigation and consid-

eration.

- (4) The ICC may order service continued only after a hearing and investigation; thus the protection of the hearing and investigation procedure is accorded only to the carriers and not to the public's need for the service.
- (5) Likewise, before it can require carriers to continue service, the Commission must make a finding that (a) the service is required by the public convenience and necessity, and (b) that continuation of the service will not unduly burden interstate or foreign commerce; this is the reverse of the findings required by subsection (2), and places the burden of proof on the Commission, not on the petitioners.
- (6) In any event, the Commission cannot order continuation of the service for more than a year.

Under these circumstances, as recent experience indicates, the Commission is seriously handicapped in its obligation to protect the public interest in transportation. It cannot adequately consider the complex issues involved within the available time; and rulings which affect thousands of passengers dependent on railroad service may be necessarily based on an incomplete consideration of the facts.

The Case bill, S. 1331, is designed, as I understand it, to overcome these procedural limitations and encourage the ICC to give equal consideration to the needs of the public while it does justice to the needs of the railroads. The bill does not do violence to the constructive work of this committee in writing the Transportation Act of 1958; it does not restore jurisdiction over train discontinuances to the States; it does not hobble the ICC in granting necessary relief to the

railroads. It simply reflects the experience of the past few months in the operation of section 13a(1) of the act and seeks to adjust the law to the realities of this experience.

It is highly significant, I believe, that the experienced Interstate Commerce Commission—an agency by no means hostile to the railroads—has at least tacitly agreed with most of the chief provisions of this bill. In fact, it seems to me the report of the Commission, which I understand is presently before the subcommittee, offers a very promising basis for a compromise solution.

basis for a compromise solution.

Briefly, this is how the Case bill would amend the present provisions governing the discontinuance of interstate passenger train

or ferry service:

(1) The relevant language would be inserted as a new paragraph 19 of section 1 of the act; instead of amending section 13a, that section would be deleted, with the technical change suggested by the Commission. The new language would thus follow present provisions governing the abandonment of railroad lines, to which it is closely related.

(2) The Case bill would require an affirmative authorization from the ICC or the appropriate State agency before passenger trains or ferries could be discontinued—rather than, as at present, permitting discontinuances without such specific authorizations, The Commission favors this change.

(3) The bill would thus close a loophole in the present law which permits a carrier to discontinue service at will if no State laws are applicable; the Commission has no

objection to this result.

(4) While present law regarding discontinuance procedures applies to any train or ferry, the Case bill would apply only to passenger trains and ferries; the Commission has no objection to this provision.

(5) The proposed bill would require a public hearing in every discontinuance proceeding in which protests were received by the Commission, while under present law the Commission need not even institute an investigation. The Commission, however, proposes that it be left with a certain amount of discretion in determining whether a hearing should be held in particular cases. Since procedure respecting applications for abandonment in the present section 1(19) would apply under the proposed bill to discontinue applications, the Commission believes that this procedure would adequately protect the public interest.

It is my own view, however, that the requirement for public hearings in the bill is one of its principal purposes. With all due respect to the Commission's experience and good judgment, I would suggest it is important to make this concession to public opinion, especially since train discontinuance cases have always been a local matter in the past. I feel sure that hearing procedures could be devised in such a way that this requirement would not unduly delay the Commission's work. If the committee accepts this view, however, then appropriate changes in the present section 1(19) should be made in order to eliminate inconsistencies, as the Commission suggests.

(6) The provision in the Case bill requiring the Commission to consider in discontinuance proceedings the carrier's revenues from all freight and passenger traffic in the States in which the particular train is operated was intended to counterbalance an excessive reliance on the possible losses of the passenger train in question. Since a railroad operates under a public franchise, it has an obligation to serve the reasonable needs of that public. The fact that a particular train loses money should not, I believe, be the sole determinant in a discontinuance proceeding.

However, since the fact of a train's losses is not and would not be the only factor in considering whether the train should be discontinued, the Commission's fear that the proposed paragraph (c) of section 1(19) would be ambiguous and would invite litigation should be explored further, I believe.

(7) The Case bill would empower the Commission to attach whatever conditions it deemed in the public interest to certificates of passenger train discontinuance; this power is already provided the Commission in abandonment and unification cases. As the Commission points out, it does not possess this authority presently in regard to discontinuance proceedings under section 13a. It would seem logical that the Commission should have the power to impose necessary conditions in such an important matter, especially since it now has this authority in similar situations. The Commission has not objected to this provision.

(8) Among its most important provisions, the proposed bill would eliminate the present 30-day notice procedure and the 4-month time limit during which the Commission could require operations to be continued. The Commission strongly suggests it favors

such a change.

(9) Similarly, under the proposed bill, the Commission would be enabled to require the continued operation of a train or ferry for whatever period it deemed necessary.

(10) Finally—and of major significance—the bill' would clearly place the burden of proof upon a railroad to show that a proposed discontinuance is permitted by the public convenience and necessity; the Commission could issue a certificate of discontinuance only if such a finding of public convenience and necessity could be made on the basis of the record before it.

The Commission has stated that it favors

this change

The Commission has also proposed several technical changes in the Case bill and has suggested appropriate places in which to clear up possible inconsistencies or ambiguities.

I have tried to indicate in this statement, Mr. Chairman, that I am more concerned for the substance of S. 1331 than I am for all of its particulars. The committee, with its wealth of experience, can undoubtedly improve on the bill. I personally hope it does so.

I believe strongly, however, that its essentials should remain unimpaired. I believe it is of the greatest importance that the Commission be empowered to protect more effectively the public interest in railroad passenger transportation. This is vital to the health and welfare of the entire metropolitan New Jersey-New York-Connecticut region, as it is to other sections of the country.

This bill will not solve the commuter problem. But it is a key element to the overall effort by various levels of government and by private citizens and organizations to establish an effective and adequate commuter system, on a basis that is fair and just to the railroads and to the public which needs their services.

Thank you very much, Mr. Chairman and members of the subcommittee.

## No Federal Reserve System for Credit Unions Contemplated

EXTENSION OF REMARKS

## HON. WRIGHT PATMAN

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES

Tuesday, June 9, 1959

Mr. PATMAN. Mr. Speaker, for 50 years credit unions have been performing invaluable service by providing low-cost credit and convenient thrift facilities for their members.

Today almost half of the 20,000 credit unions presently operating in the United States are chartered under the provisions of the Federal Credit Union Act, which was originally passed in 1934. Recently Subcommittee No. 3 of the House Banking and Currency Committee reported out a bill, H.R. 5777, introduced by myself, to amend and modernize certain provisions of this act.

Unfortunately, it has been reported in the press that this bill would establish a Federal Reserve System for credit unions. Nothing could be further from the truth. I am happy to see that the American Banker has printed a clarification of the earlier story that they ran or, this credit union legislation.

[From the American Banker, June 1, 1959] NO FEDERAL RESERVE SYSTEM OF OWN SOUGHT BY CREDIT UNIONS, CUNA SPOKESMAN STATES

The American Banker is in receipt of the following letter from Warren P. Lutey, public relations director of the Credit Union National Association, in which he clarifies the changes sought by the association in Federal statutes.

His letter is by way of correction of an inference which appeared in a report on the credit unions' testimony in hearings on the proposed changes. We are glad to give it space in the interest of better understanding of credit union aims and their point of view:

MADISON, WIS., May 19, 1959.

EDITOR, AMERICAN BANKER:

A May 12 story in the American Banker carried a headline "Credit Union Seeking Federal Reserve System." The article in paragraph four also states, "In essence, Federal and State-chartered union would form a Federal reserve system of their own."

We are writing to correct this misconcep-

tion of this report on the hearings.

Credit unions do not envision creating anything like a Federal reserve system, or any agency remotely resembling it.

What the proposed changes in the Federal Credit Union Act would allow is the chartering of central credit unions under Federal law, similar to the now-existing State-chartered central credit unions, operating in a number of States.

#### CENTRAL CREDIT UNIONS

This is how central credit unions operate, and the reason for their existence.

1. Under Federal credit union law. under many State credit union acts, officers of Federal credit unions cannot borrow from their own credit unions. Therefore, the central credit unions were established to give these people a place where they could get personal credit union loans.

2. A second purpose of central credit unions was to give credit unions a place where they can deposit excess funds not needed for current borrowing needs, and to allow other credit unions to borrow this money to short periods to meet occasional heavy loan demands of their members.

The central credit unions are voluntary associations, not official Government agencies, as is the Federal Reserve System.

The central credit unions have absolutely no control over their member credit unions. Each credit union is an independent corporation, supervised only by the chartering authority, be it State or Federal. Central credit unions have no power to influence credit conditions, as the Federal Reserve System does, by changing discount rates, the requirement concerning reserves, etc., and by influencing open-market operations.

We can see no parallel at all between

central credit unions and a Federal reserve system. The capital of central credit unions is not owned entirely by member credit un-ions, because the majority of the members of central credit unions are individual persons, not credit unions.

We consider it quite important that your readers do not get the impression that the credit union movement desires to set up any new Government agency similar to the Federal reserve system.

Sincerely yours,

WARREN P. LUTLEY, Director, Public Relations Department, Credit Unions National Association.

## No Freedom of Speech

EXTENSION OF REMARKS

#### HON. STEVEN B. DEROUNIAN

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES Tuesday, June 9, 1959

Mr. DEROUNIAN. Mr. Speaker, the following editorial, which appeared in the June 6 issue of the Brooklyn Tablet, is a brief, concise account of the incredible action of the International Association of Machinists in dismissing three of its members who dared to exercise the American right of free speech:

NO RIGHT TO WORK, NOR TO SPEAK

An issue has arisen in California which should be of interest to champions of the Constitution of the United States, Three workers—Cecil C. Mitchell, Edward G. Ferguson, and John Mulgrew-members of the International Association of Machinists, employed by the Lockheed Aircraft Corporation-have been ordered expelled from the union's district lodge 727-E because they campaigned in last November's election for a proposed "right-to-work" amendment to the State constitution. Their expulsion fol-lowed a district lodge "trial" for "conduct unbecoming union members."

whose livelihood is threatened The men have protested against their dismissal because, they state, their constitutional right of freedom of speech, to campaign on an issue or for any candidate for public office, has been denied. Mr. Mulgrew pleaded "not guilty, inasmuch as this is my guaranteed right under the Constitution of the United States and the Bill of Rights." He calls the dismissal notice "completely Fascist."

The decision was appealed to the president of the International Association of Machinists, Albert J. Hayes of Washington, D.C. Mr. Hayes supported the lodge's action and asserted that constitutional guarantee of freedom of speech does not entitle a union member "to openly denounce the considered position of the labor movement and his own union organization." In other words, the U.S. Constitution takes second place, the guarantees it gives can be supplanted by a local labor union.

Fortunately, the victims of this ruling— which in essence is not dissimilar to voting rights in the Soviet Union-are going to appeal to the membership of the union and, if defeated, then to the courts.

That this assault on freedom and exercise of power to defeat constitutional guarantees and to destroy one's livelihood is legal is almost unthinkable. As the Oakland, Calif., "Tribune" says: "It is a sad day for freedom when someone can tell you what issues to support and for whom you should vote, using the club of economic coercion."

## Pensions for World War I Vets 3 Years Overdue

EXTENSION OF REMARKS

## HON. THOMAS J. LANE

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES Tuesday, June 9, 1959

Mr. LANE. Mr. Speaker, under leave to extend my remarks in the RECORD. I include the following statement which I made on June 9, 1959, before the Committee on Veterans' Affairs, in support of H.R. 4392, to provide for payment of a pension of \$100 per month to World War I veterans who have attained the age of 60 years:

PENSIONS FOR WORLD WAR I VETS 3 YEARS OVERDUE

Mr. Chairman and members of the committee, the average age of World War I veterans is close to 65. The Congress has veterans is close to 65. failed to honor their military service to the Nation by granting to them a pension in the

last years of their lives.

In spite of the fact that those who preceded them—the veterans of the Civil War. and the veterans of the Spanish-American War—became eligible for pensions upon reaching the age of 62, close to 3 million veterans of World War I have been deprived of the pensions to which they are entitled for the past 3 years. This loss which they have suffered has become the Nation's debt to them. It could be compensated for, but only in part, but a retroactive pension to the qualifying age of 60 years.

But even this could not make amends to the tens of thousands of World War I veterans who have passed away since 1956. Late as it is, because of 3 years' delay, the very least we can do is to pass a pension bill at this session for the survivors of World War I, whose ranks are diminishing more rapidly as time moves on.

Three hundred and thirty died today. Three hundred and thirty plus will die to-

Each 24 hours' delay in passing this pension bill puts us that much more in default of our obligations to these men, the obligations we owe to them while they are living. We are denying to them the peace of mind that this pension from a grateful Nation would bring to them. It is a material benefit, yes; but it is also an honor that should bring some measure of happiness to a veteran for the few years remaining to him.

This fall, we shall observe the 41st anniversary of the day when World War I came to an end. Forty-one years have brought the veterans of that conflict to an age at which most people become eligible for retirement. It is now possible for women who are covered by social security to qualify for benefits at an earlier age of 62.

The concept of a service pension is not new. A long line of precedents, stretching back over 185 years, and applying to the veterans of all previous wars in which our Nation has been engaged, clearly establishes the right of veterans to receive such pensions during their old age.

The veterans of World War II, and the veterans of Korea, although much younger, are receiving substantial benefits in other ways and covering the active years of their Are the World War I veterans to be considered as an exception to the rule? Is there any justification for their exclusion that would stand up to the searching test of reason and justice?

The opponents of pensions for World War I veterans, unable to rebut precedents, or the fact that the veterans of 1917-18 have already passed the qualifying age, try to evade the issue through legislative maneuvers, or, when required to take a definite stand, try to scare the Nation by bringing up the costs. We did not hear that word "cost" mentioned in World War I, when we summoned millions of men to give everything for their country. Some did. Others were broken in health. The rest bear the invisible scars of time and opportunity lost, and in their aging years show the strains that can be traced to the military service of their youth.

The cost? Three and a quarter billion dollars a year at the start, but declining daily. This is about the same amount that we have been spending for foreign aid, and less than the appropriations for the Department of Agriculture which includes purchase of farm surpluses, and thousands of dollars paid to individual farmers each year just to keep part of their fields unplanted and unemployed.

The cost? If the Federal Government falls to provide a service pension for these old soldiers, it is we who will lose the faith and confidence, not only of the 2,700,000 survivors of World War I, but of every living veteran who knows that a service pension in old age is the implied promise our Nation makes to every man and woman who serves in time of war.

I speak in behalf of my own bill, H.R. 4932, to provide for payment of a pension of \$100 per month to World War I veterans who have attained the age of 60 years, or \$135.45 per month if the veteran is in need of regular ald and attendance.

This shall not be affected by payments to the veteran of social security and railroad retirement benefits and other pensions, annuities and retirement benefits, whether payable by law, contract, or otherwise.

The pension shall not be paid under this section to any unmarried veteran whose annual income exceeds \$2,400, or to any married veteran or any veteran with children whose annual income exceeds \$3,800.

I call attention to the many similar bills on this same subject as evidence of growing support for this legislation, and a realization that the time has arrived to make good on our obligations to the veterans of World War I.

#### Danny Thomas and His St. Jude Hospital Foundation

EXTENSION OF REMARKS

## HON. CLIFFORD DAVIS

OF TENNESSEE

IN THE HOUSE OF REPRESENTATIVES
Tuesday, June 9, 1959

Mr. DAVIS of Tennessee. Mr. Speaker, under leave to extend my remarks in the Record, I should like for the Members of the House to know something more about Danny Thomas, the outstanding television star who is doing so much for medical care in this country of ours, with special emphasis on research for the dread disease of leukemia among children.

Danny Thomas become acquainted with St. Jude Thaddeus, patron saint of the hopeless, in Detroit, in 1937. Danny, then still using his real name, Amos Jacobs, had married his schoolgirl sweetheart 2 years before, and had just become the father of a baby daughter, Mar-

garet. His job as a nightclub emcee had just folded. He had \$7 to his name.

Wandering into a Catholic Church to pray, Danny found a pamphlet on St. Jude. He walked to the poor box, deposited his \$7, and asked St. Jude to return it tenfold. Upon returning to his tenement rooming house, a telephone call from a radio station awaited him. Would Danny do a spot commercial for a washing machine company? Pay? \$75. Just a little more than he had prayed for—the money paid the hospital bill for Margaret.

A few years later in Chicago, Danny facing another personal crisis as to whether he should leave the theater, prayed to St. Jude, seeking advice. That day, the worst blizzard in years hit the Windy City. Trains had stopped running. This delay caused Abe Lastfogel of the William Morris Agency to be detained overnight in Chicago. Lastfogel caught Danny's act at the 5100 Club and told the comedian, "Your place is in show business." Danny took his advice and became one of the Nation's greatest comedians.

Not long afterward, Danny vowed to build a shrine—later changed to a hospital—in honor of St. Jude. Down the years, Danny has staged innumerable shows to raise funds for his project. Many of Hollywood's top movie and TV stars have appeared repeatedly as guest stars.

Money for construction of this living shrine was raised through the efforts of Danny Thomas and his St. Jude Hospital Foundation, formed in 1946. Toward this end, Danny has devoted tremendous energy in performing benefits to raise money. He has been doing this nearly single handed. This is the shrine he promised.

In 1954, Danny was dubbed a Knight of Malta by Pope Pius XII for his tremendous efforts towards aiding medical science by raising funds for all hospitals as well as his St. Jude Hospital Foundation project

The land for this ultramodern, \$2 million, 128-bed hospital was donated by the city of Memphis. Paul R. Williams, the famed architect, donated his services in designing the hospital. As part of his contribution, Walt Disney will send his staff to decorate the wards with his well-known characters.

Staffed by the Memphis and Shelby County Medical Society, in cooperation with the university of Tennessee's medical center, this hospital will provide care for the treatment of leukemia and related blood diseases in children, regardless of race, color, or creed absolutely free. There will be no accounts receivable department in the St. Jude Hospital. In addition, its laboratories will work toward the accomplishment of a cure for this dread disease. Two-men teams of scientists-a total of six-will work around the clock in three 8-hour shifts. The lights of these laboratories will never be dimmed until the cure for leukemia is discovered. When these scientists find the pharmaceutic to limit or cure leukemia, it will be made available to all children in every community throughout the known world.

ALSAC was formed and incorporated under the laws of the State of Illinois in November 1957, for the sole purpose of the maintenance of the St. Jude Hospital and its research laboratories in Memphis. Tenn.

It is ALSAC's sincere hope that its efforts will result in worldwide benefit to humanity as did the work of the

famous Dr. Salk.

Thousands of Americans of all races and creeds have and are contributing small and large amounts to the maintenance of the hospital.

#### Rich in Good Works

EXTENSION OF REMARKS

## HON. FRANK T. BOW

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Thursday, June 4, 1959

Mr. BOW. Mr. Speaker, I am indebted to the Watch, publication of the District of Columbia Council, Navy League of the United States, for news of a good neighborly Navy mission which must have been an important contribution to better understanding with one of our neighbors to the south. Under leave to extend, I offer the story of the U.S.S. Edisto as reported in the Watch:

#### RICH IN GOOD WORKS

Once again the interest shared in the crimes of the moment have successfully driven a really important story from page one of your newspapers. The missing story was the humanitarian services willingly rendered by the Navy's icebreaker, U.S.S. Edisto; the scene was the countryside of Uruguay.

It rained, yes the arroyos were flooding, rushing into the rivers. The hydroelectric dam, which provides about 60 percent of the electric power for the country, was in danger of giving away. Many areas were completely isolated and helpless. This was the problem which the little Edisto was called upon to help solve. The Edisto reached Montevideo Harbor on April 17. Shortly thereafter her two helicopters were soaring northeast across the flooded plains.

And what did that first report from the Edisto contain—a simple message explaining what they were giving—powdered milk, medicines, clothing—oh, yes, they were prepared for mass blood donations when needed. There were many situation reports which were as matter of fact and business like, just the barest details, as the Navy went about its business of being modern knights in uniforms of blue. Of all the reports perhaps the one which has the deepest significance was one of less than two lines—which said in part, "Rescued 40 children from roof schoolhouse Tacuarembo area." Thus 40 children were returned to their niche in the future, courtesy the U.S. Navy.

The reports, one after another, unfolded the mighty story: "Evacuation personnel Paso de los Torres," "Operating Triento y Tres area," "Twenty-two rubber boats have been made available to assist in evacuation of Mercedes," and thus it went, nip and tuck, for several days, the helicopters scampering along the dangerous floodwaters with their rubber pontoons, bucking winds and the currents. As the Rio Negro continued to rise, and while even the modern

capital city of Montevideo had to stumble along with flickering candles, the rescuers pressed on and on trying hard to stay the moving hands of a ruthless nature, angry and killing.

Finally, a word of cheer, the weather was improving; but also the water receded in the northern area it still had to be faced further south. Almost the entire country shared in the misery in one form or an-other. As the waters receded, over 60,000 were homeless at least for the time being

Here briefly is the 5 days work of the Edisto's two helicopters-603 sorties were flown which included: The rescuing or evacuating of 208 persons, ferrying 42 technical people to the hydroelectric dam, moving 3,800 pounds of food, 3,500 pounds of supplies, and 3,500 pounds of explosives in attempts to relieve the pressure on the dam. The ship made many material contribu-tions; the crew even put on a basketball game at Montevideo to raise funds for the flood victims.

The dreams which were washed away with the rushing waters cannot be re-claimed. The cruelty of nature is a part of the price we frequently are called upon to pay as we journey along life's road. ever, in an hour of dark peril, the helping hand of a friend can provide sustaining impetus. The Navy holds out humanitarian support to help both friend and would-be enemy alike. The cries of the suffering never go unfieeded.

Closer Local-Federal Cooperation Urged as Step Toward Building Better Limited Partnership Between Two Important Levels of Government

> EXTENSION OF REMARKS OF

#### HON, SAMUEL S. STRATTON

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES Tuesday, June 9, 1959

Mr. STRATTON. Mr. Speaker, this morning I had the privilege of addressing the 50th annual convention of the New York State Conference of Mayors and Other Municipal Officials, which was held in the Waldorf-Astoria Hotel in New York City. As a former mayor of one of New York's largest cities, and a former member of this conference, I was not only honored to have this opportunity to address the convention, but also I took this occasion to discuss what seem to me to be the proper areas of cooperation that should exist between our Federal Government in Washington and our local governments at home. Under leave to extend my remarks, I include the text of my address to the conference:

A FORMER MAYOR LOOKS AT THE FEDERAL GOVERNMENT

(By Representative SAMUEL S. STRATTON, of New York, 32d District)

Mr. President, my former friends and assoclates in the conference of mayors, it is a pleasant treat indeed to have this opportunity to come back here to renew my friendwith members of this conference, especially since I no longer can qualify for membership in my own right, and also to have this opportunity to talk with you for a few moments on a comparison of my present fate, as a Member of Congress, with my

previous privilege of being a mayor of one

of New York State's leading cities.

Let me say at the outset that while, as you perhaps will remember, I always enjoyed being mayor of Schenectady, I am even more delighted to be a Member of the House of Representatives. I can recommend the life, and I would even urge all of you to run for Congress, too, provided, of course, that you make sure not to run in the 32d District. I have troubles enough there already.

There is a great temptation here this morning to make use of this very kind invitation which you have so cordially extended to me to do nothing more than compare the life and duties of a Congressman with those of a mayor. I could dwell on the fact, for example, that there are drawbacks as well as compensations in making any such change. It's true that by being down in Washington it is hard for a Congressman to keep in anywhere as near as close and effective touch with his constituency as does the average mayor. On the other hand, you don't often get awakened in the middle of the night by some irate constituent who wants you to collect his garbage right away or raid a nearby crap game. It is true that the average Congressman is a very small frog in a very big puddle, especially after having experienced the ceremonial deference that is, upon occasion at least, accorded to the average mayor. Yet I find, too, that I can always locate a place to park around the House Office Building in the spaces reserved for Members of Congress which is a lot better than I used to be able to do back in Schenectady, even as mayor, And while a Congressman exercises much less administrative control over Federal governmental affairs than the average mayor does over local affairs (excluding those of us, of course, who got our training in city manager cities), there is at least the dubious satisfaction of knowing that as a Congressman you are assumed to be an expert in everything from foreign policy to water pollution.

Like most freshman Congressmen I found myself rather disturbed by the tight seniority system that applies to the House, whereby authority and responsibility come only after successive reelections. But then the Speaker reassured us early on this score. "Don't worry," he said. "You may not like the seniority system now, but you'll find that the longer you are down here the bet-ter you'll like it."

But while I would enjoy the chance to expand on comparative advantages like these and others I am afraid you might not feel such comments would be really worth your price of admission. And so I have chosen instead to speak on something else that has also been of great interest to me in the past few months in Washingtonnamely, the proper and desirable relationship that ought to exist between our Federal Government and the several local governments at home which you ladies and gentlemen so effectively represent here this morning.

There is one point of view-and I am sure you are familiar with it-that the Federal Government has no business dealing directly with the local agencies of Government at all-that it should always go through the State governments in each case and should leave it to the States to determine to what extent each local government, as its own creature shall benefit from or participate in Federal programs. Perhaps there is something to be said for this point of view, but I am sure you will agree with me that it does not represent by any means the whole story.

Then there is a second view, and I know that you and I have heard this expounded many times, too, and with great eloquence, and this is that the State governments are actually shortchanging the local governments, and that if the incorporated areas of our States are to continue to survive and to grow, they can no longer hope to look to the State legislatures for help but must look instead directly to the Federal Government in Washington. The suggestion has even been advanced over the past few years by some of our national municipal organizations that to meet this need the Federal Government should be reorganized, and a new, special Cabinet department be created to handle the affairs of local governments, to be known as the Department of Urban Affairs. There is no doubt something to be said, at times at least, for this point of view, too. And yet I am inclined to believe that this approach also goes too far, and that we in the cities and villages of New York do not need to feel that there is no future for us except through direct and continuing assistance and supervision from Washington. I am sure you will agree with me there, too.

And so I lean toward a third possible answer to the question of just what kind of relationship ought to exist between the State and the Federal Government, one that lies somewhere between these two extremesthat the proper role of the Federal Government should be one of a kind of limited partnership with local government agencies in those specific fields of activity where it can be especially and peculiarly helpful. In other words, the Federal Government should not replace the State but rather should only supplement it in its dealings with local agencies. And I feel very strongly too that this partnership cannot and should not exist except, as I have said, in those areas where a very definite and urgent Federal need or concern is involved.

Let me try to explain what I mean, if I may, in terms of a few concrete examples.

Take, for instance, the matter of stream pollution, and the pressing need in many of our cities and villages for the construction of sewage treatment facilities. Unless things have changed drastically in New York State since January 3, many of you represent communities which have been ordered by the State to construct these costly sewage treatment plants by such and such a date. And yet, the State itself has been unwilling to advance any of its own funds to help in the construction of such facilities. This, I know, is a very pressing problem in my own congressional district, where Amsterdam, Johnstown, and Gloversville are up against these construction deadlines, and yet are unable to find any help in meeting what is a virtually insurmountable financial burden in view of their own tight budgetary situation.

Well, water is fast becoming a major national problem, not merely in the arid West but across the land; and streams and rivers. as we all know, are no respecters of local or even State boundaries. The elimination of pollution passing across State lines, and the creation in its place of a fresh and wholesome supply of water for use by a steadily growing population is certainly a legitimate national-not just a State or local-concern. Hence we have had in operation over the past few years, as you know, a limited program of Federal assistance-up to 30 percent of the cost-for the construction of sewage treatment facilities by local governments, with a total of \$50 million allocated per year, or about \$2.7 million per year for New York State. This has been a very useful program. And while many communities are still hard pressed, even with this help, to find the other 70 percent of the money, at least here is evidence of a reasonable working partnership between the Federal Government and local governments that is both within limits and highly beneficial all

I am flying back to Washington this morning-and I hope I make it in time-in order to be able to vote on an expansion of this program which would make its benefits available more quickly to a large number of communities, by setting aside a total of \$100 million for this purpose each year for This bill, H.R. 3610, period of 10 years. the so-called Blatnik bill, has been endorsed, incidentally, by our own Governor Rocke-Teller, who wrote the House committee that its adoption would make it possible for the modest program of antipollution activity. already stimulated in New York State by the original aid bill, to be expanded and speeded up. I hardly need to tell you that this bill also has the endorsement of your conference, and I am happy not only to support it, but I am confident it will be adopted today by the House.

as I say, is one example of the This. reasonable, proper, and limited kind of partnership which I believe ought to exist between our Federal and local governments-directed to a pressing local need in which State assistance is not possible or forthcoming, at least in entirely adequate amounts, and in which a real, and urgent national need is involved. Let me give you another example of such an area, aid to areas of chronic or unusually high unem-

ployment.

Many communities here in New York State have been suffering heavily in the past few years from a sharp and painful loss of jobs. At a time when overall national statistics indicate the country is moving back out of its economic slump, we find in our own State that many spots are experiencing the same or even greater amounts of unemployment. Something is wrong. Somehow the economy of our country seems to be suffering from a kind of economic imbalance, and New York State, as you and I well know, is at the short end of the stick in this regard. Our share of national defense contracts, for instance, has been dropping off sharply in the past few years. We are told that our standards are too high to keep and to attract to our State the kinds of great productive industries for which New York is famous.

Here too in my opinion is a legitimate and urgent Federal concern. Any area of chronic unemployment in any part of the country eventually will be harmful to the country as a whole. Any imbalance in our level of employment and production, any special predominance of defense production in one area of the Nation at the expense of other areas, will ultimately hurt all of us, just as much as any cancerous growth in any isolated portion of the body will ultimately, unless removed, destroy the whole

This degree of Federal responsibility and concern is especially obvious, of course, in those areas—and I include areas right here in New York State-where this unfortunate loss of business and jobs has been caused in large measure by Federal policies and programs. I am thinking, for instance, of the glove industry of Fulton County, where our Federal tariff policies have been directly responsible for the continued serious unemployment in that area. In peace no less than in war, the Federal Government, it seems to me, has a responsibility to act to relieve the impact of any of its actions which may be harmful to individuals or to whole com-

To try to meet this serious problem, I am happy to tell you that the 45 members of the New York State congressional delegation, Republicans and Democrats alike (the largest single State group in Congress incidentally) have been meeting regularly to work out a plan of action to put our efforts and our energies solidly and unitedly behind programs to benefit our State. We have been doing this, I am proud to say, without regard for partisanship. Governor Rockefeller is to be commended for the lead which he took in April in calling such a united operation into being. And my colleagues in the House and Senate are to be commended for their willingness to go along in promoting the interests of our State. Forty-three Members of the House, after all, amount to onetenth of the total membership. If we all stick together we can be pretty darn powerful. I believe we should stick together in things of this kind to make sure that New York State's legitimate interests are fully protected, that we get our fair share of defense and Government contracts, and that the special economic needs of New York State are properly recognized by the Federal Gov-

Why, for example, should California get the lion's share of defense contracts? New Yorkers in Congress, all 45 of us, have introduced a bill to make sure that every area gets proper recognition in the award of defense contracts, and that unemployment areas are given the fullest possible consideration. We have also joined in sponsoring legislation which will end the curious situation under which New York State has been penalized, in the Federal Interstate Highway program, for having gone ahead and built the great thruway on our own with our own money. Our bill would make New York eligible for its fair share of Federal aid moneys for highways in spite of what has already been built, with the additional funds that will be coming to us because of the thruway being made available for increased State construction in the Adirondacks areas, and elsewhere where local roads are needed.

Personally, I have sponsored legislation to aid distressed and unemployment areas in their efforts to attract new industries, another bit of activity which I feel is of special interest to New York State, and I have introduced another bill that would add one more, and in my judgment a very important, incentive for industries to settle or to expand in our State rather than moving elsewhere, and that is to grant them special Federal income tax benefits in the form of fast tax write-offs-for any new construction or expansion that may be undertaken in unemployment areas, especially those areas where unemployment has been created by Federal tariff and other policies.

There are many other areas too where a proper, a limited, and a mutually advantageous working partnership between Federal and local governments can and should be put into effect. Such things, for example, as reasonable urban renewal and slum clearance programs, redevelopment planning operations, crime prevention techniques through the operation of nationally advocated FBI standards, (as well as the Federal crime census advocated Sunday former President Hoover), legislation to deal with hate bombings; legislation to deal with the vitally serious problems that will be created if communities in the South continue to emulate the example of Little Rock and Prince Edward County in Virginia in abandoning their responsibility to educate the children of our Nation without regard for race, creed, or color; legislation to deal with the deadly menace of narcotics; and finally, if I may be pardoned for a somewhat more personal reference, legislation to help meet the unexpected but very urgent danger created by the growing numbers of plastic laundry and dryclaning bags in the drawers and closets of the American home. Incidentally, in that latter connection, I am delighted to see that in response to my suggestions both the city of New York, the State of New York, as well as a number of responsible and public-spirited members of the industry, have begun to take needed corrective action to end this thoroughly unnecessary and wasteful loss of human life at the cost of a relatively minor personal household convenience.

These then are the proper areas for cooperation and mutual assistance, as I see it, between our State and local governments. But to make this relationship work most effectively in both directions, there is one ingredient that is especially necessary, and which, as I see 4t, only you can supply. That is the ingredient of closer cooperation and exchange of information and ideas between you who have the working responsibility on the local level and those of us who have the responsibility on the national level. Even though we may recognize the need and the propriety of this limited partnership I have spoken of, there is not nearly enough close cooperation, I believe, between us both. Perhaps this is the result of a certain hesitation, a certain unwillingness on the part of local officials to risk all the redtape of Federal Government bureaucracy. Perhaps we in Congress have not done all we should. Perhaps it is the result of nothing more serious than the fact that all of us have a lot more to do than we have time to do it in.

In any case, something must be done to increase this exchange of information. You would be surprised, I am sure, as I have been in the past, to find that dealing with the Federal Government is not nearly as formidable as it often appears. You would be amazed, I think, to find how much the mayors of our cities and villages are listened to in Washington, and how influential you can be in determining the kind of legislation that is adopted in Washingon, if you will but make your wishes known to us. In fact we in Congress would not only welcome but would actively want to seek out your help and suggestions on how we could better serve and represent you in our own districts.

With this in mind, then, I would like to make one specific proposal which I hope will be accepted, that we in Congress, and you in your respective communities, set up some kind of formal organization within each congressional district through which the views and thinking of the various local governments within each congressional district can be regularly passed along to your own Congressman, either on some of the matters I have discussed or any other matter of concern to you.

If we could establish such small, working groups as these and use them for the purposes I have suggested the results would be tremendous. They should, of course, be nonpartisan groups. They ought to meet with some degree of regularity. The ex-changes between us could, of course, be limited to exchanges of letters and phone calls between the local organization and the appropriate Congressman, or, as I would hope, it could also involve some periodic visits of the group to Washington during the legislative session.

Maybe those of us down there and you up here wouldn't agree on all matters brought up. I don't expect we would. But we would at least keep the channel of information open. We would have guaranteed that our representative system of Government would be truly representative. We would have established, in my opinion, the most genuine and real basis for a sound working partnership between two important levels of American government.

I might say that we in the 32d District have already tried to set up just this kind of organization, composed of mayors, and in our case directed specially to the problem of industry and unemployment, under the able leadership of Mayor Thomas Gregg, of Amsterdam. I would hope that perhaps this kind of liaison group could also be established in other parts of our State. Your Congressman, after all, is in Washington to work for you, and nothing can be more effective at cutting through official Government redtape than a Congressman. I urge you as the representatives of your cities and villages to make the fullest possible use of this important—and as far as I am concerned, most exciting and pleasant—branch of our Government and its elected Members.

We in New York State are facing critical problems in the months ahead. Our long, traditional leadership in the Nation is being challenged, just as the leadership of the United States is being challenged in the world at large. It is time that we in New York moved to set up those pieces of machinery and organization which can best utilize our strength. It is time that we in New York take advantage of the real power which we as a State possess, and begin to use it to protect our future. There is a need for all of us, I think, regardless of our party, to pull together toward this objective.

Your New York Representatives in Congress, as I have said, have already taken the first preliminary steps toward establishing the basis for bipartisan unity in behalf of our State. But more is still needed to insure that behind us and along with us we have your continuing cooperation and support on a similar bipartisan basis, and in behalf of the desperately important objective of protecting the future of our own State.

I, for one, as a former member of this organization, am confident that the mayors and other municipal officials of New York State, through your great conference here will rise to meet this challenge, that you will indeed, in the weeks and months ahead, take steps to use your vast experience and influence as representatives of the State of New York in this great task which confronts us, and that you will, both individually and through this organization, work to promote an increasingly harmonious and effective partnership between the Federal and local governments, a partnership that will en-hance not only the future of our great Empire State, which we all love, but also, through the continued health and prosperity of our State, the future and prosperity of the United States of America, the leader of the free world both today and in the years to come.

#### Racial Discrimination: A Moral Evil

EXTENSION OF REMARKS

## HON. JAMES G. O'HARA

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES Tuesday, May 26, 1959

Mr. O'HARA of Michigan. Mr. Speaker, the practice of racial discrimination poses the most serious moral problem that we face as a Nation.

Our failure to take vigorous action to correct this tragic situation is indefensible. Our halting history to half-measures puts us in the role of hypocrite the world around.

The Reverend William J. Kenealy, a scholarly churchman, has correctly defined racial discrimination as "a pagan desecration of Christian civilization." A report of his statement appeared in the New York Times on April 20, 1959. That all may be alerted to the moral implications of this vicious practice, I am including this report in the Appendix of the RECORD:

JESUIT DENOUNCES RACISM AS PAGAN—FORD-HAM PREACHER BRANDS IT MORALLY INDE-FENSIBLE, BLASPHEMOUS, CANCEROUS

A Jesuit priest lashed out yesterday against racial discrimination as morally indefensible, blasphemous, cancerous, and a pagan desecration of Christian civilization.

The attack on segregation was made by the Reverend William J. Kenealy in a sermon at the seventh annual observance of Interracial Sunday in the University Church on the Bronx campus of Fordham University.

Father Kenealy declared that popes, bishops and theologians all agreed that segregation, discrimination, and intolerance were "objectively wrong, morally indefensible, and anti-Christian."

He labeled racism "a malignant cancer in the body politic of America," "a pagan desecration of Christian civilization" and "a blasphemous attack upon the mystical body of Christ."

No Roman Catholic, he asserted, can be a racist or a segregationist, or approve or sympathize with any form of racial discrimination.

Father Kenealy is on the law faculty at Loyola University in Chicago. He was formerly dean of Boston College Law School and Loyola University in New Orleans.

"Racial segregation and discrimination, whether in the North or the South, whether by force of un-Christian snobbery or by compulsion of unconstitutional statutes," he said, "is essentially the same evil.

"As a matter of fact, and in all candor, except for the southern politician who says one thing in public and another thing in private, one thing to the national radio or television audience, and another thing to the White Citizens Council rally, the ordinary southerner practices what he preaches.

"Would that this were true of the ordinary northerner. We say the right thing, but shy away from practicing it. In many fields, such as employment and housing, northern practice is patently at variance with northern preaching."

The Jesuit acknowledged that race tensions had increased.

"But that is the price of progress," he added. "As long as the Negro is content to lie down and be walked upon, there will be no racial tensions."

Father Kenealy cautioned against overdoing the "gradualist" approach to integra-

"All the natural and weak human inclinations of timidity, laziness, selfishness, and conformism tend to support the thesis of gradualism and the plea of pseudoprudence," he said.

"What is most needed today is not so much an insistence upon prudence as a far greater insistence upon courage. By and large, prudence in the matter of race relations is the easy excuse; courage is the insistent need. It is not enough to hold American democratic principles.

"It is not enough to subscribe to the principles of the Christian faith; it is not enough to believe in the doctrine of the mystical body of Christ. It is necessary to have the courage to put our principles and our beliefs into practice in our private and public lives."

#### Memorial Day at Gettysburg, Pa.

EXTENSION OF REMARKS

## HON. JAMES M. QUIGLEY

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Monday, June 8, 1959

Mr. QUIGLEY. Mr. Speaker, on May 30 the 92d annual Memorial Day Service was held at the National Cemetery in Gettysburg, Pa. The speaker on this occasion was the junior Senator from Pennsylvania, HUGH SCOTT.

Under leave to extend my remarks I would like to include Senator Scott's Gettysburg address:

Commissioner McPherson, my friend and colleague, Representative Quickey, reverend clergy, ladies and gentlemen, as your distinguished Congressman has just noted, I am much concerned about the preservation and enlargement, with due consideration to the problems involved, of this sacred National Memorial Park. It has been a privilege to work in cooperation with your Congressman for the protection and improvement of this historic shrine.

We are met again on a field of honor where brave men died for freedom. From among the ancestors of my wife and myself, Absalom R. Coolbaugh died for the Union and Hugh S. Doggett was gravely wounded for the cause of the Confederacy.

I have good reason for pride, therefore, in my membership on the Civil War Centennial Commission.

Memorial Day was first established to honor the memory of those who died in the Civil War. But each generation has had its own, more terrible war, and Memorial Day now honors all Americans who died in defense of their land in all wars.

This is a day to honor the dead and to pray for the welfare of the living. We should give thanks that today, only 6 years after the end of the Korean conflict, our Government is devoting its best efforts and assigning its best men to the task of assuring that there will not be new wars and newly hallowed ground to be recalled at subsequent Memorial Days.

This is the sacred place where was made manifest God's will that we should be preserved as a nation united to meet our destiny as leader and standard bearer of the world's free peoples.

It was of a gallant charge and a courageous defense of a famous hill in this place where we are met, of which it was said by the poet:

"God lives. He forged the iron will,
That clutched and held that trembling

Their conflict epitomized their concepts of freedom. We are all united in a single concept now.

Our President Eisenhower himself spends more time on the problems of the world peace and international good will than on any other subject that comes before the Presidency. In averting war's dredful consequence, he has labored to good effect.

His efforts are supported by men and women at all levels of government and in

many parts of the world.

Christian Herter, our new Secretary of State, has taken over the dedicated, gigantic work for peace of the late John Foster Dulles. Today, in Geneva, Switzerland, Mr. Herter and the foreign ministers of Britain and France are absorbed in the intricate and cluster task of pegotiating with the

and elusive task of negotiating with the foreign minister of the Soviet Union. Secretary Herter is a firm and skillful diplomat. Our foreign policy is in good hands. Our objective is to unify Germany and establish the foundation for a more permanent solu-

tion of European affairs.

In another part of Geneva, U.S. Ambassador James J. Wadsworth is meeting in a small conference room with British and Russian delegates. He is trying—as he has been doing for the past 7 months—to find a basis whereby the three nations can agree on the world's first treaty that would ban nuclear explosions.

Behind Mr. Wadsworth, both in Geneva and in Washington, are a battery of American specialists—nuclear scientists, generals, financial experts, security officers, and geologists—every one hoping to make a contribution that will reduce the possibilities of an-

other horrible conflict.

Our Vice President, Mr. Nixon, will visit the Soviet Union late in July. Officially he will be there to open the American Exhibit at the Moscow Trade Fair—a gathering which in itself will make a contribution to better understanding between nations. But we are all hoping that while in Moscow, Mr. Nixon will be able to convey personally to leaders of the Soviet Government the dedication to peace that is shared by all American leaders.

Our national objectives were well stated by President Elsenhower in his second in-

augural address, when he said:

"We voice our hope and our belief that we can help to heal this divided world. Thus may nations cease to live in trembling before the menace of force. Thus may the weight of fear and the weight of arms be taken from the burdened shoulders of mankind.

"This, nothing less, is the labor to which we are called and our strength dedicated."-Of these young men, our eternally remem-

bered dead, it is written:

"The muffled drum's sad roll has beat The soldier's last tattoo. No more on life's parade shall meet That brave and fallen few.

"On fame's eternal camping ground Their silent tents are spread, And glory guards with solemn round The biyouac of the dead."

I offer to you this tribute of our constant honoring of their sacrifices:

"They shall grow not old
As we that are left grow old.
Age shall not weary them
Nor the years condemn.
At the going down of the sun
And in the morning
We will remember them."

U.S. Supreme Court in Barenblatt Case
Rules House Un-American Activities
Committee Mandate From Congress
Constitutional and Affirms Lower Court
Contempt Conviction of College Instructors and Teachers for Refusal To
Answer Committee Questions About
His Communist Affiliations and Party
Membership

EXTENSION OF REMARKS

OF

#### HON. CLYDE DOYLE

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES
Tuesday, June 9, 1959

Mr. DOYLE. Mr. Speaker, by reason of unanimous consent granted me, I am pleased to introduce for the Record the dissenting decision by the Supreme Court of the United States rendered yesterday in the case of Lloyd Barenblatt. The majority opinion of this Court in this important case will be found in the body of the Congressional Record as of this date. I, recommend that all Members read both the majority and the minority decisions. The majority of the Court affirmed the decision of the lower court in finding Barenblatt guilty of contempt for his refusal to an-

swer certain questions of the House Un-American Activities Committee. For instance, two of the questions asked were as to his Communist affilations and as to whether or not he was a member of the Communist Party. This Barenblatt decision appears to have cleared up some very important questions being asked both by proponents of the House Un-American Activities Committee and by opponents thereof. It deals rather extensively with the Watkins decision which has been relied upon since it was rendered about 2 years ago, especially by the Communists and those who opposed the committee for legal grounds for asking dissolution of the House Un-American Activities Committee.

The Barenblatt case specifically rules that the mandate of the House Un-American Activities Committee is not so indefinite as to have caused the Court to rule its committee mandate, to wit, rule 11, as unconstitutional:

#### BLACK DISSENT

(Mr. Justice Black, with whom the Chief Justice and Mr. Justice Douglas concur, dissenting:)

Barenblatt refused to answer their questions and filed a long statement outlining his constitutional objections. He asserted that the committee was violating the Constitution by abridging freedom of speech, thought, press, and association, and by conducting legislative trials of known or suspected Communists which trespassed on the exclusive power of the judiciary. He argued that however he answered questions relating to membership in the Communist Party his position in society and his ability to earn a living would be seriously jeopardized; that he would in effect be subjected to a bill of attainder despite the twice-expressed constitutional mandate against such legislative punishments. This would occur, he pointed out, even if he did no more than invoke the protection of clearly applicable provisions of the Bill of Rights as a reason for refusing to answer.

I

goes without saying that a law to be valid must be clear enough to make its commands understandable. For obvious reasons, the standard of certainty, required in criminal statutes is more exacting than in noncriminal statutes. This is simply because it would be unthinkable to convict a man for violating a law he could not understand. This Court has recognized that the stricter standard is as much required in criminal contempt cases as in all other criminal proceedings; that the vice of vagueness is especially pernicious where legisan area involving lative power over press, petition, and assembly is i. For a statute broad enough to speech. involved. support infringement of speech, writings, thoughts, and public assembly against the unequivocal command of the first amendment necessarily leaves all persons to guess just what the law really means to cover, and fear of a wrong guess inevitably leads people to forgo the very rights the Constitution sought to protect above all others. Vagueness becomes even more intolerable in this area if one accepts, as the Court today does, a balancing test to decide if firstamendment rights shall be protected. It is difficult at best to make a man guess-at the penalty of imprisonment-whether a court will consider the state's need for certain information superior to society's interest in unfettered freedom. It is unconscionable to make him choose between the right to keep silent and the need to speak

when the statute supposedly establishing the state's interest is too vague to give him guldance (cf. Scull v. Virginia, 359 U.S. 344).

#### Propaganda discussed

Measured by the foregoing standards, rule XI cannot support any conviction for refusal to testify. In substance it authorizes the committee to compel witnesses to give evidence about all "un-American propaganda," whether instigated in this country or abroad. The word "propaganda" seems to mean anything that people say, write, think, or associate together about. The term "un-American" is equally vague. As was said in Watkins v. United States, (354 U.S. 178, 202), "Who can define (its) meaning?

If the issue were merely whether Congress intended to allow an investigation of communism, or even of communism in education, it may well be that we could hold the data cited by the court sufficient to support a finding of intent. But that is expressly not the issue. On the court's own test, the issue is whether Barenblatt can know with sufficient certainty, at the time of his interrogation, that there is so compelling a need for his replies that infringement of his rights of free association is justified. The record does not disclose where Barenblatt can find what that need is.

But even if Barenblatt could evaluate the importance to the Government of the information sought, rule XI would still be too broad to support his conviction. If Congress wants ideas investigated, if it even wants them investigated in the field of education, it must be prepared to say so expressly and unequivocally.

TI

The first amendment says in not equivocal language that Congress shall pass no law abridging freedom of speech, press, assembly or petition. The activities of this committee, authorized by Congress, do precisely that, through exposure, obloquy and public scorn.

(A) I do not agree that laws directly abridging first amendment freedoms can be justified by a congressional or judicial There are, of balancing process. cases suggesting that a law which primarily regulates conduct but which might also indirectly affect speech can be upheld if the effect on speech is minor in relation to the need for control of the conduct. With these cases I agree. Neither these cases, nor any others, can be read as allowing legislative bodies to pass laws abridging freedom of speech, press, and association merely be-cause of hostility to views peacefully ex-pressed in a place where the speaker had a right to be. Rule XI, on its face and as here applied, since it attempts inquiry into beliefs, not action-ideas and associations, not conduct, does just that.

But even assuming what I cannot assume, that some balancing is proper in this case, I feel that the court after stating the test ignores it completely. At most it balances the right of the Government to preserve itself, against Barenblatt's right to refrain from revealing Communist affiliations. Such a balance, however, mistakes the factors to be weighed. In the first place, it completely leaves out the real interest in Barenblatt's silence, the interest of the people as a whole in being able to join organizations, advocate causes and make political mistakes without later being subjected to governmental penalties for having dared to think for themselves.

It is this right, the right to err politically, which keeps us strong as a nation. For no number of laws against communism can have as much effect as the personal conviction which comes from having heard its arguments and rejected them, or from having once accepted its tenets and later recog-

nized their worthlessness. Instead, the obloquy which results from investigations such as this not only stifies mistakes but prevents all but the most courageous from hazarding any views which might at some later time become disfavored.

#### POWER TO PUNISH

(B) Moreover, I cannot agree with the Court's notion that first amendment freedoms must be abridged in order to preserve our country. That notion rests on the unarticulated premise that this Nation's security hangs upon its power to punish people because of what they think, speak, or write about or because of those with whom they associate for political purposes. The Govern-ment, in its brief, vistually admits this po-sition when it speaks of the "communication of unlawful ideas." I challenge this premise, and deny that ideas can be proscribed under our Constitution. I agree that despotic governments cannot exist without stifling the voice of opposition to their oppressive practices. The first amendment means to me, however, that the only constitutional way our Government can preserve itself is to leave its people the fullest possible freedom to praise, criticize, or discuss, as they see fit, all governmental policies and to suggest, if they desire, that even its most fundamental postulates are bad and should be changed.

(C) The Court implies that the ordinary rules and requirements of the Constitution do not apply because the committee is merely after Communists and they do not con-stitute a political party but only a criminal gang. By accepting this charge and allowing it to support treatment of the Communist party and its members which would violate the Constitution if applied to other groups, the Court, in effect, declares that party outlawed. It has been only a few years since there was a practically unanimous feeling throughout the country and in our courts that this could not be done in our free land. Of course it has always been recognized that members of the party who, either individually or in combination, commit acts in violation of valid laws can be prosecuted. But the party as a whole and innocent members of it could not be attained merely because it had some illegal aims and because some of its members were lawbreakers.

The fact is that once we allow any group which has some political aims or ideas to be driven from the ballot and from the battle for men's minds because some of its members are bad and some of its tenets are illegal

no group is safe.

It, is sadly, no answer to say that this Court will not allow the trend to overwhelm us; that today's holding will be strictly confined to "Communists", as the Court's language implies. This decision can no more be contained than could the holding in American Communications v. Douds, (339 U.S. 382). In that case the Court sustained as an exercise of the commerce power an act which required labor union officials to take an oath that they were not members of the Communist party. The Court rejected the idea that the Douds holding meant that the party and all its members could be attained because of their Communist beliefs.

I dissented and said:

"Under such circumstances, restrictions imposed on proscribed groups are seldom static, even though the rate of expansion may not move in geometric progression from discrimination to armband to ghetto and worse. This I cannot regard the Court's holding as one which merely bars Communists from holding union office and nothing more. For its reasoning would apply just as forcibly to statutes barring Communists and their respective sympathizers from election to political office, mere membership in unions and in fact from getting or holding jobs whereby they earn a living." 339 U.S. at 449.

My prediction was all too accurate. Today Communists or suspected Communists have been denied an opportunity as Government employees, lawyers, doctors, teachers, pharmacists, veterinarians, subway conductors, industrial workers, and in just about any other tob.

m

Finally, I think Barenblatt's conviction violates the Constitution because the chief alm, purpose, and practice of the House Un-American Activities Committee, as disclosed by its many reports, is to try witnesses and punish them because they are or have been Communists or because they refuse to admit or deny Communist affiliation. The punishment imposed is generally punishment by humiliation and public shame. There is nothing strange or novel about this kind of punishment. It is in fact one of the oldest forms of governmental punishment known to mankind; branding, the pillory, ostracism, and subjection to public hatred being but a few examples of it.

The Un-American Activities Committee was created in 1938. It immediately conceived of its function on a grand scale as one of ferreting out subversives and especially or having them removed from Government jobs. It made many reports to the House urging removal of such employees. How well it has succeeded in its declared program of pitiless publicity and exposure is a matter of public record. It is enough to cite the experience of a man who masqueraded as a Communist for the FBI and who reported to this same committee that since 1952 when his membership became known he has been unable to hold any job.

I do not question the committee's patriotism and sincerity in doing all this. I merely feel that it cannot be done by Congress under our Constitution.

It is no answer to all this to suggest that legislative committees should be allowed to punish if they grant the accused some rules of courtesy or allow him counsel. For the Constitution proscribes all bills of attainder by State or Nation, not merely those which lack counsel or courtesy. It does this because the founders believed that punishment was too serious a matter to be entrusted to any group other than an independent judiciary and a jury of 12 men acting on previously passed, unambiguous laws, with all the procedural safeguards they put in the Constitution as essential to a fair trial—safeguards which included the right to counsel. compulsory process for witnesses, specific indictments, confrontation of accusers, as well as protection against self-incrimination, double jeopardy, and cruel and unusual punishment-in short, due process of law.

It is this same right which is denied to Barenblatt, because the Court today fails to see what is here for all to see-that exposure and punishment is the aim of this committee and the reason for its existence. To deny this aim is to ignore the committee's own claims and the reports it has issued ever since it was established. I cannot believe that the nature of our judicial office requires us to be so blind, and must conclude that the un-American Activities Committee's identification and exposure of Communists and suspected Communists, like the activities of the committee in Kilbourn v. Thompson, amount to an encroachment on the judiciary which bodes ill for the liberties of the people of this land.

Ultimately all the questions in this case really boil down to one—whether we as a people will try fearfully and futilely to preserve democracy by adopting totalitarian methods, or whether in accordance with our traditions and our Constitution we will have the confidence and courage to be free.

I would reverse this conviction.

BRENNAN'S DISSENT

Mr. Justice Brennan, dissenting.

I would reverse this conviction. It is sufficient that I state my complete agreement with my brother Black that no purpose for the investigation of Barenblatt is revealed by the record except exposure purely for the sake of exposure. This is not a purpose to which Barenblatt's rights under the first amendment can validly be subordinated. An investigation in which the processes of law-making and law evaluating are submerged entirely in exposure of individual behavior—in adjudication, of a sort, through the exposure process—is outside the constitutional pale of congressional inquiry.

Address of Congressman Carroll Reece, Prepared for Delivery at Virginia Intermont College, Bristol, Va.-Tenn., May 31, 1959

EXTENSION OF REMARKS

## HON. B. CARROLL REECE

OF TENNESSEE

IN THE HOUSE OF REPRESENTATIVES

Wednesday, June 3, 1959

Mr. REECE of Tennessee. Mr. Speaker, under leave to extend my remarks granted Wednesday, June 3, I include an address prepared for delivery at Virginia Interment College, Bristol, Va.-Tenn., May 31, 1959:

RESPONSIBILITIES OF FREEDOM

1

It is the custom of speakers, on occasions such as this one, to make profound observations regarding what is wrong with the Government of our great Nation and how the legislators are standing at the crossroads of destiny.

The heartening part of history is that there always seems to be another destiny beyond the one which has, according to the orators, been irretrievably compromised.

But this is going to be a different kind of speech—sort of a "man bites dog" proposition.

I am not going to talk about what is wrong with the Government of the United States—I am going to talk about what is wrong with the people of the United States.

For a man in public office this could be a dangerous form of heresy, but I have reached the time of life when one builds up a certain immunity to criticism.

At any rate, the subject of my remarks will be the character of the American people and the responsibilities of freedom.

This particular audience is particularly important to this subject because it is the women of a nation who are in the best position to shape the character of a nation.

I do not necessarily agree that the hand that rocks the cradle is the hand that rules the world, but I do agree that it is the character-forming period spent at our mother's knee that gives our lives the trajectory which guide us to the right or wrong decisions in our adult life.

I

As a public servant, I hear a lot of complaints from members of the general public about what goes on in the halls of government and I would like to register some of my complaints about what goes on outside of the halls of government.

In the first place, there is no point in criticizing the Government in Washington

because what it does is generally only a reflection of what the general public wants it to do

That is the kind of government we set up-government of the people, for the people, and by the people.

If we have bad government, therefore, it is

because we have bad people.

I would not go so far as to say that the American people are bad but it must be said that for some time now their judgment has been bad in many instances.

Let's look at some of the problems that have been created by misguided public

opinion.

Let's start with what most people consider our No. 1 problem-inflation,

Inflation is fun.

It is always fun to spend money which has not yet been earned—that is, it is fun in the beginning, until the results begin to come home.

Inflation begins in Washington. But why does it begin at all? Because the people want it to.

You may say that the people do not want it to and in a way you would be right, but in a much more important way you would be wrong.

The people do not want inflation, but they do want the Government to do things for them, which can only be accomplished through inflationary spending and in infla-

tionary processes.

As long as people wish the Government to do more things for them there will be Political candidates eager to promise the fulfillment of their wishes and when the bitter fruits of inflation come to their diningroom table they have no one to blame but themselves.

Our trouble, as citizens, is that we believe so many things that are not true.

One of these things is that Government has any money to give anybody without taking it away from somebody else, or even from the same people it gives it to.

Commonsense tells us that there is no such thing as something for nothing, that there is no such thing as a free meal, but our selfishness prevails over our commonsense.

As an illustration I would like to quote a few sentences from an editorial on the fallacy that Federal aid is free by the American Economic Foundation.

It was written by two friends of mine. Fred Clark and Richard Rimanoczy.

Here is what the editorial says:

"Money, in political affairs, is the original shell game of now you see it, and now you don't.

A good example is the illusion that Federal aid is free—that it is something for nothing.

The way to dispel this illusion is to check it against two of the prime principles of economics.

The first is: Nothing in our economic life comes from nowhere or goes nowhere, there is always a source and a destination.

The second is: Government cannot give the people anything that it does not take

from them. With these two truths in mind it doesn't require much detective work to discover that Federal ald is money taken from the people, sent to Washington, and then returned to

the people. Federal aid therefore is money that could have been local and State aid, had that money stayed within the States.

To the best of our knowledge, only one State, Mississippi, gets back as much as it puts in.

IV

At this moment you are probably thinking: "But there must be more to it than this. The States and cities are always short of money and the Federal Government is always loaded."

You are right-there is more to it than this: the Federal Government has a legal right to counterfeit all the money it wants to as long as it stays within the debt limit,

"Counterfeit" may be a slightly inaccurate word but it comes very close to the truth.

Here is the way it works.

Cities and States, when they need money, must get it from the people in taxes or borrow it privately against future taxes.

In other words, cities and States must raise real money-money that has been

earned.

But the Federal Government, when it needs money, can put its I O U's (that can become permanent debt) into the banking system and cause the banks to create brand new unearned money, money that takes on value only by taking away part of the value of the earned money

That is what counterfelt money does, and that is why we use the word "counter-

feit "

Another word for this money is "inflationary.

You may say: "But this bottomless Federal purse contradicts your statement that everything Government gives to the people must first be taken from the people."

On second thought, however, you will see where you are wrong: This money is taken from the people invisibly because, as previously suggested, when it is spent the value of the people's money goes down by approximately the same amount.

For example, the \$12 billion the Federal Government is adding to the money supply this year (June 1958 to June 1959) will subtract about \$12 billion from the value of the rest of the money.

The people will give up that \$12 billion just as certainly as if it had been taxed from them.

This, too, should be ample evidence that Federal aid cannot be free.

Yet, we continue to keep pressure on the Federal Government to give away money that must first be taken away from us or, borrow it and then take from us threefold to repay it.

v

Back of public approval, or at least tolerance, of deficit spending is the rather un-admirable notion that in someway or other, when government goes deeper into debt it saves us taxes.

Actually, deficit spending is triple taxation.

The first payment is made almost immediately, because the spending of the un-earned money subtracts an equivalent amount from the value of the total money supply.

This payment is really an invisible capital levy affecting everyone-rich or poor-young or old-employed or retired.

The second payment is made over the period during which interest is paid on the debt.

This payment may amount to more than the debt itself.

If the interest were 2½ percent per year and the debt were allowed to run for 40 years (a not-at-all impossible situation) we would have paid out enough interest to retire the debt.

(Today about \$8 billion a year of our tax money is required to pay interest on the Federal debt).

The third payment, of course, is when the debt is actually paid off.

This, too, must come from our tax money. So we can easily see, even though we may refuse to look, that the \$12 billion of deficit spending in the current fiscal year could cost the American people \$36 billion.

By no stretch of the imagination could a rational person consider that this deficit saved anybody any money.

But still we persist in our delusion.

VI

Another blind spot-closely related with our attitude toward deficit spending-is our stubborn belief that higher wages-in themselves—mean a higher standard of living.

Here again we are acting against commonsense but our ignorance seems invincible. Suppose we reduce the argument to ridic-

ulous proportions and see what happens. Let's suppose that tomorrow morning everyone received twice as much money as they are now getting for their contribution

to society. We can easily figure out what would

happen.

No more would be produced.

No more things would be on sale.

But there would be twice as much money paid out for the production.

So the price would have to become twice as

Nothing else could happen.

Everybody would agree that this 100 percent unearned raise would be obviously stupid—but almost everybody would eagerly accept a 5 percent unearned raise if they could get it.

Like many other problems of human nature

this is an imponderable.

It cannot be explained-it can only be observed

And as long as there are paymasters weak enough to continue to give unearned in-creases the practice will continue.

But don't try to blame it on the Government

Another source of self-generated trouble is our attitude toward employment and unemployment.

About 25 years ago some English socialists planted the economic theory that, 100 percent full employment is both possible and desir-

The American mind was fertile soil for this planting and today public opinion is largely behind the idea that corporations can and should be expected to provide 100 percent full employment, and if they fall down on the job the Federal Government must do something about it.

The only thing wrong with this idea, as a little study will disclose, is that corporations do not provide employment, or, at least do not generate it.

Our confusion arises from the fact that employment is measured in payroll and payroll comes from corporations, therefore the corporation must be the employer.

But another look at the situation reveals that the payroll came from the customers, so if payroll is synonymous with employment the customer is the employer, or at least. generates employment.

This puts the corporations in a different light.

They are responsible for employment only to the extent that they are responsible for finding customers.

But this cannot be done by management without the cooperation of the men and women in the plant whose relative efficiency and productivity is frequently the reason why customers are either found or not found.

Unless the people on the payroll cooperate in producing goods of a quality and price that will win the customer, there is nothing that management can do to prevent unemployment.

This raises the question of why the labor leaders, whose purpose is to further the welfare of their union members, so frequently throw roadblocks in the path of management instead of trying to smooth the way.

It also raises the question of why labor union members, many of whom must know the truth, permit their leaders to handicap instead of help the very people whose job it

is to find them employment.

But as long as these union members want their leaders to have the power to interfere with management's effort to provide employment there is little that the Federal Government can be expected to do about it except to provide the machinery for freedom of action by the union members and that is just what we are trying to do.

The fact that our system works as well as it does is proof that there is a destiny which shapes our ends, rough-hew them

though we may.

VIII

There is another facet of 100 percent full employment that raises a serious economic question were the Federal Government to take the extreme measures that would be required to provide it.

One-hundred percent full employment in growing economy insures chronic infla-

tion.

To its sorrow, socialist England dis-covered this hard fact when the Socialist Government set out to guarantee it by Government fiat.

Here is what happens: in a growing economy there are always new businesses that must be able to find workers.

Under 100 percent full employment all of the people who want to work already have

What happens, therefore, is the only thing that could happen: the new business takes workers away from old business by offering them more money; old business to retain their workers raises the wages.

As we know, when higher wages are not offset with highere productivity, they simply add to the cost of production and cause

higher selling prices.

The result is an endless inflationary spiral. It is interesting to note that in England the author of the full-employment theory, Lord William Beveridge, was personally ruined financially by the results of his own plan.

He wrote the plan in 1944.

In 1956 he denounced it in a speech made before the Racial Reform Group Conference in London.

In his very personal remarks Lord Beveridge told his audience that he had retired with what he thought was enough savings for a happy old age.

Under full employment, however, his savings had lost about two-thirds of their purchasing power due to chronic inflation.

The following was the high point of his speech.

The underlying reason is claims of each industry (meaning each labor group) to fix its own money wages by sovereign ac-tion. Under full employment that is leading to the destruction of the value of money and is spreading widespread poverty among all who are trying to live on savings or fixed pensions."

The answer is a normal amount of unemployment-perhaps 3 percent of the labor force.

It must not be thought that this 3 percent consists of a starving desperate impoverished people.

Many of them don't want a job right away.

Most of them have rainy day savings.

Many of them live in families where there is more than one income.

Moreover, the unemployed is a constantly changing group.

The average period of unemployment being about 120 days, the actual number of people involved in unemployment in a year would be about four times the percentage for a given year.

So manageable unemployment is not a fearsome problem-it is essential to economic stability.

You may hear speeches challenging this statement but you can be thankful that the Government in Washington does not push the panic button every time there is a mild recession.

The final observations I would like to make are more general than the foregoing.

They are rather hard to put into words.

The present generation of Americans do not seem to love their country the way it was loved by previous generations.

Nationalism, today, is almost something to be ashamed of.

This was dramatically demonstrated during the brainwashing of American prisoners in Korea.

This was probably the largest sampling of national character that was ever conducted in controlled conditions and accurately

Regarding the results, I would like to quote from a recent radio sermon by the Reverend John F. Fisler, delivered for the Protestant Council of the city of New York.

Dr. Fisler went into a great deal of detail some of which I will read to you.

The Amercan prisoners did not behave as on previous occasions when Americans were captured.

They did not organize. They did not try to escape. They did not steal telephone and radio equipment in order to transmit reports to our lines. They did not defy the enemy with the usual American spirit.

Many of those who died, died not from disease, cold or hunger, but from what the Army psychiatrists are calling "give-up-itis." They would go to bed, pull the covers over their heads, and, in 48 hours, they were dead. Fifteen hundred men died in this

Dr. Fisler quoted part of the communica-tion from the Chief of Intelligence of the Chinese People's Volunteer Army in Korea

to his chief in China.

Based upon our observations of American soldiers and their officers captured in this war for the liberation of Korea from capitalist imperial aggression the following facts are evidenced: The American soldier has weak loyalties to his family, his community, his religion, his country and his fellow soldier. His concept of right and wrong is hazy. Opportunism is easy for him. By himself he feels frightened and insecure. He underestimates his own worth, his own strength and his ability to survive. He is ignorant of social values, social tensions and conflicts."

What Dr. Fisler says is certainly not true of our soldiers generally but it is true of the significantly large numbers who yielded to the brainwashing.

I don't suppose anybody knows for sure just what has come over so many of our young Americans.

They don't seem to believe in what we used to call the homely virtues and the eternal verites.

They know all about the faults of our country and the weakness of our economic system but we don't seem impressed with the fact that we still have the finest civilization this world has ever known.

These young people knit their brows and shake their heads over the social injustices in a nation that does not automatically provide economic security.

Angry young men write about the tyranny conformity and hard work.

What these people are expressing, without knowing it, is their reluctance to take on the responsibilities of freedom.

Freedom is for strong men and, with it, must go self-reliance.

But most people can acquire the strength when they acquire a full appreciation of freedom.

The difficulty of appreciating freedom is greater for the American people than any other people on earth because we enjoy so much of it with so little effort.

We have a tendency to see only the bur-

dens of freedom.

But there is good news for those who don't believe that freedom isn't worth the effort: of all our responsibilities it is the easiest to get rid of-all we have to do is elect the men who are all too eager to take over the problem of making our economic decisions. What can one say to a man who is weary

of being free?

You should remind him that every adult as a child of God, has the moral responsibility to be free.

As a matter of fact the idea of personal freedom came from the teachings of Jesus-The entire Western World is rooted in these teachings.

That is why communism must attack Christianity.

Communism is a form of emotional dependency upon somebody or something else and the desire for security through obedi-

To the Communists, Christianity and selfreliance are synonymous.

Their weapon against them is fearfear of personal failure—the fear that drives the individual backward to the childish instinct for security.

But the self-reliant Christian is not defeated by fear.

He has, in his religion, a mother, a father, a partner, a counsellor, and a comforter. There is, for him a different type of se-

curity through obedience—the security that comes from obedience to God's will.

With God at his side the most deserted of men do not feel alone, the most beleagured men do not feel fearful, because he has the strength and courage that overcomes panic and despair.

He does not fear economic hardship because in a Christian society there is always

Christian charity.

XI

To sum it all up what I am really trying to say to you all is that a good index of America's belief in liberty, self-government, and self-reliance is the strength of America's belief in God.

And if faith in God is the foundation of our civilization, the strength of our civilization depends upon the strength of that

That is why, in spite of any of the superficial signs of character deterioration that may occupy some of the headlines today, I cannot believe that the American dream is failing, because Christian faith is growing.

It may sound odd for a politician to say that good government is to a great extent a religious problem, but good character is a religious problem, and good government depends upon the good character of its citizens.

There is evidence to back up the correlation between Christianity and character: Not one of the American prisoners in Korea who had deeply religious convictions were successfully brainwashed by the Communists.

XII

If America's problem were a highly intellectual one, I would have less hope for our future, because mass education at the intellectual level is difficult.

But it is not an intellectual problem-it is merely a matter of commonsense motivated by good character.

Most people know what they are doing wrong; in fact they feel a little guilty about

And it is the American conscience that, I believe, will guarantee our future.

It needs a little prodding, but it is still a healthy conscience.

It needs a lot of self-appointed missionaries to talk as I have been talking, and I believe those missionaries will appear.

I hope that right here, in this audience, a few of them may have been enlisted even as I spoke. Good luck and may God bless you always.

Testimony of Hon. Wright Morrow, Civic Leader, Houston, Tex., Before Senate Committee on the Judiciary on Constitutional Amendments in Support of Senate Joint Resolution 32

EXTENSION OF REMARKS

## HON. OLIN E. TEAGUE

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES

Monday, May 18, 1959

Mr. TEAGUE of Texas. Mr. Speaker, on May 13 a distinguished Texan, the Honorable Wright Morrow, appeared before the Subcommittee on Constitutional Amendments of the Senate Committee on the Judiciary. He was speaking in support of Senate Joint Resolution 32, the purpose of which is to vest exclusive administrative control of public school and public education in the States and their political subdivisions.

I consider it an honor, and indeed, a great privilege, to include the text of his testimony in the Record and commend its contents to the Members of this body:

TEXT OF TESTIMONY BY WRIGHT MORROW OF HOUSTON, TEX., BEFORE THE SUBCOMMITTEE ON CONSTITUTIONAL AMENDMENTS OF THE SENATE COMMITTEE ON JUDICIARY IN SUP-PORT OF SENATE JOINT RESOLUTION 32, THE PROPOSED CONSTITUTIONAL AMENDMENT SPONSORED BY U.S. SENATOR HERMAN E. TALMADGE OF GEORGIA, JOINED BY HIS COL-LEAGUES, SENATOR BYED AND SENATOR ROBERTSON OF VIRGINIA, SENATOR JOHNSTON OF SOUTH CAROLINA, SENATOR HILL AND SENATOR SPARKMAN OF ALABAMA, SENATOR EASTLAND AND SENATOR STENNIS OF MIS-SISSIPPI, AND SENATOR LONG OF LOUISIANA, THE PURPOSE OF WHICH IS TO VEST EXCLU-SIVE ADMINISTRATIVE CONTROL OF PUBLIC SCHOOL AND PUBLIC EDUCATION IN THE STATES AND THEIR POLITICAL SUBDIVISIONS

Mr. Chairman, I desire to express my gratitude to this subcommittee for the privilege of presenting to the members thereof my views and testimony in connection with Senate Joint Resolution 32. As a practicing lawyer and as a citizen of Texas, I appreciate this opportunity and hope that I shall be able to present appropriate testimony which may be of some benefit to you as members of this subcommittee.

By way of introduction and identification of myself, because I am sure I am not known to most of you, I should like to say my name is Wright Morrow; I am a native born Texan and have been practicing law for about 35 years—for 30 of those years in Houston, Tex. I went to the public schools in my native town and took my law course at the University of Texas in Austin, Tex. My father, Judge Wright C, Morrow, was for 25 years chief justice of a court of last resort in Texas; my mother's brother, Judge B. D. Tarlton, was chief justice of an appellate court and later a member of the supreme court of Texas; and still later, a professor of law at the University of Texas. My two brothers and I all have practiced law in Texas. I was, when a young man, first as-

sistant attorney general of Texas, and for two terms was Democratic national committeeman for Texas. I have, therefore, been nurtured in the law and under the principles of constitutional law. I am a firm and consistent believer in the genius of our form of government and I have the highest respect for law and for the courts of our country.

Senate Joint Resolution 32 seeks to add to the Constitution of the United States in plain and unambiguous language, an article that the administrative control of any public school, public educational institution, or public educational system operated by any State or by any political or other subdivision thereof shall be vested exclusively in such State or subdivision and that nothing contained in the Constitution shall be construed to deny to the residents thereof the right to determine for themselves the manner in which any such school, institution, or system is administered by such State or subdivision.

I have the deep conviction that this proposed amendment should be submitted to the States and express the fervent hope that it will be ratified and become a part of our Constitution.

Some recent decisions of the Supreme Court of the United States (particularly Brown v. Board of Education (347 U.S. 483) strike at the very heart of our Republic and undermine the fabric of our system of government. I say this as a lawyer nurtured in the principles of constitutional law. I regard it as a right, not only, but as my duty as a citizen to express my views. I do not attack the place held by the Supreme Court in the makeup of our constitutional framework. On the contrary, I am a firm and strong supporter of the constitutional function and authority given to the Supreme Court.

The problem transcends the question of racial segregation. It goes to the very vitals of our constitutional framework. In my opinion, the present Court has completely disavowed judicial restraint.

We have made the constant boast as a free people that we are entitled to express our convictions privately and publicly concerning the conduct of our public officials. I intend to be constructive and temperate, but I hope to be candid and courageous.

I do not share the view expressed by some that the decisions of the Supreme Court should be beyond the criticism of the people. I do share the view expressed by Justice Brewer in an early decision of the Supreme Court, where he said:

"It is a mistake to suppose that the Supreme Court is either honored or helped by being spoken of as beyond criticism. On the contrary, the life and character of its justices should be the object of constant watchfulness by all and its judgments subject to the freest criticism. The time is past in the history of the world when any living man or body of men can be set on a pedestal and decorated with a halo."

Those who composed the convention in 1787 had risked their lives, their liberties and their fortunes in the Revolutionary struggle; they knew what they had fought for. They were fully cognizant of the suffering of their forebears in the struggle for freedom and dignity under the rule of law instead of the rule of man. They, therefore, made the Constitution say in explicit language who should make the laws and how laws should be made.

They defined "The Supreme Law of the Land" in article VI, quoted in part, as follows:

"The Constitution and the Laws of the United States which shall be made in pursuance thereof; • • • shall be the Supreme Law of the Land."

The Constitution Is the creature of the people and the States; the Constitution

formed a government of laws and not of men. The members of the Convention rejected the idea of a monarchy or of a pure democracy and set up a Republic of limited powers—separate executive, legislative, and judicial branches. It was for this reason that the 10th amendment was adopted specifically providing that all powers not delegated to the Federal Government were reserved to the States and to the people. The child—the Federal Government—was given specific and fixed rights—all others remained with the States, the people—the parents of the Federal Government.

We should never forget that those who framed this great system of government wanted to be doubly sure that the Federal Government should be obligated to control itself. It was James Madison, credited with much responsibility for the language of the Constitution, who said:

"In framing a government to be administered by men over men, the great difficulty lies in this: You must enable the government to control the governed, but in the next place oblige it to control itself."

Alexander Hamilton emphasizes this necessity in speaking in the Federalist of article VI quoted above, using this language:

"It will not, I presume, have escaped observation that it (article VI) expressly confines this supremacy to laws made pursuant to the Constitution."

As Chief Justice Taney said in a very early case:

"The Government of the United States is one of delegated and limited powers, it derives its existence and authority altogether from the Constitution; neither of its branches, executive, administrative, or judicial can exercise any of the powers of Government beyond those prescribed and granted."

George Washington, in his farewell address used this language, which is very pertinent and appropriate here:

"If, in the opinion of the people, the distribution or modification of the Constitutional powers be in any part wrong, let it be corrected by an amendment in the way which the Constitution designates. But let there be no change by usurpation; for though this in one instance may be the instrument of good, it is the customary weapon by which free governments are destroyed."

It is elementary that the law is the very embodiment of usage; that is to say, the principles of action evolved by reason of experience, traditions, habits, customs, and rules of conduct common to all people in a given area of the world make up the basis of the law and the law comes into being (as did the Constitution) by virtue of these common attributes, common privileges and common duties. The stability of the Gov-ernment depents on law-fixed law, upon which people can rely as a part of their lives. Things adjudicated—or matters litigated and determined by competent authorities-by courts of last resort—become a part of the life of the people. Better stated, it is the doctrine to stare decisis. The specific translation of this phrase means to stand by decided cases; to uphold precedents; to maintain former adjudications. The rule is based on public policy which requires that courts respect their prior decisions and that a rule once declared and uniformly followed over a long period because the law, guiding the people in their conduct. It rests upon the principle that law by which men are governed should be fixed, definite, known. The complete Latis phase is: "Stare decisis et non quieta movere." This literally means to adhere to precedents and not to unsettle things which are established.

This definition is given both in Black's Law Dictionary and Cooley's Constitutional Limitations, and has been followed by Fed-

eral and State courts throughout the history of the jurisprudence of our country.

It is my firm and considered opinion that the Supreme Court, in the 1954 decisions on racial segregation in public schools is indefensible and their interpretation of the 14th amendment has substituted the personal philosophy of its present members for a rule of law established by tradition, habit, custom, and long-time precedent of its former decisions, and in this manner has usurped the power of the States to amend the Constitution.

Mark you again the advice of George

Washington:

"The Constitution should be amended in the manner fixed therein and not by usurpation."

More than a hundred years ago Chief Jus-

tice John Marshall said:

"Courts are the mere instruments of the law and can will nothing . power is never exercised for the purpose of giving effect to the will of the judge; always for the purpose of giving effect to the will of the law."

Again, James Madison, in discussing the necessity and value of judicial precedents

"The good of society requires that the rules of conduct of its members, should be certain and known, which would not be the case if any judge disregarding the decisions of his predecessor should vary the rule of the law according to his individual interpretation."

Thomas Jefferson, in discussing the limitations of constitutional power made this

cryptic statement:

In questions of power let no more be said of confidence in man, but bind him down from mischief by the chains of the Constitution.'

And Chief Justice Marshall said again in his great opinion in Gibbons v. Ogden, that:

"The enlightened patriots who framed our Constitution and the people who adopted \* \* to have init must be understood \* tended what they said."

Let us then undertake to determine whether the Supreme Court has usurped the power to amend the Constitution by its interpretation in Brown v. Board of Education and the companion cases in 1954.

Soon after the adoption of the 14th amendment in 1877, in considering a statute of Louisiana requiring the commingling of the races, the Supreme Court then said:

"We think this statute \* \* is unconstitutional \* \* Substantial equality of right is the law of the State and of the United States, but equality does not mean identity, as, in the nature of things identity in the accommodations afforded to passengers, whether colored or white is impossible.

The Court said further:

"It is settled law that the school board may assign a particular school for colored children and exclude them from schools assigned for white children, and such regulation is not in violation of the 14th amend-

Then comes the much quoted Plessy v. Ferguson case (163 U.S. 537) in 1896. Here the Court also passed on a Louisiana statute this time requiring separate accommodation for colored and white passengers on common carriers. The Court said (Justice Brown writing the opinion):

"The object of the 14th amendment is undoubtedly to enforce the absolute equality of the two races before the law but in the nature of things it could not have been intended to abolish distinctions based upon color or enforce social, as distinguished from political equality, or commingling of the two races under terms unsatisfactory to either. Laws permitting, and even requiring their separation, do not necessarily imply the inferiority of either race to the other and have been generally, if not universally, recognized as within the competency of State legislatures."

The Court held that the establishment of separate schools for white and colored children has been held to be a valid exercise of the legislative power of the States.

Then, as if pointing to the fallacy of the philosophy or psychology of recent decision in Brown v. Board of Education case, Justice Brown, (for the Court) said:

"The argument also assumes that prejudices may be overcome by legislation and that equal rights cannot be secured to the Negro except by an enforced commingling of the two races. We cannot accept this proposition."

In view of the continuous public statements of the proponents of the Court's decision in condemning our position in the South, it is noteworthy, that the author of the Plessy case, Justice Brown, was born in Massachusetts, educated at Yale, and was a citizen of Michigan when appointed to the Court by a Republican President.

Much has also been said by the proponents of school integration about the dissent of Mr. Justice Harlan in the Plessy case. It is, therefore, significant that 3 years later-in 1899, the same Justice Harlan, wrote for the Court in the case of Cummings v. Board of Education. Here they were considering an injunction compelling the school board to withhold its assistance from a white high school for failure to provide a high school for colored students. Justice Harlan used this language and there was no dissent:

"We may add while all admit the benefits and burdens of public taxation must be shared by citizens without discrimination against any class on account of their race, that education of the people in the schools maintained by State taxation is a matter belonging to the respective States. \* \* \* "

In 1914 the Court in dealing with a statue of Oklahoma in the McCabe case, said this:

"It has been decided by this Court, so that the question could no longer be considered an open one, that it was not an infraction of the 14th amendment for a State to require separate but equal accommodations for the races."

This was 46 years after the passage of the 14th amendment.

Thirteen years later, in 1927, a beloved former Republican President, Chief Justice Taft, in a case involving a Chinese girl being denled admission to a white school (Gong Lum v. Rice 275 U.S. 78) wrote the opinion for the Court and said:

"The right and power of the State to regulate the method of providing for the education of its youth at public expense is clear."

As a matter of stare decisis, as a matter of tradition and of stability, the people of the United States had a right to rely upon these decisions. They pass on the precise state of facts before the Supreme Court in the 1954

Chief Justice Taft said further:

We think this is the same question which has been many times decided to be within the constitutional power of the State legislatures to settle without intervention of Federal courts under the Federal Constitution. \* \* \* The decision is within the discretion of the State in regulating its public schools and does not conflict with the 14th amendment."

Sitting on this Court with Chief Justice Taft in the unanimous decision were the great judges and liberals, Justice Oliver Wendell Holmes and Justice Louis D. Brandels and Justice Harlan Fiske Stone. This is very good judicial company in which we find ourselves, who yet believe this is the right decision.

One of the cases cited by Chief Justice Taft was a case in the Massachusetts Supreme Court, written by Chief Justice Shaw

of that court in which they upheld the separation of white and colored under that State constitution guaranteeing equal protection of the law.

And again, when the present Supreme Court has disregarded all judicial restraint and rejected all precedent and is exercising legislative functions entrusted to the Congress and usurping the power of amendment of the Constitution, they scorn the case of Missouri ex rel Gaines v. Canada, 305 U.S. 337. This decision was by Chief Justice Hughes appointed twice to the Supreme Court from New York State and a Republican candidate for President. The action was brought by a Negro to compel admission to the Missouri State University Law School-The Missouri Constitution provided that separate free public schools should be established for the people of African descent. The contention was made that this was discrimination and denial of a constitutional right. Speaking for the Court, Chief Justice Hughes said:

The State court has fully recognized the obligation of the State to provide Negroes with advantages for higher education equal to that afforded to white students. State has sought to fulfill that obligation by furnishing equal facilities in separate schools, a method, the validity of which has been sustained by our decisions," reaffirming the holding in the Plessy and Gong Lum cases:

During the nearly 80 years of judicial determination by the Federal courts, this same subject has been before State courts without number-Northern and Southern States alike—and it has been uniformly held. in reliance on these Supreme Court that the right and power of the State to regulate the method of providing for the education of its youth at public expense is clear. Thus a great body of decisions has been built upon the faith of these cases. This rule has been upheld in New York, Ohio. North Carolina, Kansas, Missouri, Nevada, Mississippi, and most other States. The adjudication was universally the same and a way of life was established under the fixed law of our country by courts confronted with this exact problem. These decisions and this way of life was relied upon. The people had a right to rely upon them: It was a settled part of our jurisprudence.

A strange evidence of the desire of the present Supreme Court to legislate is demonstrated in the companion case to the Brown case, namely Bolling v. Sharpe, 347 U.S. 497. There the court was dealing with racial seg-regation in the public schools of the District of Columbia. The Court held that the due process clause of the muchly abused fifth amendment prohibits racial segregation in the public schools of the District of Colum-One hundred and sixty-seven years after the adoption of the fifth amendment in 1791, this Court comes up with this decision and arrives at this change-in the law-Congress had not legislated to this effect, and if separation of the races in the District of Columbia schools was legal in 1868 when 14th amendment was adopted and in 1914 and 1927, we wonder when the Constitution was changed and how it was amended, because it became unconstitutional after May 17, 1954. Chief Justice Warren said it WAS "unthinkable" that in the capital of this Republic separate schools were being maintained. Yet it had been so for many, many years.

These decisions are simply declarations of the present members of the Court expressing their individual views. They disregard all the wisdom and experience of their predecessors who over a period of almost a century passed on the same question, and substitute therefore what they call "modern authority."

The chief authority upon whose writing they rely is a man named Gunnar Myrdal. a Swedish sociologist, who spent a few years here in this country and now becomes the highest authority for our Highest Court. The same author in his book called "An American Dilemma" expressed the opinion that our Constitution is "impractical and ill suited for modern conditions" and "is Outmoded and should be abandoned."

When the doctrine of separate but equal was first announced by the Supreme Court, not one single State voiced a protest or claimed misinterpretation of the 14th amendment. Moreover, Congress, from the date of the amendment in 1868 until 1954 demonstrated their understanding of the Constitution by actively maintaining separate schools in the District of Columbia.

It is a universal doctrine in our juris-Prudence that the contemporaneous construction of a statute or constitutional provision by those who are charged with the duty of its enforcement is worthy of the most serious consideration as an aid to its interpretation, particularly where such construction has been sanctioned by long acquiescence.

Here the Supreme Court decisions for 80 years establish a uniform principle and uniform result. Here the Congress with the authority fixed in section 5 of the 14th amendment; namely, "The Congress shall have the power to enforce by appropriate legislation the provisions of this article," had not in their wisdom found it necessary or appropriate to legislate on this subject to deviate from the established law of the land under the decisions of the Supreme Court and the universal practice of the States in their regulation of public schools.

It is no wonder, therefore, that the Conference of the Chief Justices of the States meeting in California last August, should

have passed this resolution:

We are not alone in our view that the Supreme Court in many cases arising under the 14th amendment has assumed what seems to us primarily legislative (lawmaking) powers \* \* \* We do not believe that either the framers of the original Constitution or the possibly somewhat less gifted draftsmen of the 14th amendment ever contemplated that the Supreme Court would or should have the almost unlimited policymaking powers which it now exercises. It is strange indeed to reflect that under a Constitution which provides for a system of checks and balances, of distribution of power between National and State governments, One branch of one Government (the Supreme Court) should attain the immense, and in many respects, dominant power which it now wields."

This opinion of 36 supreme court State Justices finds tremendous support in the advice given by George Washington.

Witness, also, the recent statement of an eminent jurist, for many years a member of the Circuit Court of Appeals in New York, a man regarded as a liberal, but distinguished as a fearless judge who did not allow considerations of political expediency or emotional feelings to impair his reading of the Constitution or his study of the basic Precedents established by the courts in previous years. I refer to Judge Learned Hand's recent lectures before the Harvard Law School. Judge Hand finds himself perplexed by the decisions in the segregation cases; he says it is curious that the Supreme Court failed to mention section 5 of the 14th amendment which he says "offered an escape from intervening for it empowers Congress to 'enforce' all the preceding sections by 'ap-Propriate legislation."

Judge Hand further says:

"I cannot frame any definition that will explain when the Court will assume the role of a third legislative chamber and when it will limit its authority to keep Congress and States within their accredited authority."

He says he has not been able to understand on what basis the Court adopted the view that it may actually legislate. He asks the question of whether we should establish a third legislative chamber, and then says:

"If we do need a third legislative chamber, it should appear for what it is and not as the interpreter of inscrutable principles."

Further, Judge Hand says:

'For myself, it would be most irksome to be ruled by a bevy of platonic guardians even if I knew how to choose them, which I assuredly do not."

Moreover, Judge Hand says that he doubts whether any judge should be permitted "to

serve as a communal mentor."

The argument is made that the Constitution must keep step with the times and that it is subject to the changes in our lifetime. I hold to the view that truths never change and that principle is based on truth. I am no standpatter, I recognize that changes do come and must be given full and fair consideration, but I believe that those who claim that the Constitution does not mean what it says and the precedents of former decisions are not binding and establish a way of life, are usually those who labor under the delusion that there was little wisdom on earth before they were born. They forget that without them there was a yesterday, and without them there will be a tomorrow.

In his book on "The Nature of the Judicial Process" the former Justice Benjamin N. Cardozo, in discussing the right of a judge to substitute his individual sense of justice for rules of law, said this:

That might result in a benevolent despotism if the judges were benevolent men. It would put an end to the reign of law."

Justice Brandeis also quoted this truth

when he said:

"It is usually more important that a rule of law be settled than that it be settled right."

The lack of judicial restraint referred to in the resolution of the States Chief Justices, is apparent in these later decisions. One of the fine Federal judges undertook for his own guidance to say: "He will not overrule a precedent unless he can be satisfied beyond peradventure that it was untenable when made; and not even then, if it has gathered around it the support of a substantial body of decisions based on it."

This is precisely what has happened in our American life since 1868 until 1954.

The words of Justice Robert H. Jackson in the case of Brown against Allen supports the viewpoint of those who believe the Supreme Court has usurped the power of amendment confided to the States under the Constitution. Justice Jackson said this:

"Rightly or wrongly, the belief is widely held by the practicing profession that this Court no longer respects impersonal rules of law but is guided in these matters by personal impressions which from time to time may be shared by a majority of the Justices. • • • that regard for precedents and author-ities is obsolete; that words no longer mean what they have always meant to the profession; that the law knows no fixed principles."

Again, Justice Cardozo in his book discussing the difference between right and

power, he says:

"Judges have, of course, the power though not the right, to ignore the mandate of the statute and render judgment in spite of it. They have the power, though not the right to travel beyond the bounds set to judicial innovation by precedent and custom. Nonetheless, by that abuse of power, they violate the law."

Another and a different reason for the posltion I take with respect to the Supreme Court's segregation decision is the fact, little known until now that there are 12 States which upon their entrance into the United States were granted exclusive control of their

State schools. It appears from a recent check of the admission acts of all of the States that 12 have been granted this specific authority. The last such grant was made this year to Hawaii.

This, of course is an unequal and unfair treatment and will result in unlimited con-

fusion and instability.

I am informed the States of North and South Dakota, Montana, Washington, Utah, Wyoming, Idaho, New Mexico, Arizona, Oklahoma, Alaska and Hawaii have been granted this exclusive control of their State schools. While I am a Southerner and the people of the South have been charged with dereliction to duty in their refusal to accept the strange philosophy attributed largely to the authority of one Gunnar Myrdal given full credence under the judgment of Supreme Court. I am convinced not only people of the Southern States but those of many other States of the Union, Eastern, Northern and Western alike will come to the final conclusion that the rights of the States have been again seriously impaired, and regardless of their personal feelings, they will come to the conscientious belief that we in the South are upholding the fundamental concepts of our Constitutional system.

Therefore, I favor the adoption of Senate Joint Resolution 32 and reiterate my hope that it becomes a part of our Constitution.

First, its submission and adoption is proposed to be done in the manner and method prescribed in the Constitution and not by judicial decree or usurpation. The of the States are accorded their rightful and function in the amendment of the basic document.

Second, if submitted and adopted, it will reestablish for and by the people the validity and the wisdom of the judgment of the Supreme Court decided by the able and patri-otic Justices through these many years.

Third, the stability of the law will be regained, the way of life upon which the people rely and had a right to rely will be restored and sanctioned and firmly fixed.

Fourth, the continuing value of precedent and stare decisis known to our American jurisprudence through its whole life will again be recognized and enforced.

Fifth, that these decisions have produced most regrettable decline in white and Negro relationships throughout the country. particularly in the South-not on an individual basis because we still maintain warm individual relationships, but there is a wider and wider division among the races. These decisions, this departure from constitutional authority has caused the greatest disturbance since the Civil War. If this amendment is proposed and adopted, the matter will be settled in a constitutional manner and the prime constitutional ideal of "domestic tranquility" will be tremendously improved.

Sixth, this amendment, if submitted and adopted, will express the dominant view of the people of the United States that an overpowering centralized Government in Washington was not intended to be a part of the basic fabric of our system. It will prove again the wisdom of Chief Justice Taft "the right and power of the State to regulate the method of providing for the education of its youth at public expense (is)

Seventh, if submitted and adopted this amendment would show that the people believe in the specific language of the Constitution, article I, section 7, which gives to the Congress the power to make all laws which shall be necessary and proper to carry into execution the powers granted and all other powers vested by the Constitution in the Government of the United States or in any Department or officer thereof. In this manner the people of the United States will reassert that the Supreme Court is not a legislative body but a judicial body.

Eighth, since under section 2 of article II of the Constitution no nominee of the President becomes and remains a member of the Supreme Court except "with the advice and consent of the Senate", the submission of this amendment and the public debate that would necessarily follow would em-phasize the significance and importance of this privilege and duty of the Members of the Senate of the United States.

Ninth, if this amendment is proposed and adopted we will reestablish the fundamental doctrine that this is a government of law and not of men; that there shall not be substituted for the law of the land the whim of a judge or judges based on his or their personal philosophy, and the power and authority and function of Congress shall become stronger and more effective.

The foundation of our National strength lies in the freedom of man's initiative; the reward for his efforts and the recognition by just government of the dignity and personality of the citizen. As Americans, we are born with a heritage of freedom and we are, as a people, devoted to liberty and a religious faith. The Constitution is at once our shield and our sword. It is the very essence of our right to live as free men and women.

If the civil and political rights of both races be equal, one cannot be inferior to the other, civilly or politically. If one kind of person be unequal to another kind of person socially, neither the Constitution of the United States nor the opinion of any number of judges can put them upon the same social plane.

Tenth, if this amendment is proposed and adopted, the full sovereignty of the separate States will be reconstructed and reinvigorated; and if the sovereignty of the States is not preserved, the Constitution will fall. Court-made law, which has no sanction from the people nor from the Congress, nor from the Constitution, cannot stand.

I do not say that the Supreme Court can be denied the right and power in any instance to overrule a prior decision. This where the proper judicial restraint may justify such action. Certainly, it is not to satisfy the emotional or sentimental feelings of the individual members of the court, nor is it to express their social philosophy as op-posed to the fixed law. The guide which Judge Thomas Swan applies seems as sound as can be given. That is, that he would not overrule a precedent unless he was absolutely satisfied it is untenable, and not even then, if it has gathered around it the support of a substantial body of decisions based on it.

Eleventh, this amendment, if proposed and adopted, would give all of the States the same rights with respect to the exclusive control of their educational institutions, with the one exception, namely, that in the act admitting Oklahoma, there was a specific provision that the act could not be constructed to prevent the establishment and maintenance of separate schools for while and colored childern. This was specific to Oklahoma. As to the other 11 States which have already been granted this right the language seems to be uniform, even as late as when Alaska and Hawaii were granted statehood this year. This position should be uniform in the States.

Ours is the greatest system of government that man has yet conceived. It has given the people more freedom, and has devoted itself to the protection of the individual, dedicated to the dignity of man's soul, and has thus brought the greatest contentment to our people. To justify our heritage, we cannot fail to support it with all our hearts and all our minds and all our energies.

Let me express what I believe to be the sound view and obligation of those who occupy the highest judicial position under our system who hold their offices for life. (except for the right of impeachment). In the words of the Chief Justice White:

The fundamental conception of a judicial body is that of one hedged about by precedents which are binding on the court without regard to the personality of its Break down this belief in judicial continuity and let it be felt that on great constitutional questions this Court is to depart from the settled conclusions of its predecessors, and to determine them according to the mere opinion of those who temporarily fill its bench, and our Constitution will, in my judgment, be bereft of value and become a most dangerous instrument to the rights and liberties of the people.'

In my opinion this is the pattern which should be (but has not been) followed by this Court of last resort.

To you distinguished gentlemen who sit on this subcommittee, members of the greatest deliberative body in the world who have the responsibility of passing upon this most important matter, I can say to you with all the sincerity that I possess and in the light of some experience in the practice of law and in the business of trying to be a good American citizen, that in my opinion, you would be performing an act of justice and wisdom to report favorably on this proposed amendment and give to the Congress the right to offer to the people of the United States the opportunity to express their de-sire to determine for themselves the method of managing and administering their public schools according to the wishes of the people of the States.

With the permission of you gentlemen. I would like for the record to show that I appear here as a representative and speaking the views of the San Jacinto Chapter of the Sons of the Republic of Texas; and that, also, I have the same right to speak on behalf of the Paul Carrington Chapter of the Sons of the American Revolution.

Both of these societies are well known, patriotic, American organizations, who spend their time and effort to uphold the Constitution of the United States and respect for the law.

#### Poison in Your Water-No. 108

EXTENSION OF REMARKS OF

## HON. JOHN D. DINGELL

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES Tuesday, June 9, 1959

Mr. DINGELL. Mr. Speaker, pursuant to permission granted I am inserting into the Appendix of the Congressional RECORD an article appearing in the Jamaica (N.Y.) Long Island Press of May 6, 1959, entitled "Halpern Urges Dollars for Bay":

HALPERN URGES DOLLARS FOR BAY

Little Neck Bay is gradually turning into a muddy swampland and will be lost as a natural haven for recreation craft unless it is dredged within the next 5 years, a House Public Works Subcommittee was told today.

Appealing for funds for a survey of the bay by the Army Engineers, Congressman SEYMOUR HALPERN, Forest Hills, Long Island, Republican, warned the bay might become a public menace threatening the health of people near its shores and the value of properties surrounding it.

He said former shoreline properties along the southern part of the harbor have been converted to swamp frontages. Muck and slime have driven anchored boats out beyond the shelter of protecting bluffs at the northeast corner of the bay, he added.

HALPERN echoed an appeal made on April 27 by Frank Turner, secretary of the Council for Little Neck Bay Reclamation. He asked approval of a \$13,000 survey of conditions

and needs of the bay.

Turner warned the natural filling-in process is destroying an anchorage for Queens and Nassau pleasure boats, increasing health danger by trapping sewage, and destroying the harbor's value as an evacuation point to the mainland in case of emergency.

HALPERN pointed out that New York City plans to build a large marina at the southern end of the bay if and when the muck has been removed, and the shorefront would provide playground and bathing facilities.

Army Engineers estimat would take about 18 months. Engineers estimated the survey

#### LAWS RELATIVE TO THE PRINTING OF DOCUMENTS

Either House may order the printing of a document not already provided for by law. but only when the same shall be accompanied by an estimate from the Public Printer as to the probable cost thereof. Any executive department, bureau, board, or independent office of the Government submitting reports or documents in response to inquiries from Congress shall submit therewith an estimate of the probable cost of printing the usual number. Nothing in this section relating to estimates shall apply to reports of documents not exceeding 50 pages (U. S. Code, title 44, sec. 140, p. 1938).

Resolutions for printing extra copies, when presented to either House, shall be referred immediately to the Committee on House Administration of the House of Representatives or the Committee on Rules and Administration of the Senate, who, in making their report, shall give the probable cost of the proposed printing upon the estimate of the Public Printer, and no extra copies shall be printed before such committee has reported (U. S. Code, title 44, sec. 133, p. 1937).

GOVERNMENT PUBLICATIONS FOR SALE

Additional copies of Government publications are offered for sale to the public by the Superintendent of Documents, Government Printing Office, Washington 25, D. C., at cost thereof as determined by the Public Printer. plus 50 percent: Provided, That a discount of not to exceed 25 percent may be allowed to authorized bookdealers and quantity purchasers, but such printing shall not interfere with the prompt execution of work for the Government. The Superintendent of Documents shall prescribe the terms and conditions under which he may authorize the resale of Government publications by bookdealers, and he may designate any Government officer his agent for the sale of Government publications under such regulations as shall be agreed upon by the Superintendent of Documents and the head of the respective department or establishment of the Government (U. S. Code, title 44, sec. 72a Supp. 2).

#### RECORD OFFICE AT THE CAPITOL

An office for the Congressional Record 15 located in Statuary Hall, House wing, where Mr. Raymond F. Noyes is in attendance during the sessions of Congress to receive orders for subscriptions to the RECORD at \$1.50 per month, and where single copies may also be purchased. Orders are also accepted for the printing of speeches in pamphlet form.

# Appendix

## Address Delivered by Secretary of the Army Wilber M. Brucker

EXTENSION OF REMARKS

#### HON. GEORGE D. AIKEN

OF VERMONT

IN THE SENATE OF THE UNITED STATES Wednesday, June 10, 1959

Mr. AIKEN. Mr. President, I ask unanimous consent to have printed in the Appendix of the Record, the address delivered by the Honorable Wilber M. Brucker, Secretary of the Army, at the commencement exercises held at Nor-Wich University, Northfield, Vt., on June

There being no objection, the address was ordered to be printed in the RECORD,

ADDRESS BY THE HONORABLE WILBER M. BRUCKER, SECRETARY OF THE ARMY, AT THE COMMENCEMENT EXERCISES, NORWICH UNI-VERSITY, NORTHFIELD, VT., JUNE 7, 1959

It is a stimulating experience to visit historic Norwich University in the beautiful heartland of the Green Mountain State. It is a high privilege to share with each member of this 1959 graduating class one of life's

most significant moments.

As Secretary of the Army, I am particularly mindful that Norwich was our country's first Private military college, founded in 1819, and has ever been one of the very best. Through its 140 years, it has lived up to a noble concept of full-rounded education for the whole man which reflects lasting honor upon its Army founder, Capt. Alden Part-ridge, fourth Superintendent of the U.S. Military Academy at West Point.

Everyone connected with Norwich has a right to be tremendously proud of its rich tradition of service to America in war and

Throughout its history, this university has contributed immeasurably to the high standards of our Nation's military leadership. It is a noteworthy mark of its eminence in this field that during World War II alone more than 1,600 Norwich alumni served in the Armed Forces, 1,300 of them as commissioned officers, including 16 general officers. Of equal consequence is its record of impressive influence upon the upbuilding of our country through the outstanding achievements of its graduates in virtually every important area of civilian endeavor.

Norwich enjoys a fourfold distinction. It provides its students the opportunity for scholastic development which will lead to material success in whatever walks of life they may choose to follow. At the same time it inspires them to prize above all material things their heritage of freedom. It further prepares them morally and professionally to be effective defenders of their country in time of emergency. And, most important of all, it places major emphasis all along the line upon nurturing those vital qualities of mind and spirit which make a person manfully willing and fully able to shoulder the all-encompassing responsibilities of citizenship.

Never has our Nation had greater need for a rising generation of leaders so inspired and so equipped.

In this momentous age of ominous peril and boundless opportunity, the college grad-uate enters a world more fiercely demanding than ever before of the very best that he has to give. We are engaged today in a mortal struggle between our cherished ideals of freedom and human dignity, and the degrading philosophy of militant communism, which seeks by every means to tear down and utterly destroy everything that is good in the world, and to reduce humanity to the level of the beast. Let us not underestimate the threat—our very survival and the future of civilization are at stake.

The Nation depends upon every American. no matter how limited his talents or restricted his sphere of influence, to contribute in the full measure of his ability to the creation and maintenance of national strength to stem the powerful tide which bears against us in this hour. How great, therefore, is the obligation which rests upon those who are endowed, as you are endowed, with the God-given resources of the heart and the intellect, and who have been afforded every advantage for their maximum advance-

This is no time for a person to believe that just to get by is a worthy goal.

No man should concern himself solely in having a successful career for himself, while passing the buck when it comes to civic duty.

There is no place for the person who resolves to sit tight and wait until danger blows over.

Shame on the cynic who disparages patriotic zeal, and derides fundamental principles of morality.

The time has gone by when any of us can afford to bask languidly in the glory of past accomplishments. If we think we can rest upon our oars, the fast-running tide of events will surely sweep us to disaster.

As a means toward imposing its will upon all men everywhere, and stamping out every vestige of human freedom, the Communist conspiracy maintains the most powerful background of every move made by Communist leaders no matter nist leaders—no matter how peaceful it may appear on the surface—looms the ever-present threat of the military might at their command.

We have ample reason to be aware that they are not restrained by any moral scruples from using their millions of trained soldiers, their tanks, submarines, nuclear bombs, and intercontinental missiles to crush the free nations into submission. Expediency alone dictates the course they follow. They are deterred from armed attack only because the United States and more than 40 allied nations have built a collective defense structure strong enough to convince the Communists that they would run an unacceptable risk of defeat if they launched an assault. Equally as important as our evident military capability is our known determination to use it if necessary, no matter what the consequences.

The Communists are poised and ready to move in swiftly for the kill should we allow either our strength to decline or our resolution to waver. Meanwhile, Communist lead-ers try to keep the free world off balance and in a state of constant turmoil and tension in an effort to uncover any weaknesses which may exist, and to create a succession of crises which they might profitably exploit by propaganda, infiltration, subversion—or an appeal to military force, if they thought they could get away with it.

Our courage and constancy of purpose in such situations may well prove to be the

key to real peace.

The firm stand taken by the United States in the face of recent Communist provocations of this nature in the Taiwan Straits. Lebanon, and West Berlin has given us an invaluable advantage in the so-called cold war. It has inspired greater faith in the hearts of millions who look to us for leadership in opposition to Communist expansion. It has made a significant impression upon the peoples of the uncommitted nations. It has done more to advance our national aims than all the nuclear weapons in our arsenal.

We have demonstrated our steadfast ad-herence to the principle that armed force shall not be used for aggression anywhere on earth. We have proved beyond the possibility of an honest doubt that we will not submit to a shakedown by the Sino-Soviet

conspirators.

When the Soviets issued their ultimatum on Berlin last November, they repudiated their solemn obligations, dishonored their agreements, and provided one more indi-cation that they intend to make any negotiated settlement of the world's grave problems as difficult as they possibly can. In creating a crisis there, they seized what they probably believed was a golden opportunity to split apart the nations of the free world, to seriously damage our moral prestige, and to destroy West Berlin as a disturbing symbol of freedom and progress in an area close to their own shackled and impoverished satellites. They did not succeed.
You may recall that Khrushchev set May

27, 1959, as the deadline for the Western Powers to get out of West Berlin and leave the 21/2 million people of that valiant outpost of freedom to the tender mercies of the Communist tyranny. In response to the Soviet threat, the United States made its support evident to the people of West Berlin. In our commitment we were joined by our principal European allies.

Well, the 27th of May 1959, has come and gone, and Berlin is still free. We intend to remain there until a just and peaceful solution of the problem of divided Germany can be reached. Our adamant refusal to be blackmailed has given new inspiration to free men everywhere. We have proved once again that we will not betray those who trust us-that we will not abdicate our rights, nor shirk our solemn responsibilities in any particular, no matter how threatening the Soviets may be.

Only if we have the military capability to fight and win if war should be thrust upon us can we hope to prevent war, and establish the basis for a just and durable peace. It will be necessary for us to maintain dynamic and powerful Armed Forces for a long, long time to come—for as many years as the dark shadow of Soviet aggression pervades the earth. Obviously our Military Establishment must ever be prepared to respond promptly and effectively to any military threat. Our Army, Navy, Marine Corps, and Air Force.

must be fully manned and properly equipped to perform their assigned missions under any circumstances. We must see to it that it is impossible for the Communist conspiracy to find any type or level of warfare in which it has sufficient advantage to justify aggression by the use of military force anywhere in the world.

The maintenance of the requisite military strength will demand years of dedicated sacrifice and service, not only on the part of successive hundreds of thousands of young men in uniform, but on the part of every American in every walk of life. It will demand a continuing outpouring of our wealth for the tools of war—wealth which could otherwise be channeled into productive efforts for the enhancement of the good life of the American people. However, in the situation which confronts us today, we have no acceptable alternative.

How long must we continue to live under the grievous conditions of an armed truce?

This is the question which I am sure is uppermost in all our minds. The answer will not be found in the multiplication of armaments. We cannot buy true peace with military power. We can buy only the precious opportunity to work for peace. Nor can a stable world order be built through the processes of diplomacy. It cannot be produced by the application of science and technology.

True peace can be brought about only by the growth and fruition of ideals in the hearts of men. The spiritual and intellectual field is the real battleground upon which the future of the world will ultimately be decided.

It should be clearly evident, therefore, that the major task which devolves upon each one of us today is to utilize every talent we possess with the utmost vigor, vision, and creative imagination to help make the power of our American ideals and principles felt throughout the earth.

During four decades of military pressure, false promises, terror, and subversion, the Communists have gained physical dominion over more than a third of all the people in the world, but they have not yet succeeded in persuading their captives to love their chains.

After 41 years of absolute power in Russia, the Soviet regime still cannot count upon the loyalty of millions of its people and those of its satellites who yearn for freedom. Soviet power cannot exist without a huge secret police force, brainwashing, the dictation of every activity of the people, rigid control of the press and of education, and the penalty of death or forced labor in concentration camps as the punishment for dissent. The essential sterility of the Communist system was strikingly demonstrated during the uprisings which have occurred in East Germany, Poland, and Hungary. It is highly significant that the prime movers and principal participants in these satellite revolts against Communist tyranny were students who had been carefully schooled in the Communist dogma ever since their birth. They had never known anything else. Yet they violently rejected it at the risk of their lives. Communism can destroy and enslave but it cannot build anything of lasting worth because it is fundamentally an ideology of degradation.

Freedom, in splendid contrast, has proved itself the greatest uplifting influence in the history of mankind. It is the fulfillment of man's innate longings. Fredom builds a better world because it encourages man's most productive inspirations. Only in the climate of freedom are men able to develop what is in them to the fullest extent, and reach the heights of spiritual exaltation.

It is up to us, to all of us, to work as hard to spread freedom throughout the world as the Communists do to spread tyranny. The hundreds of millions behind the iron and bamboo curtains derive a distorted view of America from the falsehoods continuously fed them by Communist leaders and their puppet press. We must get through to them with the truth about America, and with the inspiration of the spiritual force which is our heritage. We must get through to the people of the uncommitted nations, and let them see us as we really are, not as the Communists paint us in a calculated effort to destroys our influence for good.

We must make sure that all these millions of people appreciate what freedom and democracy really mean to us, that they are not just things we talk about, but that they form the living basis of our everyday life.

People who have heard a lot about our missiles and our machines, but little about our morals and our way of life, might be deceived by the diabolic Soviet charge that Americans are a nation of aggressive, warmongering imperialists. We must make sure that they learn as much about our built-in guarantees against aggression, our long history or moral idealism, and the ingrained habits of thought which underlie the American character as they do about our armaments, our refrigerators, and our automo-biles. We must make it crystal clear to the whole world that we Americans stand for peace and the peaceful triumph of justice and the democratic ideal; that we have ever been willing and ready to help those who need our help without demanding-as Communists demand-their dignity, their sovereignty, and their souls.

If we could get the truth across to the millions of confused people under the heel of the Communist conspiracy, and the other millions in Asia and Africa who are stirring with new ambition to build a better life, I am confident the power of communism, which feeds upon ignorance, superstitution, privation, and fear, would quickly crumble.

privation, and fear, would quickly crumble. That, my friends of the class of 1959, is by far the most important task America has ever faced. It is not a task for the few, but for 177 million Americans. It should be your special concern as oncoming leaders in our national life.

We cannot hope to successfully project the moral influence of America to the far corners of the earth unless we are zealous in keeping our own house in order. Democracy is not like a granite statue which is finished for all time when the sculptor has smoothed away the last rough spot. On the contrary, it is like a ship which needs constant attention by every officer and member of the crew to keep it in repair and moving steadily forward, weathering the rough buffeting of every storm, wind, and wave.

We must recognize that the strength and effectiveness of a democracy does not lie in the form of institutions of government, but stems, rather, from the people themselves, from their sense of responsibility, the respect in which they hold the rights of each other and the laws which govern them, from the dergee in which they value individual liberty and despite authoritarian control, from the measure of their self-reliance, and the quality of their self-discipline.

The American people from the very beginning have enjoyed a greater measure of personal liberty than any other people throughout the whole course of history. We have done so only because as individuals we have voluntarily shouldered the obligations which liberty entails. We have accepted the paramount jurisdiction of the moral law. We have exercised self-restraint in the conduct of our lives. We have developed to a high degree the concept of civic duty. We have recognized our dependence one upon the other, and the vital necessity for voluntary cooperative effort in every field of activity. We have been able to enjoy freedom only because we have

proved ourselves worthy of freedom. We shall continue to enjoy freedom only so long as we continue to deserve it.

Guard well our moral and spiritual bulwarks, for they are far more vital to our future than material progress or military power.

It is not given to most men to play a headline role in shaping history, but every one of us has the power to contribute in some important way to the ongoing of America, and to her beneficient influence in world affairs. If we fall to exercise that power today, we let our country down in her hour of greatest need.

It has been well said that now and in the long run the advantage in the world struggle which is now going on will go to the side which best succeeds in developing the intelligence, competence, and insight of its people.

The influence of each individual citizen upon the life of the community in which he lives can in the long run have a tremendous effect upon this development in the Nation at large.

The advancement of education is a most important area of activity. The encouragement of greater scientific and technological interest among the young people growing up around us is essential to the future well-being of America in competition with the authoritarian education of the Soviet state. However, it is equally essential that in addition to the knowledge and skills required to insure our material progress, we develop in our upcoming generations the utmost in wisdom, vision, and character which will enable man to survive the forces man brings into being. Unless man is able to achieve moral mastery of these forces, they will ultimately destroy our civilization.

The positive emphasis you place upon the development of spiritual values in yourselves and those around you through activity in the religious affairs of your community will have a far-reaching effect upon the upbuilding of America. If we as a Nation ever get away from God, we will surely sink in the morass of materialism. This is a world of constant and impressive change, but never be so dazzled by new things that you feel the old virtues are obsolete, or that their perpetuation is not worth your best efforts.

Nothing will take the place of your active and informed interest and participation in local government. This is where your responsibility you can never afford to shirk. no matter how far you may go, it is a responsibility you can never afford to shirk. In the final analysis, it is not what is done in our State capitals or in Washington which has the most ultimate significance for America, but what is done in the local units of government throughout the Nation. In a very real sense, local government is the cradle of every great decision or momentous policy upon which the destiny of our Nation may depend. Government at the upper levels can be no more decent, wholesome, and effective than is day-by-day govern-ment on the local plane, where America lives, and works, and has her real being-Unless these taproots of self-government are kept strong and healthy, nothing can pre-vent the tree from eventually withering and dying at the top.

Most of you will in the course of time become the heads of families. The family is the foundation stone of our whole social structure, the most important single element of our national power. In all parts of the world, the family has been from time immemorial the major factor in assuring the stability of nations, and the survival of the essentials of human civilization. The surest way to destroy a nation is to destroy the family, as the Communists are now doing in Red China through the establishment of their

notorious commune system. The surest way for a nation to maintain its strength and integrity is to maintain the integrity and authority of the family. From the family units of today, in which love, enlightened guidance, moral upbringing, and proper discipline are apparent, will come the young people who will be willing and able to undertake the hard jobs of tomorrow, and make the real sacrifices which are necessary in every generation to preserve our heritage of freedom. This is your crowning responsibility.

America counts upon men who are firm in faith, stout in heart, and unwavering in zeal. People are always asking: "What will the fu-It is far better to ask: "What ture bring?" we bringing to the future?" Are we bringing doubt and despair, or faith and courage? Are we bringing indecision and weakness, or strength and determination? Are we bringing dependence upon ourselves and our powers alone, or trust in God, the omnipotent? May I leave you with this thought: The future is not something that just happens; it is what we make it by what we do, or fall to do, hour by hour, throughout our lives.

In the words of the poet, Sir Owen Seaman, written during one of the world's dark periods of tribulation:

"Ye that have faith to look with fearless eyes Beyond the tragedy of a world at strife, And trust that out of night and death shall

The dawn of ampler life;

Rejoice, whatever anguish rend your heart.
That God has given you for priceless
dower,

dower,
To live in these great times and have your part

In freedom's crowning hour."

## The World Refugee Problem

EXTENSION OF REMARKS

#### HON. ALEXANDER WILEY

OF WISCONSIN

IN THE SENATE OF THE UNITED STATES
Wednesday, June 10, 1959

Mr. WILEY. Mr. President, recently a conference of more than 160 civic volunteer welfare agency leaders from throughout the country met here in Washington to attempt to deal with the acute world refuse problem.

acute world refugee problem.

The purpose of the conference was to program the U.S. role in the World Refugee Year, created by a United Nations

resolution adopted on December 5, 1958.

The World Refugee Year starts July

1, 1959, and ends July 30, 1960.

The objectives of this special year will

First. To focus international interest

on the refugee problem;

Second. To encourage financial contributions from governments, volunteer agencies, and the general public; and

Third. To encourage further cooperation for permanent refugee solutions through voluntary repatriation, resettlement, or integration, on a humanitarian basis.

In the past, the United States has played a commendable role in the refugee resettlement field. Since 1949, we have spent well over \$1 billion on refugee problems. We recognize, of course, that the solution for the refugee problem is complex. Nevertheless, in view of its humanitarian aspects, as well as the fact that millions of persons who continue to be displaced will prolong, and perhaps even increase, economic and political problems that threaten world peace, this serious situation requires the thoughtful consideration of people everywhere.

There are, of course, a vast number of people in many areas who need to be resettled and integrated into the economic

life of the desired nations.

A recent issue of the Economic World contained an article entitled "World Refugee Problem." The article delineated six specific areas of the world in which there is a concentration of an estimated 2,350,000 refugees.

Because I believe that the seriousness of this situation continues to merit our attention, supplemented by constructive efforts to improve the outlook for these refugees, I ask unanimous consent to have the article printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

[From Economic World, June 1959]
World Refugee Problem—Critical Areas of
Need

There are an estimated 2,350,000 refugees concentrated in six areas of the world who are in desperate straits.

Their immediate needs are for the simple basic necessities of life—food, clothing, medical supplies, housing. In addition, there are thousands more who need help in resettling in strange environments and national economies.

Those areas with the most urgent problems are:

Austria, Germany, Greece, and Italy, where 30,000 refugees still live in camps and are in need of housing, vocational training, small business loans, medical, and welfare services for the aged and infirm, and so forth. This also applies to 100,000 unsettled refugees living outside camps in these four countries plus Belgium, France, the Netherlands, and Turkey.

United Arab Republic, Lebanon, Syria, and Jordan where 1 million Arab refugees are now receiving minimum assistance from the U.N. Relief and Works Agency, but need vocational training, grants for self-support until a political solution is evolved.

Tunisia and Morocco where 170,000 Algerian refugees, mostly children, the rest women and old people, live under extremely primitive conditions, need medical supplies, clothing, soap, olive oil, and food.

Dangerously overcrowded Hong Kong where the 1 million refugees from Communist China must be absorbed into a total population of 3 million. Funds are needed to assist the Hong Kong Government provide food, medical, educational, and other supplies. Aid is needed for housing, vocational training, and small business loans.

Nepal and India with over 10,000 recent Tibetan refugees, and the Chinese refugees in Macao, Thailand, Vietnam, and Laos, all need assistance.

Nine thousand five hundred European refugees still in China need to be resettled while it is still possible for them to leave.

Others, having somewhat better status since they have citizenship rights in their host countries, but who need to be resettled and integrated into the national economies of their asylums, are the North Koreans in

South Korea, the Indians from Pakistan from India, the Vietnamese from North Vietnam, and East Germans who have fied to West Germany.

## Deficiency Payments Planned for Canadian Egg Producers

EXTENSION OF REMARKS

## HON. HUBERT H. HUMPHREY

OF MINNESOTA

IN THE SENATE OF THE UNITED STATES
Wednesday, June 10, 1959

Mr. HUMPHREY. Mr. President, I ask unanimous consent to have printed in the Appendix of the Record an article published in the Manitoba Cooperator of Winnepeg, Manitoba, Canada, entitled "Deficiency Payments Planned for Canadian Egg Producers."

I want my good friends from the eastern seaboard States who have been visiting with the Secretary of Agriculture concerning the egg purchase program to know what our friends in Canada are doing. In contrast to the U.S. Government, the Canadian authorities are taking positive steps to alleviate the low

price on eggs.

Mr. President, while the Department of Agriculture stands by doing little but observing the situation, group after group of our family farmers is plunged into financial disaster by drastic price breaks. It has been brought to the attention of the Senate repeatedly in these past few weeks that egg producers are in serious trouble. The world we live in has been so closely related that it is not surprising to learn that our neighbor, Canada, is also facing serious problems due to the large supplies and low prices of eggs.

In contrast to the U.S. Government, however, Canadian authorities are taking positive steps to alleviate the problem. They are planning to abandon a weak and ineffective purchase program which has many of the characteristics of our program, and undertake the only logical program for this type of commodity, a program of deficiency payments. The Manitoba Cooperator reported this move in its news column and so I ask unanimous consent to have the news article printed in the Appendix of the Record.

There being no objection, the article was ordered to be printed in the Record, as follows:

DEFICIENCY PAYMENTS PLANNED FOR CANADIAN EGG PRODUCERS

The Agricultural Stabilization Board has been advised to develop "as soon as possible a method of providing price support for shell eggs by means of a payment to producers—commonly describd as a deficincy payment—rather than to continue the present method of offer to purchase," Federal Minister of Agriculture Douglas Harkness said in the House of Commons May 7.

"The payment to producers would be calculated on the difference between the actual market price for shell eggs for the period concerned and the prescribed support price. This method, as in the case of the arrangement proposed with respect to hogs, would make it possible to withhold payment from commercial organizations operating under the so-called verticle integration plan, or to restrict payment to a specific volume of eggs delivered by any one producer in a given period," he said.

Mr. Harkness explained that the existing price basis of 44 cents a dozen for grade A large eggs delivered to Montreal will continue in effect for another 12-month period

ending May 5, 1960.

"The volume of eggs marketed through registered grading stations to date this year is 7 percent more than for the same period last year. However, this does not correctly represent the actual increases because of the steadily growing movement of eggs from large-scale producers direct to retail outlets. Because of this, a greater percentage of eggs marketed through registered grading stations are offered to the Agricultural Stabilization Board." he said.

From January to June 1958 the Board purchased 354,412 cases. Up to April 27 of 1959, the Board had purchased 503,073 cases, and shell eggs are still being offered in unprece-

dented volume.

"With many countries of the world developing larger surpluses of shell eggs, the disposal of the surplus accumulated by the Stabilization Board is creating an extremely

serious problem.

"The continued expansion in egg production can be largely attributed to the growth in numbers and size of large commercial producers. Because of integration in this industry and technological developments, the present support program is providing an incentive to commercial operators to increase production," the Minister said.

#### The Late Charles Burlingham

EXTENSION OF REMARKS

## HON. JOHN V. LINDSAY

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Tuesday, May 26, 1959

Mr. LINDSAY. Mr. Speaker, under leave to extend my remarks in the Record, I include the following: On Saturday, June 6, 1959, one of New York's most distinguished citizens passed away. Charles C. Burlingham died quietly in his home in his 100th year.

Seldom has any community been so served by any one man in a lifetime. C. C. Burlingham demonstrated to perfection the citizen's and the lawyer's role

in the community.

Normally I would not insert in the Congressional Record a newspaper article of the following length, but I believe in this case that the New York Times did such an excellent job in documenting C. C. Burlingham's life that I take the liberty of inserting the complete obituary for the enlightenment of my colleagues.

I am honored to have had C. C. Burlingham as one of my constituents: Charles Burlingham Dies at 100; Lawyer Fought for Civil Reform—Leader in Elections of Mitchel and La Guardia Advocated Improvement of Courts

Charles Culp Burlingham, lawyer and one of New York's greatest crusaders for civic virtue, died late Saturday night at his home, 860 Park Avenue, after a short illness. He was 100 years old.

Mr. Burlingham took special pride in the part he had played in election of two reform mayors of New York, John Purroy Mitchel in 1913, and Fiorello H. La Guardia in 1933.

He headed the New York City Bar Association during the period of investigation into abuses in city government that culminated in the resignation of Mayor James J. Walker in 1932. Mr. Burlingham then led the Fusion movement's harmony committee that chose Mr. La Guardia as the reform candidate for mayor.

Though he had been blind and almost totally deaf since 1953, he was described by a friend "as gay as a lark." On his 100th birthday last August, he gave a crisp interview in which he said that New York's greatest need still was to improve its courts—part of the cause to which he had devoted his life.

Mr. Burlingham was regarded by his countless friends as a spirit that could never grow old. Even in his nineties, blind and practically deaf, he retained the wit, humor, understanding, and vigor that marked his life-long career as a force for good government in this city.

His name was attached to countless organizations and activities, to communications to the newspapers, and appeals for one cause or another. But his real effectiveness was behind the scenes of politics and law in the city.

He used his personal charm, his common sense and willingness to realize that society was not perfect to achieve many of the ends that more direct attack might not have yielded.

Mr. Burlingham had been characterized as a one-man good-government party. He was a bit more modest. Chatting one day with a friend, at a conference of persons seeking the reelection of Mayor La Guardia, he said, looking around the room:

"This is the second time in my life that I've been a member of a four-man political party." The first time, he explained, was in

the Mitchel campaign of 1913.

He lent his name and respectability, as well as his activity, to the Fusion cause in 1933, 1937, and 1941, and it is in this connection that present generations knew him best.

#### CITED BY BAR GROUP

The Association of the Bar of the City of New York described Mr. Burlingham as the first citizen of the city when in 1953 it awarded to him a medal for exceptional contributions to the honor and standing of the bar in this community. In 1953 Mr. Burlingham had been appointed to an advisory committee to the executive committee of the association.

At his 90th birthday he was one of New York's oldest practicing lawyers. Even beyond this milestone, neither his influence nor his interest showed much sign of flagging.

Mr. Burlingham continued to head the Civil Service Reform Association; he was chairman of a group working for better methods for removal or rethrement of judges; he was honorary vice president of the Community Service Society (an association that dated to 1889); and he was chairman of the campaign for the restoration of St. George's Protestant Episcopal Church.

A few months before Mr. Burlingham's 100th birthday he wrote as follows to a friend whose portrait was to be presented to

the City Bar Association:

"If I am extant when your portrait is presented, I think I may attend. However, brethren, the time is short and you had better set a painter or sculptor at work soon."

He then added this postscript:
"If you have time to call on me, I should be delighted to talk with you about the attitude of the association this year toward the selection of judges."

To illustrate the need for reforms, Mr. Burlingham used to tell a story about a New York judge in the 1890's who signed documents while trying cases. One day he handed his court clerk an opinion in an important case.

"But, judge," sald the clerk, "you set that case down for argument next Wednesday." "Oh, did I?" replied the judge. "Well.

don't file the opinion yet."

On the day set, the judge heard counsel argue the case at length. After a proper interval, he filed his opinion without changing a word.

#### LAW DEGREE AT COLUMBIA

Mr. Burlingham was the son of the Rev. Dr. Aaron Hale and Mrs. Emma Starr Burlingham. He was born in Plainfield, N.J., on August 31, 1858, and received a bachelor of arts degree from Harvard, at the age of 21.

Two years later he earned a bachelor of laws at Columbia. The university conferred on him an honorary doctor of laws degree in 1933. He was admitted to the bar in 1881, and on September 29, 1883, married Louisa W. Lawrence.

Taking up practice in New York, Mr. Burlingham quickly became active in civic affairs in various fields. He became a member of the board of education in 1897 and served as its president in 1902–03.

From the start he was identified with a wide range of liberal causes. In 1920 he submitted resolutions to the city bar association urging that a committee go to Albany to condemn the assembly's suspension of five Socialist members. He backed a fusion movement to oppose John F. Hylan in 1921.

The 18th amendment, he declared in a statement submitted to an Episcopal diocesan convention in 1922, produced class antagonism and hatred. At the same time, he said it should be obeyed as long as it was law.

Mr. Burlingham was elected a director of the legal aid society in 1925, and also became active in the Civil Service Reform Association. He was deeply interested in the case of Nicola Sacco and Bartolomeo Vanzetti, who had been found guilty of killing two men in a payroll robbery in Braintree, Mass. He expounded his views on legal aspects of the matter in letters to the New York Times.

Despite his manifold professional duties—he ranked high particularly in the field of admiralty law—he found time to share the sponsorship of the printing of the full record of the Sacco-Vanzetti trial and to sign a prefatory note explaining the project. His cosigners included Newton D. Baker, John W. Davis, and Elihu Root. Their purpose was to allow public study of the conduct of the controversial case.

Mr. Burlingham was a Democrat who liked to tell humorous stories about Re-

publicans

"Did you hear about the farmer in Connecticut?" he would ask. "A very respectable fellow, a member of the Congregationalist Church and very high in the Republican Party. He was trampled on by one of his own cows. I say it must have been a Democratic cow."

In 1929, Mr. Burlingham headed a special committee on oldage problems of the Association for Improving the Condition of the Poor. Two months after that committee reported he was elected to head the Association of the Bar of the City of New York. He was at that time senior member of the firm of Burlingham, Veeder, Masten & Feary, of 27 William Street. The firm's most recent listing at the same address was Burlingham, Hupper & Kennedy.

Mr. Burlingham succeeded Charles Evans Hughes in the bar group. Under the new president's leadership the association soon had to cope with problems that were beging to hint that a farflung city investigation might be in the offing. The association conducted the successful removal proceedings against Magistrate Albert H. Vitale.

With ramifications of the city's corruption becoming more and more evident, Mr. Burlingham addressed the State chamber of commerce in 1930 and declared flatly that all law reforms depended upon able judges. All through the period that he headed the bar group he emphasized this ideal.

When the city bar demanded that the then Governor Franklin D. Roosevelt act on charges that judgeships were frequently bought, Mr. Burlingham declared:

"Our Government, indeed our civilization, rests on the integrity of the courts."

All through the exposures that culminated in investigation of the courts the association took a firm stand, under the guldance of Mr. Burlingham. The district attorney, Thomas C. T. Crain, was assalled for inefficiency. Gradually the tenseness of the entire municipal situation increased. The investigation and resignation of Mayor Walker—ultimately the ousting of Tammany and election of the Fusion government—followed.

At the end of Mr. Burlingham's second term as president of the bar association, the nominating committee unanimously named him for a third term. When he was notified, he refused the nomination, saying:

"Dou you expect me to be an ass in a lion's skin? No other man has ever served for three terms except James C. Carter, the lion of the bar of my time, and I would not dare assume his place."

HONORED BY WILLIAMS COLLEGE

He was succeeded as head of the bar group in 1931 by Mr. Davis. A month later Williams College bestowed upon the retiring executive the honorary degree of doctor of laws.

When the Fusion movement took form in the summer of 1933, Mr. Burlingham headed the harmony committee that brought about the substitution of Mr. La Guardia for John F. Ryan as the candidate for mayor. The committee continued to function after the nomination was settled and received a good share of the credit for the Fusion victory.

Never tiring in his fight for an honest judiciary, Mr. Burlingham had in 1932 submitted a resolution to the city bar group calling for a continuous drive to keep the bench free from political and party domination. The resolution was adopted. It was an outgrowth, specifically, of the Hofstadter-Steuer judiciary deal that had been unsuccessfully opposed by a nonpartisan ticket during the November election.

Mr. Burlingham headed the Independent Citizens Committee for the election of Joseph D. McGoldrick as controller in the fall of 1934. About the same time he was chosen president of the Harvard Alumni Association.—He had previously served as president of the alumni association of the Columbia Law School.

From 1931 to 1939, a period covering most of the depression, Mr. Burlingham was president of the Welfare Council of the city of New York. But many other good causes enlisted his energies over the years. These included a Federal child labor amendment, slum clearance, minimum wages, fair employment practices, the fate of conscientious objectors and the admission of women as vestrymen. On the last named subject, he offered resolutions at six successive conventions of the Protestant Episcopal Church.

He was a member of the American Bar Association, the New York County Lawyers Association and the International Law Association. His clubs were the Century, Har-Vard, Downtown, Coffee House and Church.

Mr. Burlingham is survived by his son, Charles Burlingham; a daughter, Miss Anne Hoe Burlingham, 5 grandchildren and 12 great-grandchildren.

By his specific request, the funeral service will be restricted to members of the immediate family. At yesterday's regular service in St. George's Church, of which he was chief warden, special prayers were said for him.

#### From Depression to Prosperity

EXTENSION OF REMARKS

#### HON. RALPH W. YARBOROUGH

OF TEXAS

IN THE SENATE OF THE UNITED STATES

Wednesday, June 10, 1959

Mr. YARBOROUGH. Mr. President, some people have said recently that this Nation should undo some of the constructive legislation which lifted it out of the great depression and return to more freedom.

Not only is our freedom unimpaired today, it is coupled with prosperity—a blessing unknown in the earlier time, which they so fondly recall. Our standard of living has risen greatly since those days of depression.

In his column, The Country Editor, H. M. Baggarly of the Tulia (Tex.) Herald, one of the ablest newspaper editors in the Nation, winner of many State and National journalistic awards, recalls the depression days. I believe his comments are of interest to all.

Mr. President, I ask unanimous consent to have printed in the Appendix of the Record a portion of The Country Editor by H. M. Baggarly, from the Tulia Herald for June 4, 1959.

There being no objection, the excerpts were ordered to be printed in the Record, as follows:

Depression is a word we would like to forget. The mention of the word sends cold chills down our back. But there are times when we need to let our minds wander back to the 1930's for a while. We need to remind ourselves of what a hair-raising depression really is.

Some people apparently have forgotten those terrible days when they demand a return to the climate which breeds great depressions. Among these people are those who demand freedom of the farmer to plant anything he likes in any quantity; those who hold in contempt social security, old age pensions and other buffers between an individual and depression contemptuously called socialism and welfare statism by their opponents; those who fail to see that there are things even worse than some of our present day problems and injustices.

Then there are those too young to remember what a real depression is like. They include many college age youth who can see nothing but the evil in some of the deterrents to depression which are on our statute books.

There are still a few people around who insist that farmers were better off during the depression of the 1930's than they are today.

Troy Morris, editor of the Ropes Plainsman at Ropesville, down in Hockley County, apparently is one who hasn't forgotten so soon the great depression. We quote some of his recent remarks since they so vividly

describe the experiences of many people who lived and suffered during that era:

"We look back over those good old days when a dollar was as large as a cart wheel and a dime would buy as much as a 50-cent piece today. The first time we felt the pinch was when our wages of \$42.50 a week with overtime were cut to \$18 a week and no overtime.

"The second thing we noticed was stores loaded with merchandise for which there was no sale.

"Next, we remember when the bank in the town where we lived got the city to declare a 10-day holiday so it could close and try to get in a position where it would not have to close its doors permanently. Then we went to looking about us—people who had been working steadily found themselves without jobs.

"There were hard times. People were not only without clothes but they were without anything to eat. We went into one place where a man, with a family of five children, had had for five days a big onion and a pan of hot water cornbread. The Red Cross ran out of money. The county could not collect taxes so it had no money with which to help. There was hunger and suffering all around us—there was no shortage of food because the grocery stores had plenty of groceries. A sack of flour sold for a dollar, eggs were 10 cents a dozen, but there were no dollars and dimes to buy them.

"During that time we saw strong men bow their heads and moan because they could not feed and clothe their families. We saw a winter when there was no money for fuel and the cold penetrated the homes of the poor, bringing sickness and death.

"Crops were left in the fields because there was no market for them and the entire Nation was on starvation."

Editor Morris could have mentioned other characteristics of the times. He could have recalled how merchants had to mark off delinquent accounts by the thousands of dollars—usually owed by good and reliable men who were jobless and couldn't pay, much as they wanted. Many of these merchants were forced into bankruptcy and often there were more vacant buildings than occupied ones around a courthouse square.

Owners of rental property often permitted a tenant to go more than a year without paying rent because eviction meant only that the building would be vacant and it might be better off occupied than empty.

So many homes and buildings were moved out of town that cities passed ordinances forbidding people to move houses away because tax rolls were dropping to dangerous levels

Farmers lost their investment in half paid for farms. Sheriff sales were held almost weekly in some localities.

Everybody took cuts—deep cuts—in wages if they were fortunate enough to keep a job. Meanwhile, many budget items such as home and automobile payments, taxes, interest, loan repayments, all remained the same.

Schoolteachers were usually paid in script or I O U's, some of which never was redeemed. Some banks would cash it by discounting it from 10 to 40 percent.

The standard of living dropped to the minimum. People swapped recipes on ways to prepare mush and red beans.

Soup lines for the hungry were established in all cities. And their patrons weren't bums and tramps by any means.

When we demand an end to devices which help protect us from another depression which would make that of the 1930's look like a picnic, we had better count the cost and then decide if acreage controls and a few other regulations are too high a price to pay for a floor to our farm economy.

#### Food For Peace Programs

EXTENSION OF REMARKS OF

#### HON. ALEXANDER WILEY

OF WISCONSIN

IN THE SENATE OF THE UNITED STATES Wednesday, June 10, 1959

Mr. WILEY. Mr. President, today we recognize that the Nation, due to its tremendous agricultural productivity, has a surplus of farm commodities amounting to about \$9 billion worth. The other day I stated that I had been in Illinois, and had seen the multitude of bins filled with wheat and corn.

Theoretically, one would hope such a volume of additional foods would serve to be a blessing, both to our people and

to our economy.
Unfortunately, due to factors that, until now, have been unresolved, this vast volume of surplus farm commodities continues to act-not as a boon to the economy-but as an economic millstone around the necks of the Nation's farm-

ers and taxpayers. Over the years, various ways and means for utilizing these foodstuffs have been examined. There have also been efforts to design farm policies and programs that would not continue to contribute to the tremendous stockpiles. Although these are constructive approaches, no solution has yet proved sufficient to deal with the scope of this surplus problem.

We recognize, of course, that such programs as that of Public Law 480, for sale of surpluses abroad, as well as our school-lunch and school-milk programs and some types of relief programs, have helped provide useful outlets for the sur-

plus farm products.

Currently, too, there are before Congress additional legislative proposals for dealing with this situation.

Increasingly, it is felt-and, I believe. rightly so-that surplus farm products can, and should, be used, not only for humanitarian purpose, but also as strategic aids in conjunction with our foreign policy, as well as to help build friendship and good will among nations.

A recent issue of the Wisconsin Agriculturist carried an editorial entitled "If 'Food for Peace' Programs Could Prevent One Korean War, the Cost Would be Small." The editorial examines instances in which utilization of surplus food products serves humanitarian and policy purposes; and the editorial contains some suggestions for revising the

In order to give other Senators the benefit of these views, I ask unanimous consent to have the editorial printed in the Appendix of the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

IF "FOOD FOR PEACE" PROGRAMS COULD PRE-VENT ONE KOREAN WAR, THE COST WOULD BE SMALL

"Food for peace" programs have the attention of Congress. Strongly backed by some Congressmen, they would shore up and improve our surplus food disposal overseas. U.S. farm surpluses have already made a great contribution in helping build economically poor nations of the free world. Up until the end of last year, we had shipped or earmarked for shipping, nearly \$6 billion worth of farm surpluses under Public Law 480. Our surplus food could make an even more significant contribution.

Up until the beginning of this year a total of \$1.6 billion of local currencies paid to us by foreign countries for farm surpluses have been loaned back to these countries for eco-

nomic development programs.

But many of these countries have not as yet seen any lasting benefits from the loans. True, the people have had more to eat. But too often there is a long lag between the time they receive the shipment of surplus food and the beginning of the development pro-

Surplus food should be used at the time the project is underway for most efficient economic development. This helps soak up the extra purchasing power of the workers on the projects and prevents inflation in the country. It means that the surplus substitutes for most of the wages paid to workers.

#### WE'VE GOT PLENTY OF FOOD

At present our Government must complete surplus sales in a short time. But to be effective, surplus food must be keyed in with the development project. In large projects this may mean a period of 5 years or more. At present the Government has no such authority.

Such programs using surplus food should also be tied in with our dollar aid. In some projects this may be from 10 to 20 percent of the total cost of the project.

Some provision should be made for shipping overseas, foods that are plentiful, but not necessarily stored up in Government warehouses. We have lots of wheat in surplus. But high starch foods such as wheat must have proteins to go with them for a balanced diet. Our Government should have authority to buy up plentiful foods—such as pork—to balance out dietwise the foods we have for surplus sale.

#### PROGRAM CAN BE MORE EFFECTIVE

If our surplus food program is to be effective in economic development, we can't afford to let the State Department use it as a short time international political weapon. Few countries would want to get involved in any longtime program if they feel that the supplies may be cut off at any moment when they disagreed with our international policies

We can make Public Law 480 into a far more effective program for economic development in the poor countries of the free world. This is the challenge that faces Con-

Such programs will cost us money. But the cost is far less than the increasing dollars we will need for an ever-growing arsenal of jets and missiles. Our military costs will continue to climb if communism captures more countries of the free world. We can afford to spend a great deal of money for economic development overseas if it prevents even one Korean war.

#### Problems of the Aged

EXTENSION OF REMARKS OF

#### HON. PAT McNAMARA

OF MICHIGAN

IN THE SENATE OF THE UNITED STATES Wednesday, June 10, 1959

Mr. McNAMARA, Mr. President, I ask unanimous consent that a radio broadcast on June 4 by Edward P. Morgan over the ABC network, describing the goals of the Senate Subcommittee on Problems of the Aged and Aging, be printed in the Appendix of the RECORD.

There being no objection, the radio broadcast was ordered to be printed in the RECORD, as follows:

EDWARD P. MORGAN AND THE NEWS, JUNE 4. 1959

Is there anybody who, in trying to peer into his own private future, has not caught a glimpse of the emptiness of old age and then, with a secret shiver, quickly turned away? The insurance ads tell how the twilight of life can be warmly tinted with the sunset of a carefully financed retirement, and so it can for some, but one of the bleaker truths of the American dream is our cruel neglect of the aged.

In the United States today there are 151/2 million persons—nearly a tenth of the total population—who are 65 or over. Thanks to medical and other improvements Americans are living longer lives though not necessarily happier ones. Sixty percent of that 65-or-over class—more than 9 million men and women-have an average income of less

than \$1,000 a year.

The time has come when the politicians are going to have to give more consideration to these people than referring to them gently as "senior citizens." After all they can vote too. It is a little odd perhaps that some latter-day Dr. Townsend hasn't yet come along to weld the oldsters into a massive lobby. Fortunately, any such exploita-tion may be forestalled if an incipient move in Congress and a more remote one in the executive branch bear, as is hoped, serious fruit.

Week after next a brandnew Senate subcommittee on the problems of the aged and aging will be briefed during 3 days of public hearings in Washington by panels of experts in the fields of health, housing, employment, finances and general welfare of senior citizens. The subcommittee, a creature of Lis-TER HILL's vigorous Labor and Public Welfare Committee, was largely conceived by an ex-pipefitter, Michigan's senior Senator, PAT McNamara, whose own age is a robust 64. It includes three other Democrats, KENNEDY. of Massachusetts; Clark, of Pennsylvania; Randolph, of West Virginia; and two Republicans, GOLDWATER, of Arizona; and DIRKSEN, of Illinois

After this kickoff the McNamara subcommittee—on a modest \$85,000 budget—plans to hold hearings in various parts of country. A staff, headed by a former consultant to the Council of State Governments, Sidney Spector, who is also an authority in political science and mental health, and Research Director Harold Sheppard, an industrial sociologist from Detroit's Wayne University, will conduct investigations in homes for the aged, mental hospitals and other institutions and interview a wide variety of senior citizens all across the land. Their timetable calls for a formal report with legis-lative recommendations by January 1960. Democrats are reportedly pleased with this sequence, not only because it may give a Democratic Congress a chance to come up with some positive measures on a problem that will be a growing issue in a presidential election year, but because White House conference on aging is not scheduled until January 1961. Only 3 days ago the Secretary of Health, Education, and Welfare, Arthur S. Flemming, named a panel of 130 citizens to be the advisory committee to that conference, though plans to hold it were made months ago.

It may be one of the subcommittee's ambitions to do the White House conference's work for it-a year ahead of time-but the field, as Director Spector readily concedes,

is vast and much needs to be done. An urgent problem is illness and medical emergen-cies, "How to finance a sudden operation and care for an elderly relative can be a paralyzing fear for a whole family," he says. Some kind of hospital insurance addition to social security might be one solution but this is only part of the committee's assignment. Others include employment discrimination against the aged; and their housing needs. Most old people live alone. Spector hopes research and investigation will indicate that by improvements in health and housing, a major rehabilitation of this im-Portant segment of society may be achieved, giving the aged something to live for.

## Oregon's Centennial Exposition and Trade Fair Opens With 100-Gun Salute Today

EXTENSION OF REMARKS OF

## HON, RICHARD L. NEUBERGER

OF OREGON

IN THE SENATE OF THE UNITED STATES Wednesday, June 10, 1959

Mr. NEUBERGER. Mr. President, today at noon in Portland, the biggest single event of Oregon's centennial year, the Centennial Exposition and International Trade Fair, opens for 100 days With a burst of rocketry and a 100-gun salute.

Mr. President, I do not need to recite again the highlights of this exposition or to remind my colleagues of the scenic grandeur at the end of the old Oregon Trail in my centennial State this year. I take this time only to take official notice of the opening today of the biggest of the centennial events; I am sure I will be joined by many of my colleagues and their constituents in celebrating this 100th birthday in Oregon later this year.

I ask unanimous consent that a news item from the Portland Oregonian of June 6, 1959, entitled "Festivities Kick Off Exposition," together with a telegram which I have just sent to Hon. Anthony Brandenthaler, chairman of the Oregon Centennial Commission, be included with my remarks in the Appendix of the RECORD.

There being no objection, the article and telegram were ordered to be printed in the RECORD, as follows:

[From the Portland Oregonian, June 6, 1959] FESTIVITIES KICK OFF EXPOSITION—CATTLE
DRIVE, PARKROSE FETE START BIG DAYS

The International Trade Fair and Exposition, an event all Oregon has been awaiting is almost at hand, and centennial flavored occasions the next few days point up the fact that the big show is indeed on the road.

Redmond will kick off its historical events with a cattle drive Saturday through the main street, which has been false-fronted frontier style for the celebration, when 100 head of cattle will be driven through the town in all day festivities.

#### PARKROSE FETE DUE

Simultaneously, Parkrose will open its centennial booth on Northeast 117th Avenue, and Sandy Boulevard, commencing at 1:30 p.m. A covered wagon will be pulled by manpower from 99th and Sandy to the booth through the main section of the suburb.

Monday at 3 p.m., a radio-TV press preview will be held at the exposition, and at 7:30 p.m., will be the dedication of the Hall of Religious History, with Jewish, Catholic, and Protestant participation, remarks by the architect on the building and by Carl Morris, the artist, on his religious murals.

A newspaper press preview of the exposi-tion will be at 3 p.m., Tuesday.

#### HATFIELD'S ROLE TOLD

The big day will be Wednesday, when at noon the centennial will be opened officially by Gov. Mark O. Hatfield, TV personality Raymond Burr, and dignitaries in a burst of rockets and 100-gun salute.

Opening performance of the Ice Capades will be at 8:15 p.m., Thursday.

HON. ANTHONY BRANDENTHALER,

Chairman, Oregon Centennial Commission, Jackson Tower, Portland, Oreg .:

Congratulations on opening today of Centennial Exposition and International Trade Fair. This is crowning achievement to months of hard work by you and commission colleagues. I am sure exposition's 100 days, brilliantly reflect Oregon's 100 years of statehood. Best wishes for continued success in this wonderful year's activity.

Regards.

DICK NEUBERGER, U.S. Senator.

## To Remove Inequity in Treatment of Our Disabled Veterans, H.R. 4808

EXTENSION OF REMARKS

#### HON, ABRAHAM J. MULTER

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES Wednesday, June 10, 1959

Mr. MULTER. Mr. Speaker, on February 19, 1959, I introduced H.R. 4808 to increase the limitations on the amount of outside income which disabled veterans may receive from the present \$1,-400 a year for a single veteran or a widow without children and \$2,700 for a married veteran with a family or a widow with children. My bill would raise these amounts to \$1,800 and \$3,000 respectively.

The cost of living has increased since 1952, and while the social security plan and the railroad retirement plan have been adjusted, no adjustment has been made for these disabled veterans and widows and children of decreased veterans.

It was my privilege yesterday to present a statement in support of my bill to the House Veterans' Affairs Committee which is now considering the general subject of veterans pensions. My statement follows:

STATEMENT OF REPRESENTATIVE ABRAHAM J. MULTER, DEMOCRAT, OF NEW YORK, BEFORE THE HOUSE VETERANS' AFFAIRS COMMITTEE RE H.R. 4808, JUNE 9, 1959

Mr. Chairman, may I express my appreciation to the committee for permitting me to appear before you today on behalf of my bill, H.R. 4808, which will amend existing law to increase the annual income limitation affecting pensions paid to veterans of World War I, World War II, and the Korean conflict who are permanently and totally disabled from non-service-connected causes and the widows and children of deceased veterans.

As you know, present law sets a limitation on other income of \$1,400 for a single veteran or a widow without children and \$2,700 for a married veteran with a family or a widow with children. My bill would raise these amounts to \$1,800 and \$3,000, respec-

As you know, Mr. Chairman, no change has been made in this respect since 1952 a time when the cost of living was considerably less than it is today. In that year the cost of living index (using the 1947-49 cost as 100) stood at 113.5. Today it has climbed to 123,7 using the same measuring rod. In other words, it has risen by at least 10 points. But, while today's dollar has shunken in value, and while today's wages have risen, we are still applying the same income standards with respect to disabled veterans and the widows and children of deceased veterans which were applied in 1952.

I am convinced that we must, therefore, make the same cost-of-living adjustment on their behalf which we have made in connection with other plans governed by Federal law—such as the social security plan and the railroad retirement plan in which costof-living adjustments upward have been made on two different occasions since 1952. Likewise, for the same reason, we have increased the salaries of Federal workers and made similar adjustments in other Federal programs. In the face of this record, it is inconceivable to me that we can delay any longer in making a reasonable adjustment regarding the income limitations set for veterans and their families.

We are not concerned here with an increase in the amount of pensions paidalthough we might well be, since they currently amount to only about \$66.15 a month—or \$78.75 a month for veterans who have received such a pension for 10 years or are over 65. At the same time a widow is entitled to \$50.40 a month and a widow with a child is entitled to \$63 a month, with \$7.56 added for each additional child. surviving child with no mother is granted \$27.30 a month, two children \$54.60 a month, and for each additional child \$7.56. These amounts, in themselves, are certainly not enough to keep body and soul together, let alone provide for the kind of medical attention often required because of a disability. Certainly we can, therefore, liberalize the law so that the veteran or widow who has other income-either in the form of earnings or from any other source-can be allowed to use this income, in addition to the pension payments up to the more reasonable figure of \$1,800 a year for the single veteran or widow without children and \$3,000 for the married veteran or widow with children. If it is necessary to retain this concept of relative need in the case of such payments, we should certainly be willing to adjust our measure of need to the purchasing power of today's dollars.

Another feature of the present limitation which works a particular hardship at present income-limitation levels, is the fact that when the level is reached, all pension payments for the year are canceled. this respect this provision is unlike the income limitation in social security which allows earnings of \$1,200 a year and then cancels benefits on the basis of monthly income-one benefit being cancelled for each month in which earnings above the \$1,200 figure total \$80 or a fraction thereof. The result is that an individual loses all of his monthly social security benefits only when he has earned more than \$880 in addition to the \$1,200, or more than \$2,080 in all, Moreover, social security's income limitation applies only to earned income whereas the income limitation for veterans applies both to earned and unearned income.

I feel certain that the committee will give this matter its most earnest consideration. Because I am confident of the merits of this case, I believe you will be convinced that some reasonable adjustment in this matter must be made—and that at an early date.

#### Poison in Your Water-No. 110

EXTENSION OF REMARKS

## HON. JOHN D. DINGELL

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Wednesday, June 10, 1959

Mr. DINGELL. Mr. Speaker, pursuant to permission granted I am inserting into the Appendix of the Congressional. Record an article appearing in the Pittsburgh (Pa.) Post-Gazette of April 20, 1959, entitled "Penn Hills Battles Sewage":

COMMUNITY PLANS NEW DISPOSAL SYSTEM— PENN HILLS BATTLES SEWAGE—RESIDENTS ARE SEEKING PREPAID ASSESSMENTS TO COVER COST OF INSTALLING OWN SEWER LINES

A particularly trying sewage problem that has been plaguing residents of a Penn Hills Township housing development, seems headed for solution with township officials and residents of the area teaming up to solve it.

And the solution can't come too quickly for harried Valemont Heights housewives, for whom every day brings blue Monday washday blues.

The problem arose when it became apparent that septic tanks installed when the homes were built nearly 5 years ago were wholly inadequate for the job.

Because the soil in that northern part of Penn Hills Township is predominantly clay and nearly always waterlogged, the septic tanks could not carry off the refuse adequately. Everyone began having trouble and continued having trouble, according to Mrs. William W. H. Berg, Jr., of 629 Valemont

Various residents of the section were forced to put in costly repairs and enlargements to their drainage systems, but that usually improved things for only a short time.

Now, practically all families in the area drain off all water from washing machines, sinks, and bathtubs into the street, saving their septic tank capacity for toilet drainage. The result is a constant supply of stagnant, filthy water lying along the streets, which have no storm sewers.

Finally, about 200 of the residents of the area formed the North Penn Civic Club, which got things moving somewhat.

For one thing they elected Frank Sullivan township commissioner. In his official capacity, he discovered the township wanted to build sewers for the section, but no money was available.

He conceived and started in motion a plan whereby the citizens could get sewers by raising about 65 percent of the cost in a sort of "prepaid" assessment which would run from \$600 to \$1,000 per dwelling.

The Civic Club's Sewer Committee, under the chairmanship of Attorney Carl W. Brueck, Jr., is currently trying to do just

Attorney Brueck said he hopes the money can be raised by fall to permit a quick start on the sewer project. "But many people find that money hard to raise," he said.

Township Manager John H. Immel said the township probably would be financially able to undertake the job in about 2 years.

Thus, the end of the problem is in sight.
Mrs. Berg echoed the sentiments of other
housewives in the district:

"It can't come too soon."

#### The Family-Sized Farm

EXTENSION OF REMARKS

#### HON. RALPH W. YARBOROUGH

OF TEXAS

IN THE SENATE OF THE UNITED STATES
Wednesday, June 10, 1959

Mr. YARBOROUGH. Mr. President, although our Nation is currently enjoying a time of agricultural plenty this can turn into a time of national famine if we do not look ahead and plan ahead.

Some experts have predicted that the southwestern United States could become more arid. Other experts say there may be a food shortage in about a generation because of the increasing population.

Mr. President, to prevent the latter catastrophe better agricultural methods must be established, more young people must be encouraged to remain in the field of agriculture, and the family-sized farm, the basis of our food production industry, must be preserved. These are the small businessmen of the agricultural industry.

I ask unanimous consent to have printed in the Appendix of the Record an article by State Senator Culp Krueger, entitled "Capitol Coffee Break," printed in a recent issue of the El Campo (Tex.) Leader-News.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

CAPITOL COFFEE BREAK WITH YOUR SENATOR, CULP KRUEGER

DEAR HERSCHIEL AND FRIENDS: I feel sure all the people of our district would be most interested in reading the following resolution which was presented to the Senate Tuesday morning by your Senator trying to again draw to the attention of our national leadership a situation which confronts all of our smaller communities.

I was particularly pleased that on conclusion of the reading of this resolution before the senate, Senator Hazlewood of Amarillo moved that the names of the Lieutenant Governor and all members of the senate be added as cosponsors to this resolution. His motion was passed unanimously. Previously some 16 had voluntarily signed the resolution.

"SENATE RESOLUTION 569 BY KRUEGER

"Whereas a way of life, fought for throughout the ages and finding its first victory in the birth of America, dedicated to giving the youth of each succeeding generation freedom in the right of choice, not only of religion, press, speech, educational opportunities but also freedom to the pursuit of happiness by lawful means in the effort to earn a livelihood in the field of its choice; and

"Whereas all of this has been done in the name of efficiency, ignoring completely the people and the human desire to the point of bowing to the Communist policy that people do not count; and

"Resolved, That the leadership of America awake to the role that the small family farmer and the small communities of our Nation have played and should continue to play in this, the great drama of America before God and man, in making steadfast and secure the desire to preserve our cherished way of life which found its first victory in the birth of America; and be it further

the birth of America; and be it further "Resolved. That the role of the small family farmer and the small community be viewed in the light of social, moral, and spiritual values, as well as in the light of

economic efficiency; and be it further "Resolved. That the leadership of America reafirm their belief in the basic tenet that people do count, and that the youth of our small communities shall not be called upon to leave to live."

## Federal Versus States Rights

EXTENSION OF REMARKS

#### HON. WALTER M. MUMMA

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES Wednesday, June 10, 1959

Mr. MUMMA. Mr. Speaker, I would like to include at this point in the RECORD an editorial from the Lebanon Daily News of June 1, 1959, entitled "Laws Must Spell It Out."

This is the general feeling in my district since the House took action last year and the Senate did not, which has been the subject of editorial comment. The article follows:

#### LAWS MUST SPELL IT OUT

Congress has a bill before it which would go far toward clearing up future legislative and judicial muddles over Federal versus States rights. The bill, authored by Representative Howard Smith, of Virginia, would require Congress to spell out in each piece of legislation whether it intends that law to supersede or complement similar enactments in the various States.

There was no need for this legislation until a few years ago. Legal experts took it for granted that the 10th article of the Bill of Rights, which says, "The powers not delegated to the United States by the Constitution, nor prohibited by it to the States, are reserved to the States respectively, or to the

people," meant what it said.

A liberal Supreme Court, however, began adopting what it called a policy of preemption, which holds that Federal and State laws on the same subject only confuse the picture, and the Court has specifically accepted Federal law as superseding similar ones in the States, although such intention was never voiced by Congress nor written into the law. The tendency has been to avoid Federal-State squabbles by the simple expedient of denying the States jurisdiction in areas covered by national laws.

Among the more famous Supreme Court

Among the more ramous supreme Court decisions incorporating the policy of preemption was that which upset the conviction of Pennsylvania's top Communist, Steve Nelsen, under a State subversive act. The Supreme Court, in effect, held that Federal acts preempt the field of subversive control

and State laws are invalid.

If the Constitution is not to be flavored by changing political philosophies, Congress must be more specific in its legislative intent. It is no longer sufficient to assume the States have those rights not specifically denied them by the legislative branch of the Federal Government. The judicial branch has decreed otherwise.

#### A Balanced Budget

EXTENSION OF REMARKS

#### HON. THOMAS M. PELLY

OF WASHINGTON

IN THE HOUSE OF REPRESENTATIVES Wednesday, June 10, 1959

Mr. PELLY. Mr. Speaker, this morning's New York Times has a thought-provoking editorial. Under unanimous consent I will include it following these remarks.

Members of Congress can argue, with or without partisan bias, on the issue of budget-busting and as to the economic consequences of exceeding the President's budget. However, I suggest that inflation and an increase in the cost of living is not a threat—it is an actuality. It is here; and those of us, Democrats and Republicans alike, should stand together for a balanced budget. If we do this we can allow our voting records and our constituents to settle the argument as to which party should get the blame or the credit for the program of this Congress. The editorial follows:

NO TIME FOR STIMULANTS

No one can read the current monthly review of the New York Federal Reserve Bank, it seems to us, without coming away with the conclusion that the present recovery has now reached the stage where those who stand for economic expansion without a resurgence of inflation should take their places squarely behind the administration's objective of a balanced budget in 1960. They should recognize the fact that the time has come to take the patient, the national economy, off the artificial stimulants that, however, suitable to conditions prevailing in 1958, can promise today only a renewal of inflationary pressures in the months ahead.

Even the lag in reemployment that was the chief rationalization for the report of the

spending-minded majority of the Joint Congressional Committee on the Economic Report is on its way to early elimination. This is indicated by three facts: (1) The reemployment figures for March and April were better than seasonal; (2) the traditional prerequisite to the elimination of the lag in cyclical reemployment has now been achieved—namely, the restoration of the work week to prerecession levels; (3) finally, we moved, in April, out of that part of the year when unemployment is always abnormally high and now face a period of 6 months when seasonal influence will be increasingly favorable.

For some months after the recession struck, labor costs per unit of production declined. This situation, partly as a result of widespread wage increases, has reversed itself. There is evidence, in short, of a return to the wage-cost price push that contributed so importantly to rising living costs beginning with the spring of 1956. In fact, as the New York Reserve Bank points out, price inflation is no longer the academic subject it was a few months ago. Wholesale prices are already up 2 percent since earlier in the year and nonfarm retail prices are up 1½ percent.

#### The African Revolution

EXTENSION OF REMARKS

#### HON. LEONARD G. WOLF

OF TOWA

IN THE HOUSE OF REPRESENTATIVES
Wednesday, June 10, 1959

Mr. WOLF. Mr. Speaker, the Times-Democrat, a fine newspaper in Davenport, Iowa, printed an editorial by a guest editorialist on May 16 which bears considerable thought by all of us. The article was written by Francis Kanyua of Nairobi Kenya, East Africa. Mr. Kanyua is a scholarship student at Augustana College. He discusses the African revolution and the cries of "Uhuru, Uhuru"-freedom, freedom. Let us not mistake these cries of freedom. Let us hope that we will have the courage to champion freedom in Africa just as we championed freedom in 1776. Let us heed the cries of those who are struggling for such independence in Africa where millions of Africans are awakening to the fact that there is no reason that they have to be denied economic and human rights which are presently denied them as a result of foreign imperialist domination.

Let us not forget that history in the grandest sense is man's struggle for freedom and dignity; and never has this been so clear as in the 20th century:

THE AFRICAN REVOLUTION
There is revolution in Africa today.

Awakened nationalism is sweeping the continent like raging brush fire. Uhuru! Uhuru! is the cry of freedom echoed every-

Uhuru! is the cry of freedom echoed everywhere. Whether it is in Nigeria on the west coast, the Belgian Congo in the central area, or Kenya far to the east, the story is the same.

These countries are no longer content to remain under colonial powers which have long dominated and exploited them. The African today is revolting against this paternalism which does not allow for full self-determination.

Nationalistic movements are gaining momentum everywhere and nothing short of full independence wil stop them. Most of the Africans consider self-rule a right. The attempts of colonial powers to strangle nationalism never succeed.

They only lead to the adoption of a substitute which is often embraced with more vehemence and extremism, as was clearly demonstrated by the emergence of mau mau. The Africans abhor violence like anyone and are determined to get their legitimate rights by peaceful means.

Fortunately, many of the colonial powers have already promised or given independence. There is no mistake which way the

tide is moving.

Much of this trend can be attributed to the rise of an educated class which has produced very dynamic leaders such as Dr. Kwame Nkrumah; "Zik" of Nigeria; Banda, of Nyasaland; Tom Mboya, of Kenya, and many more I could name. However, contrary to common belief, these leaders have not in reality introduced anything new. They have only codified already existing ideas into a coherent program and channeled these ideas through effective political parties.

Ghana, formerly a British colony, is now independent. Under the leadership of Kwame Nkrumah it is now Africa's show country. In the short span of 5 years Ghana has done wonders. Through mass education and other techniques the literacy rate has increased from 25 percent to a reasonable 75 percent—one of the highest in Africa. Other African countries are asking, if they can do it, why can't we? More countries are likely to follow Ghana's footsteps in the future for democracy cannot be withheld from masses of people forever.

As these countries become independent they will add power and influence to the Afro-Asian group and the consequences for the United State of America and the free

world can hardly be overlooked.

While there were only a handful of African nations in the United Nations in 1945, now there are 10. Next year there will be 14, and this trend is likely to continue for some time.

The Communists are not blind to this importance and are doing all they can to spread the good things that communism offers. At the moment the Communists have no stronghold in Africa, but their influence is greater than ever before.

When a Russian Ambassador was allowed to enter one West African country last month, he quickly announced that he was bringing a staff of 75 with him.

The tendency of most emergent African nations is to be neutralistic, but the position of the United States of America in Africa depends entirely on herself. At the moment she has a high prestige on most of the continent, but this may soon be lost. Money alone will not solve the problem. A better understanding and sympathy may do more than mere grants.

The United States should seek more infor-

The United States should seek more information and offer the hand of genuine friendship. On such terms will lasting friendship be found. Africa does not want to turn Communist. She has too much in common with the West in cultural and commercial affairs. The Africans also realize their dependence on the West for capital and technical help which is so desperately needed for development.

Misunderstandings and suspicion, however, may jeopardize the position of the United States in Africa. Previous encounters with colonials have been unfortunate and this has led to suspicion and mistrust.

What is the feeling of the United States about the war in Algeria where 50,000 Moslems have already been killed by the French for demanding independence? Why does the

United States not condemn the apartheid policies of the South African Government where basic human rights are deliberately denied to millions of non-Europeans?

These are things which jeopardize the leadership of the United States on the African Continent and among uncommitted

After all, America has a remarkable tradition of opposition to any form of tyranny. Why are these things ignored and allowed to go on? A firm policy deploring all forms of oppression and assisting the newly independent states to achieve economic stability would be invaluable.

When the position of the United States is clear in this matter, we may yet come to see the Afro-Asian group accept the United States as the unchallenged leader of the free world.

Statement of Fred J. Hollenbeck, National Commander, Veterans of World War I, on Subject of Non-Service-Connected Veterans Pension Program

EXTENSION OF REMARKS

## HON. THOMAS J. LANE

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES Tuesday, June 9, 1959

Mr. LANE. Mr. Speaker, under leave to extend my remarks in the Record, I include the testimony of Fred J. Hollenbeck, national commander of the Veterans of World War I of the U.S.A., Inc., before the Committee on Veterans Affairs:

STATEMENT OF FRED J. HOLLENBECK, NATIONAL COMMANDER, VETERANS OF WORLD WAR I OF THE U.S.A., INC., BEFORE THE COMMITTEE ON VETERANS AFFAIRS, HOUSE OF REPRESENTATIVES, CONCERNING THE SUBJECT OF NON-SERVICE-CONNECTED VETERANS PENSION PROGRAM AS CONTAINED IN H.R. 1181 AND COMPARABLE BILLS

Mr. Chairman, Mrs. Rogers and members of the distinguished Committee on Veterans Affairs, the Veterans of World War I of the U.S.A., Inc., deeply appreciate the courtesy extended to us to appear before your committee to offer testimony in behalf of the Veterans of World War I pension program as contained in H.R. 1181 and other bills of a similar nature.

For some time past we of the Veterans of World War I have been giving careful study and serious consideration to the problem of the aging veteran of our war. I would like to briefly review the pension program and our position in connection with same.

Since the Revolutionary War, the Congress of the United States has granted pensions to veterans of all wars with no restriction except as to age and length of service and in none of these wars did the question of need appear as there does not seem to be a record of income restrictions on these pensions. Therefore, non-service-connected as we knew it before World War I was neither a needs program nor a retirement plan. It was the payment of a just debt to those who had served their country in time of war.

It should be noted in discussing the matter of pensions that Congress of the past have avoided anything that looked like the requirement of a pauper's oath in order to secure such a pension. It is with this historical reminder and brief review of the history of pensions that we premise our sincere request that this committee and the Congress pass pension legislation along the lines contained in H.R. 1181.

The files in our national headquarters are filled with appeals from men who have served in World War I pleading with us to do everything we can to secure for them a pension of \$100 per month. These letters indicate that the writers do not have social security or other outside income and they are in direcircumstances but do not want to go on the public dole to eke out an existence. They are bitter in what they feel is the lack of gratitude on the part of this Nation in not long ago having granted them the same consideration as has been granted to all other wars prior to World War I.

A recent news story under a St. Louis dateline gives us something to think about and we present it to this committee to further show the plight of those persons who have reached the age of 60 or over:

"TROUBLES TOO GREAT—ELDERLY COUPLE CHOOSE

"St. Louis.—An elderly St. Louis couple were found dead in bed Sunday. Near them was a note describing the despair they felt in trying to cope with financial problems and painful illness.

"The manner in which Joseph M. Palmisano, 65, and his wife, Sabina, 63, died is a mystery. Police found no marks of violence or other outward signs of the cause of death.

"The note was written by Mrs. Palmisano and addressed "To Whom it May Concern'. It said they had tried to get in a home for the aged but couldn't afford it.

"This is a coward's way out, but better this way than to be a burden,' she wrote. 'I have suffered more than I can tell you. We tried to get in a home, \$4,800 a year. When we heard the cost we knew there was no other out. What are people like Joe and

I to do? I pray God will forgive us for taking this way out."

We sincerely hope and trust that the Congress of the United States will never adopt need as the first criteria for eligibility for war veterans non-service-connected pension. The word "need" signifies charity, and we have always stood for the proposition that a war veteran should never be left dependent on local charity. That is one of the prime reasons the Congress has maintained pensions for war service as honorary and, further, because in most every war but particularly in World War I there have existed cases where medical records were either lost or never made or were inadequate and men with actual service-connected disabilities have existed in large numbers. Therefore, the application of the needs clause would work a grave injustice on them.

There are 2,000,796 survivors of World War I and their average age is 64.8. They are dying at the rate of approximately 100,000 a year and these men are depending upon us and the Members of the Congress to do something for them before it is too late.

H.R. 1181 is a bill which would answer the prayers of these stalwart men of another day who served their Nation well, for it is a bill designed to provide \$100 a month to veterans of World War I who are 60 years of age, who served 90 days or more, and have an honorable discharge, and it has income limitations of \$2,400 for those with no dependents and \$3,800 to those with dependents, but it also provides that social security or other pensions and annulties into which the veteran has paid shall be excluded by the Veterans' Administration in computing income.

I wonder if we would be out of orden to call the attention of this distinguished committee to the fact that the President signed into law a bill amending the Railroad Retirement Act, May 19, 1959, which contains a provision excluding railroad retirement

benefits from being computed as income for non-service-connected disability pension benefits, and I believe the record will bear us out when we call attention to the fact that there is presently pending in the House Ways and Means Committee legislation which would do the same thing to social security beneficiaries.

Mr. Chairman and members of the committee, at this point we wish to go on record as opposing the passage of H.R. 6432 as a bill designed to destroy the traditional American concept of pensions for aging war veterans and also because it contains restrictive legislation which has never heretofore been a requirement to secure non-serviceconnected pension. Also, enactment of this legislation will lower the standard of living enjoyed by veterans who have been receiving pensions in all wars prior to 1917, and we do not believe this committee would want to do that. Also, we wonder if the committee will take into serious consideration the increased cost of administration of this type of legislation.

Economically, the passage of H.R. 1181 will be felt the length and breadth of this Nation. for the recipient of this pension will immediately channel it into the economic stream

of the Nation.

Most, if not all, of the money will be spent for the necessities of life, and it will cause its recipient to hold his head high in respect and no longer give him a reason for saying "We are the forgotten veterans of all wars."

Mr. Chairman and members of this committee, we strongly urge at this time that pension legislation be considered which is applicable only to the veterans of World War I. We feel that the veterans of World War II should have a pension, but we would suggest a different approach to their pension legislation, and at some later date we would like to offer our thoughts along that line, but we do feel that pension legislation should be limited in this session of the Congress to the veterans of World War I as provided for in H.R. 1181 or comparable bills.

We also strongly urge and recommend that present service-connected compensation rates be increased to meet the growing cost of living. We also urge that you earnestly consider increasing World War I widows' pensions and raising the income limitations of those pensions but we sincerely and urgently suggest the committee give serious thought to including the widows of World War II in this type of pension program.

We should point out to this committee that the major veterans organizations at the beginning of World War II were made up exclusively of veterans of World War I and the Spanish American War veterans. We should further call the committee's attention to the fact that these men, World War I and Spanish War veterans, in the major veterans organizations were eligible to membership, set aside their pension program back in the forties in deference to the veterans of later wars because we of World War I did not wantveterans of World War II, our sons if you please, to receive the same kind and type of treatment we received when we were discharged from the service, so we went sledlength in the passage of unlimited legislation for the veterans of later wars and we are happy that we did so but now we of the veterans of World War I feel we should be given sympathetic consideration by this committee and by the Congress.

The last time representatives of our organization appeared before your distinguished committee the Honorable Charles Trague of California several times raised the question as to whether we should consider cost of our then proposed pension program. We desire at this time to submit statements comparing the H.R. 6432 proposal with proposed

H.R. 1181.

REPORT OF THE COST OF PENSIONS ASKED BY
VETERANS OF WORLD WAR I, SUBJECT TO PRESENT STATUTE OF LIMITATIONS

The purpose of this report is to bring accurately the cost of the proposed pension program of all eligible World War I veterans to \$100 per month regulated by the present laws (and contemplated changes which would occur with the passage of H.R. 1181 or similar legislation.)

All factual material used in this report was furnished by the Office of the Comptroller and the section of Vital Statistics of the Veterans' Administration or taken from the Annual Report of 1958 as submitted by the Administration of Veterans' Affairs dated January 30, 1959.

Life projections in the various tables of this report were made after study of the actuarial reports of several life insurance companies and the U.S. Bureau of Census. We have attempted to come as near to true statement of facts as obtained by consultation and study of known data and material of reputable commercial and Federal agencies.

In order to bring forward the true picture, the charts included in this report show how we arrive at the conclusions.

We therefore start with the number of liv-

B HOLLE HELL E LECETIONS.	
Total living World War I veterans 1	2, 800, 000
Receiving retirement pay	1,504
Receiving compensation (service-connected)	203, 654
Receiving pension (non- service-connected)	665, 218
Ineligible (less than 90 days' service)	77, 000
Total	947, 376
Total eligible	1, 851, 624
The state of the s	The state of the s

Present cost of compensation and pension: 203,654 receiving compensation \$220, 260, 639, 69 665,218 receiving pension 602, 560, 058, 30

Total present cost.... 822, 820, 697, 99

<sup>1</sup> Information given by VA May 1, 1959.

Present costs must be considered in the overall picture of future costs.

Revised actuarial table, comparison of Veterans' Administration table with that of Bureau of Census and life insurance companies:

Year ending-	VA table of expect- ancy	Revised table	Average age
1900	2, 676, 600 2, 090, 000 1, 483, 000 911, 000 452, 000 160, 000 44, 000 7, 000 1,000	2, 600, 000 2, 003, 000 1, 290, 000 510, 000 206, 000 127, 000 31, 000 3, 800 200	66, 1 70, 9 75, 5 80, 0 84, 4 88, 7 93, 0 95, 3

Based upon tables of life expectancy of all veterans of all previous wars, these figures of the revised table are conservative and the number anticipated to be living are much higher than actual experience.

(Somewhere in France in 1917 the World War I veterans must have found the elixir of life. They represent less than I percent of the population, yet they will live and live and live.)

Accepting the actuarial tables that take in all military and civilian population and taking into consideration the fact of longer longevity due to increased medical knowledge and better living conditions, we are confident that expectancies shown in the revised table are more accurate and dependable.

(Taken from report of Veterans' Affairs Committee.)

Comparison of H.R. 6432 proposal with that of proposal H.R. 1181—Annual costs

Year	H.R. 6432	H.R. 1181	Savings per year
1960	\$1,543,494,372	\$573, 192, 000	\$970, 302, 372
1961	1, 362, 585, 400	540, 932, 400	821, 653, 000
1962	1, 293, 248, 624	517, 305, 600	775, 943, 024
1963	1, 228, 636, 814	491, 144, 800	717, 196, 014
1964	1, 167, 204, 514	468, 868, 400	700, 336, 114
1965	1, 105, 667, 448	455, 580, 000	650, 087, 448
1966	1, 051, 559, 094	432, 750, 000	618, 809, 094
1967	1, 001, 746, 748	411, 112, 800	590, 633, 948
1968	948, 698, 280	390, 556, 800	586, 141, 480
1969	901, 264, 244	371, 029, 200	530, 285, 044
1970	856, 209, 608	352, 476, 000	503, 733, 608
1971	811, 327, 410	334, 611, 600	476, 716, 310
1972	772, 831, 460	317, 880, 000	454, 951, 460
1973	725, 077, 626	301, 986, 000	423, 091, 620
1974	685, 282, 576	286, 886, 400	398, 396, 176
1975	663, 005, 916	272, 541, 600	390, 464, 316
1976	603, 148, 678	258, 914, 400	344, 234, 278
1977	584, 446, 626	243, 568, 800	340, 877, 826
1978	555, 135, 654	233, 671, 200	321, 464, 454
1979	538, 779, 752	221, 868, 000	316, 911, 752
1980	509, 909, 420	-210, 774, 000	299, 135, 420
Total.	18, 799, 262, 264	7, 605, 500, 000	11, 193, 602, 264

This table shows conclusively that the total saving to the Nation by adoption of the proposal of World War I veterans, if given separate consideration, would be over \$11 billion.

This table of cost for pension of \$100 per month to all eligible World War I veterans sustains our contention for several years that the total cost of such pension would be considerably less that \$8 billion for the next 20 years. In fact, it will cost less than \$10 billion for the years to 2000.

We believe this table shows that H.R. 6432 was taking in all veterans—not World War I only

The figures contained in the foregoing tables should once and for all refute the oft repeated statements that to grant a pension as provided for in H.R. 1181 would run into astronomical figures.

In conclusion, Mr. Chairman and members of the committee, it is our sincere hope that your committee will in their considered judgment find they can report HR. 1181, or one of the similar measures introduced, to the House of Representatives so the Members of the House may have an early opportunity to vote on the subject matter thereby taking an important step in wiping out the discrimination that has prevailed against World War I veterans.

Realizing that even though the House passes veterans legislation there is the problem of having it reported to the Senate floor, we are joining the other veterans' organizations in attempting to have the Senate amend their rules to provide for a committee comparable to this distinguished committee in the U.S. Senate.

May I close by again expressing my gratitude for this opportunity to appear in behalf of the veterans of World War I and may I thank you all for the interest shown in listening to my presentation today.

#### Architect of Victory

EXTENSION OF REMARKS

## HON. JAMES G. FULTON

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES Tuesday, May 26, 1959

Mr. FULTON. Mr. Speaker, under leave to extend my remarks in the Rec-

ORD, I include the following article from Roll Call of June 10, 1959:

ARCHITECT OF VICTORY: SENATOR JOHNSON PAYS TRIBUTE TO GEN, GEORGE C. MARSHALL ON THE ANNIVERSARY OF D-DAY

The phrase "architect of victory" is one often bestowed upon him for his performance in World War II. It is a glittering phrase, a happy generality, until we remember and examine once again the mammoth organization which General Marshall built to crush the most professional armies which ever inhabited this earth.

Even the inexperienced amateur was aware of the awesome size of the man who relent-lessly, quietly, and selfiessly created the Armies, the Navies, and the Air Forces in so brief a span of time—and then supplied them with the ever-mounting tools of victory.

#### H. Stewart Potter

EXTENSION OF REMARKS

## HON. WALTER M. MUMMA

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, June 10, 1959

Mr. MUMMA. Mr. Speaker, H. Stewart Potter has been an employee of the Federal Government here in Washington, D.C., for a long time. He is the father of Lee Potter who is with the Republican National Committee.

H. Stewart Potter is well and favorably known in his community of Halifax, Pa., where, after an absence of some 30 years, he still maintains a voting residence and has a wonderful record for being back home on election day.

That he is sought after as a speaker on each Memorial Day is established by the fact that he is invited back time and again.

The following is an address which he deilvered at Eshcol, Pa., on this past Memorial Day:

MEMORIAL DAY ADDRESS DELIVERED BY H. STEWART POTTER, OF ARLINGTON, VA., AT ESHCOL, Pa., ON SATURDAY, MAY 30, 1959

I am deeply honored and privileged in having been invited to come back to Eshcol to deliver the annual Memorial Day address, Six years ago, in 1953, I was your speaker, but the rains came down in torrents so your committee asked me to come today.

I am a native of Perry County, having been born in Miller Township. My parents, a sister, a brother, and many other of my relatives are buried in the Newport Cemetery.

I am happy to come back here and in this way join you in paying tribute to the veterans—dead and living—of all wars. While Mrs. Potter and I have been domi-

While Mrs. Potter and I have been domiciled in the State of Virginia since the year 1920, we still hold our legal voting residence in Halifax, Dauphin County.

As we drove up here from Washington, both Mrs. Potter and I were greatly impressed with the care given the burial grounds in this part of the country. This is a beautiful section of a great State and you should all be thankful you are permitted to live here.

Years ago, as a boy in Newport, I was filled with pride on each Memorial Day when I was given the opportunity to gather fresh flowers to decorate the graves of the brave men who had served in the wars of the United States. Each grave had its American flag and its profusion of flowers. Then there was always an impressive parade with the members of the Grand Army of the Republic leading, and then a Memorial Day address

followed. Sometimes I wished for shorter speeches. Today, more than 50 years later, I shall not forget. My message will be brief. The custom of observing Memorial Day,

The custom of observing Memorial Day, which had its beginning at Boalsburg, Centre County, was the outgrowth of that stirring period known as the Civil War, and the desire of the American people for a day of tribute to their heroic dead. All over the land our grandmothers and grandfathers on both sides of the Mason-Dixon line united in paying tribute to their dead.

In so doing, they removed their hats, dropped a spray of flowers on some soldier's grave, lifted their heads to the stirring notes of the Star Spangled Banner and, at the same time, in their hearts they resolved that this Nation shall never again be torn asunder. That we shall never again allow internal dissention to break the solid front of all Americans.

This action on the part of our forebears took place here in Eshcol as well as in the most remote country churchyard throughout our Nation.

Spurred on by such a determined resolve, America embarked upon a course, backed by this unconquerable spirit of national unity, that transformed this Republic into a mighty and respected Nation among the people of the world. Yes, in a short span of years becames the leader of the world.

While our youth have responded to their country's call on each occasion, and our industries have hummed with activity, as they sought to produce the needs of an adequate national defense, we found in 1939 with the war clouds forming again and threatening our peace and security, we were indeed and truthfully a house divided against itself.

We lacked the spirit of our heroic dead who knew no ism but true Americanism, who saluted no flag but the Stars and Stripes, and to whom preservation and advancement of American ideals was a birthright and a solemn duty to one's country.

These honored dead whose memory we revere today believed in a true Americanism and were willing to fight and die for it; an Americanism that keeps strict faith with every word in the Bill of Rights and every line in the Constitution.

Yes, a kind of Americanism that gives you and me the right to express our own opinions, to approve or disapprove, to commend or criticize as we see fit.

That same Americanism which leaves our newspapers free to print anything not in conflict with the laws of libel or decency and which recognizes that a free press must be available to all, and if we deny it to those with whom we disagree today it may be likewise denied us tomorrow.

Memorial Day is a day of sadness and grief as we take a moment to reflect and to realize that thousands and thousands of Americans, the flower of this generation and past generations, made the supreme sacrifice for the defense of their country's freedom. Yet this is a day of fond and blessed memories for we know that our departed heroes sacrificed much for us, and they would, if alive, want us to carry on their noble tradition.

Through the heroic efforts of those who lie here, and in the other cemeteries of this area, we are now able to live in a free and democratic country. We are free because we are not afraid to speak our thoughts. Our assemblies are not held by stealth under cover of night.

We are not afraid of fine literature and art and music; we do not destroy such things, we encourage them. Truth can never be destroyed, nor can the ideas of great minds. Those in power do not use our schools to spread propaganda for personal gain. Our press is not silent. Our churches are great in number and ever increasing. Without the love of good there can be no freedom. Yet there are those in this world who threaten

our way of life. We must be alert not only for our own cause but also in honor of those who made this freedom possible.

who made this freedom possible.
Other nations, holding dear the same values as we, have also sacrified and are now sacrificing the best of their manhood in their fight against aggression. An unnecessary tragedy—for how much better the world would be if we still had with us the strength, the courage, and the determination of our departed youth and the wisdom of our fallen elders. How much better the world would be if all nations had the same intense desire for human freedom and liberty as we.

Due to the aggression of communism, we and other freedom-loving nations are faced with the necessity of spending billions for weapons of destruction, yet there are so many in the world sick in body and mind, without funds for medical attention and medicines.

Billions for arms, but not enough food to feed the world's starving millions. How many people died of heart ailments, cancer, and other diseases who might have been with us today if more money for medical research was available. This is a sad commentary on the history of our human civilization. Yet until such time as the enemies of freedom are prepared to lay down their arms and meet with us in good faith for the purpose of preserving honorable peace and freedom for all mankind we will continue to be faced with the problem of neglecting our sick, our hungry, our homeless. To do otherwise, our presence here today would be but mere mockery.

We must remember that the goal of communism is world domination. If world domination were not the goal of Communists, there would not have been a war in Korea. The dead and living dead of Korea would not have been a reality. The people of South Africa would have had the opportunity to settle their differences amicably. Europe and the Near East would not now be setting on a powder keg, which should remind us to keep our powder dry.

Would that we here today might dedicate ourselves to strive, by more than mere wishful thinking, toward ending the causes of war.

Memorial Day is a day of prayer and reflection—prayer for those who are suffering from the wounds they received in battle; reflection for the noble principles for which they gave their all, and upon the manner in which we cherish and safeguard those principles. Memorial Day symbolizes the spirit of the American people—the will of a great, free, and enlightened Nation to pay tribute to the honored dead.

Today, from countless flagpoles, Old Glory flutters at half mast as a moving reminder, that busy though we are, we still realize that it is appropriate to pause and remember the sacrifices of the heroes in whose honor we assemble here.

Memorial Day is dedicated to the tens of thousands of Americans, young and old, who have given their lives in military conquest to preserve our way of life. Memorial Day is the day of living tribute to those honored dead.

The intent of what we say here shall extend far beyond the horizon.

Our tributes to the heroic American war dead reach around the earth. Our thoughts, our prayers, and our words

Our thoughts, our prayers, and our words of gratitude shall travel swiftly with the light of day.

The sound of our voices is directed into many lands. For it is said truly that the sun never sets upon the American war dead. Let us remember that more than 150,000 American war dead have been laid to rest in foreign lands. Thousands of others have been lost beneath the waters of many oceans far from our shores.

Our war dead are buried in Asia, and in Africa, as well as in cemeteries here at home.

Yes; it is true that the sun of a single day never sets upon the graves of our honored dead because the sun shines perpetually upon some area of hallowed American ground. This assertion is proved by history and the maps of the world.

The light of the sun races across the face of the continent at great speed, 1,000 miles per hour. When it is midnight in the United States the sun is shining at high noon in Korea and the Philippines.

There is always a new dawn creeping sllently over some faraway ocean or jungle, over strange hills and cities. And there, in the pale light of each new day, the American Stars and Stripes is stirring at half mast, and beneath it are thousands of white markers inscribed with the names of our departed men.

If we could visit one of these cemeteries in the far corners of the earth and walk slow'y between the white markers we would see that some are of the Christian cross, and others the Star of David, the emblem of the Gentile and the Jew. Then we look at the flag overhead. We watch its brilliant red and white stripes curving with the shifting breeze—its folds gently to the north, then the east, then south, then west. The flag seems to speak.

At least we sense an answer coming from that proud and beautiful emblem that marks the last resting place of our hero dead. The flag seems to say that speculations about these men are of little importance. It matters not who they were, whether they were rich or poor, college graduates or uneducated. It makes little difference whether they rest under cross or star. All your questions are in the past. They deal with trivial distinctions which only the living consider important.

As we stand looking at the flag and the graves we see it all very clearly. Death is the great equalizer; only in life do we judge a man by his money or social standing. Only in life do we question his race or creed.

Then we get a final answer. The flag tells us clearly all the men who rest in soldier graves were your defenders and mine.

On occasions such as this we are prone to spend too much time and too many words eulogizing the dead and making eloquent speeches about the cause for which they fought. In a sense we glorify war. Whereas the only fitting tribute that can be paid our soldier dead, wounded and alive, is to strive with all our hearts, with might and main, to put an end to the causes which require their sacrifices so that they will not have died in vain. Most certainly, were our noble dead permitted to speak, they would cry out for some solution to our problems more logical and more sane than fruitless war.

We can pay no greater tribute to the martyrs of our Nation on this Memorial Day nor can we make a greater contribution to the welfare of our country than resolve that we will truly evaluate the manifold blessings bestowed upon us by citizenship in this great Republic.

Let us carry aloft the torch of freedom; and in so doing, let us march as a united people asking God to shower us with his choice blessings of peace and happiness.

From grateful hearts let us pour forth our prayers of thanksgiving for the American way of life and beseech God to preserve our great Republic for the countless unborn millions to follow us.

In the same breath let us in prayerful attitude ask divine providence to restore peace and tranquility to the nations of the world, that in so doing we may again look upon civilization as being rescued from the onslaughts of those who would destroy it.

With such an objective and faith in the future let us say from the depths of our hearts, "Thank God I am an American."

May Almighty God hear our prayers for a lasting peace on this Memorial Day 1959. and may He fill our hearts with a deep and abiding love for our country. May He impress upon us each day our duty as a citizen, and of our need for eternal vigilance in preserving, protecting, and defending this great Republic for which we owe an undying debt of gratitude to God for the Priceless heritage of liberty, freedom, and equality

Despite the efforts made to formulate a just and lasting peace, the goal has not been reached, because the hearts of mankind have not yet been attuned to the spirit of universal love, which is essential if the family of nations expect to dwell in harmony

with each other.

History is replete with the experiences of nations after nation, who sought power and glory through conquest and subjagation. It is written on the memories of mankind, that the nation that forgot God and refused to recognize the human dignity of every creature created by Him, traveled the road to ruin and destruction.

Yet, how short is the memory of man? Regardless of the lessons from history of the utter destruction of ancient empires, our minds were refreshed during the present 20th century by the fate that befell modern dictators who have trod the path to destruction that counterparts traversed in the dis-

The scene which surrounds us today is the evidence of the cost of war. Here in the Eshcol cemetery lie buried those whose lives have been given to their country in the past. Who can estimate the worth of these lives? What these men might have meant to the world had they lived? What their loss means in the unrecorded sorrow of their wives, sweethearts, and children. The great treasure of any country is not in its steel mills or its rolling prairies or its public buildings, but its young people.

And here we commemorate those lives, Who for the most part were sacrificed before the story they could have told could have been unfolded, or their contribution made to the family of the Nation which gave them

birth.

All too readily, because these dead cannot speak to us, we accept the fruit of their sacrifice in an unthinking way. We have many privileges in this country. We exerthese privileges every day of our lives. But that we have them is due to the fact that in the past Americans have been willing to lay down their lives for us. Privilege has always been preceded by sacrifice. Theirs has been the sacrifice. Ours now are the privilege.

We do right when we honor them with our flowers, our parades, with everything that can be provided at this most beautiful season of the year to remind ourselves of our indebtedness. We must also honor them

by making a lasting peace.
Would that we here today might dedicate ourselves to strive, by more than mere Wishful thinking, to do something toward ending the causes of war.

May I close with this poem?

If we could see beyond today as God can see, If all the clouds could roll away, the shadows flee;

If we could know beyond today, as God does know,

Why dearest ones must pass away and tears must flow;

If we could know why darkness leads to light.

Why dreary days invariably grow bright; but still we know

Some day life's hurts and wrongs will be made right-

Faith tells us so.

-H. Stewart Potter.

Stars for Summer Nights

EXTENSION OF REMARKS OF

## HON. THOMAS J. LANE

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES Tuesday, June 9, 1959

Mr. LANE. Mr. Speaker, under leave to extend my remarks in the Record, I wish to include a message from New England as it appeared in the Christian Science Monitor on June 8, 1959.

STARS FOR SUMMER NIGHTS-AN INTIMATE MESSAGE FROM NEW ENGLAND

(By Harold Rogers)

There was a time, not too many years ago, when there was nothing to look at on summer nights but the stars in the sky.

Then came the summer theaters, and people began to look at the stars on stage. Later the summer music festivals blossomed, and people began to listen to the stars sing. play, and conduct. Stars in the heavens became stars of second magnitude.

Eight years ago a new kind of summer festival was created in Boston. It is a festival of the arts-all the arts-and it is held

outdoors in the public garden.

It features a display of painting, drawing, and sculpture, of course—in this there is nothing unusual. But it also offers performances of opera, ballet, theater, folk dancing, folk singing, poetry reading, and concerts by symphony orchestras and bands. There are also photographic displays of architecture, together with demonstrations by artists in ceramics, weaving, and jewelry.

It is, in short, a comprehensive show presented to the people of Boston by their city. It covers 17 days; there is no admission charge; the festival has proved so popular that similar ventures have been springing up

throughout the country.

Only a minority of any city's population goes to a museum, attends the opera, or listens to concerts. But an arts festival such as Boston's brings the arts to the man-inthe-street. Every summer thousands of curious people wander through the pavilions of paintings, stimulated by the battle between objective and nonobjective art. Thousands sit on the lawns for performances of grand opera, many of them hearing an opera for the first time. Thousands have their first taste of live symphonic music. played by Boston Symphony musicians under leading conductors.

In the past Boris Goldovsky and his New England Opera Theater have presented Rossini's "The Barber of Seville" and Donizetti's "Don Pasquale." Sarah Caldwell and her Boston Opera Group gave the American premier of Offenbach's "Journey to the Moon." Professional companies from New York have offered Gian Carlo Menotti's "The Consul" and 'The Saint of Bleecker Street."

On June 5 this summer's festival opened with the Boston premier of Lee Holby's "The Scarf," as one-act opera that shared an evening with Douglas Moore's "The Devil and Daniel Webster."

Among the stars and starlets to appear this summer are Roland Hayes, the noted Negro tenor; Richard Wilbur, winner of the festival's poetry prize for 1959; Paul Draper, the man who elevated tap dancing to a fine art; Russell Stanger, young virtuosic conductor of the Boston Little Orchestra; Aaron Copland and Carlos Chavez, composers, who will conduct members of the Boston Symphony in some of their own compositions; and Thomas Sherman, who will guide Boston Symphony members in Handel's "Royal Fireworks" culte.

A highlight of the festival will be twoperformances of the Gagku dancers and musicians of the Japanese Imperial Household, now in the United States for their first appearances outside of Japan.

But not all the stars are reserved for the Boston Arts Festival. On the banks of the Charles River, a new 2,000-seat theater is being built as the first building in a complex to be known as the Metropolitan Boston Arts Center. The theater will be ready by July 9 when the Cambridge Drama Festival will open with Shakespeare's "Tweifth Night," starring Siobhan McKenna, Fritz Weaver, Tammy Grimes, Michael Wager, and Geoffrey Holder. Also scheduled are "Macbeth," with Jason Robards, Jr., in the title role, and "Much Ado About Nothing," starring Sir John Gielgud as Benedick and Margaret Leighton as Beatrice.

On the Wellesley College campus not far from Boston the Group 20 Players will hold their seventh season at the Theater on the Green. There are stars in this company, too—Eric Portman, Rosemary Harris, Jerome Kilty, and Barry Morse—who will be seen in Shakespeare's "Much Ado About Nothing," James M. Barrie's "Peter Pan," Shaw's "Man and Superman," and Sophocles' "Oedipus

On the musical scene is the Boston Symphony's Berkshire Festival, at Tanglewood, with such stars as Charles Munch, the orchestra's conductor; Pierre Monteux, guest conductor; Rudolf Serkin, pianist; Isaac Stern, violinist; Nicole Henriot-Schweitzer, pianist; Lukas Foss, composer-conductor; Adele Addison, soprano; and Arthur Fiedler, conductor of the Boston Pops.

A more intimate series of New England

concerts is offered at Castle Hill, the former Crane estate at Ipswich, Mass. Jass stars—George Shearing and Dave Brubeck—will open this series; other stellar personalities to be heard will be Gina Bachauer, pianist; Anne Ayer, soprano; Jean Léon Destiné and his Haitian dangers; Betty Allen, mezzo-soprano; and the New York Pro Musica,

Is it any wonder the stars in the sky take second place when the New England summer

sets in?

Thirty-sixth Congress Slovak League of America

EXTENSION OF REMARKS

HON. JOHN P. SAYLOR

OF PENNSYLVANIA IN THE HOUSE OF REPRESENTATIVES Wednesday, June 10, 1959

Mr. SAYLOR. Mr. Speaker, residents of my home city of Johnstown are preparing to welcome officers and delegates' of the Slovak League of America to its 36th Congress on June 14-16. While the influence of the Slovak people is not confined to any geographical area of this Nation, we in Pennsylvania are particularly mindful of the contributions that have come from the Slovak strain through the years.

The Slovaks were a large component of the Europeans who came to Johnstown and its environs to give impetus to America's industrial progress. They suffered with the rest of our community through the tragic flood, and their zeal, determination, and industry helped to rebuild our great city. Throughout western Pennsylvania here are many Slovak churches that give evidence of the devotion of these God-fearing people.

I thank you.

The Slovak League of America was organized on May 26, 1907, with the motto: For God and for the Nation. A cultural and civic organization of Americans of Slovak descent, it is dedicated to the American way of life and assists Slovak emigrants in becoming U.S. citizens. Its numerous other noble objectives include this statement of policy which I believe merits notation in the CONGRESSIONAL RECORD:

The Slovak League of America has always recognized the godless philosophy of ma-terialistic communism for the dread evil and conspiracy against free humanity that it is, as the political system which threatens mankind with utter enslavement and, therefore, has fought resolutely against it in and out of season and, today, is still determined to fight against it with all the means at its command until the dread plague of communism is wiped off the face of the earth. Hence, the league does not subscribe to the policy that doing business with the Soviet Union and its satellites is in the best interests of the United States of America and the peoples concerned.

Mr. Speaker, for many years Americans of Slovak descent have served in the Armed Forces, large numbers of them sacrificing their lives for this Nation. Today the Slovak League of America carries on the battle for liberty and peace. We congratulate this patriotic organization, and may God grant the favors it asks.

#### Minimum Wage Legislation

EXTENSION OF REMARKS OF

## HON. ROBERT N. C. NIX

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, June 10, 1959

Mr. NIX. Mr. Speaker, under leave to extend my remarks in the Appendix of the RECORD, I again have the high privilege to include a resolution from the Laborers District Council which is comprised of eight local unions, namely; Locals 57, 135, 332, 376, 413, 420, 1034, and 1052, with an approximate total membership of 15,000 people.

I feel, Mr. Speaker, that the following resolutions will prove both informative and instructive to the Members of the House and further, that the resolution sets forth a position that of necessity is basic to present day living in this country:

RESOLUTION CALLING UPON THE 86TH CON-GRESS TO ENACT S. 1046 AND H.R. 4488

Whereas all Americans must be assured of a basic minimum standard of living if we are to maintain a healthy economy at home and a position of moral leadership in the world; and

Whereas the present Federal minimum wage of \$1 an hour is inadequate to provide a bare subsistence in the United States today; and

Whereas more than 20 million Americans lack the guarantee of even this inadequate figure and are without any legal limitation on their hours of work; and

Whereas these shocking facts constitute a grave threat to our national economy, a

challenge to our moral standards as a people and a peril to our reputation as democracy's showcase throughout the world; and

Whereas the existence of underpaid and overworked wage-earners is a particular danger to the well-being of the citizens of Philadelphia; and

Whereas there is now before Congress a bill introduced by Senator John F. Ken-NEDY and Representative JAMES ROOSEVELT and cosponsored by many of their colleagues in both houses, No. S. 1046 and H.R. 4488. This bill would greatly amellorate this problem by raising the Federal minimum wage to \$1.25 and including nearly 8 million additional workers under the protection of the

Fair Labor Standards Act: Therefore be it Resolved, by Laborers' District Council of Metropolitan Area of Philadelphia and Vi-cinity, That we call upon the Congress of the United States to give prompt and favorable consideration to this bill without delay, so this serious threat to the economic and moral strength of our Nation will be swiftly met and that the conditions above described can be corrected.

LABORERS' DISTRICT COUNCIL OF THE MET-ROPOLITAN AREA OF PHILADELPHIA AND VICINITY

RAYMOND T. LAVIN, President.

World Trade Center Resolution Favoring Enactment of H.R. 5, Providing for the Encouragement of Private Foreign Investment

EXTENSION OF REMARKS

#### HON. THOMAS J. LANE

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Thursday, May 21, 1959

Mr. LANE. Mr. Speaker, under leave to extend my remarks in the RECORD, I include a resolution adopted by the membership of the World Trade Center in New England:

THE WORLD TRADE CENTER IN NEW ENGLAND, INC., Boston, Mass.

WORLD TRADE CENTER RESOLUTION FAVORING ENACTMENT H.R. 5 (BOGGS BILL) PROVIDING FOR THE ENCOURAGEMENT OF PRIVATE FOR-EIGN INVESTMENT

The membership of the World Trade Center in New England represents a large and true cross-section of the industrial, commercial and international business interests of the six-State region. The Center's ex-ecutive committee has long been concerned over the gravity of economic conditions in underdeveloped countries and has lamented the not always fully effective results of the enormous U.S. Government loans and grants to alleviate these conditions. The committee, then, was naturally interested in the provisions of the Boggs bill (H.R. 5) to induce an increased flow of private investments to oversea areas and created a subcommittee to study the bill.

The World Trade Center is convinced that private capital can be much more efficient and effective in the orderly expansion of underdeveloped economies and should be given tax incentives to promote foreign invest-ments to this end. The Boggs bill is in-tended to accomplish this in several ways, most important of which is permission to create special domestic foreign business corporations whose foreign source income would incur no U.S. tax liability until it was brought into this country.

If this country is to meet the high challenge posed by the politico-economic offen-sive of worldwide communism it must delegate more of the responsibility in the foreign economic field to private interests. Con-comitantly, it must remove some of the fetters which restrain private capital from seeking investment opportunities in underde-veloped areas. The Boggs bill would help materially along these lines.

Therefore, the World Trade Center in New England favors the enactment of H.R. 5 and urges the Congress to move promptly to this end without nullifying any of its principal

features.

## Second Worst Anthracite Mine Disaster Occurred 40 Years Ago

EXTENSION OF REMARKS OF

## HON. DANIEL J. FLOOD

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES Wednesday, June 10, 1959

Mr. FLOOD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article from the Wilkes-Barre Times Leader of Friday. June 5, 1959, which relates the details of the second worst anthracite mine disaster which occurred on June 5, 1919, at the east end Baltimore tunnel, No. 5 colliery, Hudson Coal Co., Wilkes-Barre, Pa., where 92 men lost their lives by an explosion of powder.

[From the Wilkes-Barre Times-Leader, June 5, 1959

NINETY-TWO LIVES WERE LOST: MINE DISAS-TER AT EAST END OCCURRED 40 YEARS AGO TODAY-CAUSE OF BALTIMORE TUNNEL EX-PLOSION NEVER FIXED-SOME ESCAPED

The second most terrible tragedy in the long history of anthracite mining occurred exactly 40 years ago today.

On the morning of June 5, 1919, 92 men were killed by an explosion of powder while riding a trip of mine cars a short distance inside East End's Baltimore Tunnel, No. 5

Colliery of the Hudson Coal Co. The only anthracite mining catastrophe that exceeded the Baltimore tunnel tragedy in point of fatalities was the famous Avon-dale Colliery disaster that occurred below Plymouth on September 6, 1869. In this first major anthracite mine tragedy, 108 workmen trapped inside a burning mine shaft died of asphyxiation. The flery shaft was the sole outlet for the unfortunate mine workers. Two would-be rescuers suffered the same fate, bringing total fatalities to 110 at Avon-

Highlights of the Baltimore Tunnel disaster at East End are recounted by James J. Corrigan of this city, anthracite historical researcher whose articles on the local area's history have appeared in numerous publica-

#### NEEDLESS TRAGEDY

Corrigan prepared statistics which show that the Baltimore Tunnel tragedy which shocked the postwar Nation and was termed 'a needless tragedy," widowed 60, orphaned 162, and cast a pall over the East End, North Wilkes-Barre, Heights and Georgetown sections where most of the victims made their

Whole streets were prostrated with grief. undertakers were overwhelmed with inter-ment preparation problems, and physicians were taxed in treating the scores of severely injured who survived the terrific tunnel explosion.

One group of workmen escaped to safety from asphyxiating mine gas fumes caused by the explosion of powder when they were miraculously led to the surface through a little known outlet—the "G" vein slope—by Thomas Sheridan, of Kidder Street, East End. Mr. Sheridan, a shrewd and experienced anthracite miner, was the father of Thomas Sheridan, Wilkes-Barre city policeman. The elder Sheridan's rescue maneuver was widely acclaimed.

#### SHOELACE SAVED HIM

Another East Ender later always maintained that he owed his life to the fact that he missed the disastrous train carrying both men and kegs of powder and dynamite into the tunnel. He had stopped to tie his shoelace just as the fatal train, a few feet away, started to enter the tunnel.

Corrigan gives an enlightening résumé of the report made on the disaster by Thomas Williams, inspector for Anthracite 11th District, Luzerne, to Seward E. Button, chief of the Pennsylvania Department of Mines:

Owing to the magnitude of the disaster, a thorough investigation was made as to its cause. A commission of six inspectors made a thorough and exhaustive study of the mine, but not withstanding the carefulness of their work, the cause was not definitely determined.

It is known only that the explosion was due to the ignition of powder on a trip of 13 cars. The investigation showed that mine cars were halted at the time the accident occurred, and that the motor was uncoupled from the trip. The explosion occurred on the 10th car from the motor, about 35 feet from the mine entrance. Powder and men were carried in the same cars, namely, the 10th and 13th, and with the men were open lamps and smoking pipes.

It appears that the trolley wire was out of a hanger a short distance inside the mine. The trip was stopped when signaled and advised of the condition of the trolley wire. The motor was uncoupled and the trip left standing. The motorman then ran his motor slowly to a point just inside the Stanton vein or about 25 feet inside the hanger in question. He stopped his motor, got off and turned around facing the mouth of the tunnel just as the explosion occurred.

#### CAUSE NEVER FOUND

The investigation revealed that some lights were lit on the trip in close proximity to the scene of the accident, and it was the opinion that the explosion might have been caused by a lamp or carelessly thrown match coming into contact with powder in a defective keg.

There was no positive evidence to support this theory. All evidence, however, to connect electricity as the cause falled and the majority of the commission was of the opinion that the cause would never be ascertained.

Nationalities of men fatally hurt in the Baltimore Tunnel disaster, as calculated by Corrigan from State mine reports, were as follows: American-born, 31; Polish, 31; Austrian, 15; Russian, 11; Irísh, 2; German, 1, Welsh, 1.

Corrigan explains the absence of Slovak or Lithuanian nationalities in this listing by the fact that both coal companies and mine inspectors for a great many decades lumped the latter two nationalities under Polish.

In the last century and early in the current one, coal mine inspectors were accustomed to refer to most immigrants to the anthracite region as Hungarians.

# One group of workmen escaped to safety om asphyxiating mine gas fumes caused by the explosion of powder when they were

EXTENSION OF REMARKS

## HON. JAMES A. BURKE

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES
Wednesday, June 10, 1959

Mr. BURKE of Massachusetts. Mr. Speaker, the following article represents part II:

QUINCY JUNIOR COLLEGE COMES OF AGE; 1958
AND THE FUTURE

#### (By Glenn A. McLain)

By September 1958 the permanent growth of the Quincy Junior College was an assured fact. The unsung work of the Community Colleges Association (former College Courses, Inc.), the pioneering work of Dr.Gossard and the foresight of the Quincy School Committee had finally shown concrete results. Student enrollment increased from 61 in 1957-58 to 83 in the fall of 1958. For the first time a full-time program with a student enrollment of 10 students was underway. Seventy-three part-time students were also taking a variety of mostly liberal arts courses.

College officials have maintained a firm policy of cautious professional growth based upon well planned guidance programs which are so necessary in junior colleges and other institutions. Despite the comments of some critics who feel that unqualified students might be admitted to pack the school the facts do not warrant such ideas.

The official authorization by the State board of education to Quincy Junior College to offer the 2-year program provides the citizens of this area with a number of stimulating possibilities. The future of the college belongs to the students who will attend, and the taxpayers who will support the expanding program. These problems can be summarized in four main fields: finances, administration, plant facilities, and general development. Underlying all these issues is the continuing need for more public information and more public understanding of the needs, aspirations, and future of the Quincy Junior College.

Financial worries are not expected to be of major importance according to the 3-year budget estimates made by the Community College Association and presented to the school committee by Attorney Melvin Thorner on December 3, 1958. The following figures show clearly the inexpensive nature of the estimated budget for 1959-61. The entire program for the next 3 years will cost the taxpayers of Quincy less than \$4,000 yearly. Compared with the annual school department budget of several millions, this program is an educational bargain for Quincy:

Estimated expenses \$103, 265 Estimated income 92, 471

Estimated deficit\_\_\_\_\_ 110,794

<sup>1</sup> From school department budget.

As the estimated number of students to be served during this period will be 670, the taxpayers of Quincy will be liable for a subsidy of \$14.02 per student. There is every possibility that this deficit will be further reduced through income from increased en-

rollment. Both the budget and enrollment figures are very conservative estimates. Quincy Junior College, like all others in the United States, will continue to offer minimum cost education without the extras taxpayers often justifiably complain about. The persent high quality of instruction will not be sacrificed to get these low costs.

Administrative problems include the need for a full-time director, a gradual hiring of full-time staff as needs increase, and a librarian. Some part-time instructors will still be used from nearby colleges and universities with every indication of success.

Gradual expansion of needed plant facilities is projected for added classrooms, faculty offices, more library space, and for a student lounge. No new building program is expected, and the practical utilization of unused space at Coddington School will continue to present a model of efficiency and dollarwise planning in the future.

General developmental needs for the next 4 years are highlighted by the immediate demand for a functioning library. Most junior colleges average about 7,000 volumes with about 4,000 reference works. A South Shore community drive will be started in 1959 to further this plan so essential to the continuing growth of the college. Such are the plans, needs, and hopes for the college from 1958-1961. The final problem of importance is the definition of the role of citizens in Quincy and South Shore in order to achieve these objectives.

#### PROBLEMS ON THREE LEVELS FOR CITIZENS

In the progress of Quincy Junior College from the infant to adult stage during the past 3 years the future efforts of citizens in this area can be considered on the National, State, and local levels.

With the signing of the National Defense Education Act by President Eisenhower in September 1958, tremendous possibilities were offered for the future growth of Quincy Junior College. Applications are now being made for Federal subsidies in a new student loan program and for aid in organizing summer and year-round guidance institutes at the college. Officials from the Department of Health, Education, and Welfare have assured junior college leaders that small, progressive institutions will receive special consideration in the new program.

All of the Senators and Congressmen in Massachusetts are being solicited for their help in securing educational gifts for the growing junior college library. Ambassador Wigglesworth, of Milton, has started this effort by contributing very valuable Government publications to the drive.

On the State level, Quincy Junior College must be given the chance to benefit from any developmental ideas proposed by the newly created Furcolo commission. Our local legislators should continue efforts to develop State aid according to existing and perhaps new laws. Local control of the program need not be disturbed as this type of dual administration between local groups and State agencies has been the pattern in many other States.

Locally citizens should take a personal or professional interest in the sustained growth and development of the institution. Business and taxpayer groups must contribute their advice and efforts to build the type of educational programs really needed in this area. Civic clubs, community leaders, local industry, and legislative leaders should be encouraged to use the facilities of the college for special courses, programs, and to interest themselves in scholarships or serv-

ices through the college for the entire south

As the future of Quincy Junior College is finally surveyed from the vantage point of 1959, it should be obvious to all that the young, dynamic institution at 52 Coddington Street is an asset to the South Shore community. Its present growth is the direct result of local inspiration, directed energy, and imaginative leadership by South Shore citizens and educators.

Future plans to meet the accelerated demands of this area can only be extended through more community support. The watchwords of James Bryant Conant could well be used as the idea, "Our purpose is to cultivate \* \* \* in our future citizens an appreciation of the responsibilities and benefits which come to them because they are American and are free." The citizens of Quincy have such an opportunity to further this ideal by helping to speed the objectives of Quincy Junior College.

## Congress Senses Mood-Public Aware of Inflation Danger

EXTENSION OF REMARKS OF

## HON. R. WALTER RIEHLMAN

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES.

Wednesday, June 10, 1959

Mr. RIEHLMAN. Mr. Speaker, as evidence of the growing public awareness of the dangers of inflation as well as ability to pinpoint its causes, I include the following editorial from the Syracuse (N.Y.) Post Standard of Sunday, June 7, 1959:

CONGRESS SENSES MOOD-PUBLIC AWARE OF INFLATION DANGER

It is encouraging to note that the danger of inflation is not being dismissed as lightly as it was a month or two ago by congressional leaders.

President Eisenhower's economy offensive

is beginning to get results.

House Speaker Sam Rayburn and Senate leader Lyndon Johnson are pressuring House-Senate conferees to trim major spending bills in order to avoid presidential vetoes, an increasing probability in view of Mr. Eisenhower's present mood.

There is evidence that the public is reinforcing the administration's economy drive. It is coming from people living on fixed or slowly rising incomes who are being hurt most by inflation.

Those who have retired and those who will join their ranks realize that the creeping 2 percent a year decline in the dollar's purchasing power could in time make present public and private pension plans meaning-

There is only one way to survive inflation and that is to stop it.

The first step is for the Federal Government to cut out deficit financing and use some of its tax money to help reduce the national debt.

The next is to call a halt to industrial wage increases not justified by gains in produc-

A third is to forgo price increases not warranted by production costs.

The dollar today is worth around 50 cents as compared to its buying power in 1939. By 1980 it could be worth 35 cents.

That prospect is enough to make workers dread the day of retirement. It is ironical that science is prolonging life while infla-tion is making longevity considerably less than a blessing.

The simple fact is that the figures on a pay check don't mean much any more. Although earnings may rise the worker may actually be earning less in terms of what he has left after taxes and what this will buy.

The American revolt against inflation is highly encouraging. It shows the people are

aware of what is in store.

Likewise encouraging is the campaign being undertaken by the Empire State Chamber of Commerce to bring about wider rebellion. It advises those who oppose further inflation to insist that Congress, before passing more big money bills, specify where the money is coming from.

If it comes from deficit financing and an increase in the national debt it is infla-And it must come from these sources if spending continues to exceed in-

There is no magic cure. The halt must be brought about by a combination of the factors mentioned. It can be done.

## Congress Still Toys With Surplus Subsidies

EXTENSION OF REMARKS

OF

## HON, R. WALTER RIEHLMAN

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES Wednesday, June 10, 1959

Mr. RIEHLMAN. Mr. Speaker, it is evident to me, and I am sure many of my colleagues will agree, that the taxpayers in this great country are daily growing more alarmed at the mounting tax-dollar investment in surplus farm commodities. It is somewhat ironic to me that, at the very time when public sentiment cries for an intelligent solution to farm problems, Members of the House of Representatives are being asked to support the very system of high price supports that made the original and substantial contribution to the present critical situation. Once again it appears that the demands of the poor, unorganized taxpayer are being subordinated to the desires of the special

Under leave to extend my remarks in the RECORD, I include the following editorial from the Syracuse (N.Y.) Herald-American of Sunday, June 7, 1959:

CONGRESS STILL TOYS WITH SURPLUS SUBSIDIES How much did you pay in Federal income

taxes last year?

As much as \$100 a month? Then a tenth of your tax is invested in farm commodity inventories and crop loans.

Or did you get by with a \$250 income tax? About half is represented in the Government's holdings of surplus farm commodi-

Six years ago your family owned \$30.74 worth of surplus farm commodities.

Since then, your holdings have increased fourfold.

The total investment of \$7 billion would have paid for all social security, welfare, and health and veterans' services and benefitsin.1958.

These dramatize the agricultural revolution of the postwar years.

They also put into stark relief the political tinkering that has been applied to a vital sector of the Nation's economy.

Here's the receiving side of the picture. Cited on the floor of Congress is the case of a Kansas wheat farmer.

He operates a 100,000-acre wheat empire. In 4 years, he collected \$791,000 in support loans for raising wheat; and \$405,000 in cash for not raising wheat.

This lawyer-turned-farmer controls, as well, a 500-well oil company which enjoys a favorable tax position; a building firm that relies chiefly on FHA mortgage guarantees; a chain of elevators on which he collects \$14.7 million a year for storing surplus wheat, corn, and grain sorghums.

These are legitimate, but subsidized enterprises.

Currently, neither the Senate nor the House are thinking seriously of tackling this problem beyond adopting variations of past practices.

The Senate passed by a standing vote, an amended measure providing a new wheat program for the 1960 and 1961 crops.

Under it, wheat growers would have a chance to select one of three different support formulas. Higher supports would come with agreement to plant smaller acreages.

In the House, a like measure—labeled as the "wheat bill nobody wants"—has been sent to the floor for debate and vote.

If the legislation survives, and wheat farmers adhere to tradition, they will vote for controls and higher supports.

And that is where the application of fertilizer and factory style cultivation pays off. The harvest still increases.

Since neither bill fits the President's prescription, the final version faces an almost certain veto.

He asked Congress to link mandatory supports to a percentage of the market price, or. falling that, to give the Secretary of Agriculture broad flexibility in fixing supportsfrom zero to 90 percent of parity.

The President, in effect, suggested to Congress that the market could serve as a greater regulator.

The outlook isn't bright.

Without doubt, the Federal Government cannot abandon a major sector of the Nation's economy. But neither can the present programs be financed indefinitely. Mounting costs-which are approaching a scandalous figure—are threatening all farm programs.

That could be the public's edict for the farm bloc no longer musters the strength to ride roughshod over opposition.

Many a farm State Congressman admits "I don't know a solution," and the legislation. to date, is proof of the confession. It merely shadowboxes with the problem.

The President has offered, so far, the only realistic but hard-to-take approach; namely, to tie supports to market prices or to increase their flexibility so that the result is nearly the same. Low prices, as the result of overproduction, will serve as acreage regula-

Marginal farmers will be hurt. And no doubt their numbers will incerase as price decline.

Yet, how long can Federal taxes be channeled into paying for unwanted and unused production?

Not much longer in the present climate of tax opinion.

## Statement by Hon. Walter H. Moeller. of Ohio

EXTENSION OF REMARKS

## HON. WALTER H. MOELLER

OF OHIO

IN THE HOUSE OF REPRESENTATIVES Wednesday, June 10, 1959

Mr. MOELLER. Mr. Speaker, because of my unavoidable absence from the House yesterday while returning from my duties as a delegate to the Atlantic Congress, I was forced to miss the six rollcall votes which were held on H.R. 3610, the Federal Water Pollution Control Act, and on H.R. 7509, the public works appropriations bill. I wish now to state for the record the position I would have taken on each of these votes.

On rollcall No. 68, the motion to recommit H.R. 3610, I would have voted "nav."

On rollcall No. 69, final passage of H.R. 3610, I would have voted "yea."

On rollcall No. 70, the Passman amendment to H.R. 7509, I would have voted "nav."

On rollcall No. 71, the Johnson amendment to H.R. 7509, I would have voted "nay."

On rollcall No. 72, the motion to recommit H.R. 7509, I would have voted "nay."

On rollcall No. 73, final passage of H.R. 7509, I would have voted "yea."

#### Mine, Mill, and Smelters Union

EXTENSION OF REMARKS

## HON. A. S. J. CARNAHAN

OF MISSOURI

IN THE HOUSE OF REPRESENTATIVES Wednesday, June 10, 1959

Mr. CARNAHAN. Mr. Speaker, under permission to extend my remarks in the Record, I include a resolution passed by residents of Ste. Genevieve, Mo. and surrounding areas, excerpts from a statement by Attorney General Brownell, Jr., and excerpts from the Fair Play, Ste. Genevieve, Mo. The material follows: A Joint Resolution of the Archbiocesan

JOINT RESOLUTION OF THE ARCHDIOCESAN COUNCIL OF CATHOLIC MEN AND WOMEN AND THE STE. GENEVIEVE DEANERY COUNCIL PASSED JUNE 7, 1959, IN STE. GENEVIEVE, MO.

At a joint meeting of the Ste. Genevieve Deanery Council and the Archdiocesan Council of Catholic Men and Women, held in Ste. Genevieve on Sunday, June 7, the council went on record to accept the following resolution against Mine, Mill, and Smelters Worker's Union—the Mine, Mill and Smelters Union having circulated a petition among the workers of Mississippi Lime Co., have secured a list of 30 percent of the workers and have been granted an election to occur on June 19.

The resolution follows:

"Whereas Russian communism, by it's very nature, is the implacable enemy of all re-

ligions that believe in God; and

"Whereas the same communism believes in the priority of the state over the rights, freedoms, and liberties of the individual, thus creating a social, economic, and political system althogether opposed to democracy as is understood in our Nation; and

"Whereas we are sincerely convinced that no Christian or American citizen can in good conscience be a communist, communist sympathizer, direct or indirect cooperator in communism; and

"Whereas the Mine, Mill, and Smelter Workers Union was expelled by the Congress of Industrial Organizations in 1949 because it was dominated by communistic leadership; and "Whereas we are of the opinion that there is ample proof that the Mine, Mill, and Smelter Workers Union is still communistically infiltrated and under the influence of communist leadership:

Therefore we, the undersigned, hereby resolve that for the safety and security of our country, for the good of organized labor and unionism, for the welfare of religion and for the peace and harmony of our community we believe and recommend that all the men involved in the election to be held in Ste. Genevieve, Mo., on June 19, of this year, should vote against the Mine, Mill, and Smelter Workers Union, and in favor of a union that is completely beyond suspicion and not under the cloud of communism, communistic leadership, subversive activities or association."

Signed and endorsed by: Mrs. Lawrence Braun. President, Ste. Genevieve District Council of Catholic Women; Mr. Herbert V. Wood, President, Ste. Genevieve District Council of Catholic Men; The Right Reverend Monsignor Edmund J. Venerloh; Rev. Charles M. DeGuire; Rev. Jos. J. Richter; Rev. F. G. Wisberg; Rev. Jos. B. Wolf; Rev. John S. Jadrich; Rev. Ralph A. Zimmer; Rev. Charles J. Rice, C.M.; Rev. Joseph L. Gottwald.

EXCERPTS FROM STATEMENT BY ATTORNEY GENERAL BROWNELL, JR.

Excerpts from a statement by Attorney General Brownell, Jr., before the Subversive Activities Control Board in the case of Herbert Brownell, Jr., Attorney General of the United States, Petitioner v. International Union of Mine, Mill, and Smelter Workers, Respondent, (hereinafter referred to as "the union" or "international union"), held in Washington, D.C., Monday, February 25, 1957, which were supported by evidence adduced in the months immediately following. The excerpts are as follows:

"The international organization of this union has been under the tight domination and control of the Communist Party. A majority of the members of the international executive board have been either party members or so closely affiliated with the party as to be subservient to its wishes."

"For all practical purposes membership in the party was a prerequisite to employment in any important position in the international office. The staff of international representatives and regional directors was loaded with members of the party. This staff has become a Communist Party machine within the union, used by the officers to maintain the party grip and to perpetuate their own control and to recruit members for the party.

"The educational department was used to propagate the party line among the rank and file of membership. In all matters of domestic and international politics, the union publication was but an echo of the Daily Worker. It followed every twist and turn of the party line.

"Facilities and funds of the international union were used to promote the interests of the Communist Party and its various fronts. Sometimes the international representatives who had little union work to do were assigned to work on projects for the Communist Party and its various fronts. Their salaries were paid of course by the union."

"In 1949 the party decided that the time had come to place a Negro on the international executive board. Jesse Van Camp was at that time board member for District 3 and a party member. The party decreed that he should step aside in order that Raymond Dennis, another party member, could

succeed him on the board. This was done. Dennis has been board member for District 3 since that time, and Van Camp was given a position as international representative, which he still holds in District 3."

"In 1953 the party decreed that Charles H. Wilson should step down from his position as eastern vice president so Asbury Howard could succeed him, and that was done.

"In 1950 this union was thrown out of the CIO because of its Communist leadership. It became an independent union, but its position since that time has been a lonely one. It was isolated from the main stream of labor, and its influence in the labor movement was less than nothing. It was regarded as a pariah among unions, a stench in the nostrils of labor itself.

"In 1953 the party decided that the union should get back into the main stream of labor, and to this end that the International Union of Mine, Mill, and Smelter Workers should merge with some other union. Since that time the officials of this union have made persistent and strenuous efforts to effect the merger. So far their efforts have not been successful.

"The Communist leadership has brought nothing but disaster and ill repute to this union. Control of the union has been more important to them than the welfare of the workers. Disruption and internal strife have been their major contribution. Maurice Travis once said in the midst of a secession fight in 1948 that he would prefer to see the union destroyed than to see the Communist Party lose control of it. John Williamson said in 1949 that it was more important to hold onto the basic sections of the industry, that is, to the mines and smelters, than to wage futile fight to hold the fabricating and fringe locals. Another high party functionary said in 1954 that the loss of Mine Mill would set the Communist Party back 30 years in the United States. Hold on to the union at all costs has been their purpose. Hold on to the mines and smelters even at the expense of losing the rest has been their policy.

"The cost to the union of that policy has been heavy. The Communist leadership and policies have been an expensive luxury which, as time has demonstrated, the union could ill afford."

"In August of 1947 the party decreed that Travis should step down from the presidency and take the less conspicuous position of secretary-treasurer. There was a reason for this. Travis was too well known as a Communist, and because of the bitter fights over the Communist issue the top leadership needed a more respectable front.

"John Clark was selected for this role, The party selected him. He was not a party member, but he was a quiet individual who would be completely subservient to the leadership of Travis. That is to say, that is what the party expected. So Clark became a figurehead president, referred to by the Communists themselves as a dummy, and Travis continued to run the union. Clark is still president and he has not disappointed his Communist supporters."

"There have been a few changes of personnel, but these changes have not diminished the party control. Perhaps they have operated to strengthen it,"

"To conceal the existence and operations of the committee, another group was established. It was called the progressive caucus. The committee members were a part of the progressive caucus. Other party members on the board and on the staff were also a

part of the progressive caucus. Otherwise, the caucus was made up of people who consistently supported the party leadership in

the union.

"Before every board meeting and before every convention there would be a meeting of the steering committee, followed by a meeting of the progressive caucus. Policies were transmitted first to the steering committee from the party, and through the steering committee to the progressive caucus, and thence to board meetings and conventions."

"With few exceptions, they have successfully concealed their party membership from the rank and file membership of the union. They have posed as the best and only friend of the workingman, while subordinating his interests to the interests of the Communist Party and to their own lust for power. They assume poses of righteous indignation at any challenge to their leadership and always denounce their opposition at disruptionists and as ambitious, unscrupluous men, lusting for power. Their opponents are always traitors and enemies of labor.

"They assumed the pose of martyrs when called to account and expelled by the CIO. The CIO was merely trying to take away their autonomous rights, so they said. Communism, they said, had nothing to do with it, and the maintenance of the autonomous rights became a holy cause."

[Excerpts from Fair Play, Ste. Genevieve, Mo.]

FOURTEEN MINE-MILL STAFF FACE CONSPIRACY INDICTMENT

Fourteen members of the International Union of Mine, Mill, & Smelter Workers staff surrendered in November 1956, to face Federal indictments charging them with conspiracy; in part they are named as follows: Jess Van Camp, Maurice Travis, Asbury Howard, C. J. Powers, and Ray Dennis. The trial is set for September 21, 1959, in the U.S. Federal district court, Denver, Colo.

Statement on H.R. 781, a Bill To Create a Federal Department of Urban Affairs

EXTENSION OF REMARKS

## HON. ROBERT A. EVERETT

OF TENNESSEE

IN THE HOUSE OF REPRESENTATIVES
Wednesday, June 10, 1959

Mr. EVERETT. Mr. Speaker, I have asked consent to insert in the RECORD the testimony of Bernard F. Hillenbrand, executive director of the National Association of County Officials, on proposed legislation in the House which would create a new Federal Department of Urban Affairs. Mr. Hillenbrand is probably the youngest executive director of a major national association of public officials in America today-but I commend his statement to you for its maturity of reason and its soundness on basic principles of our Federal system of government. Speaking before the House Government Operations Committee, on behalf of 6,000 elected and appointed county officials, Mr. Hillenbrand pre-sented a penetrating reappraisal of Federal-local government relationships that deserves the serious consideration of this entire body.

A graduate of the Maxwell School of Public Administration at Syracuse University, Mr. Hillenbrand's career has also included service with the States of New York and Wisconsin, the city of Syracuse and as assistant director of the American Municipal Association.

The testimony follows:

TESTIMONY OF THE NATIONAL ASSOCIATION OF COUNTY OFFICIALS BEFORE THE HOUSE GOVERNMENT OPERATIONS COMMITTEE ON H.R. 781, A BILL TO CREATE A FEDERAL DEPARTMENT OF URBAN AFFAIRS BY BERNARD F. HILLENBEAND, EXECUTIVE DIRECTOR, NATIONAL ASSOCIATION OF COUNTY OFFICIALS, JUNE 3, 1959.

#### SUMMARY

Mr. Chairman, the National Association of County Officials is opposed to the passage of H.R. 781, a bill that would create a new Federal Department of Urban Affairs under the direction of a Cabinet rank secretary appointed by the President, with the advice and consent of the Senate. As an alternate solution to the problem of providing national coordination of the numerous Federal-aid programs dealing with States, counties, cities and other units of government, we respectfully suggest that a permanent commission on intergovernmental relations be established. We propose that the present posi-tion of Deputy Assistant to the President for Intergovernmental Relations be given major responsibility for coordinating these national programs as a staff function of the office of the President of the United States. If a national commission is appointed to study metropolitan problems we respectfully urge that counties and other local units be adequately represented.

#### REASONS FOR OPPOSITION

The National Association of County Officials represents more than 6,000 elected and appointed policymaking county officials in 48 States. We are the national representatives of our 45 affiliate State associations of county officials organized in 43 States. Our membership has specifically considered the subject to creating a department of urban affairs and unanimously voted to oppose it for the following reasons:

1. A Department of Urban Affairs would

create more Federal bureaucracy.

Our American county platform which contains our national policy reads as follows:

"Whenever possible dealings between county and other local governments and the Federal Government should be channeled through an appropriate State agency. We oppose the establishment of a Federal department of urban affairs on, the ground that it would further weaken the States and would tend to create an unwieldy bureaucracy of the type found in many foreign countries." (Unanimously approved, Portland, Oreg., July 25, 1958.)

More recently, on May 5, 1959, U.S. Senator Vance Hartke, Democrat, of Indiana, asked the National Association of County Officials for reactions to his suggestion that a new Federal agency should be created to serve as a national clearinghouse for State and local government information. He had in mind a twofold function of the new agency of: (1) Service as a national library on State and local materials (much like the Library of Congress); and, (2) retention of a staff of specialists to analyze, digest, and summarize data and interpret trends (much like the Legislative Reference Service of Congress). While Senator HARTKE did not mention creation of a Department of Urban Affairs, the purpose of his proposed new unit would be somewhat similar to the purposes identified in the preamble of H.R. 781, namely:

"The Congress finds that the pressing needs of cities and metropolitan areas are such that Federal action should be taken to assist in meeting these needs through educa-

tion, research, technical services, and such programs as the Congress may later prescribe."

We circulated this proposal to 600 of our key leaders throughout the Nation and with no exceptions they were all opposed to creation of a new Federal agency to serve as a national clearinghouse. We have tabulated typical replies and because they are so pertinent to these hearings we would like to have permission, Mr. Chairman, to make them a part of the record.

Experience of local government officials with Federal agencies has not always been good. In the first place a national program inevitably involves establishment of national uniform standards. Local needs and local sentiments are such that in most cases local officials believe that their problems are unique. Federal officials dare not risk administering a program in one area at variance with its administration somewhere else.

Then again, Federal officials appointed nationally will be responsible to national of-Experience has shown that Federal officials are therefore far less responsive to local needs. We can also see basic conflicts inherent in the position of Urban Secretary. In the case of Federal aid to airports, for example, if the local officials want such aid and the administration in power is opposed, the Secretary is in a poor position to advo-cate local governments interests in face of opposition from the boss. In this case, to whom do local officials appeal? There is no evidence to support the idea that because an Urban Secretary is in charge of urban affairs that he will be in sympathy with the feelings of the locally elected urban area officials. In fact, we have had cases of Federal officials being appointed to administer certain Federal programs which they are known to oppose.

2. Transfer of function of primary interest to localities to a single Urban Department may solve certain problems of coordination while at the same time creating others as bad or worse. Example: The Bureau of Public Roads in the Department of Commerce administers the Federal-aid highway program. With some minor exceptions the Federal Government does not build or maintain any roads. Yet the Bureau spends billions of dollars a year in gigantic partnership with State and local officials. It has been argued that there is crying need for coordination of the roadbuilding with slum clearance and urban renewal in the housing agency. This is probably true but if you transfer the Bu-reau to the new Urban Department into which you have already put the Urban Renewal Agency, how do you coordinate highway construction with agencies dealing with other means of transportation and now lo-cated in the Department of Commerce? In the case of Federal-aid airport assistance which is accomplished in cooperation with the States and local government, if you move the Federal Airport Administrator into the Urban Department, how do you coordinate airport construction with air-traffic control. weather reporting, and related functions still in the Department of Commerce.

At the present time local officials often get the runaround from one agency to another and presumably this bill would solve the problem by placing all the agencies dealing with local government into a single department. Would this help? Our smaller counties for example would like to have Federal participation in the cost of resealing runways on these glant airports that they took over after the war. An appeal to the Urban Affairs Department would most likely be advised that they would have to await a determination by its airport subunit of its overall airport plan. If they appealed to the airport unit they would likely be advised that they would have to await overall determination of department policy

on all maintenance items, including highways, hospitals, etc. We might substitute intra-agency buckpassing to interagency buckpassing.

Experience with merging the Military Establishments would indicate that because agencies have a single head does not mean that they will be coordinated.

Presumably the Urban Secretary have a staff of specialists to make studies of urban area problems. This could lead to more trouble for local officials. Example: NACO has been making a concentrated effort over the past 20 years to get the National Government to recognize that large tax exempt Federal holdings often constitute a hardship on local governments, particularly small ones that depend almost exclusively on property taxes for support. We have asked Congress to authorize a controlled program of payments in lieu of taxes. In 1953 and 1954 we pushed for passage of this legislation and the Government told us that we should await the result of a national study which was being conducted as part of the research on the President's Commission on Intergovernmental Relations. In 1955 the Commission reported favorably on our position. Still no action. We know that the next argument will be that the 1955 study is now too old and that there will have to be a new study. studies can be a fine device for delaying action and most of us are agreed that now is the time to start acting on these problems.

3. Inherent in the proposal to create a Department of Urban Affairs in the assumption that the metropolitan problem will be solved at the national level. This is not true. We know of no case where the Federal Government has contributed significantly in advancing the solution to the urban problem. On the contrary, some of the Federal policies discourage its solution. Example: Under present Federal law communities with appropriate State priority are eligible to receive 30 percent of the cost up to a limit of \$250,000 for the cost of constructing a sewage treatment plant. In metropolitan areas, logic and engineering advances indicate that it is more economical for several communities to band together and construct a single metropolitan treatment plant. Under the Federal law, each individual community is eligible for up to \$250,000 of Federal aid while if the metropolitan plant is constructed the total for the entire project can only be \$250,000. Communities ignore regional responsibilities and will choose to go it alone under this policy.

Many very well meaning people are dis appointed with our lack of progress in solving areawide problems. This is probably In part due to the fact that they are looking for the wrong things. They expect bright new super new super government encompassing whole regions and crossing State lines. This isn't likely to happen in the near future. There have been some bold experiments as for example Dade County, Fla., city-county consolidations, the Lakewood plan of municipal services being provided by contract with the county and many others. All were instituted locally and all differ considerably to meet local needs and sentiments. None take on the aspect of super government.

Of even more importance is the amazing degree to which individual functions are being performed on an areawide basis through the revitalization of county government. We have ample documentation of counties in both urban and semirural areas taking over responsibility for area-wide traffic and parking, zoning, industrial development, taxation and finance, water and sewage disposal, hospital construction, community colleges, outpatient clinics,

planning and even urban renewal.

It is often pointed out that 6 out of 10 Americans live in 170 metropolitan areas. In 100 cases, this area is encompassed by a single county. In the remaining areas two or more counties are involved. It is because of this circumstance that we think that the experiment in the six-county area of Detroit is among the most significant in the country. The district of Mrs. Martha Griffiths, the author of the bill under discussion in a part of this Supervisor's Intercounty Committee made up of representatives of the supervisors, mayors, and other local officials of the sixcounty area. They study their mutual problems and while they do not have central authority, nor do they want any, they are tackling their problems by study and their cooperative action by the area governments where necessary.

4. Finally, we are opposed to the creation of a Department of Urban Affairs because it would expand the role of the Federal Government in areas which we believe should be left to the States and localities.

The governmental philosophy of the National Association of County Officials is best summed up in the statement of principles which guided the President's Commission on Intergovernmental Relations.

"Leave to private initiative all the functions that citizens can perform privately; the the level of government closest to the community for all public functions it can handle; utilize cooperative intergovernmental arrangements where appropriate to attain economical performance and popular approval; reserve national action for residual participation where State and local governments are not fully adequate, and for the continuing responsibilities that only the National Government can undertake."

There would always be a temptation on the part of a vigorous Urban Secretary to expand the role of his Department and to get involved in matters that more properly should be handled by localities. This is sometimes called empire building and examples of this are too numerous to mention. His control over the administration of standards and his power to stop Federal aid if he disapproved of local activities would place the Secretary in a most powerful position-a position of Federal control over local activities never envisioned in the Constitution or by supporters of the Federal system.

It is also important to note that while county officials have taken a strong stand against a Department of Urban Affairs, they are by no means opposed to existing Federal technical and financial aid programs. matter of fact, you will find specific endorsement of most of them in our policy statement. It is also important to note that there is no appreciable difference between the national legislative programs of the cities and the counties. In the past 2 years, we cannot recall a single instance in which the things we have worked for in Congress have not been identical, with the single exception of a stand on a Department of Urban Affairs and our position that Federal aid programs should be channeled through the States. In a great number of cases we have joined together in support of important national programs.

With respect to the apparent contradiction in supporting Federal aid while at the same time opposing expansion of the Federal Government into local activities let me add that we recognize the dilemma. The plain fact is that if the Federal Government will not participate in the present aid programs to the extent of the national interest we cannot. We do not have the funds. We feel that any proposed new aid programs should be given the most critical review. Again we agree with the spirit of the findings of the Kestnbaum Commission

The major problem with respect to the

metropolitan problem does not lie in Washington, but rather rests squarely at the State capitol, the city hall, and courthouse.

# REASONS WHY WE ARE NOT OPPOSED

In listing our reservations about the Dapartment of Urban Affairs, it is important to clarify our position. It might be argued by some, for example, that being a national association of public officials we may be opposed simply because it might tend to weaken the association. Actually, a proposed Depart-ment of Urban Affairs would strengthen our association. All experience would indicate that when a Federal agency is charged with administering a program of special interest to a given group, the group finds it increasingly necessary to form an association to interpret the needs of the group to the Federal agency. Examples: Veterans' Administration activities have stimulated organization of veteran groups, farm programs stimulate organization of farmers, etc. There would probably be an even greater need for public officials organizations with the creation of the Department than there is now.

It should be pointed out that there are many organizations of public officials, employing about 400 people in a constant study and research program. The Urban Department would have to be careful not to duplicate this work.

### PERMANENT COMMISSION OF INTERGOVERN-MENTAL RELATIONS SUPPORTED

We agree that there is need to coordinate various national programs affecting local governments but the coordination needs to be among the governments and not just among the Federal agencies. We believe that this can more effectively be accomplished by creation of a permanent Commission on Intergovernmental Relations as originally recommended by the President's Commission on Intergovernmental Relations (Kestnbaum Commission). The Commission recommended on page 88 as follows:

"An Advisory Board on Intergovernmental Relations would be appointed by the President after such consultation as he deemed appropriate with associations that represent

various levels."

We would carry this recommendation further and in line with a bill introduced by Congressman L. H. FOUNTAIN, Democrat of North Carolina, assign the following responsibilities to the Commission:

1. Bring Federal, State and local representatives together on common problems.

- 2. Provide forum for discussion of Federal grant and other programs requiring intergovernmental cooperation.
- 3. Give critical attention to conditions and controls involved in Federal grant programs. 4. Make technical assistance available to
- the Federal Government in review of proposed legislation to determine its overall effect on Federal system.
- 5. Encourage discussion of emerging problems requiring intergovernmental coopera-

6. Recommend allocation of governmental functions and responsibilities among the

several levels of government.

A permanent Intergovernmental Relations Commission would give local officials a forum to make their needs known. It would seem to us that before we talk national organization we ought to talk national policy. is the national policy on subsidy to urban area mass transit? Direct Federal-local relations that bypass the States? Civil defense dispersal policy in urban areas? These things should be decided by the Congress with the full cooperation and participation of State, local and Federal officials. An Urban Secretary would be in a poor position to sug-gest this policy. Example: Public Law 660 provides for a non-Federal Water Pollution Control Advisory Board to suggest policy on water pollution including Federal grants to localities for the construction of water pollution control facilities. These grants have the support of the majority of local government officials and the Advisory Board unanimously supported the continuance of these grants in spite of opposition by the President. The point is that a permanent Commission on Intergovernmental Relations would provide the Congress and the public with a clearer picture on local problems of this type than could be obtained from a Federal official who would and should be guided by overall administration policy.

SPECIAL ASSISTANT TO THE PRESIDENT

With respect to coordination of existing Federal programs we believe that this should rest solely with the President of the United States who is the Chief Executive Officer of the National Government. He of course needs assistance and advice and we believe that this can best be accomplished by activating the office of Deputy Assistant to the President for Intergovernmental Relations as originally recommended by the Kestnbaum Commission.

STUDY COMMISSION ON METROPOLITAN PROBLEMS

With respect to legislation to create a Commission to Study Metropolitan Problems we would respectfully suggest that if such legislation is passed that the Commission have adequate representation of county officials. The original bill introduced by Senator CLARK provided for representation by mayors but excluded any county officials. The Supervisor's Intercounty Committee of the Detroit Metropolitan Area, among many other county officials, took exception to the exclusion of county officials and unanimously approved a resolution calling for the addition of two from county legislative bodies, two from county administration and two from the legislative bodies of cities. NACO, the American Municipal Association and the U.S. Conference were to nominate these candidates.

Congressman ALVIN M. BENTLEY has introduced H.R. 7282 which incorporates these suggestions except that it should identify the organizations who are to nominate candiates.

We support this bill.

# Driver of the Year Saluted

EXTENSION OF REMARKS

### HON, ED EDMONDSON

OF OKLAHOMA

IN THE HOUSE OF REPRESENTATIVES Wednesday, June 10, 1959

Mr. EDMONDSON. Mr. Speaker, no thinking American will question the statement that one of the greatest needs in our country at the present moment is safer and more careful driving on our highways. The staggering total of highway facilities over the past Memorial Day weekend, far surpassing estimates and setting a new high in this tragic waste of lives, certainly indicates the need for careful driving and courtesy on the road.

It was with a great deal of pleasure and pride that this past week I met a man named Carl C. Crim. It was a great pleasure because Mr. Crim has just been named by the American Trucking Associations as the trucking industry's Driver of the Year for 1959, and there was also great pride because he is from my home State of Oklahoma.

The honored truckdriver is from Okmulgee, Okla., and drives a tank truck for the Hugh Breeding, Inc., a petroleum common and contract carrier with head-quarters in Tulsa. He was chosen Driver of the Year from the more than 7½ million truckdrivers in the Nation, high praise of his qualifications.

Mr. Speaker, I would like to make mention of the excellent safe driving record of Carl Crim and of several incidents in which he literally risked his life to assist other motorists involved in highway accidents.

Mr. Crim has a 26-year record of accident-free driving, coupled with a long record of administering first aid and assisting at accident scenes, both on and off the highway. He has driven over 11/2 million miles during this time, in all types of weather and conditions, without a single mishap. In July 1958, Mr. Crim was the first to arrive at the scene of an automobile accident near Claremore. Okla. He was successful in removing the occupants of one of the vehicles involved in the head-on collision, applied first aid, and helped in handling traffic until assistance arrived and the highway was cleared.

A number of years ago in Tulsa Mr. Crim prevented a certain gasoline explosion which would have taken countless lives had it not been for the quick thinking and heroic action of this truckdriver. While making his usual delivery at a bus terminal in downtown Tulsa to fill a 1,000-gallon-capacity gasoline-storage tank, Mr. Crim had removed the cap from the tank to determine the capacity. At this time a worker in the terminal began using an arc-weld torch on the opposite wall of the building. With the cap of the tank off, fumes began spreading across the area toward the worker. A spark from the torch ignited the fumes and sent a blanket of flames toward the storage tank and Mr. Crim. Quickly covering the area around the opening with a tarpaulin, he maganed to screw the cap back on the tank opening-all this while flames were burning around his legs. While the driver suffered only slight singes about his legs, authorities said the entire bus station with several dozen waiting passengers might have been blown to bits except for the driver's alertness and heroic efforts. These are but two of the many such instances in which Mr. Crim has lived up to and been an outstanding example of the gentlemen of the highway.

Named Driver of the Year for Oklahoma, Mr. Crim was selected by a group of judges, consisting of the Under Secretary of Commerce for Transportation. John J. Allen; Brig. Gen. E. Herbert Qualls, Director of the Bureau of Motor Carriers of the Interstate Commerce Commission; Arthur C. Butler, director of the National Highway Users' Conference; and Edward F. Jones, staff director. Subcommittee on Traffic Safety of the House Committee on Interstate and Foreign Commerce. Mr. Crim's record of exploits and his outstanding safe-driving record were selected as the most outstanding of all the entries in the driver competition.

He has been in the employ of Hugh Breeding, Inc., since 1947. Prior to that he drove for other trucking firms in his native State. An Army veteran, Mr. Crim spent 2 years with the Army Engineers in the Pacific theater during World War II driving heavy Army vehicles.

Mr. and Mrs. Crim have two teenage daughters and live at 900 North Griffin, in Okmulgee. As a reward for his selection as Driver of the Year, Mr. and Mrs. Crim were invited to Washington for a week of sightseeing and many radio, television, and newspaper interviews; then to New York City for a week of similar activities.

It is a great honor for me to have met with such a fine citizen of my home State of Oklahoma, for Carl C. Crim is a truly oustanding example of the competent and courteous driver whom all drivers might imitate.

# The Wheat Deluge

EXTENSION OF REMARKS

OF

# HON. ARCH A. MOORE, JR.

OF WEST VIRGINIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, June 10, 1959

Mr. MOORE. Mr. Speaker, for some time, this country has been plagued with the problem of the vast agriculture surpluses that have been accumulating over a number of years as a direct result of Government trying to tell the farmer how to run his business.

Today we are discussing what our attitude should be with the problem of wheat, and it is my sincere hope that the Congress will adopt the Belcher substitute for the bill as posed by the Agriculture Committee.

The First Congressional District of West Virginia and the State of West Virginia itself are made up of small farmers, none of whom have benefited from this vast program, and I, for one, have come to the conclusion that it should be stopped immediately. I only wish that I had the opportunity to vote for legislation which would relieve the Government of spending some \$5 or \$6 billion a year to support the large corporate farmer in America, for I feel in the end, America and the true farmer would be better off.

I respectfully call to the attention of the House and ask that it be included in my remarks an editorial written by Mr. Thomas O'Brien Flynn, a highly competent writer of the Wheeling Intelligencer, entitled "The Wheat Deluge." I commend this editorial to my fellow Members for their consideration:

THE WHEAT DELUGE

The Department of Agriculture reports that on May 1 the Government had on hand surplus farm commodities costing almost \$9 billion. The increase from a year ago was just short of \$1,681 million.

Of wheat alone, the Government held 1,084 million bushels valued at \$2,803 million. Another 300 million bushels are under price support loan.

How to get out from under this mountain of grain is one of the pressing problems now before Congress.

Democrats on the House Agriculture Committee have reported out a bill which would give growers the choice of reducing their acreage allotments by 25 percent in return for a support price of \$2.13 a bushel instead of the present \$1.81 figure, or planting at will with a support price of \$1.18.

The Eisenhower administration wants all acreage restrictions removed and the support cut well below the proposed Democratic floor to discourage production for storage.

From the time he assumed the post of Secretary of Agriculture, Mr. Benson has been trying to steer a course toward progressively lowered crop subsidies with the end in view of eventual withdrawal of the Government from the farm management business.

Because it contemplates a longer stride in this direction, the administration's wheat bill would appear superior, although assuming the imposition of a money ceiling on any farmer's crop support collections—a Senate approved measure fixes \$35,000, a different House bill \$50,000—either should help the situation somewhat.

Because we have been supporting crops for so many years that our entire agriculture has been geared to the device, it probably would be impracticable to scrap the whole thing at one time, although in the case of wheat at least it would appear that this is the only effective remedy.

Remarks by Fred C. Scribner, Jr., Under Secretary of the Treasury, at the Dinner Marking the 100th Anniversary of the Founding of the Maine Savings Bank, Portland, Maine, on June 8, 1959

EXTENSION OF REMARKS

# HON. CLIFFORD G. McINTIRE

OF MAINE

IN THE HOUSE OF REPRESENTATIVES Wednesday, June 10, 1959

Mr. McINTIRE. Mr. Speaker, Maine is justly proud of its sons and daughters who serve in responsible positions in all walks of life, and one of such distinguished citizens is the Honorable Fred C. Scribner, Jr., Under Secretary of the U.S. Treasury.

Maine is equally proud of its citizens whose service and sound management have resulted in the development of banking, commerce, educational, and other such institutions.

It was at a dinner marking the 100th anniversary of the founding of the Maine Savings Bank—a truly fine Maine institution—that Secretary Scribner addressed an assemblage of Maine citizens. Because this occasion performed as a dedication to truly sound American principles and traditions, and because Secretary Scribner's remarks served to bring these into proper focus, I commend his remarks to the attention of my colleagues:

The Maine Savings Bank, originally named the Portland 5-Cent Savings Institution, was organized in 1859 to solicit the deposit of small amounts, to provide security and safety for the sums it received and to devote all

of its earnings to the benefit of depositors either through dividend payments or through additions to surplus set aside for greater security

The new institution was not a private commercial venture created to earn a profit for its sponsors and managers. It had no stockholders. Its earnings were to belong to its depositors. Its organization represented an attempt by Portland's public spirited business and civic leaders to find a more acceptable method of aiding low income workers, many of them newly arrived immigrants and their families.

An institution for savings, organized to provide security and pay interest on the small deposits of working men and women, had been conceived some 50 years prior in Scotland by the Rev. Henry Duncan, who was anxious to substitute thrift for charity in his parish. The idea was quickly adopted in many sections of Great Britain and soon spread to the United States.

By 1859 there were eight independent mutual institutions for saving in Maine. All had been created for philanthropic purposes. They appealed for small deposits, then considered of little value by banks of discount.

Since 1859 the bank's original purposes to develop thrift and provide protection for the hard earned savings of its depositors have been firm and major guides of bank policy.

Soon after its opening the bank added a further major reason for its existence to those present on opening day. It became an important source of capital for community growth and expansion. Homes and plants and public and private ventures have found a source of capital funds at this bank. Truly, this institution has been a builder.

Savings banks, by pooling and channeling savings, perform a function essential to the growth of America. By facilitating the conversion of savings into active and productive investment areas, they help to maintain production, employment, and economic progress. For capital to come into being, saving must be followed by investing. Savings in a shoebox, while they may reduce the amount of money in circulation and help to retard inflation, previde no productive strength for the economy. The investing policies of institutions appealing for the deposit of savings must assure that capital credit is available for sound and necessary ventures.

Last week the Maine Savings Bank celebrated the 100th anniversary of its opening and began a second century of service to Portland and Maine and their people. The bank's history is one of steady and constructive growth. No depositor has ever lost a single penny. Regular dividends have been paid in every year of the bank's existence. Through Civil and World Wars, through major and minor depressions, the bank has met fully its responsibilities and has justified the confidence of its founders and its depositors.

The Maine Savings Bank begins its second century with greater assets than at any time in its history. It is responsible to its largest number of depositors—62,000—and for deposits of nearly \$70 million. Deposits have more than doubled in size in the last 20 years. The bank offers more facilities and services to its customers than ever before. Its strict adherence to the highest fiduciary standards has earned for it the trusting and loyal support of the communities it serves.

The present officers, led by H. Halsey Davis, president; the veteran Fred F. Lawrence, former treasurer and now vice president; and Barrett C. Nichols, treasurer; and the board of trustees, Messrs. Davis, Bradford, Pierce, Lawrence, Getchell, Hildreth, Ingalls, and McKusick bring to the leadership of the bank a sum total of knowledge, experience, and judgment not exceeded in any prior period of the bank's history. It has a great asset in the trained and experienced men and

women who serve the depositors in every phase of the bank's activities. The 100-year record is excellent by every test. The bank is well prépared to meet the new experiences, the unexpected challenges which are bound to come its way in the decades ahead.

The effectiveness of mutual savings banks depends on the devotion of the American people to the practice of thrift. Savings banks must constantly seek out ways of teaching the people concerning thrift and bringing home to depositors and potential depositors the individual benefits which come to a thrifty people. We cannot merely assume that the value of thrift and the essentiality of saving will be readily understood and accepted by our children and by coming generations of Americans. The energies and funds of this bank must constantly be devoted to bringing home to all the history of thrift and its great advantages. This is why the Maine Savings Bank school saving program is so fine and so essential.

This program, put into operation in 1921, while not original with the bank, was then new to Maine. It involves the rendering of a very real and vital community service, consistent with the bank's initial reasons for existence—the inculation of habits of thrift in Maine citizens. Hundreds of thousands of Maine children had their first banking experience in their school banks. Today, the Maine Savings Bank school banking system serves some 90 schools and 20 thousand children. Their deposits exceed a total of \$750,000. The success of this activity is a testimony to the unremitting efforts and devotion of its two directors, Mrs. Stevens who was succeeded by Mrs. Parker, and to those who have assisted in this teaching program.

There is another great thrift program in which this bank has written another splendid record of unselfish service. This bank, together with financial institutions throughout the country, began at the time of World War II a program of not only selling, but vigorously promoting the sale of U.S. bonds and later U.S. savings bonds. These bonds were designed and issued to appeal primarily to the same type of savers as are attracted by this bank's own savings programs. Thus in participating in this program the bank was aiding a competitive program and pushing a security which competed for savings. However, as its contri-bution to the war effort and to aid and attract funds to finance the Federal deficit, the bank from the beginning of the program has most generously, efficiently, and unselfishly devoted its facilities and its talents to this work. Here is another thrift program conducted not for profit but to aid in the financing of our national debt and to maintain the integrity of the dollar.

We at the Treasury are proud of our savings bond program. In addition to its importance in accomplishing noninflationary borrowing for the Government, it has made a large contribution to thrift in all forms and to the growth of America. Millions of Americans have saved for the first time through savings bonds deductions.

There is one other point—and if this is a selling pitch, I'm willing to make it. I believe it is important that each and every individual invest part of his or her savings in the securities of their Government. There are programs which urge people to buy stock in order to gain a better understanding of the private enterprise system. By the same token, we should urge everyone to buy and own at least a small share in this great country of theirs. I don't know of a security, on balance, that is a better buy for the great rank and file of Americans than U.S. savings bonds.

We must all understand, however, that the Maine Savings Bank and, in fact, all mutual savings banks will grow and prosper in the next century only if they can continue to function in a nation dedicated to encouraging its people to be thrifty and dedicated to practices which will maintain a sound and stable dollar. People cannot be expected to save if the ravages of inflation and imprudent fiscal policies destroy the purchasing power of that which they have put aside for future use. History has taught that inflation creates an urge for spending, not for saving. Quite recently Secretary of the Treasury Anderson, in discussing this very point, said:

"A current deficit and the fear of future deficits can keep people from saving because of possible loss of these savings to inflation. If we ever reach the point where people believe that to speculate is safe but to save is to gamble then we are indeed in trouble.

"If rising prices which will follow from continued deficits cut into saving habits, the result will be further to diminish the supply of capital for economic growth. We cannot indefinitely expect people to continue their saving if they expect prices to go on rising indefinitely."

We cannot repeat too many times that if we develop an economy in which people believe that to speculate is wise but to save is folly, then we are indeed in trouble.

For future success the needs of this bank will be best met by stable monetary standards, reasonable tax rates, and budgetary practices and policies which will check inflationary pressures. In a word, we need a balanced Federal budget and a Federal Government which will live within its income.

There is nothing more important to work for and stand for and fight for than fiscal soundness. I cannot put this point to you better than in the words which President Eisenhower used in the U.S. Savings Bond Conference in February of this year:

"Let us not be misled. A balanced budget and all that it means today in the way of fiscal soundness is a highly positive objective. It is the advocates of unbalanced budgets and deficit spending in our present economic environment who are against rather than for the maintenance of healthy growth in America. \* \* \*

"Inflation weakens the economy. It brings serious hardships to those of our citizens who are living on pensions or other fixed incomes, and works against those who are unable to bargain effectively for higher wages. Most dangerous of all, inflation weakens the incentive to save. It gives rise to a fear that the dollar will continue to decline in value and that speculation will be the only way to keep ahead of the game."

During the past two decades the value of the dollar has fallen by more than 50 percent; but there is certainly little general understanding of the inflationary dangers resulting from continuing large Government deficits. When the Government lives beyond its means, going into debt to pay for part of its requirements, as has been done, it creates heavy pressures for an inflationary price rise.

When the Government spends more than it takes in, it must borrow the difference in order to pay its bills. To the extent that these funds can be obtained only by resorting to borrowing from the commercial banking system, there is real inflationary pressure.

The reason borrowing from commercial banks increases inflationary pressures is that the commercial bank will simply credit the Government on its balance sheet for the amount requested, say, \$100 million. It does not switch out of any other investment to make the purchase. In effect this is adding \$100 million, subject to reserve requirements, to the money supply of the Nation without relation to an increase in goods. Hence, we have more money in the economy

for the same amount of goods, thereby increasing the upward pressure on prices. On the other hand, borrowing from the pool of investment funds in the hands of savings banks or other thrift institutions, does not increase the money supply; it makes use of savings accumulations already in existence.

The problem of maintaining and enlarging the proportion of the Federal debt held outside the commercial banking system is not, of course, a simple one. The thrift institutions are properly conscious of their fiduciary obligations to those whom they serve and of course they will pursue no course of action that is not consistent with those obligations.

In this area, however, to the extent that our savings institutions are able to purchase Government securities, they are making a most valuable contribution to sound Government financing. They are helping to protect the value of their dollar and of the dollars of all of us.

The other major area in which we are generating inflationary pressures is, of course, in the wage-price spiral. This is a difficult area to discuss because the minute you begin to talk about it, it is said that you are trying to indicate that labor shouldn't have its fair share of the Nation's income.

Ladies and gentlemen, you know that that's not the point at all. When you give a wage increase with no increase in production or when prices are increased arbitrarily you contribute to inflationary pressures. Purchasing the same production for higher wages or higher prices creates inflationary pressures that can produce an effect similar to Federal borrowing from the commercial banking system to satisfy a deficit. In this area both labor and management have heavy responsibilities and must constantly keep in mind the overall public interest in combatting inflation and maintaining fiscal integrity. we are to continue to carry the heavy load in the military and civilian fields which we have today, we need to have an economy which will grow, which will be dynamic. Weakening our economy will play into the hands of those who threaten our way of life just as surely as weakening our military

Some people will tell you that all the Government needs to do to aid in expanding the economy is to spend more money; that the economy will then grow faster, and we will have more resources for everything—for defense, for housing, for personal consumption. Frankly, in my opinion this is a short-sighted and unsound doctrine.

To argue that with a larger output, costs tend to fall overlooks the basic fact that a rising demand for labor and raw materials drives up costs. An economy running under forced draft, like a war economy, is bound to be inflationary. For a short while some people—not all my any means—will enjoy the illustion of good times that the inflationary boom will bring. This is an attraction on which this doctrine has been sold time after time in this world. It was sold in Germany. It was sold in France. You know the answer.

What happens a year or two later, after you have started off on this inflationary spiral and sort of relaxed and started to enjoy it? Well, the exhilaration passes off, and you then begin to pay the price. An inflationary society is a disorganized and an inefficient one. It is a very poor base from which to conduct a long-term worldwide struggle against those who would destroy us if they could. It's a particularly poor base from which to meet the strain of a sudden emergency. Under those conditions we would have a hard time taking the additional financial strain of even a minor emergency if we were to go into one already overextended.

We must constantly guard against pushing off on State and Federal Governments responsibilities which belong in private hands. It is true, of course, that some immediate problems can be solved more quickly by Government action than by the free market. But each time we resort to Government action as an easy way out, we lose something. In a technical sense, we lose some of the market's capacity to make adjustments. In a broader sense we lose some of the human stamina and fiber that have brought us to where we are today and that protect our freedom.

For the welfare of this bank and for the welfare of all Americans, we have a clear responsibility to adhere to prudent programs which will contribute to sustained growth in our economy over the long term. One of the most important of these is the maintenance of fiscal soundness. Imprudent spending and a complacent attitude toward deficit financing could in time destroy the very basis of our economic growth—the confidence of Americans in the future of this country.

Tonight, Halsey Davis bears the responsibility carried so ably by his 10 predecessors: Benjamin Kingsbury, Jr., Samuel Rolfe, William G. Davis, Eben Corey, Charles O. Bancroft, Leander W. Fobes, Jeremiah W. Tabor, Herbert J. Brown, William W. Thomas, and Robert Braun. His is not an untried hand. For nearly 6 years now he has ably discharged his responsibilities as president of the Maine Savings Bank. We know how fortunate we have been in this leadership and in the sound judgment which he and his fellow officers and all of the men and women of the bank, bring to its affairs and responsibilities.

The same opportunity for dedicated service which inspired the founding of this bank exists today. The experience and strength of 100 years now fortifies the abilities of the present officers and employees. We can look ahead to the new century, which has now begun, in the knowledge that this institution 100 years from today, while it may well function in a very different world and with different practices and responsibilities, will again be reviewing a 100-year term of faithful stewardship. It will mark a second 100-year period in which it has played a vital and helpful role in the affairs and the lives of the people of Maine.

Nine years ago, on the facing page of the booklet issued to mark the opening of the bank's new building, these words appeared:

"One ship drives east
And another drives west
With the selfsame winds that blow.
"Tis the set of the sails
And not the gales
That tell us the way to go."

We know how the sails of the Maine Savings Bank have been set. We know the course we sail. We move on confidently with a skilled captain and a veteran crew.

### Water Conservation and Treatment of Pollution

SPEECH

### HON. SILVIO O. CONTE

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Thursday, June 4, 1959

The House in Committee of the Whole House on the State of the Union had under consideration the bill (H.R. 3610) to amend

the Federal Water Pollution Control Act to increase grants for construction of sewagetreatment works; to establish the Office of Water Pollution Control; and for other purposes.

Mr. CONTE. Mr. Chairman, everyone is agreed upon the great need of water conservation and treatment of pollution. By 1980, the United States will be consuming every bit of available water; it is obvious that we cannot waste a single drop. Yet, at present, we are wasting untold amounts of this precious resource because of insufficient sewage treatment. In order to meet the demands of an increasing population and expanding industry for water, we must have greater construction of municipal waste-treatment facilities, which in turn necessitates more money. Public Law 660, enacted in 1956, has been a great boon to such construction, jumping the amount spent annually from \$222 million to \$400 million; and yet, this amount is still a big \$175 million shy of the \$575 million which we are told must be spent annually on such treatment plants to satisfy the ever-increasing needs of the land. Inasmuch as we are spending all that has been allowed under said law, it is obvious that that more money must be authorized as proposed in H.R. 3610.

The opponents of this bill have cited the fact that only 25 percent of the plants which have received Federal funds in the past 3 years have been on interstate, coastal, and Great Lakes waters and hence the program is undeserving of Federal attention. This same survey, however, revealed that a great 97 percent of all projects undertaken were based on the criterion of public health necessity. This latter is the criterion with which we must be chiefly concerned and it reveals that Public Law 660 is very definitely beneficial and crucial to the health and welfare of the Nation. Yet at the same time we know the present program is not meeting the amount Which the Public Health Service tells us must be spent to insure the health and welfare of these United States. The only way that this increase in spending can be realized is through the adoption of H.R. 3610. The facts have shown that in this area of construction, Federal funds are definitely needed as a stimulant to encourage the local governments to undertake the sewage treatment projects that will one day save the lives of their children and even themselves; it is that pressing a problem.

There is another, less tangible motive for cleaning up our country's streams, namely the need for more and more recreational facilities. If the many streams which are polluted by raw sewage or industry were cleaned up, these streams would be made available for swimming, boating, fishing—all major forms of recreation which is so important to the Well-being of all Americans. It would make you sick and disgusted to see the once beautiful and usable streams ladened with filth which make the waters unfit for consumption, recreation, or even scenery. Furthermore, this affects everyone of us, not just those who live by these disgraces to America. It is a national problem and as such re-Quires Federal aid and attention,

We are dealing with a matter which is vital to the welfare of the Nation. Our farms, industry, recreation, in fact our very lives all depend on water. We cannot go on wasting it the way we are now. The disease must be cured before it takes its victim which, in this case, would be the United States. H.R. 3610 must be adopted as a step toward the conservation of perhaps our most vital resource—water.

# "Repea! Section 315 Now or Repent Later," Says Broadcasting Magazine

EXTENSION OF REMARKS

### HON. GLENN CUNNINGHAM

OF NEBRASKA

IN THE HOUSE OF REPRESENTATIVES
Wednesday, June 10, 1959

Mr. CUNNINGHAM. Mr. Speaker, a subcommittee of the Senate will begin hearings next week on legislation designed to amend section 315 of the Federal Communications Act. These proposed amendments are important to everyone who listens to the radio or watches television as well as to all of us in public office and all who aspire to public office.

Under leave to extend my remarks, I wish to include an editorial from a recent issue of Broadcasting magazine, which serves the radio and television broadcasting industry. I recommend it to my colleagues in the hope that they will become more familiar with the issues involved and with the attitudes and opinions of the broadcasting industry:

REPEAL SECTION 315 NOW OF REPENT LATER—
THIS IS BEST, AND LAST, CHANCE TO GET
RELIEF FROM UNWORKABLE LAW

Within a few weeks the Senate Commerce Committee will hold hearings on proposals to amend the political broadcasting law.

These hearings could lead to the emancipation of broadcasters from one of the main restraints that historically have prevented broadcasting from attaining equal status with the press.

Or they could lead to the same dead end that all earlier hearings on the same subject have led to.

It will be mostly up to broadcasters themselves to determine which of the two courses develops. Never before have events been so on the side of the broadcasters' arguments against section 315, the part of the Communications Act which regulates political broadcasts. Never before have so many high officials in the Federal Government been interested in political broadcasting problems. We do not think it extreme to say that this is the best chance broadcasters have had to obtain relief from the idiocies of section 315—or to add that if they muffit, they will deserve a permanent consignment to subservience.

The history of broadcaster attempts to obtain repeal or revision of section 315 is not exhilarating. To read the record of broadcasting's struggles with section 315 is to read a record of defeatism. There has been a marked absence of the kind of universal revolt that is essential to the removal of Government restrictions. On the record it would appear that radio and television are willing, if not eager, to delegate their basic editorial functions to Government.

It is that record which must be erased

before the Senate Commerce Committee at the forthcoming hearings. Nor will it be enough for broadcasters to stand on their testimony there, no matter how persuasive it may be. After the hearings, they must persist in unremitting missionary work in both Senate and House if they are to achieve the status to which, in luncheon speeches, so many say they aspire.

There are two main bills now pending in both the Senate and House to amend section 315.

One, originally introduced by Senator Vance Harke (Democrat, of Indiana), would make several modifications in the law. It would eliminate the application of the equal opportunity rule to splinter candidates for the Presidency and Vice Presidency. It would exempt from the equal opportunity rule the appearances of all kinds of candidates on any news or panel program which is a "newsworthy event and in no way designed to advance the cause of or discriminate against any candidate." In exchange for retaining the present ban against a station's censoring a candidate's speech it would immunize the station from prosecution for libel.

The other, originally introduced by Representative GLENN CUNNINGHAM (Republican, of Nebraska), would make only one change in the law. It would exempt from equal time requirements the appearances of candidates on news programs where "the candidate in no way initiated the recording or broadcast."

Both bills have been endorsed by some broadcasters. Frank Stanton, president of CBS, and Robert Sarnoff, chairman of NBC, have publicly announced their support of Senator Harrke's. Leonard Goldenson, president of ABPT, the parent of ABC, has announced he favors a compromise which would do a little more than Representative Cunningham's and a little less than Senator Harrke's.

It was Mr. Goldenson's reasoning that a compromise was the best that broadcasters could hope to get. Mr. Goldenson is an eminently practical man, and he may be right in thinking that complete relief is unattainable at the moment. We suggest, however, that compromises are what one settles for after he has argued valiantly for something better.

The attitude of compromise is what has kept broadcasters under the yoke of section 315 since the law was passed 25 years ago.

To some degree it is an attitude reflected by Messrs. Stanton, and Sarnoff. For Senator Harkk's bill is itself a compromise with the maximum relief to be desired—the repeal of all provisions of section 315.

After the nationwide elections of 1952, the NAB announced it would beseech the Congress to repeal the political broadcasting law. We must confess that at the time we editorialized in favor of a more moderate approach. In retrospect we do not admire that position, for those who agreed with it were not only lost to the main effort for correction of the law but also were of no effect in obtaining minor modifications.

The facts are that for several years after the NAB's announcement no broadcaster made a serious attempt to advise Congress of section 315's imperfections.

In early 1956 the House Commerce Committee held hearings on several bills which, in sum, would have done approximately what Senator Hartke's present bill would do. These were endorsed by CBS, in testimony by Richard S. Salant, CBS vice president, endorsed with some reservations by NBC, through a statement filed by Thomas E. Ervin, and endorsed in part by the NAB, through the testimony of several witnesses. None of the bills passed.

During the national election campaign in the fall of 1956 the Senate Subcommittee on Elections held intermittent hearings to study

the conduct of the campaigns. During those hearings, Harold E. Fellows, president of the NAB, testified that the only solution to political broadcasting problems was the repeat of section 315. At the time no bill of that kind was before the committee, and none was introduced.

The campaign of 1956 proceeded under the same old law. An example of its applica-tion occurred. The FCC ruled, correctly, that if President Eisenhower appeared on a scheduled opening of the United Community Fund drive with a statement addressed solely to charitable purposes, Adlai Stevenson and other candidates for the Presidency would be entitled to equal time. A few weeks later the FCC announced it could not decide whether a speech by the President on foreign policy constituted a use of broadcasting entitling others to the same opportunity. week after that, the FCC came to a decision that others were not entitled to time. Meanwhile, however, Mr. Stevenson and other candidates had been put on the air by the bewildered networks.

It was during the 1956 campaign for the office of U.S. Senator in North Dakota that a classic court test of the equal time and anticensorship provisions of section 315 was pre-cipitated. WDAY-TV Fargo, in accord with the law, put a splinter candidate on the air who made statements which the station was powerless to prevent and which caused

a libel suit against the station.

That case was argued 2 months ago be-fore the U.S. Supreme Court. The fact that a Supreme Court decision may be imminent is noted with comfort by some broadcasters who wish to believe that the Court may declare the law unconstitutional and hence preclude the need for congressional remedies. This is cold comfort indeed. Whatever the Court does, the Congress will not lose interest in political broadcasting.

There is only one fundamental argument that can be made for retention of section 315 or for those traces of it which would remain if all the revisions suggested by the most extreme existing bill-Senator HARTKE'swere adopted. That is that broadcasters cannot be counted on to deal fairly with candidates if there is no section 315,

We suggest that a telling attack can be

made against that argument.

The long record of broadcasters in presenting broadcasts about political issues and political figures (when they are not active candidates) conclusively proves their desire to be fair. Controversy is treated every day, every year, without slanting or bias. It is also treated without the application of any law save the general standards of fairness implied by the law's requirement that the broadcaster serve the public interest.

Indeed, during the most controversial political campaign there is no special law which governs the presentation of news or information about any issue or any person except a

candidate.

What is so special about a political candidate that a special law is required to regulate his appearances on radio and television? Does a U.S. Senator who may have appeared in dozens of news spots and interview programs while not an active candidate suddenly become a commodity that broadcasting cannot manage when he announces his intention to run for reelection?

Questions like these, if asked frequently enough and by enough broadcasters are bound to provoke eventually the admission that section 315 makes no sense-for the broadcaster, for the public and, most of all, for the candidate himself.

Questions leading to equally nonsensical answers can be raised about the pending amendments to section 315. We say this with nothing but gratitude toward the sponsors of the amendments. Senator HARTKE, Representative CUNNINGHAM, and the many Members of the Senate and House who have endorsed their proposals or entered similar

bills of their own are to be thanked for trying, despite lukewarm broadcaster support, to achieve relief for broadcasters.

But, however well intended, both the Hartke and Cunningham amendments con-

tain imperfections.

The imperfections in the Cunningham approach lie chiefly in its inadequacy. It would provide only the limited relief of excluding from the equal time provisions of section 315 the appearances of candidates on news pro-All other provisions of the section would remain intact, and these are no less silly than the equal time provisions.

Mr. CUNNINGHAM would leave undisturbed the prohibition against the editing of candidates' remarks and the application of what equal time provisions remained to splinter candidates who have not the remotest chance of election. Even if Mr. Cunningham's amendment had been in effect in 1956, WDAY-TV Fargo would still be fighting a costly libel action in the U.S. Supreme Court.

On the surface, Mr. HARTKE's measure is more appealing, but it too offers only limited relief, and in one respect it actually sets a

tran for broadcasters.

It would eliminate from equal time provisions splinter candidates in presidential and vice presidential races. It would do nothing, however, to protect broadcasters against equal time demands by candidates for any other office. The extent of the problems which Mr. HARTKE would leave unsolved may be measured by the recollection that 72 candidates ran for sheriff in Milwaukee in

Mr. HARTKE's bill would retain the anticensorship provisions of section 315, but it would relieve broadcasters of liability for libel. This, we suggest, is the trap which libel. This, we suggest, is the way.

Mr. HARTKE has unintentionally set and baited. We are not lawyers, but our com-monsense tells us there is a serious legal question raised by the prospect of the Federal Government's immunizing anyone in mass communications from libel prosecution. Turn the proposal around and it means that the Government has deprived a libeled person of the right to recover damages for his injury. Turn it another way and it means that broadcasting has escaped a minor risk while giving up a major right. As long as radio and television are free from libel suits the Government will never give them the authority to edit.

The more you tinker with attempts to rewrite section 315 the more evident it becomes that the tinkering will create at least as many difficulties as it corrects. Complete

repeal is the only solution.

Already, highly placed officials have recognized the imbecilic features of the law.

President Eisenhower has used the word "ridiculous" to describe the rigid application of its equal time features. FCC Chairman John C. Doerfer has publicly stated his conviction that the whole section ought to be repealed.

These are powerful supports for the broadcasters' argument. It remains only for the broadcasters themselves to exploit the advantages they lately have been given.

If they fail to exploit them now, it may be years—and certainly not until after an-other presidential campaign—before they get another chance.

The Munitions Lobby

EXTENSION OF REMARKS OF

HON. LEONARD G. WOLF

OF IOWA

IN THE HOUSE OF REPRESENTATIVES Wednesday, June 10, 1959

Mr. WOLF. Mr. Speaker, under leave to revise and extend my remarks, I wish to insert into the RECORD an article by the distinguished columnist, Roscoe Drummond. Mr. Drummond poses the problem of the munitions lobby as described by President Eisenhower. He suggests that a full scale investigation of the power of these lobbyists both of the military and of the manufacturers should take place. I say "Amen" to this. It is too long that we are letting a silent conspiracy of the military and big business eat away at the very lifeblood of this Nation on the most selfish and narrow grounds; namely, that of more profits and more power to themselves. I hope that the record will be able to show that this Congress was not the servant boy doing the bidding for the military and the munitions manufacturers, but rather the watchdog over these groups in the name of the public interest; and, I might add, in the name of peace.

I would like to give an example of the problem of big business and defense. This is just a small part of the vast problem which must be attended to in this Congress. The Defense Department gives about \$5 billion yearly for research in science and scientific matters. The bulk of these research contracts go to big business. Fifty firms receive about 84 percent of the research contracts that are given by the Defense Department. Twenty-five firms receive 65 percent of the research contracts given. Among other things such a concentration in the hands of a few great firms may well put an end to small business in its fight to keep alive during the present technological revolution which American busi-

ness is presently experiencing. It should be noted that Defense Department awards its contracts for research and development under terms which guarantee the contractor a profit on the work done; consequently, such contracts are without risk to the firm. Besides this, the contracts are cost plus fixed fee and upon exhaustion of the funds provided in the contract, the contractor may either abandon the work, or by custom, ask the Department for additional funds. What is even more disturbing in this matter is that the individual contractor is allowed to take out a patent on that which he is working on for the Government. Hence, he receives a monopoly of the particular item that he prepares for the Government at Government expense. This naturally has the effect of keeping the price up when marketed for civilian use. since there is no effective competition because of the patent. Moreover, what happens in many cases is that the person who may have originally conceived the idea for a particular item and worked out all the theoretical aspects to the problem will not receive either the contract when it is awarded or the patent rights. Rather the contract is given to a very big firm which gets to keep the patent.

Besides these difficulties there is another aspect which must be explored. The firms that get these contracts are comprised of what might be called organization scientists. They are not necessarily the ones who will do the most original work because of the bureaucracy which exists in any large institution. Many times these scientists will play it safe and not do the brilliant and daring-a quality which is paramount in scientific discovery. Many times it is the supposed wrong-headed fellow who may be thought to be cracked who is the one that has the true insight into the problems of invention and scientific creation. These men will not be found only in the enormous firm More likely he may be found in a university, which, by the way, should get more contracts than it does, or the small consulting and research firm. These firms are mushrooming and should be utilized more fully by the Government.

The Defense Department attitude was made clear in a letter to the Small Business Committee. They have stated that the distribution of 95 percent to big business and 5 percent to small business of research contracts let are a fair distribution. They have stated that according to a Harvard Business School survey, only 20 percent of those firms with less than 500 employees have research and development facilities. Another reason given by the Defense Department for not letting more contracts to smaller firms is that "less than 10 percent of the research engineers and scientists in all commercial nonprofit organizations are employed by small business firms." As was pointed out by the 1956 final report of the Small Business Committee, the fact that 20 percent of small firms have adequate personnel and facilities to contribute significantly to the program, and the additional fact that small concerns employ only 10 percent of the research engineers and scientists would hardly indicate that less than 5 percent of the research and development subsidy to such firms represents a Wholesome distribution of the research subsidy.

Besides this, it may well be pointed out that many small firms have not hired research personnel and expanded facilities in research for the simple reason that they do not have the available capital to do so. Given the opportunity to share in Government research funds as has been done for the big firms, there is no Question about the fact that small firms Would expand their facilities in research and in research staffs. Therefore, it is

clear to me that-

First. Patents kept by the individual retard technological advancement in the area that the patent is held.

Second. These patents rightly belong to the Federal Government since it is the money of the Federal Government that is being spent on these projects.

Third. Individuals and small groups in science have, historically, made most of the significant theoretical and practical inventions. Consequently, we may well be suffering technologically by giving the majority of contracts to big farms where the organization man philosophy controls.

Fourth. We are forcing out small business even further in this technological revolution because we favor the big and give crumbs to the small.

Fifth. It is of importance to ascertain What profits are made by the under-

taking of a research contract in which no concrete thing has to be given. I am not quarreling with that aspect, that is, the fact that nothing may be found as a result of research. Rather I am quarreling with the amount of profit that is made from these projects.

Sixth. The analysis of this problem by the appropriate congressional committee is of paramount importance since the level of our scientific achievement is directly effected by how we allocate research contracts, to whom, how much, and for what purpose.

Herein appears the Drummond article which appeared in the June 10 issue of the Washington Post:

THE MUNITIONS LOBBY: WHERE IS PRESSURE BEING EXERTED AND FOR WHAT?

(By Roscoe Drummond)

In talking about the pernicious influence of the munitions lobby, President Eisenhower is raising a cry which will not soon be silenced.

It will not be silenced until the facts are spread on the record-and the sooner the

better.

This is a serious complaint—that big defense contractors are bringing improper pressures to bear upon Congress and upon the Pentagon in deciding what weapons ought to be manufactured.

This is the kind of issue which can become very political, very emotional, and very distracting, unless it is responsibly investigated. There will be a tendency to consider everybody guilty until proved innocent.

I am not suggesting that the President's complaint is not a valid one. What I am suggesting is that Congress ought to investigate this matter promptly, calmly, and with all deliberate speed—not drag it out. The House Armed Services Subcommittee,

headed by Representative F. EDWARD HÉBERT. Democrat, of Louisiana, is beginning hearings July 1 on the hiring of retired military leaders by defense contractors. But that is only picking at the problem by investigating a limited aspect of it. He has indicated he may broaden the inquiry. He should. His committee should go into the whole thing so that the full facts can be got out speedily and remedial actions taken, if needed.

One example will show the kind of thing Mr. Eisenhower is warning against. Pentagon and Congress are right now in the process of deciding whether to go forward with the Nike-Hercules antibomber, antimissile missile, or to rely more heavily on the Bomarc longer range antibomber missile. In the midst of this decision making, the industrial manufacturer of the Bomarc runs large advertisements in the newspapers listing 8,000 subcontractors engaged in the project. The President sees this as irrelevant pressure lobbying, since the issue to be decided is not what firms are making these weapons, but what weapons will best do the job.

It seems to me that here are the questions to which the Hébert subcommittee must get

the factual answers:

What obsolete weapons are the big contractors pressuring the services and Congress to build?

In what way and on whom-in the Pentagon and in Congress-are they exerting pressure?

Have the Defense Department and Congress yielded to these pressures?

Have the civilian or military leaders of Army, Navy, or Air Force encouraged these contractors to exert these pressures in behalf of their own favorite projects?

What evidence is there, if any, that retired military and civilian defense officials-and

retired Congressmen-have used past connections improperly in serving defense contractors?

Let's get at this munitions lobby whole, and soon.

Commencement Address at the University of Rochester, Rochester, N.Y., by John Cowles, President of the Minneapolis Star-Tribune

EXTENSION OF REMARKS

# HON. CHESTER BOWLES

OF CONNECTICUT

IN THE HOUSE OF REPRESENTATIVES

Wednesday, June 10, 1959

Mr. BOWLES. Mr. Speaker, one of the clearest and most competent voices now commenting on world affairs is that of Mr. John Cowles, president of the Minneapolis Star and Tribune.

As an astute observer and persuasive writer, his responsible reporting has been particularly important concerning the revolutionary ferment now occur-ring in the underdeveloped countries of the world.

Last Sunday, June 7, Mr. Cowles delivered the commencement address at the University of Rochester, Rochester, N.Y.

Under leave to extend my remarks, I include his statement entitled, "We're Living Through Revolutionary Times":

WE'RE LIVING THROUGH REVOLUTIONARY TIMES

It is a truism to say that you who are being graduated today have matured in the most revolutionary age in human history. The world has changed more during the last years than in any previous century.

Although I realize that prophecy is dan-

gerous, I am nevertheless going to make one. It is that change will be the dominant characteristic of the world for the rest of your lives.

Perhaps it is natural for each generation to feel that it is living in a time of crisis, but I think it is true that your generation has come into maturity at literally the most critical time in the world's history.

We face many different threats, which I will discuss later, but I am confident that we will be able to surmount them if the people of the United States are sufficiently well informed to understand the nature and dimensions of the problems, and are sufficiently openminded to modify their past convictions in the light of the new facts.

Not only is scientific progress taking place at an accelerating rate, but we are at the same time living at the center of many different revolutions, not simply one in science. Throughout the globe we have had and are having political and social and economic revolutions.

In our lifetimes most of the peoples of the world have radically changed their forms of government. Just since the end of World War II some 25 countries have already won their independence, and at least 4 additional ones have been promised theirs next

Throughout the underdeveloped parts of the world there is occurring what has been aptly called "the revolution of rising ex-Industrial development and higher standards of living are being demanded by the hundreds of millions of people who for centuries had patiently acquiesced to conditions of poverty, social, and racial discrimination, low living standards, and colonialism.

### OLD ASSUMPTIONS NO LONGER HOLD

Because things are changing so rapidly and fundamentally throughout the globe, many of the assumptions and conclusions that intelligent people have held in the past are, in the light of the new facts that have emerged, no longer valid. We simply must reexamine our past opinions and political and economic and social facts to see if they are now realistic. In this connection, I would urge, above all else, that you try to examine the facts of today and the facts of the future, whatever those facts may be, with really open minds, shed of the prejudices of past opinions.

If you agree with me that we are living in an era of extraordinarily rapid change, in a time of probably the greatest danger in which civilization has ever found itself, then I think you will agree that we as a nation may have to do many things that would have been unimaginable a generation or two ago.

If I were asked what our paramount national objective should be, what in the simplest terms it is that the American people really want, I believe I would say survival with freedom. Obviously, almost everyone wants to survive. Self-preservation is an instinctive human quality, but unless we maintain our freedom survival is meaningless. Almost universally Americans would prefer to go down fighting for their freedom than to survive in captivity.

One reason that we and much of the rest of the Western World are in trouble is because we have not thought through the implications of some of the problems confronting us. We tend to parrot outworn slogans instead of debate with open minds the issues in the world as they are today.

Let me cite a few specific examples of the type of things that I believe the American people must rethink. For generations we have believed that the principle of so-called national sovereignty was paramount. Americans and most other people in the Western World have believed so deeply in the principle of national sovereignty that they have instinctively opposed anything which it could be claimed might impair that national sovereignty.

I suggest for your openminded consideration the proposition that national sovereignty in its traditional meaning no longer exists. It has become obsolete.

If a country on one side of the globe has the capability of firing intercontinental missiles with nuclear warheads that could at least devastate, and probably annihilate, the country struck by those missiles, can one argue that the victim country really has such a thing as national sovereignty"?

If any single country can independently conduct nuclear tests which may increase radioactivity to a degree that may produce cancer through radioactive fallout in many other countries, can we say that unqualified national sovereignty still exists?

As the time approaches when it will be possible adversely to change the weather in an adjacent country so that it experiences drought instead of rainfall, can we say the harmfully affected nation still has its sovereignty?

I offer those random examples simply as illustrations of the new things that we must take into account in reexamining and reevaluating traditional opinions and policies.

### WHICH GOVERNMENT IS REALLY BEST?

In the simple, isolated, largely rural soclety that existed in the United States 150 years ago, it undoubtedly made complete sense for Thomas Jefferson to say that that government is best which governs least. But under the conditions that exist today. I suggest that Jefferson's maxim needs re-examination. It is no longer valid. Rather, that government is best that governs best, that performs best all those functions that government today must perform. The list of things that government and only government—must do for the welfare of its citizens has steadily lengthened.

As any society becomes more complex, more populous, and more highly organized, it should be obvious that there are many more such functions than was the case in a primitive rural society. When Jefferson was living there was no need for traffic policemen or school truant officers. Just a generation ago there was no need for governmental regulatory authority over aviation or over broadcasting, but such regulation is obviously imperative today.

Before repeating the slogan that that government is best which governs least, I suggest that you consider, for example, whether you would like to see the Federal Pure Food and Drug Administration abolished, with the inevitable result that the public would no longer be protected from poisonous products.

A few years before the members of this graduating class were born, a presidential campaign was fought, to a considerable degree, over the issue of Federal social security and old age pensions. One of the presidential candidates, who is still alive, called these things socialism. He also said that to give a social security number to a citizen was the equivalent of putting a license tag on a dog. I wonder how many of us today would favor the abolition of social security.

In looking back over a fairly long life, I can recall instance after instance when some new proposal which was originally denounced as "socialistic" has come to be taken for granted as acceptable by even our most conservative citizens. I remember that when Woodrow Wilson and Carter Glass proposed the establishment of the Federal Reserve Board banking system many if not most of our then leading bankers denounced it as socialistic. Although the Federal Reserve law has not been basically changed in the 45 years that it has been in existence. I would guess that if a nationwide poll of bank presidents were taken today, 95 percent would call it fundamentally an excellent law.

### OUR GENIUS IS ADAPTABILITY

The genius of the United States has been that we have not stuck rigidly to theoretical or classical political philosophy, but have done the things that the people thought needed to be done. It would be impossible today to practice complete economic laissez faire. The American genius has been in mixing laissez faire and private capitalism or the so-called free enterprise system with such Government regulations and operations and controls as would produce satisfactory overall results.

In some instances we may have put in too large a proportion of government operation or control, but on the whole the mixture has been pretty good. Capitalism in the United States has become much more serviceable to the needs of the people, and much more productive than the capitalism in Western Europe, largely because of the innovations and the modifications of the traditional concepts that we have made here.

Almost all of us compain about the burden of present taxes. Much more than half of the total expenditures of the Federal Government go for national defense or military purposes. The new weapons are so fantastically expensive and become obsolete so rapidly that I believe we are going to have to spend more money on our military in the years immediately ahead than we are now. Therefore I see no likelihood of a substantial tax cut ahead. On the contrary, I think taxes may have to be raised if we are going to balance the Federal budget.

WE MUST HAVE RETALIATORY POWER

I believe that no matter what it costs, we must build and maintain a retaliatory power sufficiently strong so as to make it certain that no matter how crippled we might be from a surprise missile assault upon us, we would nevertheless be able without the slightest question to strike back and destroy Russia. If we do maintain such a retaliatory nuclear capability, I do not believe that Russia will launch a nuclear attack on us.

I foresee not major savings in military expenditures, but rather increases, until we are finally able to secure some form of universal international disarmament, with airtight inspection and control. Probably there is no possibility of attaining that for years, but we should make every effort to persuade the Russians that is the best course for them, for us, and for the rest of the world.

Opponents of a disarmament agreement will undoubtedly contend that it would impair our so-called national sovereignty. would, indeed, according to the traditional past concepts of sovereignty. We would probably have to agree, for example, to submit any disputes that might arise over the fulfillment or nonfulfillment of the terms of the disarmament agreement to an international court for adjudication, and we would have to agree to accept the determination made by that international court. This would mean a beginning of real world law. I do not know how long it will be before we ultimately come to accept the principle of world law. It may be a long, long time, but I feel certain that ultimately we and the rest of the world will come to it.

In the meantime, while we and the Communist bloc are each armed to the teeth with nuclear weapons capable of wiping out each other, and potentially capable, for that matter, of destroying all civilization and destroying most or all of the human beings now inhabiting the globe, I think the clear-immediate threat from the Communist bloc will be in the form of economic war. I would guess that this economic warfare will take two forms-first, massive Communist economic assistance to the underdeveloped and uncommitted nations in order to draw them into the Communist orbit; and second. deliberate attempts by the Communists to disrupt and demoralize normal international trade and commerce as traditionally practiced by the Western World.

If Asia, Africa, and much of Latin America were to be taken over by the Communists, I do not believe the United States and the nations of Western Europe could long thereafter continue to live in freedom. We are so increasingly dependent upon minerals and other raw materials from Asia, Africa, and Latin America that if we were cut off from them our Government would have to impose such extreme economic controls as would greatly shrink the areas in which we now have freedom of choice. I think it is doubtful that even civil libertles could long be maintained here in a "fortress America."

To meet this double-edged sword of economic warfare, I think it is in our own national security interest for us to embark on a bold, imaginative, long-term program of massive economic aid to the underdeveloped nations. In addition, to meet the Communists' attempts to disrupt and demoralize the Western nations' normal international trade, I think that before long it will become necessary for us to create either an international or U.S. governmental tradeagency which can, when necessary, meet low Communist prices in selling goods abroad and meet high Communist offers for the purchase of other goods in foreign areas.

### THE POPULATION EXPLOSION

No discussion of the threats facing us could be complete without mention of the worldwide population explosion. Although this subject is largely ignored by the politicians and most other public leaders, it is, to my mind, more dangerous even than the Communist threat. The world's population today is about 2.8 billion. At the present rate of growth, there will probably be 5 billion people on the globe before the end of this century.

The population of Red China alone will probably exceed 1 billion within the next 10 years. Although India is making a strenuous national effort to increase its production of food and its output of manufactures, the Population of India is growing at almost the same rate as the increase in its gross national Product; so the improvement in India's per capita standard of living is extremely small.

In most of the underdeveloped nations, although they are now living only slightly above the bare subsistence level, the standard of living is actually declining because the population is growing at a faster rate than the increase in economic output.

### SCIENCE MUST DEVISE A SOLUTION

This population explosion is the result of What medical science has done to eliminate disease and pestilence, to reduce infant mortality, and lengthen the average span of human life. Anyone who has been in Egypt or India knows what excessive population means. The scientists, through reducing death rates, produced this problem. Now it has become imperative that the scientists have the resources and the drive to urgency to solve it through producing some simple, inexpensive means of fertility control which, hopefully, would be used throughout the World.

I don't believe that anyone who, with an Open mind, will study the figures on current Population growth and will ponder the social and political and economic consequences that will inevitably result from a doubling of world population within the next 40 years and another doubling within the following 40 years can fail to conclude that, of all the problems we face, this is the most fundamental.

In conclusion, let me say that while I believe your generation faces colossal problems, you are better educated and consequently better prepared to solve them than any pre-Vlous generation.

Don't assume either that you must wait until you are middle aged before you can play an effective role, or that you as an individual are impotent to help shape the course of

Don't forget that history is made by dedicated minorities, not by complacent majori-

Yours is the challenge to see to it that the human race survives, and survives in freedom, so that the dawn of the 21st century Will be bright. Good luck to you.

### Poison in Your Water-No. 111

EXTENSION OF REMARKS

# HON. JOHN D. DINGELL

OF MICHIGAN

Wednesday, June 10, 1959

IN THE HOUSE OF REPRESENTATIVES

Mr. DINGELL. Mr. Speaker, pursuant to permission granted I am inserting into the Appendix of the CONGRESSIONAL REC-ORD an article appearing in the Peoria (III.) Morning Journal Star of April 3, 1959, entitled "Need Sewer System Badly at Glasford, Survey Shows":

NEED SEWER SYSTEM BADLY AT GLASFORD SURVEY SHOWS

Dire need for a municipal sewer system in Glasford is documented in the report of a 3-month door-to-door survey just completed by the Peoria County Health Department. Glasford (population 1,000) which his

twice before defeated a referendum for a municipal sewer system will vote April 21 on a \$200,000 bond issue to install a sewer

The survey conducted by Carman H. Brown as sanitarian for the county health department showed only 31 "satisfactory and approved" sewage disposal systems found in 274 calls made to residences and businesses.

Glasford at present has 56 outdoor toilets. systems discharging to old wells, wildcat sewers (tile lines connecting to inadequately treated sewage and draining to surface of the ground), 153 septic tanks, 71 cesspools, 120 residences and business with sink or dishwater draining to surface of the ground, 141 systems connected to wildcat lines-all eventually draining to the surface of the ground.

He added that Glasford grade school and

Timber Township High School, which is just completing a \$365,000 addition, will need to construct new sewage systems if a village system is not available for hookup.

Of the 274 residents and businesses only 46 had title fields considered necessary for safe residential disposal of sewage.

Brown noted that a septic tank is only 40 percent effective and a good residential sys-tem depends upon a tile field to get rid of 60 percent of solid sewage.

This means that 60 percent of the sewage from the 141 systems of wildcat sewers in Glasford is simply drained on the surface of the ground, the report stated.

Dr. Fred Long, county health director, said Thursday that the survey has shown it will be necessary to put in new individual sys-tems for most residences if the village does not construct a sewer.

"That is not the cheap way out," he

Long commended the Glasford planning committee which has been working toward establishment of a sanitary sewer system.

Clarence Stroble, village board member, said the committee "feels hopeful" that the April 21 bond issue will pass. In making the sewer survey the health department sanitarian said only three persons voiced objection to a municipal sewer system.

## Iowa Town Fights Rural Stagnation

EXTENSION OF REMARKS

# OF

HON. MERWIN COAD

IN THE HOUSE OF REPRESENTATIVES Thursday, May 28, 1959

Mr. COAD. Mr. Speaker, on a number of occasions I have pointed out to my fellow colleagues the need for a strong agriculture industry to maintain America's economic health and wellbeing. I have pointed out how towns in my area have all but turned to ghost towns, reminiscent of the old gold rush days. I have urged action on small business measures and have demonstrated the need for these acts by referring to the plight of the small businesses in the Midwest due to the trend toward larger farm operations and the disheartening decline in the number of farm families in the trade areas of our rural communities. To me, these references to the depressed agricultural situation and its disastrous effects on the traditional rural life in America are indeed very sad. Therefore, Mr. Speaker, I was elated to see the following article in the June 7 Sunday issue of the New York Times, which describes a successful fight for survival by the townspeople of one of my favorite towns in my district:

IOWA TOWN FIGHTS RURAL STAGNATION-HUMBOLDT'S SONS COMING HOME TO RUN ITS THRIVING SMALL INDUSTRIES

(By William M. Blair)

HUMBOLDT, IOWA, May 25.-This small Iowa town is an oasis in the rich midwestern Farm Belt.

While other communities worry about losing people and business, this community worries about housing people and keeping a balance in the small businesses it attracts.

It has become in a decade an outstanding exception to the trend in rural America of the small getting smaller and the big getting bigger. Some Iowa and other midwestern towns under 4,000 population are fighting for their existence.

Some appear headed for a country cross roads future, their young people gone, their oldsters becoming older and disappearing.

But Humboldt and its sister town, Dakota City, seat of Humboldt County, have grown. A decade ago, Humboldt-Dakota City had a population of about 3,000. Today, the population stands at an estimated total of 4,700.

The towns had the disadvantage of being only 18 miles from Fort Dodge, a major trading center. The projections of 10 years ago favored Fort Dodge as rural America climbed out of World War II and faced the hard fact that farms were getting bigger. more mechanized, and reducing the number of farmers.

What happened then in Humboldt in the decade past?

The people of Humboldt are hard pressed to find an answer. But their words reveal a big home town pride and what one businessman, somewhat embarrassed, described as 'the real chamber of commerce attitude."

These people have neither read nor studied the reports of rural sociologists. In fact, they said, one after another, that they had not "given much thought" to what makes Humboldt stand out in the midst of dwindling small towns.

They know, however, what they have been

doing for 10 years.

They have been going after business and getting it. "Well, for one thing, we haven't worried about Fort Dodge," said John L. Campbell, president of the Humboldt Trust & Savings Bank.

Mr. Campbell regards himself as one of the oldsters in a town with more than an average of young men. He has been here 32 years. Now his son, John, Jr., a former Iowa bank examiner, has come home.

Other sons have come home, too. And at least two who will be graduated from college next month, will come back to the treeshaded, wide, paved streets.

"It's like the measles," said John L. Miller, a lawyer. "One kid catches them and everybody else gets them. Somebody caught the spirit, whatever it is, and everybody now has

Mr. Miller is a director of the Humboldt Development Corp., which had its genesis in a development commission of the chamber of commerce. It was capitalized at \$50,000 and set out to attract small business.

It recently built a \$69,000 building to rent to a manufacturer of small boats. Fire destroyed the building 2 weeks ago as the plant went into production.

No one appears worried. Insurance covered the plant and even if the Chicago boat company decides to abandon its venture the corporation officials, all townspeople, believe they can rebuild for another small business.

#### FIRE DAMAGE ERASED

Ten years ago another fire destroyed a section of the main business section. Some people, in the spring of 1949, looked upon the ruble as a monument to a dying country town.

Today, there is no evidence of that fire. Ten years ago the town's main business section was a block and a half long. Today it extends about five blocks and the drag stores have had a facelifting.

Ten years ago many residential streets were unpaved and without curbs and gutters. day most of the spacious streets have been

black topped with curbs and gutters.

Homes, ranging up to \$25,000, have been built. There are four home construction concerns in the town where there were none in 1949. All the homebuilders are local residents.

### YOUNGSTERS GET CREDIT

"The young people have done it. And they have had the backing of the old folks," was one of the most common explanations for the town's rejuvenation.

Jean Kleve, 42-year-old mayor of Humboldt, said "the leaders have been the banks and their progressive outlook. They've been willing to back us with money and encourage us with optimism." He is a farm implement dealer who came off a farm.

R. E. Bennett, cashier of the First National Bank, credits aggressive townspeople whether in business or in civic and social activities. He is one of many who work with youngsters in church and other groups.

### RECREATION EXPANDED

He pointed to a new elementary school building and a municipal swimming pool, all products of the last 10 years. And he cited the town's three parks, a number not enjoyed by many larger towns.

Tennis courts are flooded in the winter for ice skating. There is a nine-hole golf course and picnic areas. The country club has more than 200 members and recently ded-

icated a new clubhouse. State Patrolman J. F. Dickinson said there was "little of what you might call juvenile delinquency." The biggest juvenile problem of recent years, he recalled, was the auto-mobile traffic around the high school at the noon lunch hour. "But that was straightened out by cutting 15 minutes off the lunch hour.

### A FRIENDLY TOWN

Newcomers find the friendliness of the people the reason for accepting opportunities to settle here.

Mrs. Margaret Price, who works in the new

post office, cited this reason.

Wendell K. Wilson, who sells school furnishings, said "It's a good town to raise a family in."

George Kinton, who came from the East to manage the American Agricultural Chemical Co. (fertilizer) plant mentioned the country clubhouse as an example of the enthusiasm and cooperative spirit of the people.

Fred Meyer, who operates the town's lone theater and is secretary of the chamber of commerce, ascribed the town's growth to planning and the desire of people to do the planning.

Watching him sell tickets in the theater boxoffice gives another clue to the people. He never failed to say "Thank you" to the customers who on one spring Saturday afternoon recently were all children taking in a double feature.

#### AUCTION AN ATTRACTION

The Humboldt Livestock Auction is credited with a big assist. Its gross sales run about \$20 million a year. "And it's drawing from outside our 25-mile trade area," said Vandenberg, an appliance dealer. 'Farmers who come to the auction bring their wives and the wives shop in town."

Twenty new businesses have settled in the area since 1949. They offer steady employment to a wide area that includes some smaller farmers who want to keep their farms but need town work to supplement their incomes.

# Olympic Politics

EXTENSION OF REMARKS OF

# HON. MELVIN R. LAIRD

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES Wednesday, June 10, 1959

Mr. LAIRD. Mr. Speaker, last week when the defense appropriations bill was up for consideration, I successfully authored an amendment which prohibited the use of funds for Army support personnel, if any friendly nation was barred from competition in the VIII Winter Olympic games. The Minneapolis Morning Tribune on Monday, June 8, 1959, carried an editorial supporting the position taken by a majority of the Members of the House of Representatives. The editorial follows:

### OLYMPIC POLITICS

The United States recognizes both Communist China and East Germany in the field of sports if not in the field of politics.

In the past, U.S. athletic teams have competed against teams from both these Communist countries even though the United States does not officially recognize the government of either one. Other anti-Communist nations which did not recognize either Communist government did likewise.

Now a new element has been introduced into this issue of politics in sports by the action of the International Olympic Committee (IOC) in expelling Nationalist China from membership.

This action was taken under Communist pressure for recognition of Communist China—and only Communist China—as a representative of the Chinese people.

The Chinese Communists pulled out of the 1956 Olympics because Nationalist China was competing. And they apparently re-fused to come back unless the Nationalists were booted out. With the Nationalists out, the Chinese Reds now are expected to apply for readmission.

While the IOC contends that the way still is open for the return of the Nationalists as the representatives of Formosa, it is unlikely that the Nationalists would seek such a move or that they would be successful even if they did try it.

It is obvious from what has happened that the Communists are not in favor of peaceful coexistence in the field of sport. they really aren't in favor of the Olympic games charter which says the games "assemble the amateurs of all nations on an equal footing and under conditions as perfect as possible."

Under these circumstances, the IOC made a mistake in expelling the Nationalist Government even though the Government on Formosa admittedly "does not control sports in the entire country of China." The fact

is that world opinion is moving toward s two-China attitude, even though that approach is resisted as stoutly in Peiping as in Taipei.

# Ike's Boy and How He Grew

EXTENSION OF REMARKS

# HON. ROBERT H. MICHEL

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES Wednesday, June 10, 1959

Mr. MICHEL. Mr. Speaker, under leave to extend my remarks, I wish to include the second in a series of articles appearing in Look magazine by Mr. Earl Mazo concerning a political and personal portrait of Vice President Nixon:

IKE'S BOY AND HOW HE GREW (By Earl Mazo)

President Eisenhower hasn't referred to RICHARD M. NIXON as "my boy" in a long time. And White House wiseacres have stopped cailing him Junior. Eisenhower and Nixon are probably closer to each other than any President and Vice President have ever been.

Despite this friendly relationship, how-ever, they both prefer to limit their association to business. Nixon has few intimate friends. He has an obsession about the separation of his private life and his public life. and no one outside his family is his personal confidant. Since early youth, he has done things his way and made his own decisions.

Although both Eisenhower and Nixon have volatile tempers, they have not exchanged a cross word since taking office. But there have been times when irritations have been difficult to repress. The bond between them has weathered some serious strains and twists. A few Nixon adherents are still irked by the slights their man suffered during the 1952 campaign, particularly the "Nixon fund" episode, and are not unhappy now when the President himself becomes a target for criticism. A close friend of Eisenhower sums up the association as "a grueling re-lationship, all things considered."

Nixon, seemingly, cannot hold a grudge, not even against former Gov. Harold Stassen. who was Nixon's first political mentor and later perpetrated the abortive "dump Nixon" movement. In 1956, Eisenhower decided to seek reelection and was advised that he would have a far better chance for success without Nixon on the ticket. He offered Nixon a Cabinet post instead of a second term-Nixon planned to quit public life in disgust. then decided to run again, whereupon Stassen tried to shove him out. But the Vice President says he still has "a rather friendly feeling for Stassen. His opposition to me was a case of personal ambition. I think that he would have made a remarkable President in certain times."

In the Cabinet, Nixon's closest friends have been Secretary of Labor James P. Mitchell. Attorney General William P. Rogers and former Secretary of State John Foster Dulles. Only a few have known that the relationship between Nixon and Dulles was perhaps the warmest in the administration. Although the Secretary of State was 25 years old and already an attorney in New York when Nixon was born, their friendship always was personal and professional. Dulles was Nixon's behind-the-scenes adviser in many crises, especially during Eisenhower's illness. The Dulleses and the Nixons frequently had dinner together and then just sat around and talked, sometimes into the

early-morning hours. (Nixon has called Dulles the most thoughtful and sensitive man he has encountered in public life.)

In a way, Nixon is also a fan of Harry S. Truman, despite the insults they have traded. He admires Truman's courage and, in fact, has more in common with the ex-President than either would admit. Each is his party's toughest campaigner, each has plenty of guts and is notably loyal to party and friends, and they both like to piay the piano. They also swear like troopers when it becomes necessary to release pent-up energy.

The Washington Post contrasts the campaigning techniques of Truman and Nixon as being "the difference between a warmhearted fellow who plows into a fist fight for the sheer love of it and the grim-minded fellow who charges in with a pipe wrench."

One of the most interesting relationships in that of Nixon and Senator Lindon Johnson, of Texas, who are often said to be the smartest politicians in their respective parties. There is no particular personal friendship between them, but their association is cordial, mutually respectful and ever-watchful. Johnson has often said that one of the biggest lifts to his morale after he suffered a heart attack in July 1955, was a visit to his bedside by President Elsenhower. Few are aware that Nixon had arranged that visit.

Although Nixon doubts that a southerner could be nominated, he considers Johnson the Democrat best qualified to be President. Johnson does not return the compliment. Yet he admits Nixon has shown greater fairness to him and other Democrats than previous Democratic Vice President.

dents showed to Republicans.

Nixon has never been popular in the Senate. The small group of senior Members who constitute "the club that runs the Senate" prefer to view him as a tenderfoot, since he hadn't completed his apprenticeship in that body when he was elected Vice President. Thus the Senate provides him with a smaller staff and fewer facilities than he had as a freshman Senator. The suite set aside for him in the new \$25 million Senate Office Building was so inadequate that he preferred to stay where he was in the old building.

Nixon regards his constitutional duty to preside over the Senate as the least important he performs. Usually, he opens the Session, then turns the President's chair Over to Robert T. Baker, secretary of the majority and an assistant to Senator Johnson. It is Baker's task to inveigle Democratic Members to preside in Nixon's absence. Even novice Senators grumble that someone should "make Nixon preside—he

gets paid for it."

Nixon has spent less time at his duties in the Senate Chamber and more at chores in the executive department than any of his 35 predecessors. Although a Vice President has no executive responsibilities. Nixon took at face value Eisenhower's suggestion that he keep abreast of everything a President should know. As a result, Nixon has raised the Vice Presidency to a full-time legislative-executive operation. His influence has grown steadily and he has become a strong man—in some respects, the strong man—in the administration. During the second term, Nixon has participated in most major administration decisions.

Nixon's conduct during the weeks after President Eisenhower's heart attack in 1955 raised his prestige in the administration. Previously, Eisenhower had always spoken well of his deputy, referring to him usually as a "comer" and "a splendid type of the Younger men we want in government." Afterward, Eisenhower declared flatly: "There is no man in the history of America who has had such careful preparation \* \* for carrying out the duties of the Presidency." Several of Eisenhower's personal intimates

who had had serious misgivings about Nixon, including Dr. Milton Eisenhower, became supporters of the Vice President.

Nine months after the heart attack. Risenhower was operated on for ileitis, an abdominal allment; again Nixon took over. Eisenhower's third illness-the stroke of November 25. 1957-resulted in an unprecedented agreement by which the President commissioned the Vice President to assume the powers of Acting Chief Executive should the President ever become incapacitated again. The stroke was not severe, and the President was back at his desk within a couple of weeks. It had a singular side effect, however, in that Nixon now showed the vast self-assurance and experience he had acquired since the period of the heart attack 2 years and 2 months before. Former Gov. Thomas E. Dewey has estimated that Nixon obtained 20 years' experience in his first 5 years as Vice President.

Nixon's overseas tours gave him another opportunity to do quite well for himself politically. In fact, nothing else he has undertaken as Vice President has helped so much to enhance his chance of being elected President. Politicians now realize a man has to prove himself in international affairs to win the Presidency. World traveler Adiai E. Stevenson is the only possible opponent in 1960 of either party who could seriously match Nixon in prefacing an observation with, "On my world travels \* \* \*," as Nixon often does. Through his travels, Nixon has met more than a thousand foreign statesmen outside the Communist bloc.

Before the rock-throwing Communistsinspired demonstrations against the NIXON party in Lima, Peru, and Caracas, Venezuela, political response to the Vice President's overseas operations was subtle. The tours were noncontroversial, the only Nixon enterprise that enjoyed an Eisenhowerish immunity from partisan attack. His South American adventures changed that.

Robert C. Albright reported in the Washington Post: "Before Vice President RICHARD M. Nixon's triumphant return from Latin America, Democratic politicians quite frankly considered him easy to beat in the 1960 presidential election. They don't talk that way now." On the day after an angry mob Communists in Caracas attacked the Nixou motorcade with clubs, pipes, and rocks, the House of Representatives unanimously passed a resolution commending Nixon "for his courageous and dignified conduct." On the other hand, Walter Lipp-mann declared the tour a "fiasco" and "a diplomatic Pearl Harbor"; the Boston Globe called it "one of the most ineptly handled episodes in this country's foreign relations." Democratic National Chairman Paul M. Butler saw the tour as a cleverly concealed propaganda scheme to keep Nixon in the head-lines. "All the sympathy the Republican high command is trying to squeeze out of it cannot conceal the fact that the Vice President gained his reputation as a master of the smear technique," he said.

Nixon became a nationally controversial figure long before he became Vice President. Late in 1948, as a junior member of the Un-American Activities Committee, he pushed the investigation of Alger Hiss. The Hiss case soon developed into the issue of Communists in Government, which became the mid-20th-century version of the "Party of Treason" epithet Republicans had used successfully against the Democrats for three decades after the Civil War. Nixon's opponents countered by associating him with "McCarthyism." Rightly or wrongly, Nixon was identified with everything said by all Republican orators who taunted Democrats with this issue.

Actually, Nixon was more precise than his colleagues. His charges, when examined carefully and in toto, were practically always accurate from a strictly technical viewpoint.

But this was no angels' carnival. It was what seemed to be said that paid off, not the intricate lawyerlike interweaving of facts and qualifications. Nixon did not exactly call former Secretary of State Dean Acheson a "pink," for instance. But he did refer to "Acheson's color blindness—a form of pinkeye toward the Communist threat in the United States."

Politicians before Nixon were not averse to hyperbole. But not many in modern times handled it so resourcefully. Take, for example, his much-debated manipulation of the word "traitor." In 1954, he charged that "real Democrats are outraged by the Truman-Acheson-Stevenson gang's defense of communism in high places"; and Truman, Stevenson, and Acheson were "traitors to the high principles in which many of the Nation's Democrats believed." Was that nothing more than an appeal for the votes of "real Democrats," as the Republicans insist? Or was it slick juggling, meant to highlight "traitor" and "communism in high places"? Did Nixon deliberately associate the heinous words with major figures in the party that Senator Joseph R. McCarthy was baldly accusing of 20 years of treason?

Nixon was always a fast man on the uptake. He reached a peak of nimbleness, however, in his retort to Stevenson's assertion that Nixon represented McCarthyism in a white collar. That, declared Nixon, was an attack on the working people. "What Mr. Stevenson calls me is unimportant," he stated, "but I resent his typically snide and snobbish innuendo toward the millions of Americans who work for a living in our shops and

factories."

Nixon's role as the bayonet of Republican offensives was hardly calculated to endear him to Democrats. Since it was politically unhealthy to attack Eisenhower during his first 6 years in office, Nixon drew all the fire. Truman sized him up as an "s.o.b." And Stevenson conjured up visions of a "Nixonland—a land of slander and scare, of sly innuendo, and of a poison pen, the anonymous phone call, and hustling, pushing, shovingthe land of smash and grab and anything to The Democratic campaign handbook for 1958 contained a section called "NIXON." It opened with an excerpt from a column by Walter Lippmann, assessing the Vice President as "ruthless partisan \* \* \* [who] does not have within his conscience those scruples which the country has a right to expect in the President of the United States."

Among old-line Democrats, few have taken a more definite position with regard to Nixon than Speaker of the House Sam Rayburn. "Mister Sam," who sits with the Vice President when Congress meets in joint session, has privately referred to his colleague as "that ugly man with the chinquapin eyes." He was much annoyed at an unexpected House resolution praising Nixon for his courage in South America. It passed unanimously. Rayburn became doubly annoyed when a fellow Texan, Lyndon Johnson, next day led the entire Senate to the airport to welcome the Nixons. This, Johnson explained, was a compromise to avoid paying more formal tribute; Senator Charles E. Potter had been persuaded not to introduce a resolution congratulating the Nixons on their dignity and courage in danger.

None of the instances of reprehensible conduct charged against Nixon, the campaigner, has been cited more often than the tactics by which he defeated Representative Helen Gahagan Douglas of California for Senator. It was a ripsnorting campaign.

It began with a conflict of political ambitions—Nixon's, Mrs. Douglas', Senator Sheridan Downey's and others. The Democrats had regained control of Congress in the 1948 election, and although the Hiss case had focused enough national attention on Nixon for him to be recognized by Capitol tourists, he now was not only a junior Member, but

a junior in the minority party of the House. Nixon raised his sights to the Senate.

Challenging Republican Senator William F. Knowland was out of the question. But California's other Senator, Sheridan Downey, was a Democrat whose seat would be at stak in 1950. Downey wanted a third term, and most people felt he would probably win it. Three senior Republicans coveted Downey's post, but they decided against risking the race. That left only Nixon. He was a sad but earnest underdog until his lucky star came through in the form of Mrs. Douglas' candidacy, which meant a showdown fight among the Democrats. The race between the conserative Downey and the liberal Mrs. Douglas proved to be a prize show.

On November 3, 1949-a full year before the election-Nixon announced his intention to run for Senator. His opening speech was directed at conservative Democrats. He has repeated it in one form or another during every campaign since.

The star Republican professional campaign operator in 1950 was Murray Chotiner. a Beverly Hills lawyer. Beginning with Earl Warren's election as Governor of California, Chotiner had executed a dazzling run of Republican triumphs. He was engaged as Nixon's southern manager, and also to oversee the whole campaign. A rapport developed between the two men, and Chotiner became Nixon's closest political associate and campaign adviser. (That relationship lasted until 1956, when Chotiner's name figured in a Congressional investigation of influence peddling. Nixon was in no way involved in the investigation, but he was politically embarrassed. Chotiner became a political exile. Since then, he and Nixon have resumed their personal friendship. Nixon still considers Chotiner the ablest campaign technician in America. Chotiner, in turn, respects Nixon as a master campaigner, but admits he was the hardest candidate of all to manage.)

The only way a Republican could win, Nixon had told friends, was with "a fighting, rocking, socking campaign," At the outset in 1950, all of the rocking and socking was done by the Democrats-at each other.

Two months before the primaries, Downey withdrew from the race in indignation and disgust. Mrs. Douglas switched her attack to Downey's successor, Manchester Boddy, editor and publisher of the Los Angeles Dally News.

"It is the same old plot with a new leading man." Mrs. Douglas declared, after Boddy filed for the Senate nomination. As it turned out, this new leading man was accompanied by a new campaign assault. In the weeks that followed, fellow Democrats painted Mrs. Douglas every insulting hue of red. Few of them bothered to acknowledge even obliquely that she was actually a vig-orous foe of the Communist Party and in 1948 had fought Henry Wallace's Progressive Party in a congressional district where that took courage.

Senator Downey now pledging his support to boddy, returned to the battlefront to declare in a statewide radio broadcast that Mrs. Douglas "gave comfort to the Soviet tyranny by voting against aid to Greece and Turkey." The Senator also charged that she "opposed an appropriation to enable Congress to uncover treasonable commu-nistic activities." In this, he said, she joined Representative Vito Marcantonio, of New York, "an admitted friend of the Communist Party.

Meanwhile, Nixon, with only token opposition for the Republican nomination, stumped the State. His favorite speaking topic was the Hiss case. Occasionaly, the Democrats would take a swing at Nixon. He was often tempted to respond, especially when Mrs. Douglas stated: "I have utter scorn for such pip-squeaks as Nixon and McCarthy." But he was advised to hold his fire, and nothing was said pertaining to Mrs.

Douglas in the primary.

Nixon won the Republican nomination and also got 22 percent of Democratic primary votes (under the cross-filing system then prevailing in California). Mrs. Douglas won the Democratic nomination by a plurality, since her total was slightly less than half of the votes cast by Democrats. She also got 13 percent of the Republican primary votes.

The autumn of 1950 was ready made for mean electioneering. Domestically, the post-war reaction had set in. The Nation was on the brink of recession. Spectacular congressional investigations were depicting Washington as a haven of subversion and corruption. In the Democratic Party, which controlled both the White House and the Congress, the traditional division between conservatives and liberals had broken out into a rash of grim primary fights, in which accusations of subversion were bandled about. And then, war erupted in Korea.
Under the circumstances, the general-

election contest for Senator from California, or the final, as it is called there, was a natural for the times. The isuse-communism-embraced every nightmare of treachery a voter could conjure. Seekers after a vari ety of offices milked it as best they could. And it was clear from the start that the Communist issue was Nixon's, above all others. Mrs. Douglas tried to wish it away. She declared that it was not an issue at all, but a "phony coverup by Republicans for their failure to advance a positive program for true democracy." She tried to dislodge Nixon from his perch, insisting that she had been more effectively anti-Communist than She didn't succeed.

Nixon's greatest windfall was the mass of accusations her fellow Democrats had hurled at Mrs. Douglas in the spring. Chotiner and his associates gathered them all, added an embellishment here and there and played

it back in the fall campaign.

The campaign was the most hateful California had experienced in many years. Nixon kept on the offensive all the waybeginning with a statement in which his campaign chairman established the line that Mrs. Douglas' record in Congress "discloses the truth about her soft attitude toward communism," and a speech in which Nixon announced his decision to risk the penalty of criticizing a woman because "if she had had her way, the Communist conspiracy in the United States would never have been exposed."

An analysis of the Nixon and Douglas campaigns shows that the most notable difference was in the adroitness and calmness with which Nixon and his people executed their hyperbole and innuendo. For whatever reason (perhaps because Mrs. Douglas and her friends were less blase and more conscience-stricken by improprieties), when compared with the surgeons of the Nixon camp, Mrs. Douglas' operators performed

like apprentice butchers.

The Douglas campaign's repeated linkage of Nixon and Marcantonio was overshadowed by the shrewder manner in which Nixon tied Marcantonio to Mrs. Douglas. did not rest his case with just two, three, or five Marcantonio votes, as did Mr. Douglas. Nixon went before the voters with a carefully researched leaflet, filled with dates, reference data and lawyerlike analogies that were just confusing enough to convince laymen of their authenticity. The document was labeled "Douglas-Marcantonio Voting Record." An opening explanatory statement implied that almost everyone in California was anxious to know the truth about "the voting records of Congresswoman Helen Douglas and the notorious party liner, Congressman Vito Marcantonio, of New York." Then came the revelation: They had voted the same way 354 times.

This was followed by the statement: "While it should not be expected that a

Member of the House of Representatives should always vote in opposition to Marcantonio, it is significant to note, not only the great number of times which Mrs. Doug las voted in agreement with him, but also the issues on which almost without exception they always saw eye to eye, to wit: Un-American Activities and Internal Secu-

The first order was for 50,000 of the leaflets. Chotiner says he was never able to figure whether its immediate popularity was due to the content or the suggestive hue of the paper he had selected, which was bright pink. Anyway, within a week, he ordered 500,000 more leaflets, They are known to this day—in pride or in shame—as "the pink sheets."

One of the political milestones of that campaign, hitherto not revealed, is the strategy by which an endorsement of sorts was wormed out of Governor Warren. As all his Republican colleagues quickly learned, Warren was a lone-wolf campaigner, whose rare public support of another candidate was always based on the help that individual could give Warren, and not on party affiliation. In the 1950 election, Governor Warren, seeking a third term, headed the Republican ticket on which Nixon was the candidate for Senator.

Nixon and Warren had no particular use for each other, but the Nixon forces felt & Warren endorsement important because of rumors that the immensely popular Governor actually wanted to see Nixon defeated. Any hope of convincing Warren to come through was complicated by the fact that the Democratic candidates had not expressed any support for each other. So Nixon strategists hit upon a plan to anger Warren

into speaking.

An earnest young Republicans, elected to Congress, was assigned to follow Mrs. Douglas and ask her at press conferences whether she thought JAMES ROOSE-VELT should be elected Governor. She ignored the questioner until the Friday before election, when she said, "I hope and pray he will be the next Governor, and he will be, if the Democrats vote the Democratic ticket."

Twenty-four hours later, Governor Warren statement concerning Mrs. Dougissued a las' endorsement, concluding with: "I might ask her how she expects I will vote when I mark my ballot for U.S. Senator next

Tuesday."

Nixon's campaign chairman thereupon declared, "Every voter in California who reads his statement will realize that Earl Warren intends to mark his ballot for Dick Nixon on election day." Whether he actually did is a secret Warren has yet to divulge. Nixon was elected by a 680,000-vote margin. The fact that Warren has become Chief Justice and Nixon Vice President has not altered their relationship. "We are not unfriendly." NIXON says. "We are two individuals going our own ways."

If Nixon does run for President in 1960, there is little doubt his so-called smear teachnique will again be a target for attack. In any case, his behavior in the 1950 campaign is the source of much dislike and mis-

trust of him today.

Poultry Crisis in Connecticut

EXTENSION OF REMARKS

# HON. CHESTER BOWLES

OF CONNECTICUT

IN THE HOUSE OF REPRESENTATIVES Wednesday, June 10, 1959

Mr. BOWLES. Mr. Speaker, the independent poultrymen of my State, and

of many other States as well, are in the grip of an economic crisis of disastrous proportions. Rising feed costs have now increased by 50 percent over the levels of 15 years ago, when I was Director of OPA. Yet, believe it or not, the price paid to farmers for poultry is below that paid during OPA, and the retail price in themarket is also below OPA levels.

Hard-pressed independent poultrymen, and many of my colleagues here. have pleaded with Secretary Benson to take emergency action in this crisis. But, as the distinguished chairman of the House Committee on Agriculture has stated so aptly, the Secretary "has callously refused to use the power and money given him by the Congress to relieve the economic disaster that now grips the poultry industry."

To provide a framework for long-range corrective action aimed at stabilizing the poultry industry and provide a fair return to these family farmers, I have joined with several of my colleagues in introducing a proposal which would allow the poultry industry to take meas-

ures to help itself.

My bill, H.R. 7557, along with the companion measures introduced by my distinguished colleagues from California, Mr. Sisk, Mr. Miller, and Mr. Hagen, Would correct the basic problem of the industry-overproduction. It is not, and was not intended to be, a substitute for the immediate, emergency measures which can and should be taken now. As has been pointed out many times, the Secretary of Agriculture already has both the power and the money to remedy this Crisis

I should like to call to the attention of my colleagues who may not be familiar with the problems of the poultry industry the following article by Mr. Charles H. La Freniere, reporting in the Norwich (Conn.) Bulletin-Record of May 31, 1959. I commend it to your attention as a concise and perceptive statement of the problem and its causes:

CAUGHT IN PRICE SQUEEZE-EASTERN CONNECT-ICUT POULTRY PRODUCERS FACING DILEMMA THAT COULD AFFECT AREA ECONOMY

### (By Charles H. LaFreniere)

Connecticut poultry producers, most of them concentrated in the eastern Connecicut region, are face to face with an economic dilemma which, if it worsens, could have an impact on the rest of the area's economy.

For some time now poultry and egg producers have been caught in a cost squeeze that is a genuine threat to the \$60

million a year industry.

Consider, for example, the plight of the broiler producers who have been turning out thousands upon thousands of birds below production costs for the past 9 months. Such a condition cannot go on indefinitely without a number of them facing economic ruin.

### EGGS AT 20-YEAR LOW

And as most everyone by now is aware, eggs are at their lowest price in nearly 20 years.

The situation has caused concern among Government leaders, some of whom are attempting to help the poultry and egg farmers to find a solution to the problem.

When the State commissioners of agriculture in the Northeastern States met just a few days ago in Easton, Md., the problem was placed first on the agenda. The proposal to place it at the head of the list of items to be discussed at the parley was made by Joseph N. Gill, commissioner of agriculture in Connecticut

Commissioner Gill is well aware of the situation in the poultry industry since he also produces broilers on his farm in Mansfield Center.

### SEEK CONGRESSIONAL AID

A joint resolution passed by both houses of the Connecticut General Assembly on May 18 and addressed to Ezra Taft Benson, U.S. Secretary of Agriculture, asked that immediate steps be taken by Washington officials to alleviate the adverse circumstances facing the poultry industry

The task of finding a solution will not be an easy one because of the complex factors involved, any one of which or maybe any combination have a tendency to produce adverse

conditions.

Since the war, the industry has mushroomed like a hydrogen bomb explosion (and there are some who feel that it has had the

same disastrous results).

Prior to that time poultry was raised and eggs produced by the small independent farmer, who, generally speaking, made money doing it. But when the demand for poultry started to increase this necessitated expansion of facilities, and these continued to grow for some time until they reached a point where overproduction started to enter the picture.

#### CUTTING COSTS

Efficiency became a watchword and the production cost cutting started a movement of the industry to the Southern States, where it was felt less expensive housing and less heating was required than in the North.

This movement south continued-and still . does-because, as one local poultryman pointed out, the States in that region offer inducements to large dressing plants to locate

He also pointed out that with the Southern States losing a large percentage of cotton culture, the bankers in the region turned to the poultry industry to offset any loss in business. His comments on bankers in the North were not typical of the gentleman, and after being distilled they come some-thing to the effect that the northern banker is a much more conservative fellow than his southern colleague, and, therefore, for the most part, the poultryman has to struggle along without the resources he has to offer.

Poultry buying by the Nation's large grocery chains is another factor sometimes blamed for industry conditions.

Because there are hundreds of dressing plants and only a comparatively few chain outfits doing a tremendous amount of buying, the latter can, by working with figures provided by the U.S. Department of Agriculture, determine almost precisely the amount of poultry that will hit the market at any given time.

With this knowledge and a little calculation, it is fairly simple to determine when the market will be loaded and prices depressed-always a good time to buy.

# GOVERNMENT FLOOR ON FEED

Still another factor tending to aggravate conditions is the Government floor on feed which prevents it from reaching its normal price level. Therefore, while the feed is subsidized and the price maintained, the unsubsidized poultry farmer has to struggle hard to pay the artificial price, which may be twice as much as it should be.

Eliminating the subsidies on feed, however, would only be a temporary panacea, according to V. A. Laakso, prominent eastern Connecticut poultry producer, who said that "It's a question of the industry regulating Itself." He then added, half seriously and half facetiously, "It'll straighten out when there are less sellers than buyers.'

It was Mr. Laakso's contention that the price picture in the broller industry will be

brighter after June. He explained this by saying that placements (chicks on the farms) have been lower recently and that consump-tion of poultry jumps in the summer months. COOPERATIVES HIT

Cooperatives have been hit by the declining market also and the tendency now is for the small cooperatives to combine into one large unit providing greater financial stability and increased purchasing power.

Integration is another word often heard in connection with the trials of the boultry industry. Some members of the industry are against it, others say that "it's progress"

and is here to stay.

Integration is that process in the industry whereby the growing operation, the feed plant, the hatchery, and the processing plant are combined as a unit, so to speak, to provide a steady production of poultry.

Because such operations have spread rapidly and with them an increase in the number of birds raised, the tendency has been to overproduction.

These, then, are some of the problems that the industry with the aid of Government have to face in any determined effort to provide relief for the producer and to create a market in which he can dispose of his products at a fair profit.

In the meantime, Mrs. American Housewife, when shopping, is taking advantage of the situation although she may not be aware of its seriousness or its possible consequences to her area's economic conditions.

### Federal Water Pollution Control Act

SPEECH

OF

# HON. ROBERT N. GIAIMO

OF CONNECTICUT.

IN THE HOUSE OF REPRESENTATIVES Thursday, June 4, 1959

The House in Committee of the Whole House on the State of the Union had under consideration the bill (H.R. 3610) to amend the Federal Water Pollution Control Act to increase grants for construction of sewage treatment works; to establish the Office of Water Pollution Control; and for other pur-

Mr. GIAIMO. Mr. Chairman, it would seem that opponents of H.R. 3610 which would amend the Federal Water Pollution Control Act to increase grants for the construction of sewage treatment works feel that its only purpose is to spend money to throw the budget out of halance.

But they do not seem to consider that we as representatives have an obligation to consider seriously the national problem of water conservation and pollution control that affects all parts of this Nation, regardless of artificial political boundaries.

The increasing problem of pollution control is seen daily in our metropolitan areas where municipalities and business concerns take the easy and inexpensive way of solving waste disposal problems.

The results are open sewers of rivers. unsanitary, filthy carriers of disease; the destroying of fish and wildlife; the lowering of real estate values and in general, a backward step in the development of our communities as places where people can live decently.

Aside from drinking, the most important use of water, is for waste disposal. Yet it is considered only in passing by most of us. The Nation's use of water has in the past few years increased enormously, not only because of increased population, but because of higher standards of cleanliness, better living, rapid industrial expansion, have all contributed to an increase in per capita use from some 500 gallons a day 60 years ago, to about 1,500 gallons a day now. This includes all uses except hydroelectric power generation and recreation.

The increasing daily demand for water is dramatized almost every summer in large cities when droughts bring about shortages—shortages scarcely if ever felt not too many years ago.

Waste disposal in our rivers and streams prohibits the use of that water for other purposes without endangering health. Thus communities must start now to provide for more sanitary methods of waste disposal so that our streams can be utilized to meet the ever-increasing demand for water.

The lack of foresight on the part of communities in planning for adequate waste disposal has been detrimental to programs bent toward proper use and conservation of water resources. If not lack of foresight, then lack of funds has prevented proper treatment of the waste disposal problem.

Federal stimulus is needed to give States and local communities the impetus to correct their waste disposal methods; to bring them into conformity with standards that would relieve our waters of the dangerous wastes that are dumped into them. Enactment of H.R. 3610 would provide that stimulus.

# In Memoriam: Hon, Clarence J. McLeod

EXTENSION OF REMARKS

# HON. LOUIS C. RABAUT

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES Wednesday, June 10, 1959

Mr. RABAUT. Mr. Speaker, I want to address myself to the memory of an old and dear friend, the Honorable Clarence J. McLeod. Clarence, as he was familiarly known, as our longtime colleague here in the House. He represented Michigan's 13th District for eight full terms and the better part of a ninth. You will recall, no doubt, that he was labeled the "baby of the Congress" when first elected at the age of 25. You may also recall him as the "mayor of Washington"—an honorary title accompanying his many years as chairman of the House Legislative District Committee.

Clarence McLeod will be remembered for many things—both in Michigan and here in the Nation's Capitol. His strong, unceasing, and articulate opposition to communism will stand in lasting tribute to his fruitful life. His leadership in the 1928 fight over the Reapportionment Act was instrumental in its passage. This

gave Michigan four additional seats here in the House. He will be remembered also for the leading role in advocating improvements for the Walter Reed Army Medical Center here in Washington. This hospital has since risen to rank with the finest in the world.

Throughout his career Clarence Mc-Leod was a dedicated public servant. He was an extremely able legislator, a fine lawyer and a respected gentleman. I shall remember him always as a dear and close friend. I commend him to your lasting memory as a longtime colleague of whom this House may always be justly proud. I am sure you will join me in extending deepest sympathy to his wife and family.

# Looking Ahead From Feitshans High School

EXTENSION OF REMARKS

# HON. PETER F. MACK, JR.

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES Wednesday, June 10, 1959

Mr. MACK of Illinois. Mr. Speaker. under leave to extend my remarks, I wish to include a very interesting letter to the editor which was published in the Illinois State Register in Springfield, Ill. It is not surprising that such an event should take place in Springfield, the home of Abraham Lincoln. This whole idea of holding of the commencement exercises at the Municipal Opera site at Lake Springfield was the idea of the students themselves. All of the students in the graduating class participated in cleaning up the Municipal Opera site so that the ceremonies could be held there .-

I feel that this story is of particular interest to other Members of Congress since it is typically representative of our people and life in America.

Mr. Speaker, the author of this letter is an outstanding minister, author, and organist and is one of the leading citizens in Springfield, Ill.

The article follows:

YOUTH AND MEMORIAL DAY DRAMA

DEAR SIR: L suppose it's inevitable that on occasions like Memorial Day we should pause in tribute to "these noble dead," although most news reports I saw or heard seem to indicate the usual relatively small number turned out for the ceremonies. However, and this is entirely fitting and proper, the event was duly noted in the papers, on the radio and on TV, with pictures.

Yet something happened this past weekend in Springfield which I feel is vastly more noteworthy. So far, I've missed any follow-up news on it, and no pictures. Perhaps I'm prejudiced, because one of my daughters is involved, but I think I have enough of a "nose for news" to know that a priceless story of American ingenuity, initiative, and get-up-and-go was evidently ignored. What may well prove to be a delightful precedent was begun. What is more, the young people themselves asked a minimum of favors and did a maximum of work to bring it to pass.

I refer to the commencement exercises of Feltshans High School, Friday night, at the municipal opera site near Lake Springfield.

I don't know-how many of this year's Feitshans seniors were present on Thursday morning last, but it appeared the vast majority of the class was there to do the hot, dirty work of pulling weeds, sickling the grass, sweeping up, and otherwise getting the site ready. What's more, I recognized many, if not all, those who "made" the National Honor Society, the "egghead group" if any might be called that, out there working. What was particularly inspiring in view of the many tensions in our country and in the world today was the matter-of-fact nature of this interracial, intercultural group.

One honor society senior who was in there pitching, and who was especially presented to the large audience Friday night (probably many more people than at the Memorial Day ceremonies, by the way) was a girl who had transferred here from Little Rock, Ark,, and who had maintained her high

scholastic standing.

This may be stretching the thread of coincidence too far, I know, but even the heavens seemed to smile upon this meaningful occasion. Before and after, we'd been having rains and threatened reains. Rain was actually predicted for the time of the commencement, and special tickets had been printed for the limited admission to the Feitshans auditorium, just in case. Yet, as the large crowd present can attest, the weather was as nearly ideal as possible. Even the speaker observed, "A lot of people must have been praying."

It is just possible we may spend too much time looking backward and not quite enough looking ahead. Yes, let us honor the past but let us also give hearty encouragement and incentive to those who must live in the

future, too.

WILLIAM M. HUNTER.

# Resolution Commending Associated Tennessee Valley Chambers of Commerce

EXTENSION OF REMARKS

# HON. ROBERT E. JONES

OF ALABAMA

IN THE HOUSE OF REPRESENTATIVES
Wednesday, June 10, 1959

Mr. JONES of Alabama. Mr. Speaker, under leave to extend my remarks, I wish to present to the House of Representatives the following resolution unanimously adopted by the American Public Power Association commending the Associated Tennessee Valley Chambers of Commerce for presenting factual and convincing evidence in support of the TVA self-financing bill which was recently passed by the House. The president of the Tennessee Valley Chambers of Commerce is Mr. Barrett Shelton, publisher of the Decatur Daily, Decatur, Ala., and he and his asosciates have done a magnificant job in refuting distorted material published by the U.S. Chamber of Commerce and have vigorously opposed the U.S. Chamber's policy declaration aimed at crippling TVA.

Whereas a large group of local chambers of commerce in the Tennessee Valley have formed the Tennessee Valley Associated Chambers of Commerce to protest the policies of the U.S. Chamber of Commerce concerning the Tennessee Valley Authority; and

Whereas these local people have through close association become familiar with the coustanding benefits to the Tennessee Valley and to the Nation from TVA's operation through more than 25 years; and

Whereas the local chambers of commerce representing hundreds of independent businessmen have denounced the U.S. Chamber's publications and policies in ragard to TVA as being blased, inaccurate and a disservice to the Nation and to the members of the U.S. Chamber of Commerce; and

Whereas the American Public Power Association representing more than 1,000 consumer-owned, business-managed, electric utilities throughout the Nation feels a responsibility toward presenting the facts regarding one of the Nation's great publiclyowned power system: Now, therefore, be it

Owned power system: Now, therefore, be it Resolved. That the American Public Fower Association commends the Associated Tennessee Valley Chambers of Commerce for Presenting a factual reply to the distorted material published by the U.S. Chamber of Commerce, and for vigorously opposing the U.S. Chamber's policy declaration aimed at crippling TVA.

### Poison in Your Water-No. 112

EXTENSION OF REMARKS

# HON. JOHN D. DINGELL

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES Wednesday, June 10, 1959

Mr. DINGELL, Mr. Speaker, pursuant to permission granted, I am inserting into the Appendix of the Congressional Record an article appearing in the Texarkana (Ark.) News of April 11, 1959, entitled "The Pollution Problem,"

THE POLLUTION PROBLEM

There are many odors emanating from Washington, D.C. these days, and not all of them are political in nature.

Take that beautiful stream, the Potomac River, for instance. The stench from this stream rivals anything that has occurred, Politically, in the Nation's capital for generations, and this covers a lot of territory.

The Potomac is so polluted today that no one, ignorant or foolhardy, would dare to swim in its waters. Even to get accidentally spilled in the water brings serious danger of contracting any number of serious diseases.

Pollution of the Nation's rivers and streams is a problem that endangers the health of the people, and the growth of the Nation.

Sadly enough, we have evidences of pollution of lakes and streams right here in the four States area.

In its convention in Shreveport the other day, the Red River Valley Association took up the pollution problem and there are indications that the RRVA will throw its full weight behind efforts to halt pollution of waterways in the valley.

Industries and communities which fail to correct practices which pollute lakes and streams should be dealt with promptly and effectively. There are antipollution laws which must be rigidly enforced. Other laws—should be passed if the present laws prove the factors in the process.

ineffective in curbing this problem.

The Potomac River should serve as an excellent example of what happens when citizens drag their feet on this subject.

Pollution is deceptive. To a visitor in the Nation's capitol, the Potomac is indeed a beautiful stream. The river is spanned by bridges carefully designed to fit into the scenery. Along its grassy banks are such tourist atractions as the Jefferson and Lincoin Memorials. The river is wide, and during much of the year its waters are deceptively clear and blue.

One would think that the centerpiece of

One would think that the centerpiece of beautiful Washington—the Potomac River would be as clean, as well kept as its monu-

ments, parks, and parkways.

The river, in fact, is worse than ill kept, a
Weshington correspondent reports. Its con-

Washington correspondent reports. Its condition is disgraceful. Its waters are an open sewer along part of the Washington waterfront during some of the year.

A Member of Congress recently described

the river in this way:

"Beautiful parkways and sweeping green lawns border both sides of the river, but anyone picnicking here or driving by on a still summer day would be nauseated by the smell of decomposing sewage and the sight of repulsive materials in the stream."

Fish which go up the river in the spring to spawn have difficulty getting through the polluted water, even when rains have brought down more than the usual amount of water to dilute the sewage. Only the roughest and hardiest of fish ordinarily inhabit these waters, and to catch and eat one is a health hazard.

The wide river is a favorite spot for boating enthusiasts. On pleasant days, cabin cruisers, outboard motors, sail boats, and canoes journey on its waters. Washington-Lee High School in Arlington, Va., has won three national schoolboy championships with its rowing teams trained on the Potomac. But water sports are dangerous to health, because the spray from motors and oars carry disease germs.

Not a pretty picture, is it?

What makes it even uglier and more ominous is the fact that it can happen—and has happened—elsewhere in this beautiful country. And it could happen here.

Texarkana and the four States area has a great stake in the future, with its splendid lakes and rivers. We cannot be too stern in our demands that antipollution laws be enforced.

### Public Debt Management

EXTENSION OF REMARKS

# HON. BRUCE ALGER

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES

Tuesday, June 9, 1959

Mr. ALGER. Mr. Speaker, under leave to extend my remarks in the Record, I include the following statement on public debt management by the Secretary of the Treasury, Robert B. Anderson, was presented June 10, 1959, before the Committee on Ways and Means. I respectfully submit it for the Record at this earliest opportunity so that the House membership and our citizens can benefit by its study:

STATEMENT ON PUBLIC DEBT MANAGEMENT BY SECRETARY OF THE TREASURY ROBERT B. ANDERSON BEFORE THE HOUSE WAYS AND MEANS COMMITTEE, 10 A.M., JUNE 10, 1959

I appear this morning to support policles I sincerely believe to be in the best interests of 176 million Americans. I do so in the realization that all thoughtful people share common objectives. We realize there are honest differences of opinion as to the methods by which these objectives may be attained.

Fundamentally, we Americans endeavor to achieve sustainable economic growth in terms of real goods and services. We seek a sustainable rate of growth that would promote maximum job opportunities, continuity of employment, and real earnings. We seek as well to insure that the process of saving, which underlies the growth of this or any other country, is not diminished but encouraged. We seek to protect the welfare of those individuals who now depend for their livelihood on accumulated savings, the proceeds of insurance policies, benefits of retirement systems, the aid of social-security payments, and similar accumulations from a lifetime of effort.

We seek also to insure that those who plan for the education of their children, who guard against adversity, and who provide for their own economic well-being through any process of accumulated savings shall not have the rewards of their diligence and thrift diminished.

We live in a world of tensions and in a world where new nations with new freedoms are seeking to improve their standards of living and their economic well-being, where all eyes are turned toward America. A sound domestic economy is essential if we are to maintain sufficient military strength to preserve freedom and liberty for ourselves and our friends abroad. If we are to witness the growth of better conditions for our neighbors all over the world, we must adopt and stanchly support enduring sound monetary and fiscal policies—the same policies that we have strongly encouraged them to adopt in their own interests.

We must not be unmindful of the lessons to be learned from the financial history of others who have tried methods less demanding and less exacting; nor must we succumb to the belief that real wealth is created by any other means than by the physical and mental labor of human beings working with the physical resources with which each country is blessed.

Mr. Chairman, it is with this belief that we support the proposals which have been laid before you by the President. In a world of economic complexities there is a constant interrelationship between fiscal policy, monetary policy, and the individual and collective actions of all who participate in our economic structure. We cannot isolate one and set it apart as controlling, but we can say that each, in its own sphere, is a sine quanon to the achievement of our total objectives.

It is because of my belief that the people of our country are willing to subscribe to the disciplines which freedom exacts from government and individuals that I have confident faith in the security and well-being of our Nation's future.

our Nation's future.

I should like now to address myself to one important element of our economic life—the management of our national debt.

OUR DEBT MANAGEMENT ENVIRONMENT

The public debt rose last month to an alltime high of \$287.2 billion and is now only slightly below that figure. This represents over \$1,600 for each man, woman, and child in America. The Federal Government owes as much money as all of the corporations in the United States put together. Our debt is as large as the debts of all the individual borrowers in the country put together plus the debts of all of our State and local governments.

The U.S. Government, therefore, owes about one-third of all of the debt in the United States and is the largest single borrower. In the calendar year 1958 the Treasury issued \$69 billion of new marketable securities—\$19 billion for cash and \$50 billion in refinancing maturities, quite apart from the continuing rollover of about \$22 billion of weekly bill maturities. All of the corporations in America issued slightly under

\$10 billion of new bonds and notes last year while State and municipal new security is-

suances amounted to \$7½ billion.

In the year ahead the Treasury faces the refinancing of \$76 billion of short-term securities that will mature. In some ways the volume of this short-term debt is as important a factor in our financing picture as the size of the total debt Each time the Treasury goes to the market—either for refunding operations or for new cash borrowing needed to cover seasonal requirements or retirement of other securities-it is a significant event in all financial markets. Both the size of our borrowing requirements and the frequency of our trips to the market tend to interfere with the smooth marketing of new corporate and State and local government securities.

Another problem related to the large size of the debt maturing within 1 year is that such debt is only one step away from money. It should be realized, however, that in this country we have a large active and continuous demand for short-term debt instruments outside of the banking system inasmuch as corporations, State and local governments, foreign accounts and many other investors invest their short-term funds in this manner. Almost 60 percent of our under-1-year debt, therefore, is held outside of the banks-a larger percentage than in any

other country we are aware of.

Even though it is preferable to have large amounts of short-term securities in the hands of nonbank investors rather than in commercial banks, we must never lose sight of the fact that a well-balanced debt structure calls for continued offerings of intermediate and longer term securities whenever conditions permit if debt management is to be conducted in a manner consistent with economic growth and stability.

The quest for a balanced structure of the debt is never ending since the passage of time brings more and more of the out-standing debt into the short-term area. The high point of our under-1-year debt was reached at the end of 1953 when the total The total is now \$76 billion. was \$80 billion. having dropped below \$60 billion for short periods in 1955 and 1956.

If the Treasury should be able to do nothing but issue short-term securities to replace maturing issues between now and December 1960, instead of the present \$76 billion we would have almost \$100 billion of under-1year debt outstanding at that time.

The Treasury does not intend this to happen. We must, therefore, continue to sell intermediate and longer term bonds whenever appropriate as we try to keep the shortterm debt from growing. The only reason we have been able to keep the short-term debt from growing since December 1953 is that since then we have issued \$34 billion of 5-10-year bonds, \$2 billion of 10-20-year bonds, and \$6 1/2 billion of over 20-year bonds.

THE COMPETITION WHICH WE FACE

Let us look at some of the competitive phases of our problems. Federal Government programs to guarantee home mortgages for veterans and to provide FHA insurance on various types of mortgages have contributed to the unprecendented volume of home building in America since World War II. But they have also fostered a marked improvement in the quality of mortgages as investments for the billions of dollars that Americans each year save out of their earnings, savings which they invest directly or which insurance companies, sayings banks, savings and loan associations, or pension funds invest in their behalf.

There are a great many other debt obligations outstanding today which our Government also aids in one way or another, including securities issued by many Federal Government agencies, even though those securities are not actually guaranteed by the

term Government-aided obligations has been growing, the volume of long-term Treasury bonds has been declining. At the end of 1946, for example, there were \$117 billion of U.S. Treasury bonds outstanding which originally bore maturities of over 10 years. In contrast, there was \$61/2 billion of what might be called long-term Government-aided debt outstanding. Twelve years later—December 31, 1958—the \$117 billion total of long-term Government bonds had shrunk to \$65 1/2 billion, while the \$6 1/2 billion Government-aided total had grown to \$58½ billion, \$55 billion of which is in FHA and VA mortgages alone.

In addition, the continuation of high individual and corporate income tax rates in the postwar period has made the complete exemption from Federal income taxes which is enjoyed by State and local government securities very valuable. State and local debt outstanding has increased from \$16 billion in 1946 to \$59 billion in 1958. Tax exemption has contributed to the ability of State and local governments to sell their securities, but it has also meant that Federal securities are relatively that much less attractive.

Competition for funds available for investment has also been increased in other ways. A high corporate income tax rate has made corporations more inclined to borrow than to issue stock, since interest payments are deductible for income tax purposes, but dividend payments are not. Moreover, from the standpoint of the average small saver, Federal insurance of bank deposits and savings loan shares has practically eliminated any difference in risk between private savings and Government bonds.

The problem of encouraging more longterm investors to buy and hold Treasury securities is also increased by the tendency among some investors to prefer stocks to fixed dollar obligations because of what I believe to be a mistaken conviction that the purchasing power of the dollar will decline further. It is in this environment that the sale of enough long- and intermediate-term Treasury securities sufficient to keep the debt from getting shorter must also compete with large and growing demands for borrowing by State and local governments, by corporations for plant and equipment needs, and by home builders and buyers.

Many investors have also become increasingly confident in the continued growth potentials of our Nation. As this grows high quality of Government securities becomes relatively less important than in the past and the safest bonds in the world-U.S. Government securities-are more difficult to

In recent years there has been substantial liquidation of long-term Government securities by investors who bought large amounts of such securities during World War II, based on the improvement in the relative attractiveness of other investments.

Long-term Treasury securities are held primarily by three broad classes of private investors other than commercial banks. first group consists of savings institutions such as insurance companies, mutual savings banks, savings and loan associations, corporate pension funds, and State and local government pension funds. These investors, in the aggregate, held only \$31 billion of Government securities in December 1958, as compared with \$411/2 billion 12 years ago.

When the rapid growth of institutional assets generally is taken into consideration the decline in their holdings of Government securities is even more striking. In 1946 life insurance companies had 45 percent of their assets invested in Government securities; the percentage now is 7 percent, far below the 18 percent level back in 1939. Twelve years ago mutual savings banks had 63 percent of

U.S. Government. While the volume of long- - their assets invested in Government securities; that has now been reduced to 19 percent. Savings and loan associations now have only -7 percent of their assets in Governments, although their percentage has never been much higher. Corporate pension funds have 12 percent of their assets in Governments as against 30 percent just a few years ago. Even in State and local pension funds, where statutory requirements are much less favorable to investments outside of Government securities, the percentage invested in Governments has fallen from 54 to 35 percent in the last 6 years alone.

The second group of long-term investors includes principally personal trust accounts and individuals in the upper income brackets. Their holdings of Governments have also declined substantially in the postwar yearsfrom \$34 billion in December 1946 to \$21 biliion now. It is in this group where competition with tax-exempt State and local obligations becomes most important.

By contrast, there is a third group whose holdings have geen growing. This group includes the millions of small savers who buy and hold series E and H savings bonds. Through the savings bond program they have added substantially to their holdings of Government securities in the postwar periodfrom \$30 billion in 1946 to more than \$421/2 billion now.
